Gutiérrez, Horacio (*b* Havana, 28 Aug 1948). Cuban pianist. A child prodigy, he made his concerto début with the Havana SO at the age of 11, later moving to the USA, where he studied in Los Angeles and at the Juillard School of Music. He first came to international prominence when he won second prize at the 1970 International Tchaikovsky Competition in Moscow. Although best known as an exponent of the Romantic virtuoso tradition, he has been a regular participant in the Mostly Mozart Festival in New York and has appeared in chamber music with the Guarneri, Tokyo and Cleveland quartets. In 1982 he was awarded the Avery Fisher Prize. While particularly identified with the concertos of Brahms, Tchaikovsky and Rachmaninoff, Gutiérrez is a thoughtful and elegant interpreter of the Beethoven concertos and a persuasive advocate of such conservative contemporary composers as William Schuman and André Previn. Although capable of bravura in the biggest virtuoso works, he is essentially a pianist of great tonal refinement, whose best performances combine a vivid feeling for musical drama with a classical sense of proportion.

JEREMY SIEPMANN

Gutiérrez de Padilla, Juan. *See* PADILLA, JUAN GUTIÉRREZ DE.

Gutiérrez (y) Espinosa, Felipe (*b* San Juan, 26 May 1825; *d* San Juan, 27 Nov 1899). Puerto Rican composer. His father Julián Gutiérrez gave him his first music lessons, but he was chiefly self-taught. In 1845 he was appointed a *músico* in the Iberia battalion and in 1858 he won in open competition the post of *maestro de capilla* of San Juan Cathedral. For the next few years he also conducted the orchestra in the Teatro Municipal during opera seasons. His *Teoria de la música*, published at San Juan for pupils in his free music academy, reached a third edition in 1875. Aided by a subsidy from the San Juan town council in 1873, he studied in Europe for a year, chiefly in Paris. In 1898 as a result of the American occupation he lost his cathedral post and during the last year of his life existed on a pittance earned as a concierge.

Gutiérrez was the foremost 19th-century Puerto Rican composer of operas and sacred music, and was recognized as such as far away as Caracas, where three of his masses survive in the Venezuelan national library. His third opera, *Macías* (now in *E-Mp*), won a gold medal (30 June 1871) and proved the equal of any Spanish romantic opera of its century when first performed, on 19 August 1977, at the refurbished Teatro Tapia in San Juan. He wrote memorable melodies clothed in a rich orchestral fabric and achieved moments of real dramatic grandeur.

WORKS

OPERAS

Guarionex (3, A. Tapia y Rivera), San Juan, *c*1876, lost; ov., La Yuca, probably from this opera
El Bearnés (4, A. Biaggi), lost
Macías (3, ? M. Travieso y del Rivero, after M.J. de Larra), San Juan, Tapia, 19 Aug 1977, *E-Mp*
El amor de un pescador (zar, C.M. Navarro y Almanso), lost

SACRED

Las Siete Palabras, orat, solo vv, chorus, orch, org
5 masses, 1859–72; 2 requiem masses; 8 Salve regina, 1865–92; 2 Passions, 1870; Parce mihi, 1871; Gozos de la Inmaculada

Concepción, 1878; Lamentación 3a, for Maundy Thursday; 3 sets of Letanías, chorus, orch, org

ROBERT STEVENSON

Gutiérrez Heras, Joaquín (*b* Tehuacán, Puebla, 28 Sept 1927). Mexican composer. He studied architecture and at the same time taught himself music. Between 1950 and 1952 he studied with Imre Hartmann (cello), Rodolfo Halffter (analysis) and Galindo (composition). He went on to receive grants from the Instituto Francés de América Latina to study with Messiaen in Paris (1952–3) and from the Rockefeller Foundation to study with Bergsma and Persichetti at the Juilliard School, New York (1960–61). In Mexico he taught analysis at the Conservatorio Nacional (1969–70) and was the director of Radio Universidad (1966–70), for which he recorded numerous music programmes. He also taught in the composition workshop of the Instituto Nacional de Bellas Artes (1975–7). In 1996 he was awarded an honorary doctorate by the Universidad Nacional Autónoma de México.

Gutiérrez Heras's carefully constructed music falls into two large groups: commissioned works for stage and screen, and pieces with a long gestation or revision period, written without heed to deadlines. His film scores have won a number of prizes, earning him significant recognition in that field. These have also, on occasion, served as points of departure for later compositions: such is the case with the music for the film *Remedios Varo*, which was later reworked into the *Trío de alientos*. Gutiérrez Heras's musical language oscillates between a diatonicism in which modal harmony predominates (*Sonata simple*, *Divertimento*) and a partly atonal vocabulary, which includes aleatory elements (*Trío de alientos*, *Ludus autumni*). Standing apart from the avant garde, Gutiérrez Heras has produced a body of work which ranks among the most solid and important in contemporary Mexican music.

RICARDO MIRANDA-PEREZ

Gutiérrez Sáenz, Benjamín (*b* San José, 3 Jan 1937). Costa Rican conductor, composer and pianist. He began studying music with his maternal grandmother, Rosa Jiménez Nuñez, daughter of the composer Pilar Jiménez. He studied the piano at the National Conservatory (1953–6) and the piano and composition at the National Conservatory of Guatemala (from 1956). In October 1957 a successful performance at the Costa Rican National Theatre of his opera *Marianela* (based on a novel by Benito Pérez Galdós) earned him a grant from the International Education Institute to study at the New England Conservatory (1959–60), where he obtained the MM. In 1961 he studied with Milhaud in Aspen, Colorado, and with Ross Lee Fenney at Ann Arbor, Michigan. In 1964 he studied with Ginastera at the di Tella Institute in Buenos Aires, where he was able to forge contacts with composers from all over the world. He taught at various institutions in Costa Rica (1954–72), including the National Conservatory (from 1962). When this was renamed the School of Musical Arts he became its director (1972–5). He was deputy conductor of the National SO (from 1970) and conductor of the newly founded University of Costa Rica SO (1985–9) and Chamber Orchestra. From 1973 he worked full-time at the School of Musical Arts, teaching instrumentation, composition, orchestration and the piano (retired 1984; emeritus professor from 1986).

As a conductor Sáenz Gutiérrez played a crucial role in the development of opera performances in Costa Rica. He conducted memorable productions of Gounod's *Faust* (1987) and Bizet's *Carmen* (1981), and he also conducted the premières of his *El pájaro del crepúsculo* (1982) and of two operas by Acevedo Vargas.

He has won several composition prizes, and his works have been performed in several locations in the Americas and Europe. As a pianist he has appeared with the National SO in performances of concertos by Mozart, Liszt and Grieg, and of some of his own compositions.

WORKS

Ops: Marianela (1, B. Pérez Galdós), San José, Nacional, Oct 1957; El regalo de los reyes, o las dos Evas (1, O. Henry), 1960, perf. 1986; El pájaro del crepúsculo, perf. 1982

JORGE LUIS ACEVEDO VARGAS

Gutman, Natalya (*b* Kazan, 14 June 1942). Russian cellist and composer. Born into a family of several generations of musicians, she was brought up in Moscow. She began playing the cello at five under the tutelage of her stepfather, Roman Sapozhnikov, and at nine made her first public appearance. At the Gnessin Music School she studied with Sergey Aslamazyan and then with Galina Kozolupova, who remained her teacher at the Moscow Conservatory. In her teens she also worked with her grandfather, the violinist Anasim Berlin. She took a postgraduate course with Rostropovich and in 1962, while still a student, won the silver medal at the International Tchaikovsky Competition in Moscow. She also won prizes at the Vienna Student Festival and the Dvořák Competition in Prague, and in 1967 she and her duo partner, the pianist Alexey Nasedkin, took first prize in the Munich Chamber Music Competition. For a time Gutman's career was restricted to Eastern Europe but in 1980 she appeared at the Edinburgh Festival, playing the Brahms Double Concerto with her husband, Oleg Kagan. Works were written for the two of them by Anatol Vieru, Alfred Schnittke, Tigran Mansuryan and Sofiya Gubaydulina. In addition Gutman has had works composed for her by Edison Denisov, Vassily Lobanov and Schnittke. Although she has all the major works for cello and orchestra at her command and is famed for her interpretations of the Shostakovich concertos and Prokofiev's Sinfonia concertante, she is perhaps heard at her best in chamber music, where her lyrical gifts can come to the fore. Until her husband's death in 1990 she was regularly heard playing in small groups with him and like-minded musicians such as Richter, Bashmet and Lobanov. In 1992, with Claudio Abbado, she founded the Berlin Encounters so that young artists could play chamber music with established musicians. She has recorded much of her solo repertory and can also be heard on many records of chamber music, most of them taken from concert performances. Her compositions include a Sonatina for solo cello, published in 1970.

TULLY POTTER

Gutmann, Albert J. Austrian firm of music publishers. It was founded in Vienna in 1873 and was grandly described as the 'Kaiserl. Königl. Hof-Musikalienhandlung' on its title-pages. Its premises were at the Hofoperntheater. Gutmann published the first editions of three major works by Bruckner: the String Quintet (1884), the Seventh Symphony (1885) and the Fourth Symphony (1889) each in full score, parts and arrangements for piano four hands. Although the Gutmann score of the Fourth Symphony was dismissed by Bruckner scholars in the early 20th century, it has been suggested more recently that it may actually represent Bruckner's own definitive revision of the work.

Gutmann remained active after the collapse of the Austro-Hungarian Empire, with the firm's address now given simply as 'Im Opernhaus'. An advertisement which appeared in 1919 listed highlights from the catalogue, including the film's three distinguished Bruckner publications along with songs by Ignaz Brüll, Felix Mottl and Arthur Nikisch, instrumental music by Alfred Grünfeld and Ludwig Schytte, the version of *Don Giovanni* by Max Kalbeck and Robert Fuchs, and Mottl's opera *Agnes Bernauer*.

Gutmann himself appears as a character in one of the curiosities of the Bruckner literature. In 1924 Victor Léon collaborated with Ernst Decsey on a burlesque play about the life of Bruckner, *Der Musikant Gottes*; Gutmann is in the cast, thinly disguised as 'Goldmann, Musikverleger'. His firm appears to have ceased operations during the 1920s.

NIGEL SIMEONE

Gutturalis. *See* VIRGA STRATA.

Guy, Barry (John) (*b* London, 22 April 1947). English composer and double bass player. He played the bass in a Dixieland band at school, and jazz and improvisation have remained integral to his style. While working as a draughtsman Guy studied composition with Glasser at Goldsmiths' College (1965–6), and at the GSM he studied the bass with J. Edward Merrett and composition with Orr and Standford (1967–71). He joined the Spontaneous Music Ensemble in 1967; in 1970 he founded and became artistic director of the London Jazz Composers Orchestra, for which he has composed numerous works and recorded over 80 albums with major jazz artists such as Evan Parker, Bill Dixon and Cecil Taylor. A performer and composer in both classical and jazz styles, Guy's creative output evinces a dramatic synthesis of complex avant-garde structures with the immediacy and communicability of free jazz improvisation. Principal bass of the Orchestra of St John's Smith Square (1970–85) and of the City of London Sinfonia (1974–96), his works for his instrument have expanded both its range of sonorities and introduced novel virtuoso techniques which have inspired compositions by Rands, Orr and Swayne. His first work to gain international attention was *D*, for solo amplified strings, first performed by Boulez and the BBC SO. Excitingly varied, often aleatory string textures are displayed in major works, including *Flagwalk*, *The Eye of Silence*, *After the Rain* and *Fallingwater*, one of several works inspired by architecture. In 1991 *Look Up!* won the Royal Philharmonic Society Award. For semi-improvisational scores Guy developed his own graphic notation; in *Bird Gong Game* and *Witch Gong Game*, symbols are derived from drawings by the artist and jazz pianist Alan Davie. In more recent works he explores a postmodern synthesis of early music and avant-garde sonorities, a result of his experience with period orchestras and in duo with his wife, the baroque violinist Maya Homburger. In *Buzz* a viol consort exploits jazz techniques inspired by Charlie Mingus; in *Dakryon* the baroque violin is set against electronic tape and wild bass sounds. Guy has also presented improvisation and composition workshops at various universities, including York and Harvard.

MALCOLM MILLER

Guy, Buddy [George] (*b* Lettsworth, LA, 30 July 1936). American blues singer and guitarist. Until he was 20 he lived in Louisiana, where he played the guitar and was among the younger black musicians who sang to accompany Lightnin' Slim (Otis Hicks, 1913–74). After moving to Chicago, he came under the influence of Otis Rush, whom he subsequently claimed to have defeated in a blues contest. His guitar playing was lyrical and finely executed, with clear notes that were permitted to 'hang' until they faded, a technique made possible by the use of well-amplified instruments. He became a resident guitarist for the Chess company, for whom he made *First Time I Met the Blues* (1960), notable for its high, intense vocal line and expressive guitar playing. Guy provided accomplished support for Sonny Boy Williamson 'II' on *Trying to Get Back on my Feet* (1963, Checker), and was particularly sensitive as an accompanist for Junior Wells on the slow blues *Ships on the Ocean* (1965, Del.). He made a successful partnership with Wells, aided by the skill of both musicians and their ability to perform before large audiences as popular entertainers; they were in great demand for concerts and overseas tours, on which Guy has made some of his best recordings. *Ten Years Ago* (Red Lightnin'), recorded in Montreux in 1974, was a new version of a piece they had first recorded in 1961, and *High Heel Sneakers* (1975, Bourbon) was recorded while on tour in Japan. The excessive demands of such tours, however, sometimes caused the quality of their performances to suffer. In 1991 he recorded the acclaimed album *Damn Right I've Got the Blues* (Silverstone). At his best Guy remained one of the finest blues singers based in Chicago, capable of playing with great feeling and fluency. In the 1990s he founded his own Blues Legends Club in Chicago.

PAUL OLIVER

Guy, Helen. *See* HARDELOT, GUY D'.

Guy, Nicholas (*fl* 1615; *d* 28 Aug 1629). English musician and composer. He was the third generation of the Guy family, originally of foreign extraction, to serve at the English court. He was probably the son of Peter Guy the younger, of Greenwich, and was appointed as flautist from 24 June 1615, holding the post until his death. His extant compositions include a three-part fantasia (*GB-Lbl* Add.40657–61) and two six-part almains for wind (*Cfm* Mu.734).

ANDREW ASHBEE

Guyana. Republic on the northeastern coast of South America with an area of 215,000 km² and a population of 874,000 (2000 estimate). Formerly named British Guiana, it gained independence from the United Kingdom in 1966 and became a member of the British Commonwealth. Though on the mainland, Guyana is a part of the circum-Caribbean culture area and its heterogeneous musical traditions are most similar to those of other Caribbean poly-ethnic or plural societies (*see* SURINAME and TRINIDAD AND TOBAGO). The music of Guyana comprises three distinct traditions: that of the Amerindian tribes (5% of the population in 1975), of the East Indian community (51%) and of the African-derived blacks and Creoles (31%). However, by the beginning of the 21st century, little musicological research had been conducted there.

□

Guy de Cherlieu. *See* GUIDO OF CHERLIEU.

Guy de Saint-Denis (*fl* late 13th century and early 14th). French Benedictine music theorist. He was a monk of St Denis: Ulysse Chevalier falsely claimed that he was Guy de Chartres, Abbot of St Denis between 1294 and 1310 (*Répertoire des sources historiques du Moyen Age: bio-bibliographie*, Paris, 1877–88, 2/1905–7, i, p.2013), but he cannot be identified among the many monks named Guy in the obit lists of St Denis (ed. C. Samaran in *Bibliothèque de l'Ecole des chartes*, civ, 1943, p.49). The sole surviving copy of his treatise (*GB-Lbl* Harl.281, ff.58*v*–96) concludes 'Here ends the treatise on the tones compiled by brother Guido, monk of the monastery of St

Denis in France'; this information is confirmed by an acrostic of the initial letters of the introduction and the four sections of the treatise, which yields the name 'Guido' (a similar procedure may be observed in the seven sections of the *Speculum musice* of Guy's contemporary Jacobus of Liège).

Guy's treatise comprises two sections. The first is theoretical, and deals with the Gregorian psalm tones, consonances, modes etc. The second section is practical, and concerns the performance of the psalms and the use of the *neuma* (melismas that might be added at the ends of certain chants). It concludes with a tonary corresponding with the antiphoner and gradual in use at St Denis. Guy quoted a hymn from the Office of St Louis; Louis was canonized in 1297 and the Office composed in 1299 (this Office followed the Paris use, however, and according to Guy, was not sung at St Denis). He also mentioned an unknown chant for Corpus Christi. This festival was introduced at Paris in 1318, and slightly earlier at St Denis since Cluny introduced it in 1315; the treatise must therefore have been compiled before Paris adopted the Corpus Christi Office commonly attributed to St Thomas Aquinas (i.e. in the period between 1315 and 1318).

The sources of the treatise include Plato, Aristotle, Boethius, the *Micrologus* of Guido of Arezzo, Honorius of Autun, Guillaume d'Auxerre on the *neuma*, the *Dialogus* of Pseudo-Odo (*see* ODO) and the treatises on plainchant by Petrus de Cruce ('qui fuit optimus cantor') and, in particular, Johannes de Garlandia. Guy's quotations from the latter enabled Reimer to identify the authentic version of Johannes's treatise.

MICHEL HUGLO

Guyer, Percy. Pseudonym of SEPTIMUS WINNER.

Guymont (*fl* 14th century). French composer. He is now known only from a three-voice Kyrie (*F-APT* 16bis; ed. in CMM, xxix, 1962 and in PMFC, xxiii, 1989–91). The middle voice is frequently harmonized in discant style with the tenor; but, particularly in the four-bar hockets which conclude each major section, the two upper voices move together, so that the total effect is of motet style. (For further discussion see H. Stäblein-Harder: *Fourteenth-Century Mass Music in France*, MSD, vii, 1962.)

GILBERT REANEY

Guyon [Guion], **Jean** (*b* c1514; *d* after 1574). French composer. He was a singer in the cathedral choir at Chartres from 1523, and from 1541 to 1556 he was *maître des enfants* there. He was made a canon in 1545, later becoming a senior official ('commis à l'oeuvre'). His name does not appear on the register after 1574.

17 chansons published between 1535 and 1551 show Guyon to have been an extremely skilful chanson composer. Each of the four voices has real melodic interest, and the musical structure is nicely balanced between lively, imitative writing, passages in triple metre and homophonic sections. Most are melismatic to suit their serious, melancholy nature; a few have ribald texts set syllabically to rapid notes. Two particularly interesting chansons, *Musiciens qui chantez à plaisir* and *Si j'estoys Dieu vous series tous mes chantres gentilz*, bear witness to his pleasure in singing and his delight in the singers who worked with him; the texts advise them not to sing without having something to drink, and not to sing too loud or rush the tempo.

Only three sacred works by Guyon are known: the motet *Fundamenta eius in montibus* and two masses. His *Missa 'Je suis desheritée'* (based on a chanson attributed by Attaingnant to both Lupus and Cadéac) uses canonic writing in the 'Crucifixus' and Agnus Dei sections.

WORKS

all for 4 voices

SACRED

Missa 'Je suis desheritée' (Paris, 1556) (on chanson by Lupus or Cadéac); Missa 'Tota pulchra es', in Missae duodecim, a celeberrimis authoribus, 4vv (Paris, 1554)
Fundamenta eius in montibus, 1535[1]

CHANSONS

Amour ung jour, 1549[20]; Ce que l'oeil pert, 1549[21]; C'est trop presté, 1549[19]; De noz deux cueurs, 1563[3]; Encore Amour ne m'avoit faict sentir, 1546[14]; Esleu m'avez pour vostre seul, 1550[12]; Gaultier racontra Janeton, 1545[10]; Je meurs allors que de vous ay perdu, 1549[21]; Long temps y a, innocente pucelle, 1550[9]
Malade si fut ma mignonne, 1550[11]; Mon amy est en grace si perfaict, 1550[11]; Musiciens qui chantez à plaisir, 1550[9]; Par toy Amour, héllas, je suis laissée, 1546[12] (attrib. H. Fresneau in 1545[13]); Pleust or a Dieu, 1543[11]; Quelque yvrongne de par le monde, 1550[9]; Recepte pour un flux de bourse, 1550[9]; Si j'estoys Dieu, 1543[9]

CAROLINE M. CUNNINGHAM

Guyonnet, Jacques (*b* 20 March 1933). Swiss composer and theorist. He studied the piano, conducting and composition at the Geneva Conservatoire, attended the Darmstadt summer courses, and in 1959 founded the Geneva Studio for Contemporary Music, which contributed a great deal to the development and distribution of techniques of serial composition in French-speaking Switzerland. From 1960 he worked with Boulez, features of whose style appear frequently in Guyonnet's early compositions. In 1967 Guyonnet began teaching composition at the Geneva Conservatoire. He founded an electronic studio that was later extended to become a research institute for electronic music and audio-visual art. As a composer, Guyonnet turned away from the strictly serial style in the 1960s and began concerning himself with polystylistic influences and various different systems of musical language; his work also reflects the influence of light music. One of the pioneers of computer music in Switzerland, he composed little after the 1980s.

ROMAN BROTBECK

Guyot (de Châtelet) [Castileti], **Jean** (*b* Châtelet, ?1512; *d* Liège, 11 March 1588). Flemish composer. He entered the University of Leuven in 1534 and graduated with the Bachelor of Arts on 22 March 1537. On 26 April 1538 he obtained his share of the family inheritance at Châtelet, and documents from the record office of the deputy mayor there (1549–50) show that he kept some contact with that part of the country. According to Thimister he was chaplain and *maître de chant* of St Paul, Liège, from 1546. Susato published several of his motets in Antwerp in that year and several secular pieces during the next few years. Guyot's name appears in the lists of chaplains of St Paul in 1552 and 1554. In the latter year he dedicated his *Minervalia ... artium*, a dialogue on the virtues of music, to George of Austria, Prince-Bishop of Liège 1544–57. Guyot replaced Zacharias Gransyre as *maître de chant* of the Cathedral of St Lambert, Liège, late in 1557 or early in 1558; on 24 April 1558 he was appointed rector of the imperial altar of St Lambert in the cathedral. In 1559 he was required to take on the duties of first precentor from Etienne Danielis but was able to pass them on to Jean de Chaynée in 1561. On 28 July 1563 the chapter of St Lambert gave Guyot permission to travel to the imperial court at Vienna, and during his absence appointed Nicolas Douhaer *maître de chant* and Toussaint Dalmangne as second succentor.

In November 1563 Guyot succeeded Pieter Maessens (who had died in October) as Kapellmeister in Vienna and employed two singers from Liège, Jean de Chaynée and Adamus de Ponta, who had apparently accompanied him. The death of Emperor Ferdinand I the following year deprived them of their posts, for Ferdinand's heir, Maximilian II, dismissed his father's retinue and installed himself in Vienna with his own chapel, directed by Jacobus Vaet. Guyot returned to Liège and took up his benefice again, but no longer took any part in directing the cathedral's music. However, he appears to have composed religious music for the use of the church in Liège for over 20 years and to have taken a guiding interest in the work of young composers, notably Gérard Heine, canon of St Jean l'Evangéliste. Two other pupils of his from the years before 1563 were Johannes de Fossa, successor to Lassus in Munich, and Jean de Chaynée, *maître de chant* in Maastricht. Guyot was dean of the Chapelle des Clercs until his death and was buried there.

Guyot used dense polyphonic textures, with few rests in any voices and with imitative entries following closely on each other. He rarely wrote chordal passages or changed his vocal scoring and in this is typical of mid-16th-century composers of the southern Netherlands. The works for six voices are remarkably full and sonorous (for example the *Te Deum* in RISM 1568²); easily recognizable thematic motifs, frequently beginning on the upbeat, generally develop within a limited range. The four-voice secular pieces have considerable life and even vivacity thanks to his fluency and skill in imitative counterpoint.

Guy-Ropartz, Joseph. *See* ROPARTZ, JOSEPH GUY.

Guzikow, Michał Józef (*b* Szklów, [now Belorussia], 2 Sept 1806; *d* Aachen, 21 Oct 1837). Polish xylophonist. Born into a poor family of Jewish musicians, Guzikow was, in his early years, a street player of the dulcimer and flute. After an illness had weakened his lungs, he took up the xylophone. He improved the instrument, extending its range to two and a half chromatic octaves and placing the keys on straw rolls in order to amplify the sound (see illustration). Within three years he had become a master of the instrument, and his concert performances in Kiev, Moscow and Odessa in 1834 aroused great admiration. Encouraged by Lipiński, Lamartine and Michaud, he set off on a concert tour of Europe. In May 1835 he played in Kraków, Warsaw and Lemberg, and subsequently in Bohemia and in Vienna, Berlin, Frankfurt, Paris and Brussels, always to enthusiastic audiences: Mendelssohn and George Sand were among those who were impressed

Guzikow's xylophone: engraving after Bernhard Fischer

by his playing. Guzikow's concerts often featured a guest soloist, for example Kalkbrenner at a Paris concert in the Tuileries. Guzikow's repertory consisted of his own works, particularly fantasias on Polish themes. He also played transcriptions of piano and violin concertos by Weber, Hummel, Hoffmeister and Paganini, whose *La campanella* always won him a standing ovation. Illness interrupted his career, and he died of tuberculosis.

IRENA PONIATOWSKA

Guzmán (Frías), Federico (*b* Santiago de Chile, 17 Aug 1836; *d* Paris, Aug 1885). Chilean composer and pianist. His family, of whom many were musicians, played a fundamental part in his initial training and development as a composer. He held a variety of posts in Chile, as composer, performer, organizer and teacher. However, after meeting the American composer and pianist L.M. Gottschalk in 1866, he felt impelled to travel to Paris to complete his studies. This he did between 1867 and 1869, combining his training with successful concert tours in France and England. He was the first professional civilian composer in Chile after its independence and the first Chilean composer and performer to achieve international renown: as well as trips to Europe, he gave concert tours in the United States (1870) and in several Latin-American countries, including Argentina, Peru and Brazil. He is particularly important for his dissemination of the Classical-Romantic repertory, and particularly Chopin's works, in Chile (1869) and Lima (1871–9). He was also the first in his country to cultivate serious Romantic music. His works, mainly written for the piano, were published in Chile, Argentina, Peru, Brazil (where he lived from 1880 to 1882), France and Germany.

WORKS
(*selective list*)

Vocal: El pescador, v, pf (Santiago, Chile, 1861); Adieu (A. de Musset), v, pf (Lima, 1871–3); Rappelle toi (Musset), duetto (LIma, 1871–3)

Pf: Zamacueca (Santiago, 1856); Une larme, nocturne (Santiago, 1861); Souvenir, nocturne (Santiago, 1866); Deux mazurkas (Paris, 1867–8); Polonaise (Paris, 1867–8); Scherzo e danza (Lima, 1871–3); Mon espoir, mazurka (Rio de Janeiro, 1880–82); Oeuvres posthumes (Paris, 1886)

LUIS MERINO

Guzmán, Jorge de (*b* Cádiz, *fl* 1686–1709). Spanish theorist. He was *sochantre* (sub-precentor, or director of plainsong) at Cádiz Cathedral from 1686 to 1709. His plainsong treatise, *Curiosidades de cantellano, sacadas de las obras del Reverendo Don Pedro de Cerone ... y de otros autores* (Madrid, 1709), is a substantial volume of 280 pages of text and musical examples. Its purpose was twofold: to aid him in teaching plainsong at the collegiate seminary of S Bartolomé, and to make available valuable material from various treatises of the past, particularly Cerone's *El melopeo y maestro* (Naples, 1613). Many of his chapters consist of commentaries upon Cerone; other works cited include the exceedingly rare 1604 plainsong treatise of Vicente Villegas, *Suma de todo lo que contiene el arte de canto llano*. Guzmán's prose style is witty and conversational; although he deals with most of the fundamentals of plainsong, the particular significance of his study lies in his detailed treatment of the rhythms used in Spanish chant, the variety of psalm-tone terminations and their functions, the 'affects' of the modes and the *cuerda* (key or pitch) at which the chants are performed in different parts of Spain – a matter of special interest in the study of liturgical organ music.

ALMONTE HOWELL

Guzmán, Luis de (*b* ?Granada; *d* nr Naples, 1 May 1528). Spanish vihuelist and composer. Apparently a native of Granada, he perished while observing the naval battle of the Gulf of Salerno aboard the Spanish commander's vessel. Praised as one of the most talented vihuelists of his time, Guzmán was one of the earliest exponents of the seven-course vihuela. No works survive, although his tablatures were collected for publication by Luys de Narváez in the 1530s and were still in circulation when Bermudo wrote of him in *Declaracion de instrumentos musicales* (1555). Remembered posthumously for having 'made the strings speak' and for his sweet voice, he was also noted for his use of scordatura. Bermudo reported that he had intabulated works using irregular tunings, and also that he would play in standard vihuela tuning except for one string on either the third or the fourth course being tuned to another note.

Gwynneth, John (*b c*1495; *d* ? *c*1562). Welsh composer. He was listed by Thomas Morley in his *Plaine and Easie Introduction* (1597) as a distinguished English practitioner of the art of music. His works are now lost or unidentifiable, save for the bass part of his four-voice song *My love mournyth* in the *XX Songes* (RISM 1530[6]). The poem, a meditation on the Passion, is a sacred contrafactum of the popular song *My love sche morneth*, known from Cornysh's arrangement in Henry VIII's Manuscript (see Stevens, p.394). Gwynneth's setting uses a varied refrain form analogous to the carol; it is possible to fit a rhythmically free version of the second half of the song melody over the bass of the refrain. The solitary bass line moves smoothly but purposefully, and its composer commanded a fairly progressive technique.

Gwynneth's lost works included at least eight polyphonic masses, mentioned in his two supplications for the Oxford DMus. He applied for this degree in 1531, though he had not first taken the BMus, describing himself as a secular priest who had practised the art of music for 12 years – a term extended to 20 years in his second and more emphatic application, which was granted. The latter figure would put his birth at about 1495. He claimed to have composed 'all the Responses for a whole year *in cantis chrispis aut fractis ut aiunt* [i.e. mensural music], and many masses, including three masses of 5 parts and five masses of 4 parts, and hymns, antiphons, etc.'. Burney claimed to have seen music by Gwynneth in the Pepysian Library (Magdalene College, Cambridge), though he placed him in the wrong reign and appears to have expanded the contraction 'Jo.' wrongly, writing of 'Joseph Guinneth and Robert Davis, who flourished about the time of Edward the Fourth, and of whose counterpoint in two parts there are some fragments at Cambridge, in the Pepysian Collection, in which red notes are used for diminution'. These are now untraceable; but in view of Burney's mention of 'fragments' it is highly unlikely that he had misread the word 'Gymel' (in *GB-Cmc* Pepys 1236) as 'Guinneth'; the music in this manuscript is not fragmentary, nor does the source contain a name that could have been misread as Davis. Probably Burney was describing a fly-leaf or some loose scraps taken from a binding.

The composer is perhaps the clerk John Gwynneth, a Catholic apologist who published anti-Protestant books in 1536 and 1554–7 (see *DNB* and Flood); if this identification is correct, it is strange that he is nowhere described as DMus.

BRIAN TROWELL

Gye, Frederick (*b* London, 1809; *d* Ditchley, Oxon, 4 Dec 1878). English theatre manager. He was educated mainly in Germany and originally helped his father manage the Vauxhall Gardens, London. He was associated with the Jullien Promenade Concerts at Covent Garden (1843–4) and became acting manager of the Theatre Royal, Drury Lane (1847). In 1848 he became business manager to Edward Delafield (director of the Royal Italian Opera, Covent Garden, 1848–9), and the next year obtained the lease of Covent Garden, initially for seven years though he remained there until 1877. He introduced many operas to London, including *Rigoletto* (1853), *Il trovatore* (1855), *Don Carlos* (1867), *Aida* (1876), *Lohengrin* (1875) and *Tannhäuser* (1876), with artists including Patti, Albani, Pauline Lucca, Tamberlik, Faure and Maurel. He was succeeded by his son Ernest Gye, who married Albani.

HAROLD ROSENTHAL/R

Gyffard Partbooks (*GB-Lbl* Add.17802–5). *See* SOURCES, MS, §IX, 19.

Gyger, Elliott (*b* Sydney, 27 Sept 1968). Australian composer. He studied composition at the University of Sydney with Eric Gross and Peter Sculthorpe, then at Harvard in 1996 on a Frank Knox Memorial Fellowship. His work of the early 1990s revealed a penchant for complex and refined instrumental writing with some affinities with the style of Elliott Carter, for instance in *Liquid Crystal* (1990) and *Trio Sonata* (1994). His works for voice display intimate knowledge of vocal writing combined with an instinct for intellectual and cultural resonance. His sophisticated orchestral writing, developed through a series of commissions and performances, is displayed in *Arclight* (1990) and *Deep and Dissolving Verticals of Light* (1994). His style combines modernist techniques with an expressive sensibility to textural refinement.

PETER McCALLUM

Gyles, Nathaniel. *See* GILES, NATHANIEL.

Gymel [gimel, gemell, gemmel etc.]. A 15th- and 16th-century English term denoting the counterpoint that results from the temporary splitting of one voice part in a polyphonic composition into two voices of equal range. Each of the two voices so produced is usually designated as 'gymel' in the manuscript sources. The evident etymological derivation of the word from the Latin

gemellus ('twin') is corroborated by John Palsgrave, who in the English–French vocabulary of substantives in book 3 of his *Lesclarcissement de la langue francoyse* (London, 1530) gave *iumeau* as the French equivalent of 'Gymell song'.

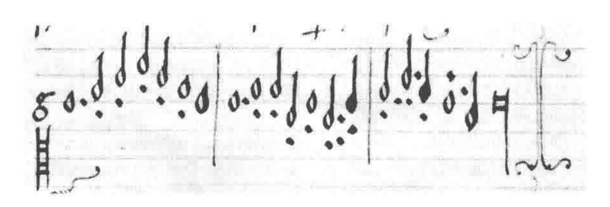
While the term 'gymel' seems not to have come into use before the later 1430s, the first known example of the practice dates from the mid-14th century (*GB-DRc* C.1.20, ed. in PMFC, xv, 1980, no.34). The case is the more remarkable for the periodic occurrence of gymel in the triplum of an isorhythmic motet, a species rightly assumed to have involved performance by only one musician to each part.

In the 14th century there was a widening of the two-voice framework to more than a single octave, and a regular acceptance of the 12th as the largest contrapuntal interval between the outer voices of a composition. This brought with it the gradual development of a concept of polyphony in which the voice parts tend to occupy contiguous rather than identical or largely overlapping ranges. This differentiation of ranges in turn evidently caused English composers to vary the combination of voices within compositions. By about 1400 works came to be written in which duet sections provided textural change as well as structural articulation within a three-part context.

Two factors therefore seem to account for the rise of gymel: (1) The growing interest of composers in a succession of textures and colours, varied from section to section by means of different combinations of voices; and (2) the growth of small but well-trained and properly balanced chapel choirs. The latter were expected by their aristocratic patrons to sing the new sonorous choral polyphony that 15th-century composers were beginning to write for them, in contrast to the ecclesiastical and courtly solo polyphony of earlier times.

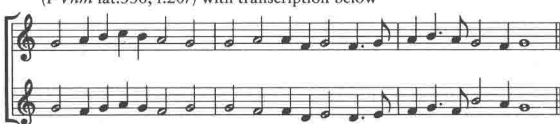
Apart from one unusual case, no extant English manuscript before the end of the 15th century contains examples of gymels. That exception is a composition (in *GB-Lbl* Eg.3307, *c*1440) whose two sections both begin with a duet for two high voices not labelled gymel, in which the two voices subsequently combine into one before the remaining voices enter. The fragmentary state of preservation of English sources doubtless accounts for the curious fact that the earliest documentation of an English practice and term is found in two continental manuscripts. The tropes in a Sanctus by Roullet (*D-Mbs* lat. 14274, ff.143*v*–5) are composed for solo duet using two sopranos, designated 'gemell'. *O rosa bella*, attributed to Dunstaple (as it appears in *I-TRmp* 90), has several additional voices, two of which, labelled 'Gimel' and 'Alius Gimel' and occupying the same range as the melody, are designed to form alternative duets with it. (The resulting counterpoint makes it impossible to retain the remaining voices of the composition.) In both of these cases the manuscript was probably written in the late 1450s, while the composition may well date from about 1440.

The practice of fashioning a gymel for a pre-existing voice part is briefly referred to in an anonymous English treatise written in about 1450, the so called Pseudo-Chilston. After enumerating unison, 3rd, 5th, 6th and octave as the consonant intervals available to a countertenor improvising a descant above or below a plainsong, the author continued: 'And alwey beginne and ende thi Countertenor in a 5. And thi Countergemel begynne and ende in unisoun' (Bukofzer, 1936). The directions are laconic, but entirely adequate in the context, since the 'countergemel' (the voice added to a pre-existing part to produce an improvised gymel) differs from a countertenor in nothing but the unison junction with its 'twin'. (Pseudo-Chilston made it clear that the SIGHT system of faburden and English discant did not apply to the countertenor; naturally, it would be equally inappropriate for the countergemel.) The counterpoint of the composed gymels for *O rosa bella* reflects the rules given by Pseudo-Chilston.



The first English source to contain gymels is the Eton Choirbook, written between 1497 and 1502. Compositions in which they occur are by Banaster (MB, x–xii, 1956–61, no.28), Browne (no.5), Cornysh (no.30), Davy (nos.11, 51), Fawkyner (no.32), Horwood (no.44) and Lambe (no.14). In the gymel section of the work by Banaster, who belonged to the generation before the other composers, the treble part is split while all other voices pause (ex.1). Taken together with the earlier cases this seems to indicate that composed gymels originally involved the top part of a composition and excluded all the other voices from participation in the counterpoint. The manuscript uses *semel* (*semell*, *semellum*) as well as the conventional term to designate gymels. This perhaps confirms that no more than two singers usually sang a given voice part. (*Semel* does not indicate the return to unison singing, as has been claimed.) All other instances of gymel in the Eton Choirbook and in later sources combine such duets with one or more of the other voices, which need not be lower voice parts. Nor do the gymels necessarily any longer begin and end on a unison. Any voice – even the bass – can be split; and sometimes two voices are divided to form double gymels, either by themselves or in counterpoint with one or more of the other parts.

Other manuscripts containing compositions with designated gymel sections are *GB-Llp* 1 (*c*1510), *Cgc* 667 (*c*1520) and the so called Forrest-Heyther Partbooks (*Ob*). Representative composers to use the device are Cornysh (*Magnificat*), Aston (*Missa 'Videte manus meas'*), Taverner (*Missa 'Gloria tibi Trinitas'*; *Missa 'Corona spinea'*; *Missa 'O Michael'*), Tye (*Missa 'Euge bone'*), Tallis (*Gaude gloriosa mater*; *Magnificat*) and Robert White (several compositions). The term seems to have fallen into disuse by the late 1560s. The claim that evolutionary lines can be drawn from gymel to bicinium and from gymel with contratenor bassus to canzonetta,



Ex.1 Gymel passage, Banaster: *O Maria et Elizabeth*

Ex.2 Passage from Guilielmus Monachus: *De preceptis artis musicae* (*I-Vnm* lat.336, f.20*r*) with transcription below

basso continuo duet and trio sonata seems fanciful and dubious, the more so since bicinia were usually not written for equal voices and 16th-century gymels generally shared their counterpoint with a variety of additional voices.

Apart from Pseudo-Chilston, only GUILIELMUS MONACHUS, presumably an Italian savant writing in Italy in about 1470, reported on gymel, which, together with 'faulx-bordon', i.e. faburden (not 'English discant', as has been claimed), he calls the two 'modi Anglicorum' (CSM, xi, 29–30, 38–41; *CoussemakerS*, iii, 228*b*–289, 292*a*–295*b* – corrections by Bukofzer and Trumble). The first passage describes it as an improvisatory technique (notating it as in ex.2; the octave transposition assumed by Bukofzer in *MGG1* seems based on a misreading of the relevant passages), while the other deals with composed gymel. The only change in Guilielmus's descriptions is the omission of the 5th from the available consonances. His examples prove that this is not an oversight, since they contain no 5ths, but exhibit long stretches of parallel 3rds, 6ths and 10ths. The incidence of parallel 6ths in particular makes it clear why he discussed faburden and gymel together: his version of the latter, which, according to him, may or may not involve a cantus firmus, often sounds like fauxbourdon without the middle voice. Moreover, he said that in composed gymels it is possible to have a contratenor bassus, 'because, if indeed Gymel have 6ths and 8ves in the manner of faulxbordon, then the contratenor of Gymel can proceed just like the contratenor of Faulxbordon …'. (In other words, since the usual contratenor altus is impossible in such a fauxbourdon, it is in fact the same as parallel gymel with contratenor bassus, because it has lost the characteristic parallel 4ths of normal fauxbourdon; ex.3.) If the main voice (i.e. the top voice) contains a cantus firmus, the latter will, of course, normally have to be transposed upwards, usually an octave. The prevailing techniques of decoration and paraphrasing are then applied to it (ex.4).

Both the principle of parallelism and the corollary separation of the voices in his composed gymels – there is no crossing of voices between cantus and 'tenor' – set Guilielmus apart from the English tradition. Counterpoint for twin voices has been transmuted into parallelism for two different voices, to which the term gymel seems hardly applicable. (The frequently cited 'Gemel' in *PL-Wu* Rps.Mus.58, which involves two unequal voices, likewise betokens a continental misunderstanding of the word.) The situation is similar to the rise of fauxbourdon on the Continent in the later 1420s. Both cases show how

continental musicians assimilated an English contrapuntal technique favouring imperfect consonances and more or less frequent parallel movement, the latter, however, by no means continuous; each time the result was a codification into a system far more rigid than the original style.

The tangled semantic history of gymel in modern musicology is due to the fact that theoretical sources were published first. The earliest discussion of gymel (by Adler) resulted from Coussemaker's publication in 1869 of Guilielmus's treatise. Both Adler and, after him, Riemann surmised, not unreasonably, that the parallelism of Guilielmus's examples, which appeared to be an essential characteristic of gymel, was the original germ of harmony (Adler), the oldest type of English polyphony (Riemann). And indeed, 13th-century English musicians produced a number of duets for equal voices that cross frequently and favour parallel 3rds (*see* CANTILENA (i)). The first to misapply the term gymel to consecutive 3rds in English polyphony (for two or more voices) of the 13th and 14th centuries was Wooldridge in 1905 (*OHM*, ii). 30 years later Bukofzer published the first of many essays in which he emphatically set forth this interpretation. Though anachronistic and inaccurate, it has been adopted by many authors.

'Gypsy' [Roma-Sinti-Traveller] **music.** The music of itinerant groups, predominantly found in Europe but also in other areas, such as the Middle East and South Asia. Most often classified as 'Gypsy' – once a derogatory term but more recently the source of political pride – these groups also have their own ethnonyms. The main focus of this article is the music of Roma/Gypsies in Europe, with the aim of underlining similar patterns in their musical practices and processes that reflect their shared values and ethos. For the music of non-European gypsies, see under the appropriate country article.

1. 'GYPSY' GROUPS. 'Gypsies' comprise many different groups, but these can be classified into two main categories: the Indian-originated Roma (and Sinti) and the indigenous peripatetic Traveller groups of particular countries and areas. The Roma, whose name is derived from the Romani word *man*, are also known in different places as Romen, Romani, Rom or Romanichals. Roma is the term implemented by Roma politicians to avoid non-Gypsy derogatory terms such as '*çingene*', '*cigány*' or 'gypsy'. Spanish Gypsies refer to themselves as Gitan, others opt for a different name all together. In German speaking areas, the 'Gypsy' group who suffered most during the Holocaust stress this through their name, Sinti. In Finland they call themselves Kale.

Within the broad categories of Roma, Sinti or Gitan, there are further subdivisions according to type and level of descent, language use and religion, all of which serve as a framework for Roma social structure. Many Roma groups are divided according to their previous or present residency in a country and its cultural symbols. In Bulgaria, the trilingual Xoraxani (Turkish) Roma speak a strongly Turkish-inflected Romani and are Muslims. The Dasikane (Bulgarian) and the Vlaxe (Vlach) Roma also have their own Romani dialect and are Orthodox Christians. (Here, the term 'Vlach', just as in Hungary, refers to the Roma's past residence in Romania and is not to be confused with the Aroumanian Vlachs, who are pastoralist nomads living in Macedonia and Greece). Some Bulgarian Roma even resort to a paradoxical category of Gažikane (non-Gypsy) Roma to distinguish themselves from all the other Roma groups.

Traveller and other 'Gypsy' groups are also known by a great number of names, such as the minceírs of Ireland, the Reisende ('Travellers') Scandinavia, the Jenish of German-speaking areas and the Mercheros in Spain. As with the Roma, these Traveller groups have names that distinguish subdivisions, partly because their itinerant life styles favour small social units, which may comprise families, who build further connections through marriages with other groups.

These differences are important in creating 'Gypsy' identities that, from the viewpoint of particular Roma, Traveller or other groups and individuals, make the single concept 'Gypsy' meaningless, except within the recently developed Romani rights political movement. The term 'Gypsy' is used in this article to designate the collectivity of many separate groups, all of which treasure their own uniqueness. Use of the collective term, however, does not mean that they constitute a homogeneous whole. Gypsy society is characterized by variety, in which the individual orders the world through the perspectives of the social group to which he or she belongs (Liégeois, 1986).

Enforced or voluntary sedentarisation has helped to create regional musical styles, but even within these there are still persistent differences according to descent and community. Beneath the ostensible variety of Gypsy musics, however, lie shared socio-cultural values, which are responses to pressures for assimilation and constant persecution from different 'host' societies. Those values are, to an extent, embodied in their musical activities. They include a lack of shared homeland (even in mythology); a strong emphasis on the importance of an individual's descent; economic dependence through mainly autonomous occupations; an explicit 'purity' system to mark social and other boundaries between

Gypsies and non-Gypsies as well as between different Gypsy groups; a non-possessional attitude to property; and a social memory that concentrates largely on history within living memory while mythologizing older events. These socio-cultural aspects represent a Gypsy ethos shared by sedentary and itinerant Roma or Traveller groups, and have correspondences in musical products and in processes and conceptualizations that are brought together in performance (fig.1).

Recent political and socio-economic changes, together with rapid developments in mass communications, have widened the possibilities for Gypsy interaction. With growing political self-determination in most communities, aspirations to Roma or Traveller unity are being articulated for the first time and symbolically embodied in a Gypsy (inter)national anthem, *Gelem, gelem*. However, this co-exists with various regional 'national' anthems, and an awareness of differences in historical origin and development; for instance, Roma populations have an increasing awareness of relationships to India or Arab cultures. This has brought with it changes in general thinking and musical practices, which through their long-established flexible value system allow accommodation of several concurrent identities in relation to immediate family and locality or to a wider region and even the world at large.

2. Music and musicianship. Documented instances of Roma individuals playing lutes or plucked instruments at the royal courts of Europe go back over 500 years (e.g. to the Duke of Ferrara of Italy in 1469; the Royal Court of Hungary, near Buda, in 1489). The available evidence suggests that in subsequent centuries Gypsies offered a wide range of entertainments to the broadest possible public. Initially this role was shared with non-Gypsy entertainers, but early modern times saw a growing religious ambivalence, and even prohibitions, in relation to music for entertainment, and that tendency gave increasing opportunities for Gypsies to become professional musicians. This was aided by their marginalized social position and the association that many societies make between musicianship and the magical, exotic and even devilish. This economic niche as professional musicians suited the Gypsies' preference for autonomous occupations that allow them to work mainly with their own kin. Famous musician families, such as the Stewarts and Robertsons in Scotland, the Keenans in Ireland, the Manush families of Ferréts, Reinhardts or Rosenbergas, the Hungarian Romungre dynasties of Lakatos and many others, carry a complex social web in their musical heritage.

Furthermore, for the Gypsies themselves, musicianship has positive connotations. The cultural significance of Gypsy musical practices, which may also comprise verbal-musical and kinaesthetic forms, is exemplified in the concept of 'true words' (*čači vorba*) among the Hungarian Vlašicka Roma (Vlach Gypsies) and the Finnish Roma, while the Travellers of the British Isles talk about the 'realness' of performance.

3. Adaptation and conservation. A mobile, flexible mode of life and lack of their own nation-state has forced the Gypsies to create their own social space within the existing political structures of other nations. This has encouraged dependency on the 'host' culture, a non-proprietary attitude to goods and a willingness to adapt, conserve and transform all values which find expression at various levels in the music-making sphere. Processes of adaptation form a continuum, ranging from imitation-recreation of the original material, through various transformations of this process to the creation of new genres. At another level, this may involve changes in musical parameters such as instrumentation as well as, tonal, temporal, linguistic, kinaesthetic and conceptual shifts, which together form a complex set of connections with and demarcations from the practices of the dominant non-Gypsy society and other Gypsy groups.

A widely-noted and valued aspect of Gypsy musical practices is the preservation of the traditional musical materials and customs of the dominant society in both their own group repertories and their activities as professional musicians. For instance, the Romanian *lăutari*, playing in the villages of Muntenia and Oltenia, kept the otherwise disappearing tradition of epic singing (*cîntec bâtrînesc*) alive into the late 20th century by performing epics at wedding feasts and other celebrations

'I have to go on a long journey', Öcsöd, south-east Hungary, 1990

(*see* ROMANIA, §III, 3). As elsewhere in the Balkans, these epic songs deal with real or imagined outlaws (*haiduki*) who fought for social justice, often in face of the Ottoman power. Roma groups update the texts to refer to current events, as in Taraf de Haïduk's *The Ballad of the Dictator* (e.g. Ceauşescu).

Similarly, the instrumental repertory of the *cigány muzsikusok* of Transylvanian villages has proved to be a treasury of Hungarian folk music traditions that had largely died out in Hungary itself until their 'discovery' by visiting Hungarian musicians, who mined it for the urban folk music revival in Hungary in the 1970s (*see* HUNGARY, §II, 6). Though such preservation by professional Gypsy musicians can be ascribed largely to their catering to the tastes of their host-culture audiences, significantly it can also be found among non-professional Gypsies singing for their own in-group needs. In the British Isles it was the contribution of non-professional Scottish Travellers (both directly and through revivalists such as EWAN MACCOLL, PEGGY SEEGER or A.L. LLOYD) that gave ballad singing an important place in the English folk music revival of the 1950s and 60s, a tradition that was still going strong in the 70s among the Irish Travellers. In the Balkans, too, it is the Roma who keep ballad singing alive as a tradition, with certain ballads, for instance the *Song of the Bridge*, still widespread during the 1990s. In Hungary, by contrast, the brothers Csenki were still able to collect a number of ballads among Hungarian Vlach Gypsies in south-east Hungary in the 1940s; these have since became virtually extinct in both Roma and Hungarian society.

Paradoxically, it is the older materials in many traditions that Gypsy performers tend to regard as their own, while more recent repertories are more likely to be viewed as adopted. In BULGARIA, the Turkish Roma (Xoraxane) divide their repertory into 'heavy-songs' (*phari gili*) – a classification also used in Bulgarian traditional music – which are mostly laments in Romani language, or Romani mixed with Turkish or Bulgarian; 'slow-songs' (*loki gili*), which are slower versions of *čoček* dance melodies and 'dance-songs' (*khelimaski gili*), comprising adaptations of Bulgarian and Serbian dance-songs. 'Heavy-songs' follow the Bulgarian epic (*na trapeza*) but add Romani topics of loneliness, loss and sorrow. Song structure has a wider tonal range than other Bulgarian songs, reaching a 7th or an octave, with highly ornamented melody lines descending in steps within a 4th or 5th. They are sung solo.

In Slovakia, the Roma classification emphasizes the age of songs: 'old songs' (*phurikane gilja*), as opposed to 'new songs' (*nevi gilja*). The first group comprises slow, lyrical, sad (*žalosna*) or poor (*čorikane*) songs and dance-songs (*khelibnaskere gilja*); 'new songs' may use old melodies with new texts, new melodies with old texts or new melodies with new texts. This practice, also found among Hungarian Vlach Gypsies, underlines a Roma cultural view that the 'novelty' of a composition does not necessarily lie in the melody. Hungarian Vlach Gypsies and the Slovak Roma also differentiate between 'old' (*durmutani*), 'new' (*nevi*) songs (the former refer to the generation of the performer's parents or grandparents, the latter to the most recently acquired items in the repertory, important for the young and those in early middle-age) and 'not-so-old' or 'not-so-new', those songs that metaphorically link past, present and future.

A similar distinction between old and new seems also to be present in Andalusia. Flamenco subgenres of *tonás* and *martinetes*, sung without guitar accompaniment (*a palo seco*), along with the *soleas* and *siguiriyas*, are considered to be the oldest, most 'Gitano' genre, collectively referred to as *cante hondo* ('deep song'). They contrast with the 'lighter' subgenres of *cante chico*, with its numerous adaptations such as the *fandango*, and the mixed genres of *intermedio* (*see* FLAMENCO). 'Deep songs' – as in various Gypsy repertories in the Balkans, central, north and eastern Europe – include genres such as laments, begging and prison songs, which, though often shared with other ethnic-cultural communities, have been creatively transformed by the Gypsies into their own distinctive genres, not least because they found in them strong resonances of their own life experiences.

4. MUSICAL AND TEXTUAL TRANSFORMATIONS. The selection of materials, alongside folk classifications, can serve to express musical distinctness from the main population, as well as from other Gypsies. For example, Hungarian Vlach Gypsies avoid performing what they consider to be Hungarian folksong or *nóta* in Romani contexts, just as the Irish Travellers do not sing the most 'Irish' genre, *sean nós* songs. In north-east Syria the *nayel* and *swehli* vocal genres are in the *Nawar* (Gypsy) repertory. In other instances, such differences are expressed through transformation, keeping some aspects intact, such as melody, while 'Gypsyfying' others, such as temporal or textual aspects, thereby generating considerable ambiguity in relation to a 'pure' or single musical identity.

Hungarian Vlach Gypsies singing adapted songs tend to bring the temporal aspects into conformity with their own stylistics, as discussed above, and when necessary and possible introduce small changes in the tonal structure to move the Hungarian feature of 4th- or 5th-shift structures (of folksongs) towards more harmonic-based aesthetics. Dance-songs, even those from popular genres such as the tango, often receive an added accompaniment played on spoons, tables or metal water jug, as well as mouth-bass, 'rolling' and rhythmical shouts. Such transformations are even extended to adaptations of Western pop music. Similarly, in flamenco, genres of Spanish folk origin such as the *campanilleros* may be transformed closer to a *hondo* style through long rubato type or stretched musical lines, more highly ornamented vocals, and the modal delivery and harmonics of the guitar accompaniment, as is evident in performances from the 1920 to 30s (e.g. Manuel Torre with Miguell Borull on guitar), or the more *chico* style of *alegrias* from the 1950s (e.g. Canalejas de Jerez with Antonio Uteras on the guitar).

Transformation can also be illustrated by the way the Roma of Kosovo took over the Brazilian hit tune *Lambada*, by omitting repeats (thus changing the symmetrical structure), and adding new sections of a formal and improvisatory character (*taksim*) in which the oboe, accordion and synthesizer players altered the scales to modal variants and simultaneously filled out the melodically 'empty' parts in parallel but slightly different ways (ex.1). The Portuguese vocal was also left out by Roma performers, though included by non-Roma musicians.

Playing with ambiguity and crossing musical (and social) boundaries may give rise to specific genres. Again in Kosovo, during the 1980s, Roma singers, such as Tafa,

Ex.1 *Lambada* in Kosovo (Pettan, 1992)

developed a new genre called *talava* ('under arm'), based on an originally female genre of singing with frame drum accompaniment. The ambivalence created by men performing women's songs and playing a women's instrument has since been eliminated by 'masculinizing' the genre through the introduction of amplified instruments as accompaniment (e.g. by Fadil Sulejmani and Mazlum Šaćiri-Lumi). In this format, the genre using short and repetitive musical lines to improvise texts in Romani, and to a lesser degree, in Albanian, has rapidly gained popularity among the general population of Kosovo for use as praise-songs at weddings and other celebrations, despite the criticisms of other Roma musicians.

Other examples illustrate the creative use by Gypsy musicians of different musical styles. This may be largely an individual matter, as when an Irish Traveller performs a song both in the traditional Irish way and in American Country and Western style. It may also be more systematic as with Manush and Sinti jazz musicians, such as Hänsche Weiss and his group, who are able to perform Hungarian urban Gypsy music (that is the *nóta* and *csárdás* of Hungarian popular music) both with a Hungarian style of delivery or in Swing jazz style with corresponding tempo changes and use of complex seventh and ninth harmonics in the guitar accompaniment.

Change of tempo is a common musical technique with which Gypsies distinguish items of their repertory from those shared with the main population or other Gypsy groups. In the Finnish Roma tradition, long pauses and ornamented, elongated tones, especially at cadences, generally halve the tempo of songs by comparison with the Finnish folksinging tradition. Similarly, Slovak Roma deliver *tempo giusto*-adapted Slovakian songs at a much reduced speed. In Hungary the Vlach Gypsies also mark their regional differences through variation in tempo: the south-eastern Vlach Gypsies perform slower than those in the north, particularly compared to performers in Budapest. British Travellers, as with the Finnish Roma, may change the metrically-structured tempos of adopted songs to a freer rubato style. Despite the similarities of processes, such temporal changes sound very different from one group to another. A Finnish Roma performance, for example, still sounds metrically structured in comparison with Spanish or Hungarian vocal deliveries.

Changes in tempo affect the texts in vocal genres. The priority given by Gypsies to emotional expression means that poetical aspects may be distorted or overridden. This is especially pronounced in flamenco singing where the performers may interrupt a word to include long melismatic decorations or guitar solos, so that even the metric structures, such as *seguiriyas*, lose their importance.

In genres such as ballads, in which the emotional intensity important for Gypsies is already embedded in their topics, performers tend to support a specific story in a manner that stays more or less faithful to the original, though additional verses or lines may be added to 'Gypsify' the protagonists or performer. For example, at the end of one performance of *For my Name is Jock Stewart*, JEANNIE ROBERTSON added the lines, 'So come, fill up your glasses of brandy and wine, Whatever it costs I will pay'. This is almost identical to a formulaic couplet used by Hungarian Vlach Gypsies to express their generosity and the value of sharing money and good times with others.

Among bi- or trilingual Gypsy groups, switching languages is a more obvious signal of context. It may serve, for example, to protest at the 'alien' position of Gypsies in a non-Gypsy world, such as when they are in hospital or prison, or to playfully blur the demarcations (e.g. adding a purely Romani text to a Hungarian song), or to allow ironical or humorous expression of matters that offend strict Romani morality and thus are more safely sung in the second language.

While professional Gypsy performers must, to a degree, comply with the linguistic and thematic preferences of their non-Gypsy audiences, they often find ways of 'Gypsifying' texts by making references within traditional songs to, for instance, football stars, popular television programmes or driving a Mercedes car.

Whether texts are adapted (e.g. ballads), or created by a technique of formulaic improvisation, Gypsy songs in Europe tend to deal with a similar range of topics and mostly, though not exclusively, from a male perspective. These include personal loss, loneliness, imprisonment, family relations (especially between mother and children) and the ambiguous nature of love, but also the joys of Gypsy life, such as being together with their 'brothers', going to a fair, selling and buying horses, as well as explicit notions of physical love, a topic that is also part of the kinaesthetic expressions of many Gypsy dances.

Gypsies generally – whether Finnish Roma, Hungarian Vlach Gypsies or British Travellers – also have a practice

2. Gypsy band with two violins, cimbalom (dulcimer) and double bass, north-east Hungary

of associating songs with a special individual in their lives or creating specific songs to the memory of a beloved person, which is rooted in the significance of music and its relationship with Gypsy life and family.

Typically, lyrics retain elements of ambiguity, which can make it hard to distinguish them from more specific personal statements unless one is familiar with Gypsy symbols, logic or the individual's life story. Such ambiguity offers a way of telling or 'confessing' socially and personally disturbing events which, under the strong moral rules of Gypsy societies, cannot be talked about explicitly.

Until recently, Gypsy songs have lacked overt political messages. Even songs about the Holocaust (e.g. *Ballad of Hitler*) followed their conventional deeply sorrowful and resigned lyrics and were seldom performed except by those personally affected. An implicit political aspect, in its broadest sense, is present in the performance practice, within the interactions between performers.

5. Instrumentation. As with repertory, instruments used by Gypsy performers are generally those favoured by the dominant population, for instance the fiddle and bagpipes in Scotland and Ireland or the harp in Wales. In many places, for instance in German-speaking areas, the guitar is an important Gypsy instrument. It may occur in specific forms, such as the seven-string guitar among Russian Roma or the flamenco guitar in Andalusia. In Syria, Iraq and other Middle Eastern countries, Gypsies are associated with the spike fiddle (*rebaba*) and the long-necked lute *buzuq*. In Syria the *Nawar* use empty petrol cans as sound-boxes for *rebaba*, not unlike the eastern European Roma, who also use various household items and other utensils in their music-making. In Roma-populated regions of eastern Europe, the *taraf* ensembles of Romania and *cigány banda* of Hungarian areas (expanding to areas of the former Habsburg empire), comprising violin, viola and double bass, may be combined with local instruments (e.g. *ţambal* or *cimbalom*), which are strongly, if not exclusively, associated with Roma (fig.2). In other instances, the viola and bass may be replaced by the accordion, another instrument which has strong Roma associations in Romania as well as Bulgaria, in order to become acceptable to local aesthetics or reduce cost and problems of transportation. Local aesthetics may require a *tambura* band comprising a *tamburica*, *brach tambura* and bass *tambura* as in southern Hungary or be reduced to two *tamburicas* as in Serbian-populated Banat (Romania) areas. Brass ensembles or *fanfare* perform with breathtaking virtuosity among the Roma in that region as in central Moldavia and in Serbia.

In the Ottoman Turkish tradition of the Balkans are urban bands known as *čalgija* in Kosovo and Macedonia, *koumpania* in Greece (*see* Greece, §IV, 2(i)) and 'wedding bands' in Bulgaria. These bands employ similar instruments to those of urban Turkish popular art music traditions, such as the *kaman* (violin), *tanner*, (long-necked fretted lute), *'ūd* (fretless lute), *ney* (flute), *daire* (frame drum) or *darabuka* (kettledrum). They are also played by Roma. Some instruments are viewed as typically

Roma, for instance the *dzumbus* (banjo) in Kosovo or the clarinet in Bulgaria, and tend to be retained for that reason; in recent years, some instruments have tended to be replaced by their amplified modern equivalents (e.g. guitar, bass guitar, drum sets). The rural, and largely outdoor *zurna-davul* ensembles, which are traditionally of ritual importance at weddings and circumcision ceremonies, have survived as a preserve of Roma performers throughout the Balkans as well as in many parts of the Middle East (*see also* SURNĀY). In Iraq the Gypsies, or *kawlīyya*, perform on the drum and shawm (*ṭabl wa zurna*) in addition to the spike fiddle (rebāba). In many instances, the traditional *zurna-davul* Roma ensemble developed during the 19th century into full brass-band ensembles, with trumpets, saxophone, tuba, bass tuba and additional instruments such the accordion, though its traditional form is also kept in some countries, for instance Macedonia, as a symbol of the Roma 'national' political movement.

The strong connection between the Roma and the *zurna-davul* ensemble, which may be connected to their Indian heritage, is evident in the name of Albanian Roma bands, *dualle* (drum) which, as in other parts of the Balkans, has became modernised and uses amplified instruments. It is also argued that the *zurna-davul* combination inspired the violin-*gardon* ensembles of Hungarians and some Roma in Transylvania. There, the cello-shaped *gardon* is used as a percussive instrument, with strings plucked and beaten with a bow. The *gardon* is regularly, though not exclusively, played by a woman, the wife of the violinist.

6. FEMALE PERFORMERS Gypsy women are notable performers of flamenco singing and dancing, and a few have been and still are distinguished *primáses* (lead violin player) in Hungarian *cigány banda*. In the Ottoman Turkish-influenced Balkans and Middle-East, they are widely engaged as professional singers, dancers and frame-drum (*daire*) players (*see* DĀIRA and DAFF). Their musical activities are viewed, however, with suspicion, since only women of bad-reputation are thought to take part in musical entertainment. Gypsy women performers have, for centuries, been perceived by non-Gypsies as prostitutes or as *femmes fatales*, a common theme also of 19th-century European operas such as *Carmen* or *Rigoletto*. This widespread representation is related to a complex combination of concepts about music, Gypsies and the socio-economic position of women in societies at large. In most Gypsy societies, women are the dominant providers for their families' everyday needs and musical performance is one of many economic roles (others include hawking, fortune telling or providing domestic help for non-Gypsy households). Gypsy woman take advantage of non-Gypsy stereotypes and sell these representations but not themselves in music and dance. Gypsy women adhere to strict moral rules, which keep strict boundaries between Gypsies and non-Gypsies, males and females. In turn, Gypsies regard non-Gypsy women as potentially non-moral.

The ambivalent position of male and female Gypsy musicians enables them to perform during the liminality of rites of passages such as weddings, circumcisions, baptisms and funerals. For the same reason, non-professional Gypsies carry out a number of pre-Christian or pagan traditions in Christian societies. In Bulgaria and Romania the rain-invoking dance, *paparuda*, is performed by young Roma girls dressed in grass and sprinkled with water while singing. Roma adults also perform rituals on New Year's Eve both in Romania and Hungary.

In many societies Gypsy musicians help to induce heightened states of mind in their audiences, such as *kefi* in Greece, *duende* in Spain or Hungarian *mulatás* (merry-making or 'merry-making with tears'), echoed in the Vlach Gypsy concept of *voja kerel*, a sacred 'liminal' state that combines joy, sorrow, consolation, extreme happiness and peace.

7. NEW DEVELOPMENTS. The massive upheavals of the 20th century, with its two world wars, frequently changing political regimes and boundaries, increasing urbanization and industrialization and, not least, the first stirrings of Roma movements to claim their own rights, all left their mark on Gypsy populations and on their music-making.

Arguably, the most widely influential development is the Manush jazz style evolved in the 1930s by Belgian-born DJANGO REINHARDT. This drew on several strands, particularly 19th-century *musette*. a dance music style that developed in Paris from the traditions of migrant workers from rural France (Auvergne) and Italy. Initially it was played on the accordion, to which the *bandurria* and the banjo were later added as accompanying instruments, the latter being introduced to France together with minstrel shows after World War I. Subsequently, the guitar proved better suited for performance of the fast and fluid improvisatory sections in the dialogic interactions between performers, a performance structure preferred by the Manush and by most other Gypsies to the non-Gypsy (*gajo*) 'lead' and 'accompanist' structure. Thus the basic seed of the French 'jazz' tradition had been planted by the time Reinhardt started playing; his contribution was to blend it with further traditions, such as American Swing, and to give it an eastern European Gypsy flavour in the form of STEPHANE GRAPPELLI's violin style. The western European Gypsy style of Manush jazz created by their *Quintet de la Hot Club de France* has continued to thrive and diversify. Some performers (e.g. the Rosenberg Trio) have stayed near to the original 'tradition', while others push it towards more mainstream US jazz styles (e.g. Christian Escoudé) or flamenco (e.g. Rapháel Fäyre), though most of them acknowledge their musical descent from Reinhardt by playing his compositions (e.g. *Nuages* or *Anounman*).

The Manush jazz style was also taken up by the German Sinti, the Roma group most affected by the Holocaust, as a way of breaking publicly from Germany by asserting a new musical identity. This Sinti school started in the late 1960s on the initiative of the violin player Schnukenack Reinhardt. It is stylistically similar to Manush jazz, but adds vocal parts, which may articulate political texts in Sinti Romani, and places more emphasis on eastern European Roma traditions. The latter dimension involves both repertory (including Hungarian *nóta and csárdás*) and Russian popular pieces or Gypsy romances) and additional instrumentation (accordion, harp, cimbalom and double bass).

Another major trend has been the emergence of 'newly composed folk music' (*novokomponovana narodna muzika*) in the territories of former Yugoslavia since the 1980s. Introduced by the Belgrade group *Južni Vetar*, ('Southern Wind'), this blended various elements associated with specific ethnic musics, such as the Serbian *dvojka* (2/4) metre, the Bosnian ornamented *sevdalinka*

and 'flat' (*ravno*) singing style, and Macedonian asymmetric rhythms (7/9), with Western pop-music instrumentation. The overall eastern feel of the music, together with involvement of Roma musicians such as Šaban Bajramovič and the appeal of its 'internationalism' and 'novelty' to Roma taste, led to rapid acceptance of this style by the local Roma population, to the extent that older repertory was pushed into the background, thereby diminishing divisions between the repertories of professional and non-professional Roma musicians.

By contrast, a perceptible growth in nationalism in Bulgaria strongly favoured the propagation of 'pure' Bulgarian culture, free from 'foreign' (i.e. Turkish) influences. The newly emergent 'wedding music' (*svadbarska musika*), which was predominantly performed by Roma (and/or Turks), came under sustained attack because of its fast tempos, and its highly improvised ornamented character and instrumentation – all perceived to be opposed to the quieter, simpler values of 'folk music' (*narodna muzika*). Despite official disapproval, 'wedding music' gained wide popularity among Bulgaria's youth, both Roma and Bulgarian, precisely because its foremost performers (e.g. Ivo Papasov) amalgamated the *hora*, *rutsenitsa* and *kopanitsa* styles of folk dance music with a mixture of others, such as *arabesque*, Macedonian Roma, film music, Western pop and jazz, played on loudly amplified modern instruments.

In Spain, the flamenco tradition, which already had a long history of incorporating new influences (e.g. Cuban rumba or *son* into flamenco rumba) continued to develop. After the death of Franco and an accelerated migration of population from the Andalusian south to the industrial cities of Madrid and Barcelona, flamenco rumba was fused with Western rock music in the Catalan rumba, which continued to use the Andalusian Phrygian cadence and Gitano techniques of voice production but took on a more consciously political stance in its song texts and emphasized its rock affiliations. Guitarist Paco de Lucia and the singer Camarón infused traditional flamenco style with jazz and pop elements, while other artists, such as Lole (Montoya) and Manuel, combined flamenco guitar playing and blues-inflected Arab singing to give new life to flamenco's (and Anadalusia's) historical connection with Arab music. The Catalan style flamenco and rumba have gained popularity among the Southern French Roma too, many of whom are from Catalan Gitan descent, for example the (kin) members of the group *Gypsy Kings*, and they have developed it further by incorporating the Cuban SALSA.

In Hungary, the 1970s 'dance house' revival of folk music among Hungarian youth inspired young Vlach Gypsies working in Budapest to modernize their own hitherto unknown vocal traditions by adding harmonic accompaniments on acoustic guitar. The growing public recognition given to recordings of the pioneering group *Kalyi Jag* has inspired others. One of the most innovatory of these is *Andro Drom*, who have served Roma political goals by broadening the original Vlach Gypsy core of the music to acknowledge symbolic links not just with Hungarian Romungre (the inclusion of *cimbalom*) but also to other Roma traditions, both from the East (the Balkans and even India) and the West (Catalan rumba rhythms).

Though Gypsies have in most places been appreciated for their musical services and their popularity is increasing widely, their marginalized social position has persisted. It is ironical that Gypsy music thrives through its willingness to conserve, adapt and experiment with the traditions of their 'host' cultures, thereby sustaining and enriching the very cultures that for five centuries have been bent on excluding and eradicating the Gypsy presence from their midst.

IRÉN KERTÉSZ WILKINSON

Gypsy scale [Hungarian mode, Hungarian scale]. The scale type *c–d–e♭–f♯–g–a♭–b–c′*, so called because of its use in much Hungarian Romantic music (particularly the *verbunkos* and the *csárdás*).

Gyrowetz [Gyrowez, Girowetz], **Adalbert** [Jírovec, Vojtěch Matyáš] (*b* Česke Budějovice, 19/20 Feb 1763; *d* Vienna, 19 March 1850). Bohemian composer and conductor. His father, a choirmaster, taught him singing and the violin and he later studied the organ and thoroughbass with Haparnorsky, a church organist and composer. His earliest compositions include serenades, sacred works and string quartets. After excelling in his studies at the local Gymnasium, he began studying jurisprudence in Prague. He was an exceptional student and in addition to German eventually learnt to speak Latin, Czech, Italian, French and English. Limited finances forced him to abandon his studies and become secretary to Count Franz von Fünfkirchen, who encouraged him musically, and with whom he spent his winters in Brno. The success of several works for wind instruments led him to compose his first six symphonies, which were well received, and an opera, which was not performed.

A promising young composer, Gyrowetz left the region and travelled to the principal music centres of Europe: Vienna, Italy, Paris, London, and then back to Vienna. During his first visit to Vienna, in either late 1785 or 1786, he made the acquaintance of Haydn, Dittersdorf, Albrechtsberger and Mozart; he developed a warm relationship with Mozart, who performed one of his symphonies at a subscription concert. In the service of Prince Ruspoli he travelled to Italy, where he met Nardini in Florence and Goethe in Rome. He composed six string quartets which, without his knowledge, were published in Paris by Imbault as his op.1. He left Prince Ruspoli in 1787 and went to Naples for two years. During this time he studied composition wth Paisiello and counterpoint with Nicola Sala. He led a meagre existence teaching and playing at quartet parties. In 1789 Gyrowetz arrived in Paris to find that one of his symphonies had been published under the name of Haydn and that his op.1 quartets had created a sensation; seven more editions had been published, and the demand for new works was strong. Gyrowetz obliged and entered a productive period for both symphonies and string quartets.

Escaping the revolutionary fervour of Paris during that same year, Gyrowetz came to London where he spent the next three years. He was immediately successful both in society and as a composer. When Haydn arrived in 1791 Gyrowetz helped introduce him to the city's high society. Works by both composers were performed at the same concerts sponsored by Salomon. That same year Gyrowetz was commissioned to compose the *opera seria Semiramis* for the Pantheon. Unfortunately, the theatre burnt down in January 1792, and his music was either destroyed or never completed.

Failing health forced Gyrowetz to leave London in 1792. From England he travelled by way of Brussels, Paris, Berlin and Dresden to Bohemia (1793), where he spent some time in Prague and in his home town. According to his autobiography he had a brief and friendly encounter with Napoleon during his travels. He then returned to Vienna, where he remained, except for a short stay in Munich and Schwetzingen in the service of Count von Sikkingen just before the turn of the century. Dividing his time between diplomatic service and composition, Gyrowetz continued to produce chamber music and sacred music through the early 1800s. In 1804 he became the Second Kapellmeister for the Vienna Court Theatre, an appointment that resulted in a radical change in his compositional output. His production of instrumental works dwindled quickly, although they did not necessarily go out of fashion. As late as 1818 the nine-year-old Chopin made his début with an orchestra playing a concerto by Gyrowetz.

In his new position Gyrowetz was obliged to compose at least one opera and one ballet a year. His first major success was *Agnes Sorel* (1806), an *opera seria* that was performed 124 times in Vienna during the next decade. It continued to be performed throughout Europe for the next 30 years and was translated into German, Polish, Danish and Hungarian. The Singspiel *Der Augenarzt* (1811) was also very popular in Vienna and Germany. Other important works include *Robert, oder Die Prüfung* (1813), reportedly admired by Beethoven, *Il finto Stanislao* (1818), composed for La Scala in Milan on a libretto later used by Verdi in *Un giorno di regno*, and *Hans Sachs* (1833), written for Dresden, of interest as a predecessor to Wagner's *Die Meistersinger*. The ballets of Gyrowetz also received international attention. Among his best known scores are *The Inconstant Page*, or *The Marriage of Figaro* (1819) and *La laitière suisse* (1821).

Gyrowetz retired from his position in 1831 and remained in Vienna until his death in 1850. An autobiography in 1848 describes in detail not only his contacts with a large number of well-known musical, literary, artistic and political figures, but also the performing practices and social conditions in many of Europe's leading musical centres. During his last decades he was greatly admired by the younger generation, including Meyerbeer, who even assisted him financially. Gyrowetz served as a pall-bearer at Beethoven's funeral, and encouraged Chopin early in his career. Despite the international focus of his career, Gyrowetz seems also to have been aware of the nationalistic movement in Bohemia, and set a number of songs in the Czech language.

Gyrowetz has frequently been called a follower of Haydn, but there is little musical support for this view. No evidence exists (not even from his autobiography) that he studied with the older master, and his youthful musical style is much more akin to that of Pleyel, Hoffmeister and Kozeluch, composers he greatly admired in his younger years. There is clear evidence that contact with Haydn in London inspired Gyrowetz to borrow some of his musical ideas. But these borrowings are few, and they are incorporated into his own musical style. During the 1790s Gyrowetz was acutely aware of the prevailing French styles, and his works reflected the latest trends. After the turn of the century four-movement formats are dominant in his instrumental works, and an understanding of unity, balance and proportions is apparent – not within the stylistic parameter of Haydn or Beethoven, but within the emerging new Romanticism, a style that he helped to create.

It is difficult to assess his historical role in composing for the stage. A study of his operatic works has not been undertaken and, in general, this period in Vienna is not highly regarded for this genre. Nonetheless, next to Weigl, he is the leading composer of Singspiel and other dramatic works in Vienna during the first three decades of the 19th century. His themes of heroism, magic and exoticism (e.g. in *Das Winterquartier in Amerika*, 1812) reveal that his subject matter is at least consistent with early Romanticism. If his role in operatic history is questionable, there can be no doubt that he was an important figure in the emergence of Romantic ballet. He worked with both Jean Aumer and Filippo Taglioni, two of the most important choreographers in the establishment of the classical ballet traditions, and at least one of his works, *La laitière suisse*, was danced by the two most celebrated ballerinas of the century, Fanny Elssler in Vienna and Marie Taglioni in Paris.

ADRIENNE SIMPSON/ROGER HICKMAN

Gyselynck, Franklin (*b* Ghent, 26 April 1950). Belgian composer. He studied at the Ghent and Brussels Conservatories, and at the Chapelle Musical Reine Elisabeth. He obtained first prizes in harmony and composition with Vic Legley, and in counterpoint and fugue with Jean Louël. Since 1974 he has taught counterpoint at the Brussels Conservatory.

Despite the early influence of Legley, he quickly found his own style. His compositions contain elements of neo-Classicism and post-war serialism but also clearly demonstrate an intuitive, introspective approach, with great care for detail and solid harmonic form and structure. His lyric poem *Las alturas de Macchu Picchu* (1979) has great dramatic impact and theatrical quality. He attempts to express humanitarian concerns in several of compositions. This brought him early recognition, and in the 1970s his work won several awards, including the Royal Academy of Belgium prize (1974) for his String Quartet no.1, the Queen Elisabeth prize (1976) for his Ballade for violin and piano, the Oscar Esplá prize (1978) for *Les alturas de Macchu Picchu*, and the Koopal prize (1982) for his *For a Better World*.

DIANA VON VOLBORTH-DANYS

Gysi, Fritz (*b* Zofingen, canton of Aargau, 18 Feb 1888; *d* Zürich, 5 March 1967). Swiss music critic and musicologist. He began his musical studies at the Basle Conservatory and subsequently studied musicology and art history at the universities of Zürich, Berne and Berlin. In 1921 he completed the *Habilitation* in music history at Zürich University, where he became titular professor in 1931. From 1928 he was music critic of the Zürich *Tagesanzeiger*, and from 1915 he wrote for the *Basler Nachrichten* and the Basle *National-Zeitung*, as well as being correspondent for other newspapers in Switzerland and

elsewhere. His chief interests were Swiss music history and 19th-century music.

JÜRG STENZL

Gyterne. *See* QUINTERNE. Term used from the 13th century for a GITTERN, from the 16th for a small guitar (*see* GUITAR, §3 and §§4).

Gyuzelev [Ghiuselev], **Nikola** (*b* Pavlikeni, 17 Aug 1936). Bulgarian bass. He studied at Sofia and joined the Bulgarian National Opera in 1960, making his début as Timur. In 1965 he toured France, Germany and Italy with the company and made his Metropolitan début as Ramfis. He sang in most major European theatres, including La Scala, the Paris Opéra, the Vienna Staatsoper and Covent Garden, where he made his début in 1976 as Pagano (*I Lombardi*). His repertory included Boris, Dosifey (*Khovanshchina*), Borodin's Galitsky (which he sang at Covent Garden in 1990), Don Giovanni, Rossini's Don Basilio, Oroveso (*Norma*), Henry VIII (*Anna Bolena*), Gounod's and Boito's Mephistopheles and the four villains in *Les contes d'Hoffmann*. His rich, dark-toned voice was most effective in Verdi, notably as Philip II, Attila, Silva (*Ernani*) and Fiesco (*Simon Boccanegra*).

Haack [Haacke, Haak, Haake], **Friedrich Wilhelm** (*b* Potsdam, 1760; *d* Stettin [now Szczecin, Poland], 1827). German violinist, organist and composer. Apparently a violin student of Franz Benda, he also studied composition (with Carl Fasch) and the organ. He began his professional career as a youth in the private orchestra of the crown prince of Prussia at Potsdam, and later held posts as organist at Stargard (from 1779) and Stettin (from 1790). At Stettin in 1793 he became the leader of a layman's musical group which gained a reputation comparable to that of the Berlin Sing-Akademie (founded two years earlier by Fasch). After 1800 Haack was a theatre Kapellmeister and the Kantor of the Marienkirche at Stettin; J.A.P. Schulz knew him there and left him his music collection. Haack published six piano trios (Berlin, 1793), a keyboard concerto (Berlin, 1793), a violin concerto (Berlin, 1801), three string quartets (Berlin, n.d.) and a *Caprice* for piano (Leipzig, n.d.). A concerto for two harpsichords also survives in manuscript (in *D-Dl*). His opera *Die Geisterinsel* (written 1798, after Shakespeare's *The Tempest*) was the fourth to use Gotter's libretto. The *Allgemeine musikalische Zeitung* (ii, 1799–1800, col.135) remarks that 'the richness, fullness and elaboration of the harmony, especially in solemn and sublime passages, are supposed to distinguish this composition greatly'. Haack's other vocal works and symphonies are lost. His brother Karl [Charles] (*b* Potsdam, 18 Feb 1751; *d* Potsdam 28 Sept 1819), a violinist and composer, studied the violin under Benda and also joined the private orchestra of the crown prince of Prussia at Potsdam. In 1796 he became leader of the royal chamber of musicians; he was pensioned in 1811. Widely appreciated in Potsdam and Berlin, his pupils included Karl Möser, F.A. Seidler and L.W. Maurer. He published at least five violin concertos (the first two in Paris, *c*1779) and about six flute sonatas. (*EitnerQ*; *GerberL*; *GerberNL*)

E. EUGENE HELM

Haag, Den (Dutch). *See* HAGUE, THE.

Haapanen, Toivo (Elias) (*b* Karvia, 15 May 1889; *d* Asikkala, 22 July 1950). Finnish musicologist and conductor. He studied the violin and music theory in Helsinki (1907–11), Berlin (1921) and Paris (1924) and musicology with Ilmari Krohn at the University of Helsinki (MA 1918), where he took the doctorate in 1925 with a dissertation on the manuscripts in neumatic notation in the university library. After a period as a violinist, violist and conductor of various orchestras in Helsinki and Turku, he was head of the music department of the Finnish Broadcasting Company (1929–46) and chief conductor of the Finnish RO (1929–50). He was also a lecturer (1925–46) and professor *extra ordinis* of musicology (1946–50) at the University of Helsinki. As a conductor, broadcast programme planner, lecturer, administrator, music critic and writer he did much to promote Finnish music in Finland and abroad. His research was mainly concerned with early Finnish music history; his major work, *Suomen säveltaide*, was the first critical history of Finnish music and remained for a long time the only work of its kind.

ERKKI SALMENHAARA

Haar, James (*b* St Louis, 4 July 1929). American musicologist. After graduating from Harvard (BA 1950) he began graduate work at the University of North Carolina, where he worked with Glen Haydon (MA 1954). He then returned to Harvard, where he studied musicology under John Ward and Nino Pirrotta and received his PhD (1961) with a dissertation on *musica mundana*. He taught at Harvard (1960–67) and at the University of Pennsylvania (1967–9). In 1969 he was appointed professor at New York University, and in 1978 became professor at the University of North Carolina, Chapel Hill.

Haar has written widely on the 16th-century madrigal, the history of music theory in the 16th and 17th centuries and manifestations of humanist thought in the music of that period. His work on the madrigal has focussed on the early cinquecento, stressing its independence from the

frottola and its relationship to the French chanson. In addition to his activities as teacher and scholar Haar served as general editor of the *Journal of the American Musicological Society* (1966–9) and president of the AMS (1976–8). In 1987 he became a member of the American Academy of Arts and Sciences.

PAULA MORGAN

Haarklou, Johannes (*b* Førde, Sunnfjord, 13 May 1847; *d* Oslo, 26 Nov 1925). Norwegian composer, organist and critic. After graduating from Stord Teachers' Training College in 1868 he worked for some years as a schoolteacher, but from 1872 he devoted himself completely to music. He studied with L.M. Lindeman in Christiania (Oslo) in 1872, and then at the Leipzig Conservatory with Richter, Jadassohn, Kretzschmar and Reinecke (1873–5). He spent a year (1877) at the Hochschule für Musik in Berlin under Bungert, Kiel and Haupt. After settling in Christiania in 1880 as organist, he conducted a series of popular symphony concerts (1883–8), supported by grants from the Norwegian parliament, and later toured extensively as an organ virtuoso, well known for his improvisations.

As a composer Haarklou was influenced by Grieg, but he soon turned to a style which, though late Romantic in its harmonic idiom, was based on the Viennese forms and, while drawing on Norwegian folk music, showed contrapuntal tendencies. He wrote four symphonies, the popular orchestral suite *In Westminster Abbey*, and five operas, among which *Marisagnet* (on a subject from Norwegian folklore) was his greatest success (1909). Many of his organ works, such as *Fantasi triomphale* (1900) and the two organ symphonies (1916 and 1924), are of high quality and are still performed; and many of his choral compositions and songs remain in the standard Norwegian repertory. From 1882 to 1921 Haarklou was active as a music critic of various newspapers. In 1910 he received an annual state grant from the Norwegian parliament.

FINN BENESTAD

Haas. German family of brass instrument makers. Active in Nuremberg, they were descended from Caspar Haas and his son Lorenz, both tower watchmen who played the trumpet as part of their duties. Lorenz's son, Johann Wilhelm Haas (*b* Nuremberg, bap. 6 Aug 1649; bur. Nuremberg, 2 July 1723), who probably learnt from Hanns HAINLEIN, became a master in 1676 and went on to be the most famous of the Nuremberg brass instrument makers; both his youngest son, Wolf Wilhelm Haas (*b* Nuremberg, bap. 3 March 1681; bur. Nuremberg, 21 Feb 1760), and Wolf Wilhelm's eldest son, Ernst Johann Conrad Haas (*b* Nuremberg, bap. 16 March 1723; *d* Nuremberg, before 29 Feb 1792) – masters in 1706 and 1748 respectively – signed their instruments with his name instead of their own. (Johann Adam Haas, bap. 16 Dec 1769; bur. 11 Jan 1817, who in 1796 became one of the last of the Nuremberg masters, left no known instruments.) In 1719 the Nuremberg business agent C.S. Dresde wrote in a letter that 'There are others here who work for less ... [b]ut ... Mr Haas is the best and most highly regarded'. In his *Versuch* (1795, probably written in 1770 or just before; p.10) J.E. Altenburg noted that the trumpets of 'W. Hasen' were the best for general use.

The products of these three generations of the Haas 'factory' (Barclay, 1997) were in great demand throughout Europe, as witnessed today by the unusually large number of surviving instruments distributed over a wide area. Over 60 trumpets are known as well as seven horns of various shape and two trombones. The trumpets exhibit the typical 'late Baroque' bell, with a narrower throat and more rapidly expanding terminal flare than those by earlier makers, notably Schnitzer and Hainlein. Wörthmüller has shown the existence of at least three types of Haas trumpet, ranging from the simple to the ornate and doubtless corresponding to price categories. He also established the canon (expanded slightly by Smithers) of which instruments are attributable to which family members, based on their maker's marks and on minute variations in the shape of the angel heads appearing on the bell garlands of many of the ornate trumpets. The appearance of the family's maker's mark, a hare running to the left, has been the subject of some confusion. All four family makers personally registered their mark on a brass tablet in possession of the *Rugamt* (now in the Kunstgewerbemuseum, Berlin; see Pechstein), but in actual practice did not necessarily hold to the prescribed shape: for example, it has been stated that Johann Wilhelm's hare looks to the left and those of both Wolf Wilhelm and Ernst Johann Conrad to the right, but on at least one dated instrument by Johann Wilhelm (1688; Trompetenmuseum, Bad Säckingen) the hare looks to the right, and on another, a magnificent silver and gilded trumpet by Ernst Johann Conrad (1765; Shrine to Music Museum, Vermillion, South Dakota), the hare looks to the left. At least three bezel patterns are known, although only one has been described in the literature (Wörthmüller, Smithers). Clearly, the canon will have to be re-thought in the future.

Besides the latter trumpet, the most splendid examples are another silver and gilded one made by a member of the family about 1750 (Metropolitan Museum of Art, New York no.54.32.1) and the 12 silver trumpets, four by Wolf Wilhelm (1744) and eight by Ernst Johann Conrad (1775), made for Elector Carl Theodor (Nationalmuseum, Munich no.47/25–36).

For illustration of an instrument by Wolf Wilhelm Haas, *see* TROMBONE, fig.5*c*.

EDWARD H. TARR

Haas, Friedrich (*b* Laufenburg, Baden, 1811; *d* Lucerne, 1886). Swiss organ builder of German birth. He trained from 1825 to 1829 with the Schaxel family of organ builders of Baden, alternately with the elder Schaxel at Herbolzheim and his sons Matthäus Schaxel at Freiburg and Josef Schaxel at Benfeld (Alsace). He continued his training – particularly in tonal aspects of the craft – with E.F. Walcker at Ludwigsburg, from 1830 to 1835, and is thus customarily regarded as a pupil of Walcker. From 1836 he worked independently. After 1840 he confined his activities exclusively to Switzerland, eventually becoming that country's most important organ builder of the middle of the 19th century. At first Haas, in the traditional way of craftsmen, did not settle in one area, but moved from place to place as his work required. Thus he moved to Lucerne in 1859 to renovate the organ of St Leodegar und Mauritius. He settled down there, however, and founded the organ-building firm which from 1867 was carried on by his colleague of long standing, Friedrich Goll, and which, as 'Orgelbau Goll & Cie AG', is still in existence. In his retirement he was occasionally employed as a consultant, as during the construction by Johann Nepomuk Kuhn of the organ of the Grossmünster, Zürich (1873–6).

Haas was modern in outlook and played a significant part in the technical and artistic transformation of organ building in the 19th century. At first he built purely mechanical slider-chest organs, but *c*1850 he changed to sliderless wind-chests and made use of Barker's pneumatic lever in order to make the tracker action smoother. In sound, he made the step from the south German late Baroque ideal to the fundamental tone quality of the Romantic organ. He loved wide scaling and double-lipped wooden pipes (Doppelflöte, Doppelbourdon). Many

details of scaling and other advice on the technique of organ building were incorporated in the second edition of Töpfer.

New or rebuilt organs by Haas include those at the following places in Switzerland: Grenzach (1837); Neumünster Reformed church, Zürich (1838–40); Rheinau (1840–41); Temple du Bas, Neuchâtel (1841); Stadtkirche, Winterthur (1841–3); Andelfingen (1842–3); Zofingen (1847); Berne Minster (1849–51); Lenzburg (1851); Fribourg Cathedral (1852–3); Leuggern (1854); Basle Cathedral (1852–7); St Leodegar und Mauritius, Lucerne (1859–62); Thalwil (1864).

FRIEDRICH JAKOB

Haas, Georg Friedrich (*b* Graz, 16 Aug 1953). Austrian composer. He studied at the Graz Hochschule für Musik, where his teachers included Doris Wolf (piano) and Gösta Neuwirth (composition), and with Cerha in Vienna (1981–3). He also attended the Darmstadt summer courses (1980, 1988, 1990) and worked with the Stage d'Informatique Musicale pour Compositeurs at IRCAM in Paris (1991). He has taught at the Graz and Oberschützen Musikgymnasium (1982–7) and the Graz Hochschule für Musik (lecturer from 1998). In the words of Reinhard Kager, Haas is attracted by 'resonant nocturnal worlds', with elements of the unreal and the irrational. While he initially relied on mathematical models, influenced by Hauer's *Zwölftonspiele*, he turned away from constructivism after *quasi una tânpûrâ* (1990–91). Later works employ freer tonal possibilities and show the influence of Feldman and Nono. In addition to microtonal intervals, his compositions feature concealed reminiscences of earlier music.

SIGRID WIESMANN

Haas, Ildephons [Johann Georg] (*b* Offenburg, 23 April 1735; *d* Ettenheimmünster, 30 May 1791). German violinist and composer. He was at first a soprano, and later had an admirable alto voice, and at 12 studied the violin under the Baden court musician Wolbrecht. In 1751 he entered the Ettenheimmünster monastery, where he studied under Johann Stamitz (who went there from Mannheim in 1755), using Leopold Mozart's violin tutor. After completing theological studies he trained himself in composition for three years through the tutors of Marpurg, Mattheson and Fux, and by correspondence with Isfrid Kayser, J.G. Portmann and the Abbé Vogler. He was ordained priest in 1759 and later held many positions in the monastery, including those of choir director (1761–73) and prior (1781).

Particularly in his later years Haas was respected as one of the best violinists and church composers in the upper Rhine valley. As early as 1764 his contemporary Marianus Königsperger ranked him alongside the Catholic composers Brixi, Zach and Kayser, and compared his works favourably to those of Leopold Mozart and Haydn. Gerber, however, criticized Haas's idiosyncratic three-part writing (omitting the viola, a practice which Haas defended in the preface to his *XXXII hymni vespertini*) and the use of 'sweet' 3rds and 6ths in the upper parts. In several theological works and in his compositions Haas opposed the secularization and decline of church music in the Strasbourg diocese. Maintaining that 'in church music the majesty of the surroundings calls for something uncommon', he set 40 sacred texts by the Benedictine priest Pirmin Hahn to 'melodies in the melismatic style'. Most of his later works, including many considered his best by Christmann (1791) and by Haas himself, were not published and are now lost. Haas also wrote an article, 'Fragen und Zweifel, jedem Tongelehrten zu beliebiger Beantwortung empfohlen', for Bossler's *Musikalische Realzeitung* (1791).

WORKS

XXXII hymni vespertini, 2vv, 2 vn, 2 bc, op.1 (Augsburg, 1764); XV offertoria, acc. orch, org, op.2 (Augsburg, 1766); [40] Geistliche Arien (P. Hahn), op.3 (Augsburg, 1769); Missa de nativitate, Salve regina, Wie weit mein Heiland, in Bossler: *Musikalische Realzeitung* (1791)
Lost works: stage work, Offenburg, 1759; 6 masses, 1784; 2 vespers, 1788; sequel to op.3, 1790; 34 Marian antiphons; other masses

FRIEDRICH BASER

Haas, Jonathan (*b* Chicago, 6 Sept 1954). American timpanist. After studying at Washington University, St Louis, and at the Juilliard School, he was nominated 'Young Artist of 1982' by the journal *Musical America*. He gave the first-ever solo timpani recital in the Carnegie Hall recital room in 1981. Haas was appointed principal timpanist with the New York Chamber SO in 1980 and the Aspen Chamber Orchestra in 1984, and became principal percussionist with the American SO in 1990. He also plays 'hot jazz' timpani with his band Johnny H and the Prisoners of Swing, 'rock' kettledrum with the

band Clozshave, and has recorded a solo mallet book (keyboard percussion instruments) for the album *Zappa's Universe*. Various composers, including Stockhausen, Glass, Irwin Bazelon, Marius Constant, Stephen Albert, Eric Ewazen, Thomas Hamilton, Robert Hall Lewis, Jean Piche and Andrew Thomas, have written works for him. Haas has recorded many 20th-century works, including Prokofiev's *Peter and the Wolf*, Copland's *Three Latin American Sketches* and George Crumb's *A Haunted Landscape*. He is director of the Peabody Conservatory Percussion Studio, and has given over 200 concert demonstrations as part of his Drumfire educational programme.

JAMES HOLLAND

Haas, Joseph (*b* Maihingen, 19 March 1879; *d* Munich, 30 March 1960). German composer. He trained as a primary school teacher before becoming a pupil of Reger in 1904. Haas developed a deep friendship with Reger and in 1907 followed him to Leipzig, where he also studied with Straube and Ruthhardt. In 1911 he was appointed to teach composition at the Stuttgart Conservatory and became a professor there in 1916. From 1921 he taught composition and directed the department of church music at the Akademie der Tonkunst in Munich. There he influenced generations of composers with a pedagogical method adopted from Reger. In 1921 Heinrich Burkard invited him to participate in the music committee of the Donaueschingen Festival, and Haas contributed substantially to the festival's success in the 1920s. Although his folk oratorios and operas were enormously successful in Hitler's Germany of the 1930s and 40s, Haas's biographers believe that his religious faith made him immune to Nazi ideology. In 1946 he was appointed president of the Staatliche Hochschule für Musik in Munich. He worked towards rebuilding this school until his retirement in 1950. In his last years he received many honours, including the Federal Cross of Merit and the Bavarian Order of Merit, as well as honorary doctoral degrees from the Papal Institute for Church Music in Rome (1953) and the University of Munich (1954).

As a composer Haas felt a strong bond to his teacher, Reger. His preference for small ensembles and genres, particularly character pieces (in the tradition of Schumann), lieder and small choral works led his critics to label him a 'master of small forms'. Such forms, however, enabled Haas to depart from the dominant programme music aesthetic of his day and achieve his goal of creating a folklike, 'popular' art music. He developed a transparent contrapuntal style, which first became evident in works such as the Divertimenti op.22 (1909) and op.32 (1911). By devoting himself to such genres and favouring music for amateur musicians, he supported the 19th-century tradition of domestic music-making, as well as the *Gebrauchsmusik* of the 1920s. His most important compositional achievement is perhaps in the field of the 'folk oratorio', in which he sought to transform the traditional oratorio through allowing the congregation vocal involvement in the performance. In his masses as well as his oratorios Haas achieved a folklike simple style based on unison choirs, basic forms, characteristic melodies, tonal harmony and the influence and presence of Gregorian chant.

WORKS
(*selective list*)

for complete list see Gemeinwieser (1994)

OPERAS AND ORATORIOS

Operas: Die Bergkönigen (Christmas story, F. Rodenstock), op.70 1927; Tobias Wunderlich (H.H. Ortner and L. Andersen), op.90, 1937; Die Hochzeit des Jobs (Andersen), op.93, 1943

Folk oratorios: Die heilige Elizabeth, op.84, S, spkr, chorus, orch, 1931; Christnacht, op.85, female/children's vv, chorus, solo vv, spkr, orch, 1932; Das Lebensbuch Gottes, op.87, chorus, solo vv, org/f/orch, 1934; Lied von der Mutter, op.91, S, Bar, chorus, children's, male and female vv, orch, 1939; Das Jahr im Lied, op.103, chorus, solo vv, spkr, orch, 1952; Die Seligen (Bible, A. Silesius, Haas, L. Schuster), chorus, children's chorus, solo vv, orch, 1956

OTHER VOCAL

Masses: Eine deutsche Singmesse (Silesius), op.60, chorus unacc., org, 1929; Hymnen an das Licht (W. Dauffenbach), op.82, chorus unacc., 1932; TeD, solo vv, chorus, orch, 1945

Secular: 3 Lieder, op.1, 1904; Unterwegs (H. Hesse), op.65, 1925; Gesänge an Gott (J. Kneip), op.68, 1926; many other choral and solo songs

INSTRUMENTAL

Orch: Heitere Serenade, op.41 (1913/14); Variationen und Rondo über ein altdeutsches Volkslied, op.45, 1916/17; Variationen-Suite über ein altes Rokoko-Thema, op.64, 1924; Lyrisches Intermezzo, 1937; Ouvertüre zu einem frohen Spiel, op.95, 1943

Chbr: 2 Sonatinen, op.4, vn, pf, 1905; Ein Kränzlein Bagatellen, op.23, ob, pf, 1909; 2 Grotesken, op.28, vc, pf, 1909; Sonata, op.29, hn, pf, 1910; Ein Sommermärchen, op.30, vc, 1910; Kammertrio, op.38, 2vv, pf, 1912; Grillen, op.40, vn, pf, 1912; Str Qt, op.50, 1919; 2 Kirchen-Sonaten, op.62, vn, org, 1925/6

Pf: Eulenspiegeleien, op.39, 1912; Sonata, a, op.46, 1918; Deutsche Reigen und Romanzen, op.51, 1919; Schwänke und Idyllen, op.55, 1921; 2 Sonatas, op.61, 1923; 4 Sonatinen, op.94, 1943; Klangspiele, op.99, 1945; many small character pieces

Org: chorale preludes, suites etc.

Principal publisher: Schott

TAMARA LEVITZ

Haas, Monique (*b* Paris, 20 Oct 1909; *d* Paris, 9 June 1987). French pianist. She studied first with Joseph Morpain and Lazare-Lévy at the Paris Conservatoire, where she received a *premier prix* in 1927, and then privately with Rudolf Serkin and Robert Casadesus. During an illustrious career she performed throughout Europe and the USA, as well as in Russia, Armenia, China and Australia. She taught at the Paris Conservatoire from 1967 to 1970 and gave masterclasses at the Salzburg Mozarteum. Her extensive repertory ranged from Bach to Messiaen, with an emphasis on modern music: she performed with Stravinsky, Hindemith, Poulenc and Enescu and made notable recordings of Bartók's Third Concerto, the complete piano music of Debussy and Ravel, and works by Milhaud, Prokofiev and Marcel Mihalovici, whom she married. Her elegant and fastidious style also made her an ideal Mozart player, as may be heard on her recordings of the concertos in E♭ K449 and

in A K488, with Ferdinand Leitner conducting the Berlin Philharmonic.

CHARLES TIMBRELL

Haas, Otto (*b* Frankfurt, 2 Dec 1874; *d* London, 27 April 1955). German antiquarian music dealer. He worked with the firms of Josef Baer in Frankfurt, Brentano in New York and Breslauer & Mayer in Berlin before joining Leo Liepmannssohn in Berlin in 1903. Later that year he bought the business from Liepmannssohn, subsequently continuing its well-known series of auction sales. In 1936 Haas moved the firm to London, where he continued it under his own name. He confined his business to the sale of music by important catalogues, of which he issued 37 in all, and by private offers. In 1955 he sold the firm to Albi and Maud Rosenthal, who have upheld the Liepmannssohn tradition of scholarly expertise.

ALEC HYATT KING

Haas, Pavel (*b* Brno, 21 June 1899; *d* Auschwitz [now Oświęcim], probably 18 Oct 1944). Czech composer. He studied composition at the Brno Conservatory in Janáček's masterclass (1920–22). He worked first in his father's business, then from 1935 as a private teacher of music theory, and finally taught music at the Jewish secondary in Brno. Haas took the style of Janáček as his starting point, and came closer to Janáček's compositional method than any of his other pupils. However, he developed this in his own way and soon achieved a mature individuality in the Wind Quintet op.10, the Piano Suite op.13 and the opera *Šarlatán* ('The Charlatan'). During the German Occupation he suffered persecution on account of his Jewish origin, performances of his compositions were banned, and neither he nor his wife were allowed to work. He was imprisoned in Terezín concentration camp (1941–4), where he continued to compose, including two of his best-known works, the Study for Strings (1943) and the *Four Songs on Chinese Poetry* (1944), which are linked to the Oboe Suite (1939) and the unfinished Symphony (1940–41) in expressing through music the struggle against Nazism. Haas died in a gas chamber at Auschwitz.

Janáček apart, Haas's melodic style owed much to Moravian folksong, Jewish chant and medieval chorale, while his rhythmic and harmonic thinking was influenced by contemporary Western European music and jazz. Although Haas and Janáček share a liking for concise motifs, Haas's are quite different in character from Janáček's. This difference is most apparent in the opera *The Charlatan*, its topic far removed from the world of Janáček while at the same time demonstrating remarkable dramatic talent. In Czech music, Haas represents a trend connecting the Czech national tradition with pioneering acts of international music.

WORKS

Dramatic: Šarlatán [The Charlatan] (tragi-comic op, 3, P. Haas), 1934–7, Brno, 2 April 1938; 7 incid scores, 3 film scores

Vocal: 6 písní v lidovém tónu [6 Songs in Folk Tone], op.1, S, pf/orch, 1918–19; 3 písně [3 Songs], op.2 (J.S. Machar), S/T, pf, 1919–20; Čínské písně [Chinese Songs], op.4 (Chinese poetry), A, pf, 1921; Fata Morgana, op.6 (R. Tagore), T, pf qnt, 1923; Vyvolená [The Chosen One], op.8 (J. Wolker), T, fl, hn, vn, pf, 1927; Karneval [The Carnival], op.9 (D. Chalupa), male chorus, 1928–9; Ps xxix, op.12, Bar, female chorus, org, orch, 1932; 7 písní v lidovém tónu [7 Songs in Folk Tone], op.18 (F.L. Čelakovský), S/T, pf, 1940; Al s'fod [Do not Lament] (D. Shimoni), male chorus, 1942; 4 písně na slova čínské poezie [4 Songs on Chinese Poetry] (trans. B. Mathesius), B, pf, 1944

Orch: Zesmutnělé scherzo [Melancholy Scherzo], op.5, 1921; Suite from 'The Charlatan', op.14, 1936; Sym., 1941, inc. (2 movts); Study, str, 1943

Chbr and solo inst: Str Qt no.1, op.3, 1920; Str Qt no.2, op.7, with jazz band ad lib, 1925; Wind Qnt, op.10, 1929; Pf Suite, op.13, 1935; Str Qt no.3, op.15, 1938; Suite, ob, pf, 1939

Principal publishers: Tempo (Prague), Bote & Bock

LUBOMÍR PEDUZZI

Haas, Robert (Maria) (*b* Prague, 15 Aug 1886; *d* Vienna, 4 Oct 1960). Austrian musicologist. After his schooling in Prague he studied at the universities of Berlin, Vienna and Prague, where he took the doctorate under Rietsch in 1908 with a dissertation on the Viennese Singspiel. He then went to Vienna as assistant to Guido Adler. From 1910 he worked for a few years as an opera conductor in Münster, Erfurt, Konstanz and Dresden, but returned to Vienna in 1914 as secretary to the Corpus scriptorum de musica medii aevii and the Denkmäler der Tonkunst in Österreich. After military service in World War I he worked in the Österreichische Nationalbibliothek, and in 1920 was appointed head of the music collection, a position he held until 1945 when his collaboration with the National Socialists led to his dismissal. Concurrently with his work in the library, he submitted his *Habilitationsschrift* at Vienna University in 1923 with a work on Eberlin's school dramas and oratorios, and in 1929 was appointed to a readership. In addition, he took over in 1927 the supervision of the Archiv für Photogramme musikalischer Meisterhandschriften, the collection of photocopies of musical manuscripts set up by Anthony van Hoboken in association with the Nationalbibliothek.

During the first part of his career, Haas worked primarily on the music of the Baroque and Classical periods, and was the author of comprehensive historical surveys (e.g. *Die Musik des Barocks*, 1928), scholarly editions, and detailed specialized studies particularly in the fields of opera and oratorio. His *Aufführungspraxis der Musik* (1931), an important early study of historical performing practices, reflects both his scholarship and his sensitivity as a practising musician.

His most important and complex legacy is his work on Bruckner, which occupied much of his later career. He prepared editions for the Sämtliche Werke of most of the composer's symphonies and masses. His text-critical work strongly influenced the course of Bruckner studies by making available previously unpublished versions; further, Haas promulgated the belief that the scores published during the composer's lifetime were not authentic and should be replaced with modern editions based solely on unedited manuscript versions. Although his ideological biases and scholarly rigour have recently been criticized, his basic editorial position still exerts some influence. Since the 1950s the editions by his successor, Leopold Nowak, have increasingly supplanted Haas's.

ANNA AMALIE ABERT/BENJAMIN KORSTVEDT

Haase, Wolfgang. *See* HASE, WOLFGANG.

Haass, Georg. *See* HASZ, GEORG.

Hába, Alois (*b* Vizovice, 21 June 1893; *d* Prague, 18 Nov 1973). Czech composer, theorist and teacher. He acquired his first musical skills in singing and playing the violin and the double bass in his father's folk band, which regularly performed at dances. His mother, Theresia Trčková, was an excellent folksinger who taught Hába peasant songs from Moravian Wallachia, the intervals of which sometimes deviated from the semitone system. Hába's conventional music education began at the teachers' training institute of Kroměříž (1908–12) where he became familiar with the standard repertory and the Czech tradition from Smetana and Dvořák to Suk and Novák. While still at the institute he began to compose; on leaving he taught himself for two years before taking a teaching position in Bílovice, in the Uherské Hradiště district of Moravian Slovakia. There he made a study of theoretical literature and attempted composition of greater complexity. The organ Fugue on H–A–B–A and the orchestral piece *Mládí* ('Youth'), both written in 1913, already show freedom in their use of diatonic melody and harmony and in their treatment of thematicism.

Shortly after the outbreak of World War I Hába left for Prague where, under the guidance of Novák, he passed the entrance examination for the conservatory. Novák recognized his talent and immediately accepted him into his course from which Hába graduated, after a year of study (1914–15), with his Sonata op.1 for violin and piano. It was Novák who encouraged Hába's creative self-discipline, gave him a thorough technical command and showed him how to harmonize modal folktunes. Hába was then called up for military service. A spell in Vienna enabled him to take lessons in counterpoint and vocal fugue with Stöhr and to continue his output of music, including the Suite (1917) for string orchestra, his first composition to use quarter-tones. This development was suggested by a report which Hába read in a Vienna newspaper of a lecture on quarter-tone music given by von Möllendorf on 20 January 1917. Also in Vienna Hába became acquainted with his countryman Petyrek, who recommended him to Schreker for private lessons in February 1918. Under Schreker's surveillance he wrote the piano pieces opp.1*b*, 2 and 3, the First Quartet op.4 and the Overture op.5; Schreker urged him to respect conventional forms and Brahmsian thematic working, but he did not restrain Hába's chromaticism – the Intermezzo from op.2 and the Sonata op.3 show an extreme of expanded tonality. But Hába's harmonic venturings did not emanate from Schreker: from 1918 he attended the concerts given by Schoenberg's Verein für Musikalische Privataufführungen, and he also worked as a proofreader for Universal Edition, correcting scores by Schoenberg, Szymanowski and Janáček. Under the influence of these composers, Hába returned in his op.6 to his earlier dynamic conception of tonality and form, replacing conventional tonal functions with a concept of pitch polarity; from this period the melody and rhythm of

Moravian peasant music became more important in his work.

In September 1920 Hába left with Schreker for the Berlin Hochschule für Musik, but his position as Schreker's pupil was now only formal and a definite split took place at Easter 1922. Beginning with the Six Piano Pieces op.6 (1920) Hába no longer showed his new works to Schreker. The music that he wrote during the years 1920–22 reveals a maturing of his free thematic writing and intensely chromatic melody and harmony, organized by means of his principle of polarity. In Berlin Hába also began to make plans for quarter-tone instruments, which were constructed after his return to Prague. He envisaged a department of quarter- and sixth-tone music at the Berlin Hochschule, but the project faltered as a result of financial, as well as cultural and political, obstacles. Hába went back to Prague in September 1923. With influential support in Czech artistic life and with the backing of Suk, he gradually established a department of microtonal music at the Prague Conservatory. The department began as a series of courses in quarter-tone music in 1924 and operated fully from 1934 until 1949 with an interruption during the war. Among its students were many Czech and foreign composers, including Ponc, Pauer, Hába's brother Karel, Osterc, Reiner, Ullmann, Ristič and Iliev. Hába himself took an active part in turning Czech music in a more adventurous direction; he was a leading officer of several Prague music societies and a jury member and honorary member of the ISCM. These efforts culminated in his organization of the 1935 ISCM Festival in Prague.

During World War II Hába was persecuted as a progressive artist, but in 1945 he returned to musical life, founding and managing (1945–9) the Grand Opera of the Fifth of May (now the State Theatre), and teaching at the Prague Conservatory and at the newly established Academy. When the department of quarter- and sixth-tone music was officially suspended in 1949, Hába devoted his attentions solely to composition and lecturing. He was elected to the Czech Academy of Sciences and Arts in 1929 and to the German Academy of Arts, Berlin, in 1961. In 1963 he was given the title Artist of Merit; in 1968, on the occasion of his 75th birthday, he received the Order of the Republic.

Hába may justly be regarded as the originator of the use of quarter-and sixth-tones in Western art music. To realize this new music he pioneered the construction of special instruments: three types of quarter-tone piano (1924–31), a quarter-tone (1928) and a sixth-tone (1936) harmonium, and a quarter-tone clarinet (1924), trumpet (1931) and guitar (1943). Hába's microtonal music employs the same compositional techniques as his work in the semitone system, and he avoided opposing the two. In the preface to his Second Quartet op.7 he wrote: 'It is my concern to permeate the semitone system with more delicate sound nuances, not to abolish it ... to extend the possibilities of expression already given by the old system'. This precept underscores his early microtonal works for strings (opp.7, 9, 12, 14 and 15) and the Suite op.13 for chorus. Developing from microtonal usage in Moravian folk music, the major mode is stressed by quarter-tone and sixth-tone sharps, the minor by quarter-tone flats; in each case the result is to heighten the expressive effect.

The masterpiece of Hába's quarter-tone music is the opera *Matka* ('The Mother') (1929), which begins with a profoundly moving funeral scene and closes with a

Alois Hába at his quarter-tone piano

purifying and exalting catharsis. Hába's use of microtones in this work shows the power of the technique in presenting dramatic action and emotional experience in musical terms, and a number of quarter- and sixth-tone quartets, written in the 1950s and 60s, prove the continuing vitality of Hába's innovations. These have tended to overshadow his extensive and highly individual output in the semitone system, an output dominated by piano and chamber pieces. The four nonets opp.40, 41, 82 and 97 are masterly in their solutions of different problems of style and form, while two early piano works (opp.6 and 8) are characteristic syntheses of chromaticism and modality within a very freely thematic style. In some works of the 1950s (e.g. the quartets opp.73–4, 76 and 79, and the orchestral works opp.77, 83 and 86) Hába moved towards a greater simplicity of harmony and form and a less sophisticated expression. Like all Hába's music, these pieces reveal a composer of fresh invention whose primary sources are to be found in the music of his native region.

For Hába's accidentals for quarter-tones, *see* NOTATION, fig.96.

WORKS

OPERAS

Matka [The Mother] (A. Hába), op.35, ¼-tone, 1927–9; Nová země [The New Land] (3, F. Gladkov, F. Pujman), op.47, 1935–6; Přijď království Tvé [Thy Kingdom Come] (Hába), op.50, ¼-tone, 1932–42

ORCHESTRAL

Mládí [Youth], 1913; Ov., op.5, 1919–20; Symfonická fantazie, op.8, pf, orch, 1920–21; Cesta života [The Way of Life], sym. fantasy, op.46, 1933; Valašská suita [Wallachian Suite], op.77, 1951–2; Vn Conc., op.83, 1954–5; Va Conc., op.86, 1955–7

VOCAL

Suite, op.13, ¼-tone, chorus, 1922; Já [Myself] (Hába), op.36, male chorus, 1928; 5 Children's Choruses, op.42 (V. Nezval), ¼-tone,

1932; Children's Choruses, op.43, ¼-tone, 1932; 5 choruses, op.44 (Nezval), ¼-tone, 1932; Pracující den [A Working Day], op.45 (J. Hora), ¼-tone, male chorus, 1932; Říkadla pro děti [Children's Rhymes], op.48, children's chorus, 1936; Dětské nálady [Children's Moods], op.51, Mez/Bar, ¼-tone gui, 1943; Poezie života [Poetry of Life], op.53 (R. Horalová), S, ¼-tone gui, 1943; Milenci [Lovers] (B. Benešová), song cycle, op.57, 1944; 5 Songs (Moravian trad.), op.58, Mez/Bar, pf, 1944

Ústava 9. května [Constitution of 9 May], op.64, male chorus, 1948; 3 Male Choruses (J. Hora, J. Hilčr), op.65, 1948; Meditace [Meditation] (R. Steiner), op.66, male chorus, 1948; Mír [Peace] (Hába), op.67, male chorus, 1948; Za mír [For Peace] (cant., Hába, D. Vačkář), op.68, chorus, orch, 1949; Male Choruses (J. Hilčer, K. Šiktanc, B. Balcar), op.71, 1950; Slovanské mudrosloví [Slavonic popular proverbs] (F.L. Čelakovský), op.84, children's chorus, pf, 1954–5; Poznámky z deníku [Diary Notes] (R. Pandulová, Hába), op.101, spkr, str qt, 1970

STRING QUARTETS

No.1, op.4, 1919; no.2, op.7, ¼-tone, 1920; no.3, op.12, ¼-tone, 1922; no.4, op.14, ¼-tone, 1922; no.5, op.15, ⅙-tone, 1923; no.6, op.70, ¼-tone, 1950; no.7, op.73, 1950–51; no.8, op.76, 1951; no.9, op.79, 1952; no.10, op.80, ⅙-tone, 1952; no.11, op.87, ⅙-tone, 1957; no.12, op.90, ¼-tone, 1959–60; no.13, op.92, 1961; no.14, op.94, ¼-tone, 1963; no.15, op.95, ⅕-tone, 1964; no.16, op.98, ⅕-tone, 1967

OTHER CHAMBER AND SOLO INSTRUMENTAL

Fugue on H–A–B–A, org, 1913; Sonata, op.1, vn, pf, 1914–15; Fantazie, op.9a, Hudba [Music], op.9b, ¼-tone, vn, 1921; Fantazie, op.18, ¼-tone, vc, 1924; Fantazie, op.21, ¼-tone, vn, pf, 1925; Suite, op.24, ¼-tone cl, ¼-tone pf, 1925; Fantazie, op.32, va, ¼-tone pf, 1926; Fantazie, op.33, vc, ¼-tone pf, 1927; Fantazie, op.34, fl, pf, 1927–8, rev. op.34a, b cl, pf, 1968; 6 Pieces, op.37, ⅙-tone hmnm, 1928; Fantazie no.1, op.40, nonet, 1931; Fantazie no.2, op.41, nonet, 1932; Duo, op.49, ⅙-tone, 2 vn, 1937; Sonata, op.54, gui, 1943; Suite, op.55, ¼-tone cl, 1943; Nonet no.3, op.82, 1954; Nonet no.4, op.97, 1971

Suite, op.56, ¼-tone tpt, trbn, 1944; Suite, op.59, chromatic hp, 1944; Sonata, op.60, diatonic hp, 1944; 2 skladby [2 Compositions], op.61, diatonic hp, 1944; Suite, op.63, ¼-tone gui, 1946; Suite, op.69, bn, 1950, rev. op.69a, b cl, 1969; Suite, op.72, 4 ¼-tone trbn, 1950; Qt, op.74, 4 bn, 1951; Fantazie 'Te Deum laudamus', op.75a, org, 1951; Fantazie a fuga HABA, op.75b, org, 1951; Sonata, op.78, cl, 1952, rev. op.78a, b cl, 1968; Suite, op.81a, vc, 1955; Suite, op.81b, vn, 1955

Suite, op.85a, ⅙-tone, vn, 1955; Suite, op.85b, ⅙-tone, vc, 1955; Suite, op.91, cimb, 1960; Suite, op.93, ¼-tone, vn, 1961–2; Suite, op.96, b cl, 1964; Fantazie no.4, op.97, nonet, 1962–3, 1970; Suite, op.99, sax, 1968; Suite, op.100, b cl, pf, 1969, MS; Suite, op.103, vn, pf, 1972

PIANO

3 Fugues, op.1a, 1918; Variace na kánon od Roberta Schumanna, op.1b, 1918; 2 morceaux, op.2, 1917–18; Sonata, op.3, 1918; 6 Pieces, op.6, 1920; Suite no.1, op.10, ¼-tone, 1922; Suite no.2, op.11, ¼-tone, 1922; Suite no.3, op.16, ¼-tone, 1923; Fantazie no.1, op.17, ¼-tone, 1923; Fantazie no.2, op.19, ¼-tone, 1923; Fantazie no.3, op.20, ¼-tone, 1924; Suite no.4, op.22, ¼-tone, 1924; Suite no.5, op.23, ¼-tone, 1925; Fantazie no.4, op.25, ¼-tone, 1925; Fantazie no.5, op.26, ¼-tone, 1925; Fantazie no.6, op.27, ¼-tone, 1926; Fantazie no.7, ¼-tone, op.28, 1926; Fantazie no.8, op.29, ¼-tone, 1926

Fantazie no.9, op.30, ¼-tone, 1926; Fantazie no.10, op.31, ¼-tone, 1926; Toccata quasi una fantasia, op.38, 1931; 4 moderní tance, op.39, 1927; Sonata, op.62, ¼-tone, 1946–7; Suite, op.88, ¼-tone, 1957–9; Fantazie, op.89, ¼-tone, 1957–8; Six Moods, op.102, 1971

JIŘÍ VYSLOUŽIL

Hába, Karel (*b* Vizovice, 21 May 1898; *d* Prague, 21 Nov 1972). Czech composer, violinist and teacher. The brother of Alois Hába, he studied at the teachers' training institute in Příbor, graduating in 1917. While working as a teacher he attended the Prague Conservatory, completing his studies in the masterclasses of Novák for composition (1921) and Hoffmann for the violin (1928); from 1925 to 1927 he participated in his brother's courses in quarter-tone music, receiving in 1936 a diploma for the quarter-tone Piano Trio op.8 (1926). Between 1929 and 1950 Hába worked for Prague radio, first as a member of the orchestra and from 1936 as head of the music education department, where he made use of his experience in schools and teacher-training colleges. In 1951 he was appointed to lecture on methods of music education at the Prague Faculty and Institute of Education. Hába was a notable representative of the schools of Novák and his brother. His output, which covers all genres, shows the rhythmic and melodic influence of east Moravian folk-song, together with something of Schoenbergian harmony. Pieces by him were performed at the ISCM Festivals of 1928, 1929 and 1934, and his opera *Jánošík* was given at the Prague National Theatre on 23 February 1934. Hába was the first Czech performer of quarter-tone music for the violin and the viola, giving recitals in Prague, Paris, Geneva, Siena, Frankfurt and elsewhere during the period 1925–7. He was made a member of the Czech Academy of Sciences and Arts in 1940.

WORKS
(*selective list*)

STAGE

Jánošík (op, 4, A. Klášterský), op.17, 1932, Prague, National, 23 Feb 1934

Stará historie [An Old Story] (op, F. Pujman), op.20, 1937, Prague Radio, 25 Sept 1940

Smolíček (children's radio op, V. Čtvrtek), op.33, Prague Radio, 28 Sept 1950

Kalibův zločin [Kaliba's Crime], 1960

INSTRUMENTAL

Lullaby and Scherzo, op.3, vn, pf, 1920; Ov., op.4, orch, 1923; Str Qt no.2, op.5, 1924; Vc Conc., op.18, 1934; Pf Trio, op.24, 1940; Str Qt no.3, op.27, 1943; Sym. no.1, op.30, 1947–8; Sym. no.2, op.36, 1953–4

VOCAL

Balada každodenní a Ahasver [Everyday Ballad and Ahasver] (F. Toman, A. Sova), op.9, male chorus, 1927; Dětská poesie [Children's Poetry], op.10, 1v, pf, 1927; Letní nálady [Summer Moods] (J. Hora), op.23, 1v, pf, 1938; Nejmenším zpěváčkům [To the Youngest Singers], op.37, 1v, pf (1955); Z dětského světa [From the Children's World] (F. Branislav), song cycle, op.41, 1v, pf, 1956

EDUCATIONAL

Moderní houslová technika [Modern Violin Technique], op.12, 2 vols., 1927, unpubd

Škola čtvrttónové houslové hry [School of Quarter-Tone Violin Playing], 1927, unpubd

Hornické a vlastenecké písně [Miners' and Patriotic Songs for Children's Chorus] (1949)

Metodika hudební výchovy škol 2. stupně [Methodology of Music Education in Secondary Schools], 1953, unpubd

Valašské písně na slova lidové [Wallachian Songs with Folk Poetry] (1957)

Principal publishers: ČHF, Hudební matice, Nakladatelství krásné literatury, hudby a umění

JIŘÍ VYSLOUŽIL

Habana, La (Sp.). *See* HAVANA.

Habanera (Catalan *havanera*). An Afro-Cuban dance and song.

1. The dance. 2. The song.

1 THE DANCE. A synthesis of European and African elements, the habanera (or Havana-style contredanse) has its roots in the English country dance, which gained great popularity in Europe in the 18th century. Although it was imported to the Americas by the Spanish, it did not take hold in Cuba until the arrival in the late 1700s and early 1800s of French refugees from rebellions in Haiti, who brought with them the contredanse, a stylized French version of the English country dance. In its basic form this early social dance consisted of two sections of eight bars each, repeated for a total of 32 bars, with each eight-bar segment distinguished by a different dance figure; the second half is livelier in character than the first. Black musicians transformed the regular rhythms of the contredanse into the dotted and syncopated rhythms of the *contradanza habanera* or simply habanera. Its slow tempo, in duple metre with a suave and lilting rhythmic ostinato (ex.1), became popular in all strata of society.

Ex.1

The dance, performed by couples, features stately steps in which the feet are hardly lifted from the ground, accompanied by sensual movements of the arms, hips, head and eyes. Its influence can be seen in the evolution of the Cuban *danzón* and the Argentine tango, and it was influenced in turn by developments in the latter genre. In Spain it was also absorbed into the zarzuela.

The earliest surviving habanera is the anonymous *San Pascual Bailón* of 1803. In Cuba the popular dance was transmuted into an art form through the piano music of Manuel Saumell Robredo and, later, that of Ignacio Cervantes. The exotic character of the dance attracted many composers when it was re-exported to Europe in the 19th century. Renowned examples of the genre are *La paloma* by Sebastián Iradier and *Tú* by Eduardo Sánchez de Fuentes. Bizet drew on Iradier's *El arreglito* for the celebrated habanera in *Carmen*. Habanera rhythms found their way into French instrumental pieces by Saint-Saëns, Chabrier, Debussy and Ravel, among others, and also inspired Spanish composers including Albéniz, Falla and Montsalvatge.

2. THE SONG. Habanera is part of the rich liminal culture of *ida y vuelta* ('going and returning', 'there and back') that exists between Cuba and the Costa Brava through maritime trade and the navy. For that reason, although its origins lie in Catalan-speaking parts of the world, its texts are mostly Spanish. It was particularly significant at the end of the 19th century during the war of Cuban independence, when many Spaniards found themselves in a conflict of allegiance rooted in their personal lives. The songs tell of romantic relationships (mostly with the idealized mulata, the Cuban woman of mixed African and Hispanic blood), of sad farewell and of loneliness at sea, themes that support the notion that many men had families in both Spain and Cuba. The music has absorbed

influences from the migration to Cuba of Andalucians and people from the Canary Islands, as well as Italian bel canto vocal style and other Mediterranean elements, and Afro-Cuban syncopations; it also shares common ground with traditions of Mallorca and Menorca in the Balearic Islands. Habanera is also sung in villages in Spanish Castile, brought there by returning sailors.

Originally performed both by solo singers and by groups of fishermen in the late 19th and early 20th centuries in Catalonia, habaneras entered the repertory of choirs of fishermen who sang while mending nets or sitting in the tavern on days when the weather was too stormy for them to take to sea. While the tradition never died out, it has received a boost from Catalan autonomy within Spain and is now thriving: many young singers are taking it up, and there are regular summer festivals along the coast, notably in Calella de Palafrugell, attended mostly by Catalan and Spanish locals and tourists. Whereas the habanera in Catalonia has always remained a popular form, in Cuba it fed into the *trova* (troubadour) tradition, its strength lying more in popular-classical manifestations with bel canto influences persisting.

FRANCES BARULICH (1), JAN FAIRLEY (2)

Habelhauer, Josef Franz. *See* HABERHAUER, MAURUS.

Habeneck, François-Antoine (*b* Mézières, 22 Jan 1781; *d* Paris, 8 Feb 1849). French violinist, conductor and composer. He was a son of a military bandsman born in Germany but serving in the French army, and the eldest of three brothers, all of whom studied the violin with their father and later at the Paris Conservatoire. The family spent some years in Brest. François-Antoine was in Baillot's class at the Conservatoire, where he won a *premier prix* for the violin in 1804. He is said to have received a pension of 1200 francs from the Empress Josephine. In 1804 he joined the orchestra of the Opéra-Comique, but moved almost at once to that of the Opéra. When Rodolphe Kreutzer was promoted to director of the Opéra in 1817 Habeneck succeeded him as principal violin. From 1821 to 1824 he was director of the Opéra, from 1824 to 1831 he shared with Valentino the title of *premier chef* there, and from 1831 to 1846 he fulfilled that function alone. Thus he was conductor of the Paris Opéra during one of its most brilliant periods, conducting, among others, the first performances of Rossini's *Guillaume Tell*, Meyerbeer's *Robert le diable* and *Les Huguenots*, Halévy's *La Juive*, Berlioz's *Benvenuto Cellini*

François-Antoine Habeneck: line drawing after a bas-relief by Jean-Pierre Dantan

and many others. He raised the standard of orchestral playing there to a level where Chorley, writing of the orchestra in 1836, could describe it as 'a machine in perfect order, and under the guidance of experience and intellect – for these are thoroughly personified in M. Habeneck'.

Habeneck's most lasting achievements were the introduction of Beethoven's music to France and the founding of the Société des Concerts du Conservatoire. From 1806 to 1815 he was in regular charge of the Conservatoire students' orchestra, known as the *exercices publics*. In 1807 Beethoven's First Symphony was played for the first time in Paris, and the Second shortly after; some accounts report a performance of the Third in 1811. When Habeneck took over the *concerts spirituels* at the Opéra in 1818 he continued to promote Beethoven's music, including the Allegretto of the Seventh Symphony and certain overtures. The main impact of Beethoven was to come later, however. In 1826 he tried the Third again with a group of invited musicians and their meetings were regularized into a formal body, the Société des Concerts du Conservatoire, giving its first public concert on 9 March 1828 and including the Third Symphony. The third concert introduced the Fifth Symphony to France and the Ninth Symphony followed in 1831. The orchestra of 86 and chorus of 79 were under Habeneck's direction and remained so for 184 concerts until his death. The

orchestra of the society quickly attained the same high standard as that of the Opéra and was admired and emulated all over Europe.

Habeneck generally conducted with a bow and from a first violin part. Wagner admired his efficiency and the command he had over his forces. Berlioz, as a representative of the new type of baton conductor, was more critical, particularly over performances of his Requiem in 1837 and *Benvenuto Cellini* in 1838, though he should perhaps have given him more credit for his audacious undertaking of the *Symphonie fantastique* in 1830. Habeneck's influence and standing in Paris musical life was unrivalled, particularly during the last 20 years of his life. He taught the violin at the Conservatoire from 1808 to 1816 and from 1825 to 1848, and his *Méthode théorique et pratique de violon* appeared in about 1835. He owned a late Stradivari violin (the 'Habeneck'), now the property of the Royal Academy of Music, London. He also composed, mainly for the violin; his works include two violin concertos, an *Air varié* for violin and orchestra, three *duos concertants* for two violins, three caprices for violin solo, a *Grande polonaise* for violin and orchestra and a *Grande fantaisie* for violin and piano.

HUGH MACDONALD

Haberhauer [Habelhauer], **Maurus** [Josef Franz] (*b* Svitavy, 13 March 1746; *d* Rajhrad, Moravia, 18 Feb 1799). Moravian composer. He entered the Benedictine monastery at Rajhrad in 1764, was ordained a priest in 1770 and from 1775 was musical director of the monastery. Under his directorship concertante church music flourished there. Besides several symphonies and a concerto for english horn Haberhauer composed numerous church works, all in a conservative style. He used folksongs and instruments such as the bagpipe and shepherds' trumpets, particularly in four *missae pastorales* (Christmas masses). A complete list of his works is in the library of the Gesellschaft der Musikfreunde, Vienna. Those extant (preserved in *CZ-Bm*) include 46 masses, 2 Requiems, 7 litanies, 13 vespers and 16 shorter church compositions.

CAMILLO SCHOENBAUM/JIŘÍ SEHNAL

Haberl, Franz Xaver (*b* Oberellenbach, Bavaria, 12 April 1840; *d* Regensburg, 5 Sept 1910). German musicologist and church musician. A schoolmaster's son, he was educated in Passau, ordained priest there on 12 August 1862, and was subsequently head of music in the episcopal seminaries and deputy choirmaster at Passau Cathedral. From 1867 to 1870 he was organist of S Maria dell'Anima in Rome, and pursued musicological research in Italian libraries and archives. In Rome he met Liszt and became acquainted with the Roman plainchant movement headed by Cardinal Domenicus Bartolini. In 1871 he was appointed cathedral Kapellmeister and inspector of the Dompräbende in Regensburg. In 1874, encouraged by Liszt and F.X. Witt, he founded a school of church music in Regensburg that soon acquired an international reputation. Pope Leo XIII made him an honorary canon of Palestrina Cathedral in 1879, the year in which Haberl founded a Palestrina society and became editor of the first complete Palestrina edition, which Breitkopf & Härtel had begun in 1862. He left Regensburg in 1882 and went to Italy again to research and transcribe primary sources. Returning to Regensburg in 1885, he resumed direction of the school of music. In 1889 the University of Würzburg awarded him an honorary doctorate in theology. In 1894 he began the first complete edition of Lassus, with the collaboration of Adolf Sandberger. He was elected general president of the Allgemeiner Deutscher Cäcilienverein in 1899, and campaigned for the building of a church to St Cecilia in Regensburg. The Prince Regent of Bavaria appointed him a royal ecclesiastical counsellor in 1906 and Pius X made him a domestic prelate in 1908. He was a member of the Accademia di S Cecilia and of the Prussian commission for the publication of the Denkmäler Deutscher Tonkunst. His comprehensive collection of music is now in the Bischöfliche Zentralbibliothek in Regensburg.

Haberl edited the continuation of the anthology Musica Divina from 1872, and the *Cäcilien-Kalender* from 1876, changing its name to *Kirchenmusikalisches Jahrbuch* in 1886. From 1888 he edited *Musica sacra* and from 1899 the *Fliegende Blätter für katholische Kirchenmusik*, later entitled *Cäcilienvereinsorgan*.

Together with Michael Haller, Joseph Hanisch and F.X. Witt, Haberl was one of the leaders of the Regensburg Cecilian movement, which aimed to put into practice the reform of church music initiated by Carl Proske. As a member of the papal commission for the revision of official chant books he was charged with producing new authentic editions on the basis of the *Editio medicaea*. The papal decree of 1904 reinstating the readings of the *Editio vaticana* rendered the Regensburg chant editions, as well as Haberl's internationally disseminated textbook *Magister choralis*, unusable. Haberl's seminal publications in the field of ecclesiastical music from the 15th to 17th centuries, his role in the first complete editions of Palestrina and Lassus, and his historical and critical researches make him one of the pioneers of modern musicology.

DIETER HABERL

Habermann, Franz (Johann or **Wenzel)** [František Václav; Franciscus] (*b* Königswart, nr Eger [now Cheb], Bohemia, 20 Sept 1706; *d* Eger, 8 April 1783). Bohemian composer and choirmaster. As the relevant baptismal register is lost, Habermann's full christian name cannot be verified; his published op.1 gives only Franciscus. He attended the Jesuit grammar school of Klatovy. The claim that he studied philosophy at Prague University is disproved by the registers: it is his brother Karl who is listed there as bachelor (in 1731) and master (in 1732) of philosophy. After studying composition at Prague (probably with F.J. Dollhopf) and on visits to Italy, Spain and France, Habermann was appointed music director at the court of Prince Louis-Henri of Condé in 1731, and later moved in the same capacity to the court of the Duke of Tuscany in Florence. He returned to Bohemia in the early 1740s, and achieved success with an *opéra comique* commissioned by the Prague Jesuits for the coronation of Empress Maria Theresa as Queen of Bohemia. He worked as choirmaster at two Prague monastic churches; he became Kantor at Eger in 1773 and held this post until his death.

Habermann's works composed before his return to Bohemia are lost. The printed masses *Philomela pia* (1747) are in the Venetian late Baroque concerto style, with continuo-homophony and with forceful themes for instruments in unison. Handel copied sections from five of these masses (*GB-Cfm*, 30H10, 30H13) and used their motivic material in both his oratorio *Jephtha* (1752) and the organ concerto op.7 no.3. In Habermann's later works elements of the pre-Classical and early Classical style are predominant. He was renowned among his contemporaries for his contrapuntal writing. The most outstanding of his pupils were Mysliveček, Oehlschlägel, F.X. Dušek and C. Vogel.

Habermann's brothers Anton (*b* Königswart, 1704; *d* Prague, 14 Jan 1787) and Karl (*b* Königswart, 1712; *d* Prague, 4 March 1766), and a son Franz Johann (*b* Prague, *c*1750; *d* after 1799) who succeeded him as choirmaster at Eger, were also musicians and composers. The church composer Matthäus Habermann (called 'il figlio', perhaps another son of Franz senior) was also active at about the same time in Bohemia. Therefore the attribution to the elder Franz Habermann of compositions bearing an ambiguous christian name or none at all is questionable.

WORKS

DRAMATIC

only printed librettos extant

Easter orats (all perf. in Prague): Haec mutatio dextrae excelsi . . . id est Conversio peccatoris, 1749; Christi servatoris . . . de morte triumphantis archetypus, 1753; Deodatus à Gozzone, 1754; Coelestis Samaritanus Jesus Christus, 1763; S Agostino, 1764

MILAN POŠTOLKA

Habermann, Philipp. *See* AVENARIUS, PHILIPP.

Habermann, Thomas. *See* AVENARIUS, THOMAS.

Habert, Johannes [Johann, Jan] **Evangelista** [Evangelist] (*b* Oberplan [now Planá], 18 Oct 1833; *d* Gmunden, 1 Sept 1896). Austrian composer, organist and writer on music. He received his first music instruction from his family, taught himself to play several instruments and took a teacher-training course in Linz, where he came under the guidance of the cathedral organist Wenzel Pranghofer. He spent the next decade as a teacher, in Naarn an der Donau from 1852 and in Waizenkirchen from 1857. In 1860 he settled in Gmunden as an organist and from 1878 also as a choral director. He founded the *Zeitschrift für katholische Musik* in 1867, remaining its editor until 1883, and waged a continuing offensive against the Cecilianist movement in favour of retaining instrumentally accompanied liturgical music. His editions include a selection of works by Robert Führer as well as three volumes of sacred music (Fux, Stadlmayr) for *Denkmäler der Tonkunst in Österreich* (i, Jg.i/1; iii, Jg.ii/1; v, Jg.iii/1: 1894–6). Himself a prolific composer of church music (masses, offertories, litanies, motets and organ music), he also wrote some orchestral and chamber music, piano pieces and songs. There is a complete edition of Habert's works, begun under his direction in 1894 and initially sponsored by the Gesellschaft zur Förderung Deutscher Wissenschaft, Kunst und Literatur in Böhmen. Among his published writings is a four-volume composition textbook (Leipzig, 1899).

MATTHIAS SCHMIDT

Habsburg [Hapsburg]. Family of rulers and patrons. They were the most powerful and long-lived ruling dynasty in Europe and of major importance as patrons and practitioners of music and the other arts. From the 13th century until the beginning of the 20th they were responsible for much of the musical activity of important European centres, chiefly Mechelen, Brussels, Vienna, Graz, Innsbruck and Madrid. The imperial court chapel under successive rulers attracted some of the most eminent composers, singers and instrumentalists of their day into Habsburg service, and the corpus of music written for court functions includes vast numbers of sacred works, operas, oratorios and chamber works.

1. Extent of Habsburg influence. 2. 13th to 16th centuries. 3. Music under the Spanish Habsburgs. 4. Music under the Austrian Habsburgs.

1. EXTENT OF HABSBURG INFLUENCE. The Habsburg family, named after their ancestral seat in Switzerland, may be traced back to 950. Except for a brief period in the 18th century, Habsburgs occupied the throne of Germany continuously from 1273 until 1806. From 1273 they enjoyed the title King of the Romans, and in 1274 Rudolf of Habsburg was recognized as Holy Roman Emperor (although he was never crowned). One branch of the family established Habsburg domination of Austrian territories, while Maximilian I, by means of skilfully arranged dynastic marriages, passed on to his grandson, Charles V, an empire that included the Netherlands, Spain, Naples, Sicily and the American colonies. In 1521 the house was divided into Spanish and Austrian lines; the former died out with Charles II (1665–1700) and the latter, in the male line, with Charles VI (1711–40), after whom Maria Theresa, founder of the house of Habsburg-Lorraine, acceded to the throne. The last Habsburg emperor, Karl I, abdicated in 1918 when Austria became a republic.

2. 13TH TO 16TH CENTURIES. The Habsburgs' close connections with music seem to have begun in the reign of Rudolf I (1273–91) who welcomed many travelling singers to his court, among them Frauenlob (Heinrich von Meissen) and Stolle; thereafter the Minnesinger were prominent in the musical establishments of successive Habsburg kings. Duke Rudolf IV (1358–65), whose retinue for a time included Heinrich von Mügeln, is credited with the founding of a university at Vienna (1365) and with establishing the forerunner of the later Hofkapelle. Under Frederick III (1440–93, emperor from 1452) the court Kantorei included musicians of German, Flemish and Burgundian origin, among them, probably as a pupil, the young Paul Hofhaimer. The Trent manuscripts were compiled primarily for the use of Frederick's chapel at the instigation of Johannes Hinderbach, imperial secretary, later Bishop of Trent.

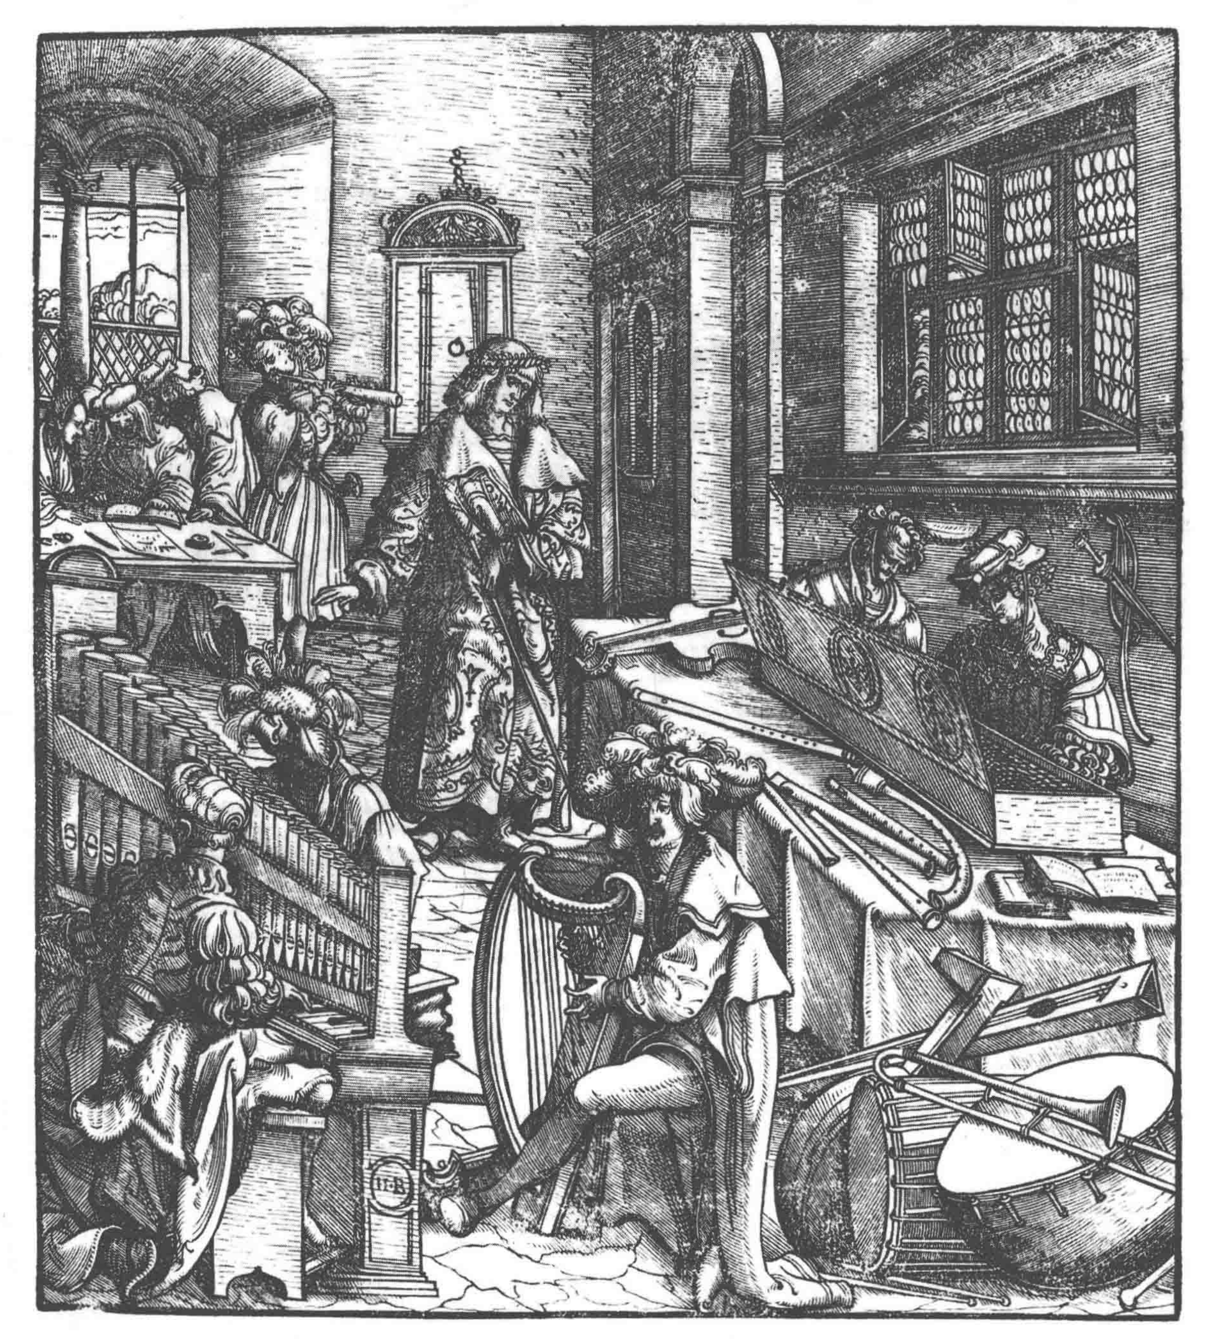
The first Habsburg ruler of outstanding importance as a patron of music was Maximilian I, King of the Romans from 1486 and Holy Roman Emperor-elect from 1493 until his death in 1519. In spite of a sketchy education and provincial upbringing, Maximilian was a devoted patron of the arts and learning. His marriages to Mary of

Burgundy (1477) and Bianca Maria Sforza (1493) brought him into contact with Renaissance centres in the Netherlands and Italy, on which he modelled his own court at Vienna.

As consort of Mary of Burgundy and regent for their son Philip I 'the Fair' (1478–1506) until he came of age in 1494, Maximilian maintained the Burgundian court chapel, whose members included Antoine Busnoys and Pierre de La Rue. After the retirement of the Archduke Sigismund of the Tyrol in 1490, Maximilian assumed control of his territories and made Innsbruck his residence. Hofhaimer, court organist to Sigismund, entered Maximilian's service and was knighted in 1515. In 1492, during a journey to Italy, Maximilian engaged Henricus Isaac for his chapel, naming him Hofkomponist in 1497. Isaac spent only brief periods at Vienna and other imperial cities, but he maintained an association with the court until his death in 1517. Ludwig Senfl and Adam Rener entered the Vienna Hofkapelle as choirboys in 1496 and 1498 respectively, and may have been instructed by Isaac. Senfl succeeded Isaac as court composer.

In 1498 the Hofkapelle was reorganized under the direction of Georg Slatkonia, who became Bishop of Vienna in 1513. Among the musicians associated with the Kapelle in later years were Heinrich Finck and Balthasar Resinarius. In 1520, after Maximilian's death, it was dissolved by order of the new emperor, Charles V. Music was composed for Maximilian's Kapelle by both resident and visiting musicians. In 1504, during a stay at Innsbruck, Obrecht composed a *Regina coeli* for the Kapelle. In 1508, at a meeting of the Reichstag in Konstanz, Isaac received a commission for a cycle of Mass Propers called, in a posthumous edition by Senfl, *Choralis constantinus*; the published version included music written for the imperial Kapelle as well as for Konstanz Cathedral.

Maximilian was a generous and enthusiastic patron of music. The Swiss humanist and music theorist Heinrich Glarean was crowned poet laureate in 1512 after praising the emperor in song. An engraving by Hans Burgkmair in Maximilian's autobiographical *Weisskunig* shows him surrounded by musicians and instruments (fig.1). In Burgkmair's celebrated woodcuts *Triumphzug Maximilians* (fig. 2), designed between 1512 and 1519 according to Maximilian's explicit instructions, the full complement of court musicians is displayed: fife players, trumpeters, drummers, lutenists, viol players, a wind band of shawms, trombones and crumhorns, the organist Hofhaimer, a mixed consort of chamber musicians, and the Hofkapelle of 20 singers with trombone and cornett players led by Slatkonia with Isaac at his side. Maximilian was praised in ceremonial motets by Isaac, Senfl and Benedictus de Opitiis; his death was mourned in a motet arranged by Senfl from Costanzo Festa's *Quis dabit oculis*, and in an anonymous motet *Proch dolor* attributed by some to Josquin.



After coming of age, Maximilian's son Philip the Fair, King of Spain, continued to promote the musical interests of the family in the Netherlands. He enlarged the chapel, whose more eminent members included Alexander Agricola and Pierre de La Rue. After his marriage to Juana of Castile (1496) the chapel accompanied him on two important visits to Spain in 1501 and 1505. Philip's early death in 1506 compelled his sister Margaret of Austria to become regent of the Netherlands for her nephew, later Emperor Charles V, who was under age. Margaret, the daughter of Maximilian I and Mary of Burgundy, was born at Brussels in 1480. She was betrothed to Charles VIII of France while still a child, and lived at the French court between 1483 and 1491. After her return to the Netherlands she married Prince Juan of Spain (1497), and, after his death, Duke Filiberto II of Savoy (1501). Filiberto died in 1504 and she became regent of the Netherlands in 1506, a position she held, except between 1515 and 1518, until her death in 1530.

Margaret chose Mechelen as her capital and there re-established the dispersed court of Burgundy, reviving it as a literary, artistic and musical centre. Her intensive and varied education included music; in 1495 Govard Nepotis, the court organist to her brother Philip the Fair, instructed her in a number of musical instruments, and her court poet, Jean Lemaire, wrote of her skill in vocal and instrumental music, and especially of her talents as a keyboard player. She wrote poetry, some of which was set to music by court composers. The court chapel in Savoy, where she resided from 1501 to 1505, included the composers Antoine Brumel, Antoine de Longueval and Pierrequin de Thérache among its members. During Margaret's regency of the Netherlands, Marbrianus de Orto was director of the court chapel, Henry Bredemers was the organist and Pierre de La Rue was employed as a singer and composer. In her later years she formed a private chapel of which Florens Nepotis was the organist.

Margaret's library at Mechelen contained many music books including one manuscript of basses danses and two of chansons (all in *B-Br*). One book of chansons (*B-Br* 228) contains her portrait and many pieces that reflect her tastes, principally by Pierre de La Rue and Josquin. Her lament for her brother Philip, *Se je souspire/Ecce iterum*, appears in this chansonnier; its music has been attributed to La Rue but may possibly be by her. A choirbook is extant (now in *B-MEa*), which may have been used in her chapel. Another (now in *I-Rvat* C.S.) may have been a gift from Margaret to Pope Leo X; it contains masses by La Rue, including the *Missa 'O gloriosa domina'* which is decorated with her coat-of-arms.

Margaret's successor as regent of the Netherlands was Mary of Hungary (1531–55), sister of Charles V, together with whom, as a child, she received a detailed musical education under Margaret's guidance at the court at Mechelen. During her regency Mary lived mainly at Brussels, where the court chapel was directed by Benedictus Appenzeller; she also maintained Margaret's private chapel.

3. Music under the Spanish Habsburgs. The first Spanish king of the Habsburg dynasty was Philip the Fair, eldest son of Emperor Maximilian I and Mary of Burgundy. It was he who introduced into Spain Burgundian ceremonial, a formality of style and an organization of the palace inherited from the ancient dukes of Burgundy. When Philip and his wife Juana of Castile arrived in Spain in 1506 from Flanders, they already, as monarchs of Castile, had in their *grande chapelle* (their establishment for sung Mass) musicians of such standing as Marbrianus de Orto, Alexander Agricola, Pierre de La Rue and the organist Henry Bredemers (music tutor of the future Charles V and his sisters). After Philip's sudden death in September 1506, this *grande chapelle* remained in Spain in the service of Juana until 1508, when it

1. Maximilian I surrounded by musicians and instruments: woodcut by Hans Burgkmair I from Maximilian's autobiographical 'Weisskunig', 1505–16 (A-Wn)

returned to Brussels and was placed at the disposal of the future emperor.

Charles V identified himself closely with the house of Burgundy left him by his father Philip the Fair. In 1515, when he attained his majority, he had in his *grande chapelle* Orto, La Rue and Bredemers. When, in 1517, he succeeded to the throne of Spain he was in possession of two royal houses, those of Burgundy and of Castile, the latter inherited from his mother and his grandmother Isabel the Catholic. The most important musical possessions remained in the house of Burgundy: the Flemish choir and the *vihuela de arco* players. However, throughout his reign he also employed *ministriles altos* (players of wind instruments) from the house of Castile. In 1519 Charles became Holy Roman Emperor. It is known for certain that he had as *maestros de capilla* Adrien Pickart, Thomas Crecquillon, Cornelius Canis and Nicolas Payen. Nicolas Gombert held the post of master of the choristers. When the choristers' voices broke, their studies were paid for for a period of three years, after which they joined the *capilla* as singers if they still had good voices. In 1526 the emperor married Isabel of Portugal. The empress had her

own household in Spain, organized in the Spanish manner, with her own *maestro*, singers and the organist Antonio de Cabezón. Charles was a cultivated music lover (in the tablature for *vihuela de mano* that Luys de Narváez made of Josquin's *Mille regretz*, this song is identified as 'the emperor's song'). When he abdicated in 1555–6 in favour of his son Philip (for Spain, America and Flanders) and of his brother Ferdinand (for the Empire), he retired to the Hieronymite monastery of Yuste and there organized a *capilla* made up of monks summoned from various Spanish monasteries, with Juan de Villamayor in charge.

Philip II is a key figure for an understanding of the way in which music functioned and evolved at the Spanish court. When Isabel of Portugal died, in 1539, Charles V ordered that part of her staff be placed at the service of Prince Philip and part at that of the infantas Maria and Juana. Cabezón would serve the former for half of the year and the latter for the other half. In 1543, when Philip became regent of Spain, his household was enlarged. Cabezón remained at his service exclusively, and the *maestro de capilla* was García de Basurto. In 1548, when Philip's journey to Flanders and Germany was being prepared, Charles ordered that the prince's household should follow the model of Burgundy. From that moment Philip had at his disposal two households parallel to those of the emperor – that of Castile (in which the main part of his *capilla* was to be found, with Pedro de Pastrana as *maestro*, Cabezón as organist, choristers and a master for them, Luys de Narváez) and that of Burgundy. However, in 1554, when Philip became royal consort of England through his marriage to Mary Tudor, most of the *capilla* transferred to the Burgundian household. During Philip's stay in England, Cabezón (who remained with the Castilian household) seems to have performed the duties of *maestro de capilla*. Finally, when, in 1556, Philip became King of Spain, the two households of Burgundy (that of the emperor and that of Philip) were amalgamated, as also were those of Castile, and all the musicians were at the service of Philip II. From that moment most of the musical resources remained with the Burgundian household, as was the case with the so-called Flemish choir (i.e. the Flemish singers who had come from the emperor's Burgundian household), and with the so-called Spanish choir (i.e. the Spanish singers who had come from Prince Philip's Burgundian household), although in the Castilian household there remained musicians as prestigious as Cabezón. Philip II held Cabezón in high regard and favoured him above all other musicians in his service, paying him one of the highest salaries of the Spanish royal household. Philip II's *maestros de capilla* were Nicolas Payen, Pierre de Manchicourt, Jean de Bonmarché, Geert van Turnhout, George de La Hèle and Philippe Rogier.

Philip II's musical patronage was above all institutional in character. From 1561, when he definitively established the court in Madrid, he laid down the basis upon which the royal chapel would function, and this was followed for a long time after his death. He established new rules for it and in 1595 founded the Colegio de Ninõs Cantores (choir school). In the palace-monastery of El Escorial his most outstanding achievements were the compiling of 214 books of plainchant for the use of the monks, and the construction of seven organs built by the Flemish maker Gillis Brebos and his sons. The repertory performed in Philip II's chapel included compositions of the Franco-Flemish, Spanish, Roman and Venetian schools, including works by Palestrina and Andrea Gabrieli. Polychoral singing was a normal feature, as was the use of *basso seguente* in Franco-Flemish and Spanish works. Mention should also be made of the permanent presence of violinists (mainly Italians) in the queen's household from 1560.

Philip III (1598–1621) was a keen music lover. He was an accomplished dancer, played the guitar and had the Venetian Mateo Troilo as his viol teacher. The harpsichord, lute, harp, clavi-arpa, viol and instruments of the violin family were introduced into the royal chapel from the beginning of his reign, and the number of wind players was increased. Furthermore, the chapel became hispanicized, since many of its original members returned to Flanders. The royal *maestro de capilla* for the whole of his reign was Mateo Romero; as his deputies Romero had Géry de Ghersem, Jean Dufon, Gabriel Díaz Bessón and Juan Bautista Comes. The guitar was usually used to accompany villancicos at Christmas and Epiphany (when the choristers took part), and this was played by Romero himself.

Philip III employed as chamber and chapel musician the Bolognese theorbo and viol player Filippo Piccinini,

for whom he had a special affection and with whom he himself played the viol. Another important initiative was the creation of a permanent group of chamber musicians, singers and instrumentalists (among them the composer Juan Blas de Castro), with the result that secular music began to be played much more at court. Philip III's favourite, the powerful Duke of Lerma, was important for musical patronage at court. It was he who brought from Milan a group of violinists under the direction of the composer Stefano Limido; their main function was to provide music for dancing, of which the king was fond.

Philip IV (1621–65) surpassed his father in his knowledge of music. His music teacher was Romero, and Piccinini taught him the viol; he also composed, but none of his works survives. In general, the royal chapel followed the lines laid down in the previous reign except that the viols were eventually displaced by instruments of the violin family. However, the viol had an exceptional player in the Englishman Henry Butler, who also played in the chamber music. The principal harp and clavi-arpa player was the composer Juan Hidalgo. Musical activity in the chapel was enriched from 1639, when the Holy Sacrament was moved there, and the monthly service of the Cuarenta horas was instituted. In the course of this service villancicos and *tonos* were sung in the vernacular, and instrumental compositions were performed in which instruments of the violin family played a prominent part. Many of the *tonos* were composed by Juan Hidalgo. Philip IV's *maestros de capilla* were Romero and Carlos Patiño.

Philip IV preferred secular to sacred music, and chamber music therefore received considerable impetus during his reign. As well as the king, the queen, the infante Fernando and infanta Maria also employed chamber musicians. However, perhaps the most important effects of Philip IV's musical patronage were felt in theatre music: operas, semi-operas and zarzuelas. The initiative taken by the king's favourites, the Count-Duke of Olivares and later Luis de Haro, was in this respect crucial. They organized elaborate performances to please the king and to give an air of sumptuousness to the court. Performances took place either in the *salón de comedias* of the royal palace or at the Coliseo of the new palace of Buen Retiro. It was thus through the court that the new style of Italian recitative was introduced into Spain. The genres most cultivated were those in which speech and singing alternated (ie. the semi-opera and the zarzuela); Juan Hidalgo, who followed the lines laid down by the dramatist Calderón de la Barca, was the outstanding composer.

Although Charles II (1665–1700) had no particular fondness for music, he took harpsichord lessons from Juan del Vado, organist of the royal chapel. However, his reign is of enormous importance because of the process of revival in the music at court. The driving force behind this was Juan José of Austria, Philip IV's illegitimate son, a passionate music lover and viol player, who was first minister from 1677 to 1679. During those years violinists, singers and a trumpeter were recruited for the royal chapel from different parts of Italy. From among the best a *maestro de violines* was chosen whose task it was to compose a specifically instrumental repertory using a string style different from that previously employed. Several references during the last decade of the century to 'Italian music', to *tonatas* for violins and to groupings typical of trio sonatas show that the royal chapel was moving in a new direction. Carlos Patiño, Cristóbal Galán and Diego Verdugo were the *maestros* during Charles II's reign. Other outstanding musicians were the guitarist Francisco Guerau, the organist Joseph de Torres, the viol player Antonio Literes, and above all the organist Sebastián Durón. In 1675 Juan de Andueza built a new organ for the chapel, which brought together all the characteristics of the Iberian Baroque organ. In 1698 Charles II ordered a reform which would have reorganized the personnel and financing of the royal chapel. Although this reform did not take place, it laid down the basis for that carried out by the administration of the new dynasty, the house of Bourbon, in 1701. Music for theatrical performances continued to be encouraged at court, the favourite composer being Sebastián Durón, a key figure in the modernization of Spanish musical style (based on Italian models) during the final years of the 17th century and the early years of the 18th. The encouragement given to music by Charles's second wife, Queen Mariana of Neuburg, was also important.

4. Music under the Austrian Habsburgs. In 1521 the Habsburg territories were divided between Charles V and Ferdinand I, the grandsons of Maximilian I, creating the Austrian and Spanish lines of succession. Beginning with Ferdinand I's coronation in 1556, members of the Austrian line occupied the imperial throne almost continuously into the 19th century. Their role as Holy Roman Emperors and a dynastic tradition of staunch Catholicism shaped Habsburg patronage of music in the early modern era, when the imperial Kapelle served as the sounding representation of imperial might, dominion and religiosity. Although the emperor's Kapelle in Prague or Vienna was usually the pre-eminent musical institution in the Habsburg lands, the archducal courts, especially those at Innsbruck and Graz, sometimes cultivated music on a scale that rivalled the imperial court.

Ferdinand I (reigned 1556–64) had a Kapelle as early as 1526, 30 years before becoming emperor. Like most 16th-century Kapellen, his was decidedly sacred in

character, headed by the court preachers and staffed mainly by clerics. Ferdinand's Kapellmeister included Heinrich Finck, Arnold von Bruck, Pieter Maessens and Jean Guyot. Maessens, in particular, is credited with raising performing standards and recruiting distinguished musicians from the Low Countries. The preference for musicians trained in the north continued under Ferdinand I's successor, Maximilian II (1564–76). The extraordinary range of the court's repertory and artistic contacts under Maximilian II is demonstrated in the five-volume *Novi atque catholici thesauri musici* (Venice, 1568), a collection dedicated to the emperor that contains motets for liturgical and ceremonial use by composers with artistic connections to the court, including Josquin, Lassus, Regnart, Wert and Andrea Gabrieli. The range of styles and genres cultivated under Maximilian is also evident in the works of his two Kapellmeister, Jacobus Vaet and, particularly, Philippe de Monte, whose compositions include madrigals, spiritual madrigals, masses and motets in a range of styles.

Monte continued to serve as Kapellmeister under Rudolf II (1576–1612), whose court at Prague was still dominated by northern musicians, including Carl Luython, Jacobus de Kerle, Jacob Regnart and Lambert de Sayve. These composers produced a large repertory of masses, especially parody masses, for use in the imperial chapel. Music seems to have been neglected at the end of Rudolf's reign as he became increasingly reclusive; Monte's post, for example, was not formally filled after his death, although Alessandro Orologio carried out many of his duties. The Kapelle of Emperor Matthias (1612–19), led by Lambert de Sayve and Christoph Straus, has received little attention, and few surviving works can be securely dated to his reign. Although Matthias retained many members of Rudolf's chapel, more progressive, Italian-influenced styles, including monody, were known at his court. Francesco Rasi (creator of the title role in Monteverdi's *Orfeo*) performed in Prague in 1612, and a document of 1617 describes a performance of monody by a female singer who accompanied herself on the lute.

The decisive turning-point for music at the imperial court, however, came in 1619 with the coronation of Ferdinand II as Holy Roman Emperor. Ferdinand dismissed nearly all Matthias's musicians, replacing them with the thoroughly italianized Kapelle from his archducal court at Graz. His reign ushered in a century of Italian dominance of musical and cultural life in Vienna. Under his Kapellmeister Giovanni Priuli and Giovanni Valentini, Ferdinand II's musicians cultivated a large repertory of both sacred and secular works that ranged from *stile antico* compositions, through large-scale polychoral works, to monodic compositions and pieces in the modern concertato style. It was also under Ferdinand II that opera was first established at the imperial court, probably as early as 1625. Contrary to accounts in earlier literature, Ferdinand II did not dissolve his Kapelle during the Thirty Years War, but instead increased its size during his reign.

The preference for modern, italianate music intensified under FERDINAND III (1637–57), who was himself a poet and composer. Artistic contacts with Italy were reinforced by the emperor's step-mother, Eleonora Gonzaga (the second wife of Ferdinand II), and his own subsequent marriage to another Gonzaga princess named Eleonora in 1651. Both of these empresses maintained their own Kapellen after their husband's deaths. Mantuan contacts may also have been responsible for Monteverdi's dedicating his eighth book of madrigals (1638) to Ferdinand III and his *Selva morale* (1641) to the elder Eleonora Gonzaga. Under LEOPOLD I (1658–1705), also a gifted composer, the predilection for Italian composers continued, though German-speaking musicians, including J.H. Schmelzer, F.T. Richter and J.K. Kerll, also came to prominence, particularly for instrumental composition. Hundreds of musical-dramatic performances, including opera, ballet, serenata, oratorio and *sepolcro*, took place during Leopold's reign, reaching an apex late in the century in the collaborations of the composer Antonio Draghi, the librettist Nicolò Minato and the stage designer Ludovico Ottavio Burnacini.

The reigns of JOSEPH I (1705–11) and CHARLES VI (1711–40) have many common elements since each monarch took over, in large measure, the personnel of his father's Kapelle. Joseph I seems to have been less directly involved in musical matters than other monarchs, though he was responsible for the construction of a new opera house, which opened in 1708. The operatic repertory, not surprisingly, continued to be dominated by Italians, including the Bononcini brothers, Caldara and Marc'Antonio Ziani. Fux came increasingly to dominate the musical scene under Charles VI; he was appointed Kapellmeister after Ziani's death in 1715, and he taught the emperor composition. Charles VI formalized the court ceremonial, which had been evolving since the reign of Ferdinand II. The court participated in stational worship throughout Vienna, travelling regularly to over 30 locations to celebrate particular feast days. The music's style, solemnity and performing forces were determined by the type of liturgical celebration, and the repertory ranged from *stile antico* works that had been part of a traditional court repertory since the late Renaissance to new works in modern and retrospective styles by court composers such as Fux and Caldara.

Maria Theresa's patronage of music was severely limited during the early years of her reign (1740–80), as she and her armies fought to retain her throne, and her court poet, Pietro Metastasio (appointed by her father), wrote little. In 1746 the empress reorganized her Hofkapelle, naming L.A. Predieri to supervise opera and Georg Reutter (ii) to oversee church music. After 1747, when the opera house in the Hofburg was dismantled, performances of Italian opera and ballet continued in the smaller Burgtheater, which was extensively remodelled in 1748, and inaugurated by Gluck's setting of Metastasio's *Semiramide riconosciuta*, whose protagonist symbolized the empress triumphant.

During the next decade Maria Theresa and her chancellor, Wenzel Kaunitz-Rietberg, effected a reorientation of foreign policy towards France. The accompanying wave of French culture made obsolete the court's stiff Spanish ceremonial and had important repercussions for theatre. As part of a 1752 reorganization of the court's spectacles, Kaunitz hired a company of French actors for the Burgtheater which soon added *opéra comique* to its repertory. The court's director of spectacles, Giacomo Durazzo, appointed Gluck to lead performances (also of an ambitious concert series). Between 1758 and 1764 Gluck composed eight *opéras comiques* and after 1759 also supplied ballets for the Burgtheater and (initially) the

German (Kärntnertor) theatre, where 'regular', written-out plays only gradually displaced semi-improvisational farces (some with music).

Italian opera, given only sporadically during the height of the Seven Years War, returned in force in 1760 with Hasse's *Alcide al bivio*, for the marriage of Archduke Joseph. Throughout the next decade Hasse (the empress's former singing teacher, employed at Dresden) and Gluck, together with their respective librettists Metastasio and Calzabigi, headed opposing operatic factions, that of Gluck and Calzabigi, supported by Kaunitz, aiming for greater continuity and expression at the expense of vocal display in such works as *Orfeo ed Euridice* (1762) and *Alceste* (1767). By 1770 things were essentially at an impasse, and no opera whatsoever was commissioned for the marriage of Maria Antonia to the French dauphin. In 1772 Maria Theresa wrote to another daughter that 'for the theatre . . . I prefer the least of the Italians to all our [court] composers, whether Gassmann, Salieri, Gluck or anyone else'. Maria Theresa's children were all trained in music (principally by G.C. Wagenseil, appointed in 1749) and dance, skills essential for their future self-presentation as rulers or as spouses of rulers. On numerous occasions they performed in specially written *componimenti drammatici* or ballets, some of them memorialized in paintings.

Under Joseph II (co-regent 1765–80, emperor 1780–90) Vienna's theatres underwent numerous changes of repertory and organization. His creation in 1776 of a German Nationaltheater, replacing the French players, reflected his desire for financial efficiency more than patriotic conviction. Until 1778 musical works were banned as too distracting, but public demand forced the addition of Singspiele to the repertory. Mozart's *Die Entführung aus dem Serail* (1782) was a notable success, but lack of available pieces led to the Nationalsingspiel being replaced by an Italian *opera buffa* company in 1783. The emperor worked closely with theatre director Franz Orsini-Rosenberg, favouring Salieri (whom he had appointed in 1774 to succeed Gassmann as court composer and music director) but also giving other composers, such as Mozart, opportunities to succeed with the Burgtheater public.

The Hofkapelle, already much consolidated under Maria Theresa, was further reduced under Joseph II. His decrees, issued in 1783, restricting concerted church music and introducing German devotional song in its place were highly unpopular, especially in rural areas, and were ultimately rescinded. Joseph, an accomplished cellist, enjoyed private music-making several times a week with Salieri and other select company. His preference for learned compositions corresponded to the taste of Gottfried van Swieten and his circle, who organized antiquarian performances on a larger scale.

Although his reign was short (1790–92), Joseph's brother Leopold II thoroughly reshaped the court's theatrical life, firing Mozart's collaborator, Lorenzo Da Ponte, reintroducing *opera seria* and ballet and encouraging a simpler style of *opera buffa*. It was for his Bohemian coronation in 1791 that Mozart wrote his last opera, *La clemenza di Tito*.

In 18th-century Italy several Habsburgs influenced musical life in important ways. Maria Theresa herself occasionally intervened in the affairs of Milan's Regio Ducal Teatro (where her namedays were celebrated), and in 1771 she dissuaded Archduke Ferdinand, regent of Lombardy, from taking the young Mozart into his service. In Tuscany Archduke Leopold was a conspicuous patron of opera and ballet, and fostered a Handel revival that predated that in Vienna. Lavish musical and theatrical entertainments marked the weddings of several imperial children on the peninsula, and often also family visits in either direction.

After 1800 the French military threat, inflation and the increased importance of market forces in the musical world made imperial patronage largely irrelevant; there were also complaints about the decline in quality of the court theatre's orchestra. But Emperor Franz II (1792–1835), and even more his wife, Marie Therese, commissioned important works from such composers as Haydn and Joseph Eybler, and between them amassed a large collection of manuscript music (the Kaisersammlung, now in *A-Wn*), used in part for private performances in which the empress and various courtiers participated. Archduke RUDOLPH (son of Leopold II) had a uniquely personal relationship with Beethoven as both pupil and patron. The composer's *Missa solemnis*, though not completed in time for Rudolf's investiture as Cardinal in Olmütz, was dedicated to him on its publication in 1827.

During the 19th century the musicians employed at the imperial court included Leopold Kozeluch, Franz Krommer and Hans Richter. After 1918, when the Austrian republic was established, the Hofkapelle continued to organize concerts and to be responsible for church services until 1945, when it was taken over by the Ministry of Education and Culture.

RICHARD SCHAAL (1), MARTIN PICKER (2), LUIS ROBLEDO (3), STEVEN SAUNDERS, BRUCE ALAN BROWN (4)

Haccourt, Nicolaus (*b* ?before 1600; *d* ?after 1644). Flemish choirmaster and composer. Two composers of this name were active in the Netherlands in the first half of the 17th century and it is difficult to distinguish between them. One Nicolaus Haccourt was choirmaster of Onze Lieve Vrouwbasiliek, Tongeren, between 12 November 1619 and 8 June 1640. On 26 November of the same year he became a priest. A namesake was active as choirmaster of the Collegiate Church of Our Lady, Maastricht, between 1624 and 1644, although he was suspended in 1628 and between 1630 and 1636 because of misconduct. In 1627 this Haccourt composed vespers for eight voices for the chapter. In 1644 he may have been presented as canon of St Maternus at the cathedral of St Lambert, Liège. The eight-voice vespers included in an inventory of Onze Lieve Vrouwekerk, St Truiden, were probably composed by him.

EUGEEN SCHREURS

Hachimura, Yoshio (*b* Tokyo, 10 Oct 1938; *d* Tokyo, 15 June 1985). Japanese composer. He studied composition at the Tokyo National University of Fine Arts and Music, graduating in 1961. His early compositions display the influence of the atonal Expressionism of the Second Viennese School. He established his original style, an assimilation of Webern, Boulez, Cage, jazz and Japanese traditional music, with *One Hour at Every One Breath* (1960); this work won him a prize at the 1962 Rome International Competition. In 1967 he joined the faculty of the Tōhō Gakuen College of Music, becoming an assistant professor in 1984. The colourful sonorities of *Constellation* (1969), performed to acclaim at the 1969 Japanisch-Deutsches Festival für Neue Musik, became one of the characteristics of his later style. In 1980 he won an ISCM prize for *The Logic of Distraction* (1975). Though Hachimura was not a prolific composer, each of his 20 finely wrought compositions bears a deep personal significance.

YO AKIOKA

Hackbrett (Ger.). *See* DULCIMER.

Hacke, John. *See* HAKE, JOHN.

Hacker, Alan (Ray) (*b* Dorking, 30 Sept 1938). English clarinettist. He studied at the RAM, where he won the Dove Prize, and the Boise Scholarship which enabled him to study in Paris, Vienna and Bayreuth. He played in the LPO from 1959 to 1966 and then embarked on a distinguished career in chamber music, playing in the Fires of London from 1967 to 1976 and forming his own groups, Matrix, The Music Party and The Whispering Wind Band. Compositions have been written for him by Birtwistle, Maxwell Davies, Morton Feldman and Alexander Goehr.

Hacker's flexibility of embouchure enables him to play chords, glissandos etc. with ease. He is equally renowned for his playing of contemporary music and of 18th- and early 19th-century works on period instruments. He has attempted reconstructions of the lost original solo parts of Mozart's Clarinet Concerto and Quintet, and has written an article on 'Mozart and the Basset Clarinet' (*MT*, cx, 1969, p.359). Among his many recordings are Mozart's Quintet and works by Brahms and Finzi. He taught at the RAM from 1959 to 1976 and was a senior lecturer at York University from 1976 to 1986, helping to found the York Early Music Festival in 1977. More recently Hacker has undertaken conducting engagements in Finland, Germany, Italy, Sweden and with Opera North. He was made an OBE in 1988.

PAMELA WESTON

Hackett, Charles (*b* Worcester, MA, 4 Nov 1889; *d* New York, 1 Jan 1942). American tenor. On the recommendation of Lillian Nordica he studied at the New England Conservatory with Arthur J. Hubbard, and later with Vincenzo Lombardi in Florence. In 1914 he made his début in Genoa as Wilhelm Meister, which also served for his La Scala début (1916). He appeared at the Paris Opéra as a servant in *Maria di Rohan* in 1917, returning as the Duke and Romeo in 1922. After a season in Buenos Aires (1917–18) he made his Metropolitan début in 1919 as Almaviva; there he later sang Lindoro (*L'italiana in Algeri*), Rodolfo, Pinkerton, Romeo and Alfredo. At Monte Carlo (1922–3) he sang Cavaradossi and Des Grieux (*Manon*). He was closely identified with the Chicago Opera (1922–35) and took part in the première of Cadman's *A Witch of Salem* in 1926. In the same year, he appeared at Covent Garden as Almaviva, Fenton, and Romeo in Melba's farewell performance. He continued to sing until 1939. Hackett made a number of records, including duets with Barrientos and Ponselle; they document a secure technique and a certain elegance, though there is also a sense of routine about them. That sense is completely dispelled by the sweep and finesse of his style in a recording of a Metropolitan Opera broadcast of Gounod's *Roméo et Juliette* from 1935.

RICHARD DYER, ELIZABETH FORBES

Hacomplaynt [Hacomplayne, Hacomblen, Hacomblene, Hacumblen], **Robert** (*b* London, 1455 or 1456; *d* Cambridge, 8 Sept 1528). English ecclesiastic and composer. He was 13 when, in 1469, he was elected a scholar of Eton College. Like many Etonians he went on to King's College, Cambridge, being admitted as a scholar there in 1472. He took his BA in 1475 or 1476, his MA in 1480, his BD in 1490 and his DD in 1507. A Fellow of King's College between 1475 and 1509, he became its provost in 1509 and held this office until his death. The following extract from the college's accounts is typical of several which testify to the interest which he, as provost, took in the musical life of the foundation. 'Item xxiiij° die Martii [1516] Cobnam pro emendatione organorum ex conventione per Magistrum Prepositum iij li. vj s. viij d.'.

A five-part *Salve regina* in the Eton Choirbook (*GB-WRec* 178, ed. in MB, xi, 1958, 2/1973, p.12) is Hacomplaynt's only known surviving composition. It is an accomplished if slightly stiff work, noteworthy for its intricate rhythmic style and for the resourcefulness with which the composer devises imitative treatments of a great variety of melodic ideas. The unidentified cantus firmus, which sounds like a hypodorian plainchant, is evidently quoted both in the fully scored and in some reduced-voice sections, sometimes in transposition. 'Haycomplaynes Gaude' (probably a setting of either *Gaude flore virginali* or *Gaude virgo mater Christi*), cited in an inventory from King's College, dated 1529, is now lost.

NICHOLAS SANDON

Hacquart, Carolus [Carel] (*b* Bruges, *c*1640; *d* ?1701). Flemish composer and instrumentalist, active in the northern Netherlands. He probably received his musical education – comprising composition and bass viol, lute and organ playing – in his native town. Attracted by the growth of musical life of rich citizens of the United Provinces, he left the Spanish Netherlands for Amsterdam in the early 1670s. There he composed a set of *Cantiones sacrae*, suited to both Protestant and Catholic use, in 1674, and the music for a play by Dirk Buysero, *De triomfeerende min*, to celebrate the Peace of Nijmegen in 1678. He became a protégé of Constantijn Huygens who praised him as 'ce grand maistre de musique' and through whose mediation he was able to give concerts in the Mauritshuis at The Hague. He moved to that city in 1679, received its citizenship on 11 November of that year and was appointed organist in a small hidden Catholic church from 1680 until 1682. There is no trace of him in the United Provinces after 1686, when he published his opp.2 and 3. He possibly went to England with William III in 1689 or later. The Carolus Hacquardt from Amsterdam cited by Niemöller as a citizen of Cologne is not to be identified with him.

Hacquart's most important music is found in his *Harmonia parnassia*, containing ten sonatas that compare in interest with the trio sonatas of Purcell and Corelli. In them features of the *sonata da chiesa* and *sonata da camera* are fused, and they can be seen as a highly personal synthesis of chamber music styles up to the 1680s: for example, a thoroughly polyphonic canzona may alternate with a lyrical air and a surprising *bizzaria* or even some dance movements. The thematic material is characterized by both italianate melody and elements from folksong, and there is some harmonic innovation in the slow movements. *De triomfeerende min* has often been considered the first Dutch opera, but in fact it is a rather conventional pastoral not unlike a masque such as *Cupid and Death* by Locke and Christopher Gibbons.

P. ANDRIESSEN

Hadden, J(ames) Cuthbert (*b* Banchory-Ternan, Kincardine, 9 Sept 1861; *d* Edinburgh, 2 May 1914). Scottish organist and writer on music. His first post, with Routledge, the publisher, gave him the opportunity to study music in his spare time, in particular the organ. Returning to Aberdeen by 1882, he held appointments there, then in Crieff (1884) and finally at St John's Episcopal Church, Edinburgh (1889), where he was one of the first organists in Scotland to hold special musical services on Sunday evenings.

He was a naturally gifted writer, with a clear, vigorous style, and was a sound scholar. His first two biographies, of Handel and Mendelssohn (both 1888), were favourably received. Other books followed, notably those on Haydn and Chopin, commissioned by Dent for the first series of the Master Musicians. His outstanding work, likely to be the most long-lived, is *George Thomson, the Friend of Burns* (1898), which deals with the letters that passed between Thomson and the contributors to his anthology, *A Select Collection of Sottish Airs*, including Beethoven, Haydn, Pleyel and Weber.

Hadden contributed excellent articles to the *Dictionary of National Biography* and to periodicals including the *Nineteenth Century*, *Scottish Review*, the *Cornhill Magazine* and the *Fortnightly Review*. He was also, from October 1893 to May 1896, editor of the *Scottish Musical Monthly Magazine*, where his lively editorials provoked much discussion. He also wrote books on naval history, Scottish history and biography.

JEAN MARY ALLAN/RUZENA WOOD

Hadianda, Dedy Satya (*b* Bandung, Java, 1964). Indonesian composer. From a family famous in the traditional arts of Sunda, he was deeply immersed in these arts from the age of eight. After attending the High School for the Indonesian Performing Arts in Bandung, Hadianda continued to the Indonesian Dance Academy there, then studied classical Javanese and Sundanese music at the Indonesian Academy for the Performing Arts in Surakarta. He benefited from this academy's progressive approach, in which composition was placed in the context of contemporary indigenous classical music. In 1993 Hadianda formed Zithermania, an ensemble consisting of two players of the *kecapi* (Sundanese zither) and a Latin American percussionist. In writing the music for Zithermania he fuses the idiom of Western tonal music with the pentatonic idiom of Sunda. By using the *pelog* and *salendro* scales of Sundanese music on respective *kecapi*, he makes available a wide range of notes, allowing his compositions to sound variously tonal, Sundanese pentatonic or dodecaphonic. Hadianda is one of the few prominent contemporary Indonesian composers strongly rooted in traditional Sundanese musical culture.

FRANKI RADEN

Hadidjah, Idjah [Hajah] (*b* Karawang, 12 June 1956). Sundanese *pasindén* (female singer with *gamelan saléndro*). She began to study Sundanese *kawih* (vocal genre) with her father in 1969 and the following year was invited by *dalang* (puppet master) Tjetjep Supriadi (*b* 1931) to sing with his *wayang golék purwa* (rod puppet theatre) troupe, Panca Komara. They were married in 1972. In the 1970s, Panca Komara recorded over 100 three-hour *wayang* performances for distribution on cassette. Hadidjah's clear, soaring voice, the clarity of her *senggol* (ornamentation), her subtle expressiveness and sensitivity, and her ability to reflect and enhance the mood of any *wayang golék* scene contributed to the commercial success of these cassettes and made hers a household name throughout West Java. She won several prizes in annual Binojakrama Padalangan (*wayang* competitions), including the overall first prize in 1995. From 1980 to 1984 she was contracted to the Jugala recording studio, where she recorded *degung kawih* (songs accompanied by *gamelan degung*), *kliningan* (performance of *gamelan saléndro* pieces for listening) and *jaipongan* (popular Sundanese genre); several of Idjah's recordings form the core of the current *jaipongan* canon. Although her name is closely identified with *jaipongan*, Idjah never participates in live *jaipongan* performances, but continues to perform in *wayang golék* with Tjetjep Supriadi.

HENRY SPILLER

Hadjiapostolou, Nikolaos [Nikos] (*b* Athens, or nr Athens, ? May 1879; *d* Athens, 9 Aug 1941). Greek composer and bass. He studied at the Lottner Conservatory, Athens, with Karl Boehmer (*c*1899–1905) and sang with Lavrangas's Elliniko Melodrama company (*c*1905–15). After composing music for revues, he began in 1916 to write operettas, between one and three a year for more than 20 years, which were staged by Athenian companies. A cultured, self-disciplined musician, he owed his great

popularity to the hundreds of songs he composed; mostly written for, or incorporated into, his operettas, they often have an irresistible dramatic impact and vary from simple strophic forms to more complex opera-like scenes. Several of his individual songs and short dramatic scenes were recorded by his close friend the baritone Yannis Anghelopoulos; a number, including *O katadhikos* ('The Convict'), *I kardhia tis mannas* ('Mother's Heart'), *To palio violi* ('The Old Violin') and especially *O agoyatis* ('The Cart-Driver') still enjoy widespread popularity. Although the plots of some of his works are based on French plays, they are adapted to Greece, with heroes that are usually simple and kind-hearted working-class Athenians, maintaining their national and class identity in ultimately peaceful confrontations with wealthy city dwellers. His best-known operetta, *I apahides ton Athinon* (1921), was made into a film in 1930 and successfully revived in 1985 by the National Lyric Theatre in Athens. Many of his scores were destroyed in a fire in 1968.

WORKS
(*selective list*)

OPERETTAS

for detailed list see GroveO, dates are of first performance in Athens

Moderna kamariera [Modern Chambermaid] (3, N. Paraskevopoulos, after G.-L.-J.-M. Feydeau), 1916; Erotika gymnassia [Manoeuvres in Love] (3, Paraskevopoulos, after *Amour et Preston*), 1917; I bebeka [Baby Doll] (V. Vekiarellis), 1918; I erotevmenoi, i I erotevmenoi mylonades [People in Love, or Millers in Love] (A. Nikas), 1919; Kontessina [The Countess] (after Fracarolli), 1920; Sta triandafylla [Among the Roses] (3, Paraskevopoulos, after *Emprunte-moi ta femme*), 1920; I apahides ton Athinon [The Athenean Apaches] (3, Y. Prineas), 1921

To koritsi tis yitonias [The Girl of the Neighbourhood] (3, Z. Thanos), 1922; Pos pernoun i pandremenoi [Married Life] (3, Thanos), 1923; I gyneka tou dromou [The Tramp] (dramatic operetta, 3), 1924; Boemiki agapi [Bohemian Love] (3, O. Karavias), 1926; Proti agapi [First Love], 1928/9; Yola (operetta-revue, 2), 1931; O babas ekpedevetae [Daddy's Education] (3, Hadjiapostolou, after S. Melas), 1936; I kardia tou patera [Father's Heart] (2, after Cormon and Granger: *Le vieux Martin*), 1939 Gremisméni folia [Destroyed Nest] (operetta, 2, after A. Bisson's *L'inconnue*), n.d.; Sani kardia pona [A Heart in Travail] (2, Hadjiapostoloa), n.d.

GEORGE LEOTSAKOS

Hadjidakis, Manos (*b* Xanthi, 23 Oct 1925; *d* Athens, 15 June 1994). Greek composer and administrator. Almost entirely self-taught as a composer, he attracted notoriety in February 1949 by drawing attention in a lecture to *rebetiko* (urban folksong), a genre previously scorned by serious Greek musicians. His series of lectures on American composers (Menotti, Copland and others) in Athens early in 1953 did much to expand the horizons of young Greek composers, who had been isolated by World War II and by postwar conditions. He was active in promoting new Greek music within Greece: in 1962 he financed the Manos Hadjidakis Competition at the Athens Technological Institute, which introduced works by Xenakis, Logothetis, Mamangakis, Antoniou, Ioannidis and others; in 1964 he founded and conducted the Piramatiki Orchistra Athinon (Athens Experimental Orchestra), which, although it gave only 20 concerts during its brief life (1964–7), was responsible for the premières of 15 Greek pieces. In 1967 Hadjidakis moved to New York, but he returned to Greece in 1972. In 1975 his international reputation prompted Karamanlis's right-wing government to appoint him director of music programmes for Hellenic Radio and, a little later, director of its Third Programme (1975–82), as well as director general of the Athens State Orchestra (1976–82) and deputy director general of the National State Opera (1974–7). For seven years he was one of the most influential musical figures in Greece. Under his guidance the Third Programme underwent considerable (though not lasting) changes, while the short-lived Musical August festival in Iraklion, founded in 1979, became an important platform for young composers. Yet despite Karamanlis's support, the intricate problems of music in Greece after years of stagnation and mismanagement proved insoluble for one of Hadjidakis's ebullient temperament, and he withdrew when Papandreou came to power. He then became editor of the art periodical *To tetarto* (1982–3) and founded the record company Seirios (1985) and the Orchistra ton Chromaton (Orchestra of the Colours; 1989), whose sole conductor he remained as long as his health permitted.

Hadjidakis's personality left its imprint on a wide sector of Greek musical life. His songs, a model for younger songwriters, enjoy lasting popularity and represent perhaps the most refined musical experience of the general Greek public after 1950 (he recognized no distinction

between serious and light music). His undeniable gifts were offset by a psychological inhibition that made sustained effort impossible; hence he avoided large-scale musical forms entailing development, adhering instead to number forms. As if to overcome this inhibition by submitting to controlling external factors, the greater part of his output was written to commission. Many of his best songs, from Lorca's *Blood Wedding* to Pirandello's *Tonight we Improvise*, were written for the theatre (principally the Greek National Theatre and Koun's Art Theatre) or for films, from *Stella* and *Never on Sunday* (whose theme-song won him an Oscar in 1960) to *Blue* (1967–8) and *Sweet Movie* (1975). To the dismay of producers, he seldom prepared a full score or orchestral parts, preferring to compose and experiment with orchestration in the recording studio, with the result that part of his output exists only in recordings.

While Hadjidakis pursued an international career and showed wide-ranging interests in new music, his essential sympathy was with the specifically Greek sensibility of such poets as Seferis, Elytis and Gatsos, and of such painters as Tsarouhis, Moralis and Arghyrakis. This orientation, shared by Kounadis and, to a much lesser extent, by Theodorakis, led to a revival of Greek popular song (often to poems by celebrated Greek writers) that displaced the more sentimental western style of the 1920s and 30s. Partly for that reason Hadjidakis's name is often mentioned together with that of Theodorakis – an ill-considered judgment, in view of their different musical temperaments. Unlike Theodorakis, with his spontaneity and disregard for stylistic homogeneity, Hadjidakis was hypersensitive to style and to the expressive potential of each interval, rhythm and accidental (as for example in *O efialtis tis Persefonis* ('Persephone's Nightmare') from the song cycle *Ta paraloga*, where a commonplace melodic pattern is transformed by a single unexpected flat), as well as being attuned to the inflections of the Greek language and to the interrelationship of melody, verse and rhythm. His early piano music and ballets – such as *To katarameno fidi* ('The Accursed Serpent', 1950) on the feats of Karaghiozis, the hero of the folk shadow theatre – have eloquent melodic lines, soberly yet inventively harmonized in imitation of *rebetiko* instruments. Hadjidakis later moved away from *rebetiko* and ballet towards songs and song cycles in an instantly recognizable idiom; with their subtle orchestration they create a poetic universe imbued with sadness or nostalgia, and often attain an expressive poignancy that ranks them alongside the best works of Riadis and Kalomiris.

WORKS
(*selective list*)

DRAMATIC

Stage: Andreas Zeppos (ballet), 1945/1946, inc.; Satyros (ballet), 1947, inc.; Marsyas (R. Manou), op.4, 1949; To katarameno fidi [The Accursed Serpent] (ballet, Hadjidakis, N. Hadjikyriacos-Ghikas, E. Spatharis), op.6, 1950; Erimia [Solitude] (ballet, Hadjidakis), op.10, 1957; Rinaldos kai Armida (folk op, 1, G. Hortatzis), op.17, ?1961–2, inc.; Odos Oneiron [Dream Street] (revue, I. Kambanellis and others), op.20, 1962; Kaesar kai Kleopatra (musical play, G.B. Shaw), op.21, 1962; Mayiki poli [Magic City] (revue), 1963; Ornithes [Birds] (ballet, Aristophanes), 1964 [based on incid music]; Ilya Darling (musical play), ?1967; Opera ya pende [Opera for Five], 1968, inc.; O odiporos, to methysmeno koritsi Kai o Alkiviadis [The wayfarer, the drunken girl and Alcibiades (M. Eleftheriou and Hadjidakis), 2 female vv, 2 male vv, small orch, dancers, actors, 1973; Paedes epi Colono [Youths at Colonos] (staged cant., N. Gatsos, M. Bourboulis, Hadjidakis), op.36, 1977–8, inc.; I ballades tis odou Athinas [The Ballads of Athena Street] (ballet, A. Dimitrouka, A. Davarakis, Hadjidakis), 1982–3 [based on song cycle]; Pornografia (revue, Gatsos, Davarakis, Hadjidakis), op.43, 1982–3

76 film scores incl.: Stella (dir. M. Kakoyannis), 1955; Pote tin Kyriaki [Never on Sunday] (dir. J. Dassin), 1960; Maddalena (dir. N. Dimopoulos), 1960; The 300 Spartans (dir. R. Mate), 1961; It Happened in Athens (dir. A. Martan), 1961; In the Cool of the Day (J. Huismann), 1962; Topkapi (dir. Dassin), 1963; Blue (dir. S. Narizzano), op.25, 1967–8; The Heroes (dir. J. Negulescu), 1969; The Pedestrian (dir. M. Schell), 1973; Sweet Movie (dir. D. Makaveyev), 1974; Isyches meres tou Avgoustou [Quiet Days of August] (P. Voulgaris), 1992

Incid music for 65 plays incl.: O teleftaeos asprokorakas [The Last White Crow] (A. Solomos), 1944; Mourning Becomes Electra (E. O'Neill), 1946; Antigone (J. Anouilh), 1947; Blood Wedding (F. García Lorca), op.3, 1948; A Streetcar Named Desire (T. Williams), 1949; Death of a Salesman (A. Miller), 1949; Saint Joan (G.B. Shaw), 1951; A Midsummer Night's Dream (W. Shakespeare), op.8a, 1954; The Caucasian Chalk Circle (B. Brecht), op.13, 1957; Dark is Light Enough (C. Fry), 1957; Lysistrata (Aristophanes), op.12, 1957; Paramythi horis onoma [Tale Without a Name] (I. Kambanellis, after P. Delta), op.11, 1957; Ornithes [Birds] (Aristophanes), ?1959; Tonight we Improvise (L. Pirandello), op.18, 1960; Bacchae (Euripides), op.19, 1962; Kapetan Mihalis (N. Kazantzakis), op.24, 1966; The Masks (B. Johnson), 1975, collab. T. Antoniou, Y. Couroupos; To fyndanaki [The Offspring] (P. Horn), 1989

VOCAL

GEORGE LEOTSAKOS (work-list with RENATA DALIANOUDI)

Hadley, Henry (Kimball) (*b* Somerville, MA, 20 Dec 1871; *d* New York, 6 Sept 1937). American composer and conductor. His father taught him the piano, the violin and conducting, and he studied harmony with Emery and counterpoint and composition with Chadwick in Somerville and at the New England Conservatory (to 1894). He also studied counterpoint with Mandyczewski in Vienna (1894–5) and composition with Thuille in Munich (1905–7). Hadley was especially influenced by Chadwick, who was a good friend and mentor, and by Richard Strauss, whom he met in London in 1905. Hadley taught at St Paul's School in Garden City, New York (1895–1902, succeeding Horatio Parker), and he pursued a highly successful conducting career in the USA and, from 1904, in Europe. He was conductor of the Mainz Stadttheater (1907–9) and of the Seattle SO (1909–11), and he formed and conducted the San Francisco SO (1911–15). He was associate conductor of the New York PO (1920–27) and founder and conductor of the semi-educational Manhattan SO (1929–32), an orchestra formed to promote the works of American composers. He also conducted in Japan and South America. Hadley was a tireless and effective advocate of American music, both in performance and as a lecturer. In 1933 he founded the National Association for American Composers and Conductors, which endowed the Henry Hadley Memorial Library (the Americana Collection), now housed at the New York Public Library. He also founded the Berkshire Music Festival (1934) and conducted the orchestra there for the first two seasons. He was elected to the American Academy of Arts and Letters in 1924. Hadley's abundant compositions were written in a conventional, late Romantic and expressive style; they were popular in his lifetime, and received repeated performances but mixed critical reaction, though their fluency and technical excellence was universally praised. He was awarded the Paderewski Prize in 1901 for his Second Symphony. Hadley wrote several works for his brother Arthur (1874–1936), a cellist, including the *Konzertstück* op.61. His opera *Cleopatra's Night* was given by the Metropolitan Opera and was the first work to be conducted there by its composer (though not in its first performances). Hadley was commissioned by the Vitaphone Company to compose and conduct what may have been 'the first musical score to be recorded and played in synchronism with an entire motion picture' (Canfield) for *When a Man Loves* (released November 1926).

In 1933 the *Musical Courier* could call Hadley 'probably the most important composer in the contemporary American musical scene', but his standing as a composer has since declined and it is perhaps first as a conductor and promoter of American music that he deserves recognition. The Henry Hadley Foundation was established in 1938 in New York to promote cooperation among American musicians and to provide scholarships and financial aid for the training and encouragement of American composers.

WORKS

DRAMATIC

Happy Jack (operetta, S.F. Batchelder), 1897
Nancy Brown (operetta, F. Ranken), op.63, 1903, New York, 1903
Safié (op, 1, E. Oxenford, after a Persian legend), op.63, Mainz, Stadt, 4 April 1909
The Atonement of Pan (music drama, J. Redding), 1912, Sonoma County, CA, 10 Aug 1912
The Pearl Girl (operetta, W.J. Hurlburt), op.73
Azora, the Daughter of Montezuma (op, 3, D. Stevens), op.80, 1914, Chicago, Auditorium, 26 Dec 1917
The Masque of Newark (pageant, T. Stevens), 1916, Newark, 1916
Bianca (op, 1, G. Stewart, after C. Goldoni: *La locandiera*), op.79, 1917, New York, Park, 18 Oct 1918
Cleopatra's Night (op, 2, A.L. Pollock, after T. Gautier), op.90, 1918, New York, Met, 31 Jan 1920
Semper virens (music-drama, Redding), op.97, 1923, Sonoma County, 1923
The Fire Prince (operetta, Stevens), Schenectady, NY, 1924
A Night in Old Paris (op, 1, F. Truesdell, after G. McDonough), 1924, private perf. New York, Dec 1924; NBC Radio, 20 Jan 1930
The Legend of Hani (music drama, J. Cravens), 1933, Sonoma County, 29 July 1933
The Red Flame (musical, L. Anderson)

ORCHESTRAL

Ballet Suite, op.16, 1895; Festival March, op.5, orch, band, 1897; Sym. no.1 'Youth and Life', d, op.25, 1897; Sym. no.2 'The Four Seasons', f, op.30, 1901; Herod, ov., F, op.31, 1901; In Bohemia, ov., E♭, op.28, 1902; Oriental Suite, op.32, 1903; Sym. Fantasia, E♭, op.46, 1904; Salome, tone poem, E, op.55, 1905–6; Sym. no.3, b, op.60, 1906; Konzertstück, e, op.61, vc, orch, 1907; The Culprit Fay, rhapsody, e, op.62, 1908
Lucifer, tone poem, C, op.66, 1910; Sym. no.4 'North, East, South, and West', d, op.64, 1911; The Atonement of Pan, suite, 1912 [from op]; Silhouettes, suite, E♭, op.77, 1918; Othello, ov., f♯, op.96, 1919; The Ocean, tone poem, E♭, op.99, 1920–21; Suite ancienne, F, op.108, 1924 [orig. vc, pf]; Streets of Pekin, suite, A, 1930; San Francisco, suite, C, op.121, 1931; Youth Triumphant, ov., band (1931); Alma mater, ov., A♭, op.122 (Boston, 1932); The Legend of Hani, suite, 1933 [from op]; Scherzo diabolique, D, op.135, 1934; Sym. no.5 'Connecticut', c, op.140, 1935; other works

VOCAL

The Fairies (W. Allingham), op.3, S, SATB, orch/pf (1894); Lelawala (ballade, G.F.R. Anderson), op.13, SATB, orch (1898); In Music's Praise (cant., Anderson), op.21, S, T, B, SATB, orch, 1898; The Princess of Ys (cant., E.W. Mumford), op.34, women's vv/mixed vv, orch (1903); A Legend of Granada (cant., Mumford), op.45, S, Bar, SSAA (New York, 1904); Merlin and Vivian (lyric drama, Mumford), op.52, solo vv, SATB, orch, 1906; The Fate of Princess Kiyo (cant., Oxenford), op.58, S, S, SSAA, orch (New York, 1907)
The Nightingale and the Rose (cant., E.W. Grant), op.54, S, SSAA, orch (New York, 1911); The Golden Prince (cant., D. Stevens, after O. Wilde), S, Bar, SSAA, orch (New York, 1914); Music, an Ode (H. Van Dyke), op.75, solo vv, SATB, orch, 1915; The Fairy Thorn (cant., C.B. Fenno), op.76, S, Mez, female vv, pf/orch (New York, 1917); In Arcady (idyll, E.F. Weatherly), op.83, SATB, orch; The New Earth (ode, L.A. Garnett), op.85, S, A, T, B, SATB, orch, 1919; Prophecy and Fulfillment (Pss., hymns), Christmas cant., op.91, S, A, T, SATB, orch, 1922
Resurgam (orat, Garnett), op.98, S, A, T, B, SATB, orch, 1922; Mirtil in Arcadia (pastoral, Garnett), op.100, solo vv, nar, SATB, children's chorus, orch, 1926; The Admiral of the Seas (cant.,

Fenno), T, SATB, orch (1928); Belshazzar (cant., Garnett), op.112, solo vv, SATB, orch, 1932
Anthems and other choral pieces; over 200 songs

RICHARD JACKSON/R

Hadley, Jerry (*b* Princeton, IL, 16 June 1952). American tenor. After vocal studies at the University of Illinois and with Thomas Lo Monaco in New York, he made his début as Lyonel in *Martha* (1978, Sarasota). Several seasons at the New York City Opera, beginning in 1979 (as Arturo in *Lucia di Lammermoor*), established him as a leading lyric tenor: his roles included Des Grieux (*Manon*), Pinkerton, Tom Rakewell, Werther and Gounod's Faust. His European début in Vienna as Nemorino in 1982 was followed by appearances in Berlin, Geneva, Glyndebourne, Hamburg, London and Munich. He made his Metropolitan Opera début as Des Grieux in 1987. His lyrical, italianate voice and dramatic immediacy make him a fine interpreter of the Mozart, French lyric and Italian repertories. He is an equally accomplished artist in the concert hall in works such as *Messiah*, *Elijah* and Britten's *War Requiem*, all of which he has recorded. Among his many operatic recordings are *Faust*, *Werther*, *La bohème* and *The Rake's Progress*, in all of which his firm line and ardent manner are in evidence.

CORI ELLISON/ALAN BLYTH

Hadley, Patrick (Arthur Sheldon) (*b* Cambridge, 5 March 1899; *d* Heacham, 17 Dec 1973). English composer. After schooling at Winchester College and war service in France (where he lost his right leg) he attended Pembroke College, Cambridge, and the RCM. His studies with Charles Wood (at Cambridge) and later with Vaughan Williams, Boult and Sargent prepared him for a career as a composer, conductor and academic. He joined the teaching staff of the RCM in 1925, continuing to teach there after his appointment in 1938 to a fellowship at Gonville and Caius College, Cambridge, and a university lectureship in music. During World War II he took over the conductorship of the Cambridge University Musical Society, while Ord was absent on war service, and conducted memorable performances of Beethoven, Bach and Verdi and two major Delius works, *Appalachia* and *Song of the High Hills*. He was elected in 1946 to the chair of music at Cambridge from which he retired in 1962.

His small but individual output consists almost entirely of word settings, and his many haunting and atmospheric songs have remained undeservedly neglected. There are also settings for voice and chamber group, such as *Mariana* and *Scene from 'The Woodlanders'*. The anthem *My Beloved Spake* has maintained its place in the cathedral repertory.

Four large-scale works display an operatic gift that was never fully realized. *The Trees so High* is a four-movement symphony drawn from the contours of that Somerset folksong, and *The Hills*, also for chorus, orchestra and soloists, is the nostalgic reminiscence by a bachelor of his parents' happy marriage, disguised as a modern fable. Equally impressive are the settings of *La belle dame sans merci* and *Lines from 'The Cenci'*. In these works he achieved a personal idiom that was a successful synthesis of the influence of Delius, Debussy and Ravel.

His advice on musical matters was often sought by friends such as Bax, Boult, Moeran, Alan Rawsthorne and Walton, while his own compositions are characterized by wistfulness and introspection combined with an abiding love of the English landscape, qualities apparent in his orchestral miniature *One Morning in Spring*.

WORKS
(*selective list*)

Choral: The Trees so High, sym. ballad, Bar, chorus, orch, 1931; La belle dame sans merci (cant, J. Keats), T, chorus, orch, 1935; Travellers (cant, A. Pryce-Jones), S, chorus, orch, 1942; The Hills (cant, Hadley), S, T, B, chorus, orch, 1944; Fen and Flood (cant, C.L. Cudworth), S, B, chorus, orch, 1954–5; Connemara (cant, Cudworth), S, T, B, chorus, orch, 1958; A Cant for Lent (compiled Cudworth), T, B, chorus, orch, 1962
Vocal: Scene from 'The Woodlanders' (T. Hardy), S, chbr ens, 1925; Mariana (A. Tennyson), Mez, chbr orch, 1937; My Beloved Spake (Bible: *Song of Solomon*), mixed chorus, pf, org (London, 1938); Lines from 'The Cenci' (P.B. Shelley), S, chbr orch, 1951; The Gate Hangs High (Cudworth), T, Tr vv, hp, 1960–61
Orch: Kinder Scout (Sketch for Orch), 1923; One Morning in Spring (Sketch for Small Orch), 1942
Songs, short choruses, incid music to Aeschylus, Shakespeare and Sophocles

ERIC WETHERELL

Hadow, W(illiam) H(enry) [Sir Henry] (*b* Ebrington, Glos., 27 Dec 1859; *d* London, 8 April 1937). English writer on music, educationist and composer. He was educated at Malvern College, Worcestershire, and at Worcester College, Oxford, which he entered as a scholar in 1878. He passed with first-class honours in Moderations in 1880 and in Litterae Humaniores in 1882, graduating that year with the BA and becoming an MA three years later. Meanwhile he began his practical musical education at Darmstadt in 1882 and continued his studies in England with C.H. Lloyd in 1884–5. In 1885 he was appointed a lecturer at Worcester College, where he was next made Fellow and classics tutor in 1888. In 1890 he took the BMus and began lecturing for the professor of music (Sir John Stainer). In 1896 he took over the general editorship of *The Oxford History of Music*.

Hadow left Oxford in 1909 to become principal of Armstrong College, Newcastle upon Tyne, a division of Durham University. He was then given the honorary degree of DMus by Oxford University, as he later was by

the universities of Durham and Wales. In 1918 he was knighted and became for a time director of education with the British Army in France for the Young Men's Christian Association. After returning to England, he was appointed vice-chancellor of Sheffield University in 1919; during his regime a chair of music was established (in 1927), with F.H. Shera as the first full-time, resident professor (from 1928). Hadow was the chairman of a committee of the Board of Education that in 1926 produced the Hadow Report, a document which revolutionized education in England. His work in public affairs, centring on education, was more influential than his musical activities. He retired from public life in 1930.

All Hadow's compositions are early works, for as he became busier with other affairs he gradually gave up composing. His instrumental works, notably a string quartet in E♭, reflect his German training. Popular though they and his songs were in Oxford, he exerted his most potent influence there through his lectures on music: his appointment as general editor of *The Oxford History of Music* was a fitting tribute to his fine work for music. He was also invited to advise the Carnegie Trust, sponsor of *Tudor Church Music*, with Hadow as the inspiration behind this epoch-making series. Moreover, it was largely through his work at Oxford, and elsewhere later in his life, that music in England began to find a respectable academic place among the humanitarian studies. His influence was felt on a broader scale as a result of the publication of various books, notably, in the first place, of his *Studies in Modern Music*, consisting mainly of essays on Berlioz, Schumann and Wagner (first series) and on Chopin, Dvořák and Brahms (second series). These perceptive and elegant essays set a new standard for England in musical literature, and though they reflect certain Victorian prejudices they may still be read with interest. Hadow was most at home, as many of his titles show, writing about music in general terms or about the general characteristics of a composer, without extensive recourse to detailed analysis of particular works: one excursion into specialization, his conclusions about Haydn's Slavonic origin included in his revision of Pohl's article for *Grove's Dictionary*, second edition, can now be seen as unfortunate. In other areas of music, his work on hymnody should be mentioned.

NIGEL FORTUNE

Hadrava, Norbert (*fl* 1776–91). Austrian amateur musician and patron. A diplomat in Berlin during the 1770s and in Naples during the 1780s, he pursued a variety of musical activities. He played and composed for the keyboard (including two published sonatas); he improved a hurdy-gurdy, which he called the *lira organizzata*, taught Ferdinando IV of Naples how to play it, and commissioned several German and Austrian composers, including Haydn, to write music for it. As self-appointed agent for the instrument builder Johann Andreas Stein, he arranged for the purchase and shipping of pianos from Stein's workshop in Augsburg to Naples. Hadrava's letters to his friend Johann Paul Schulthesius (*A-Wn*) represent an important source of information about Neapolitan musical life during the 1780s.

JOHN A. RICE

Hadrian I (pontificate 772–95; *d* 25 Dec 795). Pope. He sent to Charlemagne the manuscript of the Gregorian sacramentary known as the *Hadrianum*, the text of which subsequently formed the basis of the Carolingian Mass. According to several medieval authors, Hadrian was also associated with Roman chant and its introduction into the Frankish Church. Amalarius of Metz (*d c*850) reported that he had consulted a 'responsoriale' at Corbie that bore attributions to the pope. John the Deacon, a monk of Monte Cassino, claimed in his *Vita sancti Gregorii* (*c*873–5) that Hadrian had attempted to aid the introduction of 'Roman' chant into Francia by training Frankish cantors in Rome and by sending two of his own cantors to Gaul to 'correct' the Frankish chanting (*PL*, lxxv, 91). Adémar de Chabannes (988/9–1034) ascribed to Hadrian the composition of several chants (tropes and sequences) and the authorship of the prologue 'Gregorius praesul', a poem that stood at the head of many early Carolingian chant books (*see* GREGORY THE GREAT).

JANE BELLINGHAM

Hadrianus [Hadrianius], **Emmanuel.** *See* ADRIAENSSEN, EMANUEL.

Haebler, Ingrid (*b* Vienna, 20 June 1929). Austrian pianist. She made her début at the age of 11 in Salzburg, and studied at the Mozarteum there, the Vienna Music Academy, the Geneva Conservatory and in Paris with Marguerite Long. In the mid-1950s she won prizes for her playing of Schubert and Beethoven and awards for her recordings and performances at Salzburg. Haebler toured widely, not only in Europe (where she appeared at the Edinburgh, Holland and Prague festivals) but also in the USA, the USSR, Japan and Australia.

Her reputation was based principally on her recordings. She recorded all Mozart's piano concertos (most of them twice) and all the sonatas of both Mozart and Schubert, as well as music by Haydn and Beethoven, and works by J.C. Bach on a fortepiano. Her piano style was essentially gentle and unassertive, but her natural, Viennese feeling for a shapely line, her crystalline passage-work, her quiet warmth and intimacy of expression, and her sensitivity in dialogue in concertos and chamber music made her a distinguished and faithful interpreter of Schubert and above all Mozart. She often played cadenzas of her own composition.

STANLEY SADIE

Haeffner, Johann Christian Friedrich (*b* Oberschönau, Thuringia, 2 March 1759; *d* Uppsala, 28 May 1833). German composer, active in Sweden. The son of a schoolmaster and church organist in Klein-Schmalkalden, he received his earliest musical education from his father. As a student at Leipzig University he became acquainted with J.A. Hiller, from whom he learnt the Singspiel tradition. From 1778 to 1780 he was musical director of theatre troupes in Frankfurt and Hamburg. In 1780 he was appointed organist at the German Church (St Gertrude) in Stockholm, and held that post until his dismissal in 1793. In autumn 1781 he began to teach singing at the Royal Theatre and also acted briefly as musical director of Carl Stenborg's Mindre Teater; he was made assistant director of the Royal Theatre in 1782 for J.G. Naumann's production of *Cora och Alonzo* and was given a formal contract as a teacher of singing in 1783. In 1792 he was appointed interim successor to J.M. Kraus as *Hovkapellmästare*, a position he held until he was forcibly removed in 1808 and sent to Uppsala, where he became *director musices* at the university. His last formal appointment was as organist at the cathedral there in 1826.

Haeffner's often stormy relationship with his subordinates in Stockholm led to considerable controversy. Unlike his articulate predecessor Kraus, he spoke Swedish poorly and his conducting style was often uninspired and pedantic. He was considered authoritarian and unable to get along with either colleagues or superiors, and his departure for Uppsala was greeted by the court orchestra with relief. As a composer, however, he demonstrated considerable knowledge of both the Singspiel tradition of Hiller and the heroic French style of Gluck. His best work, the three-act opera *Electra*, is filled with colourful orchestration and shows a conscious attempt to bring out an emotional text. The music is heavily influenced by the German *Sturm und Drang*, and in his other stage works (which include incidental music) there is well-crafted and often harmonically advanced writing. His greatest influence on Swedish music, however, was the revision of the standard hymnal for the Swedish Lutheran church in 1820. He also developed the popular oratorio and male chorus traditions at Uppsala, in addition to producing scholarly works on the chorale, Nordic folk music and vocal pedagogy.

WORKS

most MSS in S-Sk, Skma, St, Uu

STAGE

Den svartsjuke sin egen rival, eller Sängkammareko [Jealousy is its own Rival, or Echo in the Bedroom] (incid music), 1784

Electra (op, 3, A.F. Ristell, after N.E. Guillard), Drottningholm, 22 July 1787

Alcides inträde i världen [Alcides' Entrance into the World] (op, 1, A. Clewberg-Edelcrantz), Stockholm, Royal, 11 Nov 1793

Epilogue to R. Kreutzer: Lodoiska (1, C. Lindegren), Stockholm, Royal, 2 Nov 1795

Renaud (lyric tragedy, 3, N.B. Sparrschöld, after Leboeuf and others, after T. Tasso), Stockholm, Royal, 29 Jan 1801

Arias in Äfventyraren (oc, 2, J. Lannerstierna, 1791), Eremiten (drama, 3, G. Eurén after A. von Kotzebue, 1798); prologues for royal occasions

OTHER VOCAL

Chorus, orch: Försonaren på Golgotha [Saviour at Golgotha] (orat, S. Ödmann), Uppsala, 19 March 1809; Ps xx; Ps xxi; Konungars Konung [King of Kings]; Svensk Te Deum; Musik till Jubelfesten, 1793; numerous occasional works for coronations, royal visits, funerals, etc.

Other sacred: Choralbok (1807–8); Svenska mässan, 1817; Svensk choralbok, 1820–21; Choral-Buch eingerichtet nach dem Gesang-Buch der deutschen Gemeinde in Stockholm, 1828; Litania (M. Luther), male vv, org

Secular: partsongs, male vv, pf; songs to Ger. and Swed. texts, 1v, pf (Stockholm, 1793), many pubd in *Musikaliskt tidsfördrif*

INSTRUMENTAL

Orch: Ballet for Fru Cassali, C; ballet movts; sym., D, 1795; 3 ovs., D, *c*1798, E♭, *c*1808, E♭, 1823; Funeral March for Gustav III, C minor, 1792; Variations on Bevara, Gud, vår Kung; Bolero, A♭; 2 polonaises; marches; movts for orchestra

Chbr: Partie, 8 winds, E♭

Kbd: Variations on Gubben Noach, pf (Uppsala, 1803); Preludier till melodierna uti Svenska choralboken samt marscher, org (Uppsala, 1882); Preludium till Psalmen Hela Werlden fröjdes Herran (Uppsala, 1818); works for pf

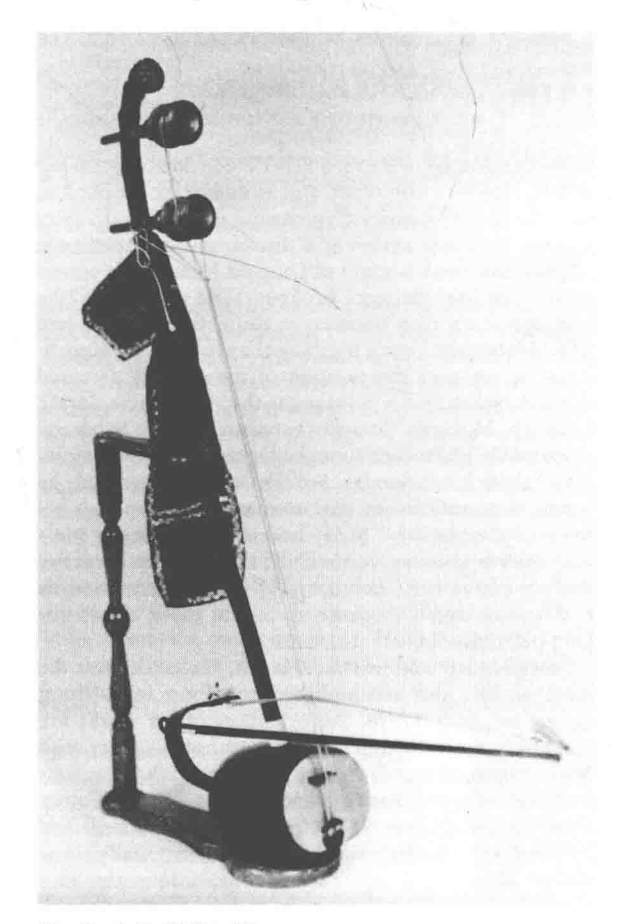
BERTIL H. VAN BOER



Haefliger, Ernst (*b* Davos, 6 July 1919). Swiss tenor. He studied at Zürich and Geneva, and in Vienna with Patzak. He made his début in 1949 at Salzburg, creating Tiresias in Orff's *Antigonae*. While engaged at the Städtische (later Deutsche) Oper, Berlin (1952–74), he sang Belmonte at Glyndebourne (1956), Idamantes at Salzburg (1961) and Tamino in Chicago (1966). He created roles in Blacher's *Zwischenfälle bei einer Notlandung* (1966, Hamburg) and *Zweihunderttausend Taler* (1969, Berlin), and in several operas by Frank Martin. His repertory included Ferrando, Don Ottavio, Pelléas, Jeník, Busoni's Calaf, Froh and Palestrina, his most striking characterization. He was an admired interpreter of the Evangelist in both Bach Passions, and of Schubert's *Die schöne Müllerin* and *Winterreise*. Haefliger's voice was notable for its clarity and focus rather than its tonal quality, which tended towards the monochrome. His scrupulous attention to verbal articulation and his understanding of the niceties of phrasing were always evident in Bach and in song recitals, as can be heard on many recordings. He also

recorded several of his Mozart roles and an eloquent Florestan in *Fidelio*, all with Fricsay conducting.

ALAN BLYTH

Haegŭm. Two-string spike fiddle of Korea (*hae*: name of a Tatar tribe; *gŭm*: 'string instrument'). In some documentary sources it is also known as *hyegŭm* (Chin. *xiqin*) and, onomatopoeically, *kkangkkangi*. The *haegŭm* is about 70 cm in length, and the neck (of bamboo or wood), about 2·5 cm in diameter, curves gently forward at the top and passes at the bottom through a tubular soundbox of large bamboo root or hardwood (about 10 cm in diameter and in length). The soundbox has a paulownia-wood soundtable at the front and is open at the rear. Two strings of twisted silk are attached to a metal clasp at the bottom of the soundbox, pass over a small wooden bridge and are tied to two large pegs skewered into the curved portion of the neck; the pegs (about 11 cm long) have spools on which excess string is wound. The bow, about 65 cm long, is of slender and supple bamboo with loose horsehair; the horsehair passes between the two strings of the fiddle (see illustration). It is said that the *haegŭm*, as it was built in former times, was the only instrument to use all eight sonorous materials of the Chinese classification system (earth, metal, silk, gourd, wood, skin, stone and bamboo).

The performer sits cross-legged, with the *haegŭm* propped up vertically on the player's left knee, the bow held horizontally in the right hand. The tension of the horsehair is altered by pushing down on it with the fingers of the bowing hand; according to which string is played, both sides of the horsehair are used. The player's left thumb is hooked round the slender neck, and the other fingers pull the strings towards the neck, there being no fingerboard. There is a position system for the left-hand fingering, as with the Western violin. The small bridge is slid to the centre of the soundtable when a full sound is required, as in ensembles with loud wind instruments, and closer to the upper edge when a gentler sound is called for, as in ensembles to accompany singing. The strings are tuned a 5th apart, a typical tuning being *a♭* and *e♭*, and the *haegŭm* has a range of three octaves. It has a nasal timbre which, though not especially loud, is distinctive enough to be heard even in large ensembles. It is capable of rich ornamentation and of dynamic contrast.

Haegŭm (spike fiddle) of Korea

The *haegŭm* is thought to be of Mongolian (Tatar) origin. It was used in China by the 10th century, and the first known citation of the name in Korea occurs in a poem of the first half of the 13th century. Until at least the end of the 15th century it was used only in Korean *hyangak* ('native music'), but it is now also used in *tangak* ('Chinese music'); this reverses the usual Korean pattern of a foreign instrument used initially for foreign music and only later adapted for native music.

Today the instrument is usually played in mixed ensembles. Like the bowed long zither AJAENG it can sustain notes and therefore often appears in so-called 'wind' ensembles. It is a favourite instrument in shaman ensembles (*sinawi*) and folksong accompaniments, and it occasionally serves as soloist in the virtuoso genre *sanjo*.

ROBERT C. PROVINE

Haemel, Sigmund. *See* HEMMEL, SIGMUND.

Haendel, Ida (*b* Chelm, 15 Dec 1923). British violinist of Polish birth. She studied with Michałowicz in Warsaw, and in 1933 won the conservatory gold medal and the first Huberman Prize with Beethoven's Violin Concerto. Later she took lessons with Flesch and Enescu. In 1937 she played the Beethoven Concerto for her London début under Wood. She settled in London the following year, and her wartime activities included concerts for the troops, National Gallery appearances and a performance of Dvořák's Concerto at the composer's centenary Prom. An American tour followed in 1946–7, a Russian one in 1966; in 1952 she left England to live in Canada. In 1973 she was the first Western soloist invited to perform in China after the revolution. Assured in technique and intonation, Haendel's playing is clean and classical in style and she earned golden opinions from Sibelius and Walton for her playing of their concertos. Among her first performances have been Dallapiccola's *Tartiniana seconda*, broadcast from Turin in 1957, and Alan Pettersson's Violin Concerto no.2 (1980), which was dedicated to her. Her recordings include concertos of the standard repertory as well as those by Glazunov, Wieniawski,

Walton and Britten. She has enjoyed a long association with the Proms, where she has been particularly noted for her interpretations of the Brahms and Sibelius concertos. She has written *Woman with Violin: an Autobiography* (London, 1970) and was created a CBE in 1991.

ROBERT ANDERSON

Haerpfer. French family of organ builders. The firm was founded by Charles [(Johann-)Karl] Haerpfer (*b* Nördlingen, Germany, 17 June 1834; *d* Boulay-Moselle, 19 Oct 1920). After working with Steinmeyer, Walcker and Haas in Lucerne, Haerpfer went to work for Cavaillé-Coll in Paris where he met Nicolas-Etienne Dalstein. A partnership was founded on 29 July 1863 in Boulay-Moselle, where the family has remained to this day. The fine, intact organ of St Sébastien, Nancy (1873), is considered their masterpiece and exemplifies their adroit synthesis of French and German styles, with features such as cone-valve chests and Doppelflöten stops standing alongside a French *Récit* division and reed style.

Frédéric [Friedrich] Haerpfer (*b* 13 July 1879; *d* Metz, 11 Dec 1956), son of Charles, worked as an apprentice in the firm from 1894 and, following journeyman experience with Weigle in Stuttgart and Mascioni in Milan, made a significant contribution to the organ section of the Vienna congress in May 1909. After World War I he took over direction of the firm and the Dalstein name was dropped. In the first decades of the century the shop enjoyed a close working relationship with Albert Schweitzer in Alsace, to which the organ built for the Sängerhaus (now the Palais des Fêtes), Strasbourg (1909), still bears eloquent witness. Two of Frédéric's sons, Walter (*b* Boulay, 9 Feb 1909; *d* Boulay, 10 May 1975) and Théo (*b* Boulay, 2 May 1912; *d* Fort de France, Martinique, 14 Aug 1936), took over the firm. The carpenter Pierre Erman (*b* Boulay, 20 June 1913; *d* Metz, 19 Nov 1990), joined in 1946. Over 250 instruments were built or rebuilt by the 'Manufacture Lorraine de Grandes Orgues Haerpfer-Erman' between 1946 and 1970, as the firm became one of three prolific exponents of the neo-classical or eclectic style in France. Its light mechanical actions controlling bright voicing appealed to many organists, most notably the eminent recitalist Marie-Claire Alain. Erman retired in 1978 and Walter Haerpfer's son Théo Jean-Marie (*b* Boulay, 8 Sept 1946; *d* 12 June 1999) took over the firm. It is well represented not only in eastern France but also in Normandy and in Paris, as well as the Saar region of Germany, Canada and Japan. The firm has also restored or rebuilt many historic organs ranging from the 1714 Boizard organ in Saint-Michel en Thiérace (1982) to the Cavaillé-Coll organs in Notre-Dame, Saint-Omer (1989), and in Belém, Brazil (1996).

KURT LUEDERS

Haeser, August Ferdinand (*b* Leipzig, 15 Oct 1779; *d* Weimar, 1 Nov 1844). German composer and theorist. He was the most celebrated of five musician children of Johann Georg Haeser (1729–1809), leader of the Leipzig 'grosses Conzert' (later known as the Gewandhausorchester) from 1763 to 1800. He attended the Thomasschule, Leipzig (1793–6), studied theology for a year at the University of Leipzig, and in 1797 was appointed schoolmaster and Kapellmeister at Lemgo, Westphalia. From 1806 to 1813 he accompanied his sister Charlotte Henriette Haeser (1784–1871) on her tours as a singer, mainly in Italy. He returned to Lemgo in 1813, and settled in 1817 at Weimar, where he was music master in the duke's family and chorus master at the theatre; from 1829 he was also director of music at the principal church.

Haeser's religious music includes Latin settings (one mass, two requiems and two settings each of the *Te Deum* and *Miserere*), and the oratorio, *Die Kraft des Glaubens*, translated by W. Ball as *The Triumph of Faith* and performed at the 1837 Birmingham Festival. Two five-part motets, in English, were included in Hullah's Vocal Scores (1847). These and other of his unaccompanied choral pieces suggest Spohr in their mainly homophonic texture and their use of chromaticism and sequence, but they show melodic and rhythmic interest and a feeling for choral sonority and nuance. His secular works include two operas, *Alphonsine, oder Der Turm im Walde* and *Die Neger auf St Domingo* (1836, Weimar); four orchestral overtures; piano and chamber music, some with clarinet; and more than 25 songs. Most of his extant manuscripts are in the state libraries in Berlin. Haeser published two treatises on singing: *Versuch einer systematischen Übersicht der Gesanglehre* (Leipzig, 1822) and *Chorgesangschule* (Mainz, 1831); the latter appeared in a bilingual French and German edition. He also translated Jelensperger's harmony treatise into German as *Die Harmonie im Anfange des neunzehnten Jahrhunderts* (Leipzig, 1838).

M.C. CARR/PHILIP ROBINSON/MICHAEL MUSGRAVE

Hafeneder, Joseph (*b* Raab, 8 Feb 1746; *d* Salzburg, 18 Jan 1784). Austrian composer and violinist. He enrolled at the Salzburg University Gymnasium in 1759 and subsequently took instruction as a discant at the Kapellhaus; he may have been a pupil of Leopold Mozart. He served at St Peter after his voice broke in 1763 and in 1767 he was appointed to a position at court. In late 1768 and 1769 Hafeneder began teaching the violin at the Kapellhaus, taking over the position of the recently deceased Wenzel Hebelt, who had taught the violin there during Leopold Mozart's frequent absences from Salzburg. Apparently Hafeneder thought highly of his own violin playing: in a petition to Archbishop Schrattenbach he wrote, 'I venture to say that no-one at court approaches me in violin playing – to say nothing of surpassing me – and at your gracious command I shall attempt to prove this'. In a letter of 20 February 1784 Mozart regretted his death, but chiefly because it meant extra duties for Leopold at the Kapellhaus.

After Mozart and Michael Haydn, Hafeneder was the most prolific and accomplished composer in Salzburg during the later 1770s. Performances of his works are frequently mentioned in J.B. Schiedenhofen's diary, and Mozart thought highly enough of a trio to take it on tour to Mannheim and Paris. Leopold Mozart, on the other hand, described one of his marches as 'wretched' and 'pilfered'. Hafeneder's surviving works, especially those of the late 1770s and early 1780s, frequently have parallels, if not in quality then at least in matters of general style and innovation, in Mozart's works.

There was possibly another, younger, Joseph Hafeneder, active in Mannheim, Vienna and Landshut, who may also have composed symphonies.

WORKS

SACRED

Masses: Missa solemnis, C, by 1768, *A-MS*; C, by 1772, *LA*; C, *Gd*; 1, lost, listed in Seeon catalogue; 1, listed in Freising catalogue, *SB*, attrib. M. Haydn

Lits: de BVM, B♭, by 1772, *Sd*, *Ssp*; de BVM, D, *Ssp*, *D-LFN*; 1, formerly *Ahk*, lost

Offs: pro Tempore Paschali, D, by 1778, *A-Ssp*; pro Ascensione Domini, D, *Ssp*; de Confess Pontifice, D, *Ssp*; pro Omni tempore, C, by 1772, *Sd*, *Sn*, *D-BGD*; pro Festa S Caeciliae, D, *FW*; de SS Angelis, *LFN*; de Dedicatione, C, *A-MS*

Other works: Ascension hymn, formerly *Ssp*, lost; Ihr Sinnen, Kräften, aria, F, *D-WS*; Komm heiliger Geist, *Mbs*; Tantum ergo, G, by 1770, *A-Ssp*; Tantum ergo, C, *D-AIC*; Te Deum, D, *Mm*

ORCHESTRAL

Syms.: B♭, *A-LA*, *CH-MÜ*; B♭, *A-LA*, *MB*; D, by 1772, *SEI*; D, *Sca*, ed. in RRMCE, xl (1994)

Conc., D, vn, *Sca*

Serenades: D, *D-RUl*, listed in Waldburg-Zeil catalogue as a sym.; 2 serenades, D, lost, listed in Schäftlarn catalogue; Finalmusik, 1776, lost, described in diary of Schiedenhofen; Finalmusik, 1777, described in letter of L. Mozart (30 Sept 1777)

Marches: D, 1778, *A-Ssp*; E♭, 1779, *Ssp*; B♭, 1780, *Ssp*

Cassations: D, 2 vn, va, b, 2 hn, *LA*; pt of Nachtmusik, 1777, lost, described in letter of L. Mozart (16 Oct 1777)

Doubtful works: sym., A, lost, listed in Schäftlarn catalogue; 3 syms. (Mannheim, 1785)

CHAMBER AND KEYBOARD

2 cassations: B♭, 2 vn, va, b, *Ssp*; C, 2 vn, va, vc, *Ssp*

Divertimento, B♭, vn, va, bn, by 1779, *Ssp*

3 qts: C, *M*, *Ssp*; F, *Ssp*, *Wn* (attrib. M. Haydn); G, *Ssp*, *Wn* (attrib. M. Haydn)

Trio, vn, ?, lost, described in a letter of W.A. Mozart (16 Oct 1777)

Variations, kbd, *Ssp*, *D-ERP*

CLIFF EISEN

Ḥāfez, 'Abdel-Halīm (*b* Zakazik, Sharkia, east Nile Delta, 1929; *d* London, 30 March 1977). Egyptian singer. He studied the oboe at the Institute for Theatre Music, graduated in 1949 and then worked as a school music teacher before joining the radio orchestra. Subsequently he turned from oboe playing to singing under the encouragement of Muhammed Abdel-Wahab. His warm voice, quasi-declamatory style and emotional singing were quite novel, and he was much in demand, making musical films, and singing patriotic and love songs. His close musical partner, Kamal El-Tawīl, who composed his most popular songs, belonged to a younger generation. Twenty years after Ḥāfez's death the songs and films he performed in have retained their popularity. He is recognized as the musical voice of the era beginning with the 1952 revolution.

SAMHA EL KHOLY

Haffner, Jacobus (*b* Wels, nr Linz, 1615 or 1616; *d* Amsterdam, bur. 23 Dec 1671). Dutch organist and composer of Austrian birth. The Counter-Reformation in Austria obliged his father, a Lutheran pastor at Wels, to return with his family to his birthplace, Regensburg. Here the young Haffner may have been the pupil of Paul Homberger and Johann Reinhard Seulin at the Gymnasium Poeticum. About 1640 he moved to Amsterdam, where he was active as a city musician and on 13 November 1658 was appointed organist of the Oude Lutherse Kerk. Except for a four-part piece, *De vyf Carileenen* (five song settings on the five senses), in a Dutch print of Gastoldi's three-part ballettos (Amsterdam, 1657), his only known music is the collection *Alauda spiritualis* op.1 (Amsterdam, 1647). It contains 21 sacred compositions with Latin texts for one to four voices with continuo, written in the Italian concertato style. (D. van den Hul: 'Jacobus Haffner en zijn *Alauda spiritualis* (1647)', *TVNM*, xxi/4 (1970), 225–39 [includes edn of *O Rex gloriae*, A, T, bc])

DICK VAN DEN HUL/J.H. GISKES

Haffner, Johann Ulrich (*b* 1711; *d* Nuremberg, 22 Oct 1767). German music publisher. He founded a music publishing house in Nuremberg about 1742 with the copper-engraver Johann Wilhelm Winter (1717–60), and managed the business on his own from 1745; he was the leading Nuremberg music publisher of the mid-18th century. The firm specialized in the piano and chamber music of German (central and southern) and Italian composers, including C.P.E. Bach and Domenico Scarlatti. During his 25 years as a publisher Haffner issued about 150 works, all first editions; almost all were engraved by the outstanding Nuremberg engraver Johann Wilhelm Stör (1705–65). The Nuremberg art dealer Adam Wolfgang Winterschmidt took charge of the publishing house in 1770, and was succeeded by his son in 1786.

THEODOR WOHNHAAS

Hafgren [Hafgren-Waag, Hafgren-Dinkela], **Lilly** (*b* Stockholm, 7 Oct 1884; *d* Berlin, 27 Feb 1965). Swedish soprano. She was trained first as a pianist and was advised by Siegfried Wagner to take up singing. Her studies in Frankfurt and Milan being completed, she was invited to Bayreuth, where in 1908 she made her début as Freia in *Das Rheingold*. Further roles there were Elsa in *Lohengrin* and Eva in *Die Meistersinger*, in which role she reappeared in 1924. From 1908 to 1912 she was with the opera at Mannheim, after which there followed six years at the Hofoper in Berlin. Her large repertory now ranged from Brünnhilde and Isolde to Pamina and Countess Almaviva, Tosca, Carmen and Charlotte in *Werther*. She sang the Empress in the Berlin première of *Die Frau ohne Schatten* and the title role in that of *Ariadne auf Naxos*. She travelled widely in Europe, appearing at La Scala as Brünnhilde in the seasons of 1925, 1926 and 1930. Her operatic career continued in Dresden until 1934, and she was also a noted recitalist. For a time she appeared under the name of Hafgren-Waag after her first marriage and Hafgren-Dinkela after her second. Her voice on records

is bright in tone, conveying a strong sense of dramatic commitment.

J.B. STEANE

Hagan, Helen Eugenia (*b* Portsmouth, NH, 10 Jan 1893; *d* New York, 6 March 1964). American composer and pianist. She attended the Yale University School of Music (1906–12), studying composition with Horatio Parker. After graduation (BMus), she performed her Piano Concerto with the New Haven SO. A Yale fellowship enabled her to study with d'Indy and Selva at the Schola Cantorum in Paris. Having briefly pursued a performing career, she turned to education and became head of the music department at the George Peabody College for Teachers. Her one-movement concerto in C minor, one of the earliest extant works in the genre by a black American woman composer, adheres to the Lisztian tradition, featuring a virtuoso solo part and fluid chromatic harmonies (an arrangement for two pianos is held at Yale University). Hagan's other works included piano pieces and a violin sonata (before 1912), all lost. (*GroveW*, D. Metzer [incl. bibliography]; *SouthernB*)

DAVID METZER

Hagegård, Håkon (*b* Karlstad, 25 Nov 1945). Swedish baritone. He studied in Stockholm, making his début at the Royal Opera in 1968 as Papageno, the role he later sang in Ingmar Bergman's film of *Die Zauberflöte* (1975). He first appeared at Glyndebourne as the Count in *Capriccio* (1973), returning as Count Almaviva and Guglielmo. After his Metropolitan début as Malatesta (1978) he sang Rossini's Figaro, Eisenstein and Wolfram, the role of his Covent Garden début in 1987. He has also appeared with Scottish Opera, La Scala and Drottningholm, and in Paris, Copenhagen, Hamburg, Geneva, Zürich, Santa Fe, San Francisco and Chicago. Among his other roles are Don Giovanni (which he has recorded), Pacuvio (*La pietra del paragone*), Yevgeny Onegin, Posa, Rigoletto, Ford and Pelléas. In 1991 he sang Beaumarchais in the première at the Metropolitan of Corigliano's *The Ghosts of Versailles*, and the following year created the Officer in Ingvar Lidholm's *Ett drömspel* ('A Dream Play') at the Royal Opera, Stockholm, a role he subsequently recorded. With the years his light, lyrical voice has grown more powerful, without losing its beauty of tone or flexibility. Hagegård is also an admired concert singer, and has made notable recordings of Brahms's *German Requiem*, lieder by Schubert, Wolf and Mahler and songs by Grieg, Stenhammar and Rangström.

ELIZABETH FORBES

Hageman, Richard (*b* Leeuwarden, 9 July 1882; *d* Beverly Hills, CA, 6 March 1966). American composer and conductor of Dutch birth. He studied with his father at the Amsterdam New Music Institute and at the Brussels Conservatory. When he was 16 he was appointed coach to the Nederlandse Opera, of which he was later conductor. For a short time he was accompanist to Mathilde Marchesi in Paris, and in 1906 he travelled to New York in the same capacity with Yvette Guilbert. He conducted at the Metropolitan Opera (1908–22) the Chicago Civic Opera (1922–3), and the Los Angeles Grand Opera (1923). He was also conductor of the Fairmount SO in Philadelphia and head of the opera department at the Curtis Institute. In later years he worked at the Paramount studios in Hollywood, writing scores for a number of John Ford's films, including *Stagecoach* (1939) and *Fort Apache* (1948). His opera, *Caponsacchi*, first performed at Freiburg as *Tragödie in Arezzo* in 1932, was staged at the Metropolitan in 1937.

WORKS
(*selective list*)

Stage: Caponsacchi (op, 3, R. Browning), 1931; I Hear America Call (orat, R.V. Grossman), Bar, SATB, orch, 1942; The Crucible (orat, B.C. Kennedy), 1943

Film scores (all dir. John Ford): Stagecoach, 1939; The Long Voyage Home, 1940; Fort Apache, 1948; Three Godfathers, 1948; She Wore a Yellow Ribbon, 1949; Wagon Master, 1950

Orch: Ov. 'In a Nutshell'; Suite, str

Chbr: October Musings, vn, pf, 1937; Recit and Romance, vc, pf, 1961

Songs, 1v, pf: Do not go, my love (R. Tagore), 1917; May Night (Tagore), 1917; At the Well (Tagore), 1919; Happiness (J. Ingelow), 1920; Charity (E. Dickinson), 1921; Nature's Holiday (T. Nash), 1921; Animal Crackers (C. Morley), 1922; Christ went up into the Hills (K. Adams), 1924; Me Company Along (J. Stephens), 1925; The Night has a Thousand Eyes (F.W. Bourdillon), 1935; Christmas Eve (J. Kilmer), 1936; Music I Heard with You (C. Aiken), 1938; Miranda (H. Belloc), 1940; Lift thou the Burdens, Father (K.C. Simonds), 1944; The Fiddler of Dooney (W.B. Yeats), 1946; over 50 other songs, many arr. for chorus

Principal publisher: G. Schirmer

PHILIP LIESON MILLER/MICHAEL MECKNA

Hägemann, Christian Franz Severin (*b* c1724; *d* Plön, 23 April 1812). German composer. The first date recorded in his life is 1744, when he joined the retinue of Duke Friedrich Carl of Schleswig-Holstein-Plön as a trumpeter. Later he was a violinist in the court orchestra, to which his brother Johann Peter also belonged. After Duke Friedrich Carl died in 1761 the Duchy of Plön fell to Denmark, and King Friedrich V incorporated some of the Plön musicians, including the Hägemann brothers, into the court orchestra at Copenhagen directed by Giuseppe Sarti. Christian Hägemann returned to Plön as a pensioner in 1776, and in August 1777 dedicated six keyboard sonatas to the heir apparent, Prince Peter Friedrich Wilhelm of Schleswig-Holstein-Oldenburg, who was living in Plön. The manuscripts of these sonatas (*Clavier Versuche in sechs Sonaten*) are in the Landesbibliothek at Eutin, with his six trios for keyboard and violin and three *Geistliche Lieder* (Passion chorales arranged as cantatas for soprano with keyboard accompaniment). No evidence remains of the 12 keyboard sonatas (in two manuscript volumes, 1782) mentioned by Gerber.

Hägemann's sonatas of 1777 contain characteristic features of the early Classical style, particularly as found in northern Germany, and bring to mind the works of C.P.E. Bach. Despite the uniform pattern of three movements, the works display variety in both mode of expression and musical techniques. The second theme of the Classical sonata is still not fully distinct, although it is hinted at occasionally; the developments last no more than a few bars.

DIETER HÄRTWIG

Hagen, Daron Aric (*b* Milwaukee, 4 Nov 1961). American composer. He studied composition with Homer Lambrecht and Les Thimmig at the University of Wisconsin, Madison (1979–81), and with Ned Rorem at the Curtis Institute (BM 1984). He entered the Juilliard School in 1984 (MM 1987), where his teachers included David Diamond, Joseph Schwantner and Bernard Rands. He

also studied with Witold Lutosławski (Evian Music Festival, 1983) and Leon Kirchner (Tanglewood, 1986). He was founding director of the Perpetuum Mobile New Music Ensemble (1983–93) and served as composer-in-residence of the Long Beach SO (1994). In 1996 he joined the composition department at Curtis. Among his honours are a Bearns Prize (1985), the Barlow International Composition Prize for Chamber Music (1985) and a Friedheim Award (1994). His commissions include works for the New York PO, the King's Singers and Texas Opera Theatre.

The art song is the cornerstone of Hagen's compositional output. His earliest published cycle, *Echo's Songs* (1983) is strongly influenced by Rorem. In *Dear Youth* (1991), a cycle setting American Civil War texts, Hagen's compositional style shows a range of influences from jazz to Lutheran hymns. His first opera, *Shining Brow* (1990–92), features a similarly broad stylistic palette and an uncommon theatrical instinct.

WORKS

STAGE

Shining Brow (op, 2, P. Muldoon), 1990–92; The Elephant's Child (children's op, D. Hagen, after R. Kipling), 1994; Vera of Las Vegas (cabaret, 1, Muldoon), 1995

JAMES CHUTE

Hagen, Francis Florentine (*b* 1815; *d* 1907). American Moravian composer. *See* MORAVIANS, MUSIC OF THE, §3.

Hagen, Johann. *See* HAGIUS, JOHANN.

Hagen, Konrad von. *See* HAGIUS, KONRAD.

Hagen, P(eter) A(lbrecht) von [van], **jr** (*b* ?Charleston, SC, 1779–81; *d* Boston, 12 Sept 1837). Dutch-American musician. Together with his father (*b* Netherlands, 1755; *d* Boston, MA, 20 Aug 1803), who shared his christian names, Hagen composed and performed on several instruments. The parents emigrated to Charleston in 1774 and were in New York by 1789; the son, a child prodigy, joined them in teaching in 1792. Moving to Boston in 1796 (where they changed their name from van to von), they became the first important music retailers and publishers there, played in theatre orchestras, conducted and generally took an active part in the musical life of the town. Hagen was involved with his father in the family business, but owing to his lack of interest or incompetence, the firm's fortunes deteriorated and its stock was sold in 1804 to Gottlieb Graupner. After his father's death Hagen's reputation declined and he became an alcoholic; in 1833 he was a member of the viola section in the orchestra at the Tremont Theatre, Boston. The individual authorship of music by Hagen and his father is often uncertain, and the location of some works is unknown; the known published works composed by father or son up to 1825 are at least 12 songs, four marches for piano and one overture. The songs *Monody* and *Kiss the brim and bid it pass* are charming in their original edition.

Hagenau, Reinmar von. *See* REINMAR VON HAGENAU.

Hagenbach, Jacob (*b* Basle, bap. 20 April 1532; *d* Basle, between 17 Sept 1565 and 17 Sept 1566). Swiss type cutter and composer. He was the son of a Basle weaver and served his youth at the court of Maximilian II, where he became a goldsmith and cultivated an interest in music. In 1555 he became a member of the Zunft zu Hausgenossen, a prestigious guild for artisans in Basle, and in 1560 was employed as a typecutter for the Basle printing firm of Froben & Episcopius. In 1556 Jacob acquired his father's home, where he lived with his wife and child until his death. It was during this last decade of his life that his interest in music flourished.

As well as performing music with prominent Basle citizens including, for example, Thomas Guerin and Felix Platter, Jacob collected and composed polyphony. As a collector, his tastes were of the highest standards. About 1560 he copied around 120 polyphonic songs (*CH-Bu* F IX 59–62, F X 17–20, and F X 63) including chansons by Sermisy, madrigals by Arcadelt, and Tenorlieder not only

by Senfl but also by Hagenbach himself. His songs, previously attributed to Isaac, reveal Hagenbach as a competent composer who worked predominantly in a homorhythmic style punctuated with points of imitation. Stylistically similar is his only surviving motet, *Jubilate Deo*, an autograph copy of which also survives in Basle.

JOHN KMETZ

Hagen Quartet. Austrian string quartet. It was formed by Lukas, Angelika, Veronika and Clemens Hagen when they were pupils of Helmut Zehetmair and Wilfried Tachezi at the Salzburg Mozarteum in the 1970s. Their later teachers were Hatto Beyerle, Heinrich Schiff, Walter Levin and Nikolaus Harnoncourt. In 1981 Angelika Hagen withdrew, to be replaced by Annette Bik, and in 1987 Bik was in turn replaced by Rainer Schmidt. The ensemble won a competition held in 1981 as part of Gidon Kremer's Lockenhaus festival; and its members took part, both individually and as a group, in many of the Lockenhaus events in the 1980s and early 1990s. Meanwhile, after winning the international competitions at Portsmouth in 1982 and Evian in 1983, they embarked on an exceptional career, touring widely. Their repertory is founded on the Viennese Classics, which they interpret with supreme assurance, rhythmic élan, emotional profundity and intellectual rigour. They are also at home in Romantic repertory and contemporary music by such composers as Ligeti and Lutosławski, but forays into Bartók, Janáček and Shostakovich have been less convincing. As an ensemble they play with beautiful tone, impeccable intonation and an internal balance which has been even better since the advent of Schmidt and the acquisition by Veronika Hagen of a stronger-toned viola. They have collaborated in quintets with the pianists András Schiff, Oleg Maisenberg and Paul Gulda, the clarinettist Eduard Brunner, the viola player Gérard Caussé, the cellist Heinrich Schiff and the bass player Alois Posch. Among their recordings are works by Haydn, Mozart, Beethoven, Schubert, Brahms, Dvořák, Verdi, Debussy, Ravel and Webern, as well as the complete quartets of Schumann. Scmidt, and Veronika and Clemens Hagen have also made solo recordings. Since 1988 all four members have taught chamber music at the Salzburg Mozarteum, where Lukas and Clemens also take instrumental classes. In addition Schmidt has taught chamber music at the Escuela Superior in Madrid and Veronika Hagen gives masterclasses in viola and chamber music at the Paris Conservatoire.

TULLY POTTER

Hager, Georg (*b* Nuremberg, 26 Nov 1552; *d* Nuremberg, 23 Oct 1634). German Meistersinger. He was a shoemaker by profession, like his great model Hans Sachs. From about 1569 until his death he belonged to the Nuremberg Meistersinger guild, presiding as senior Merker from 1619. Along with Benedict von Watt (1569–

Georg Hager: woodcut, after 1634

1616), Hans Winter (*d* 1627) and Magister Ambrosius Metzger (1573–1632) Hager was among the most notable figures in the later flowering of the Nuremberg Meistersinger tradition. Within the guild he represented the position initiated by Sachs, in whose name he resisted attempts at innovation (in the *Schulstreit* of 1624). Apart from a few *Sprüche* (poems in rhyming couplets), 624 sacred and secular Meisterlieder by Hager have survived as well as 36 other sacred and secular *gemeine Lieder* (songs that are not written in one of the *Töne* of Meistergesang). 17 melodies survive for *Meistertöne* written by him, together with another four melodies composed by him for his other songs.

WORKS

Edition: *Georg Hager: a Meistersinger of Nürnberg (1552–1634)*, ed. C.H. Bell, University of California Publications in Modern Philology, xxix–xxxii (Berkeley, 1947) [all music in xxix, 201–39]

TÖNE

1590: 'Spitze Trinkschuhweise', 'Mittagweise'
1591: 'Lange Leistweise', 'Überlanger Ton'
1592: 'Starke Heldenweise', 'Venwirrte Osterweise', 'Kalte Pfingstweise', 'Klingende Vesperweise'
1593: 'Fröhliche Schalmeienweise', 'Neue Chorweise', 'Helle Morgensternweise', 'Starke Greifenweise', 'Grüne Hagweise'
1595: 'Kurze Affenweise'
1597: 'Neujahrsweise'
1599: 'Überkurze Abendröt'
1615: 'Liebliche Harfenklangweise'

OTHER MELODIES

Ein Trostlied wider die Anfechtung des Todes
Ein schön neu Lied zu Trost allen Betrübten
Ein neues Lied, darinnen vermeldt wird der schreckliche Schaden, so zu Erfurt geschehen
Ein schönes neues Lied zu Trost allen betrübten Herzen

HORST BRUNNER

Hager, Leopold (*b* Salzburg, 6 Oct 1935). Austrian conductor. He studied at the Salzburg Mozarteum and made his début in 1958 with *L'italiana in Algeri* at Mainz, where he was principal conductor until 1962, followed by appointments at Linz and Cologne. He was music director at Freiburg, 1965–9, and principal conductor of the Salzburg Mozarteum Orchestra, 1969–81. During this time he appeared frequently in opera at Salzburg, Munich, Stuttgart and Cologne. His first engagement at the Vienna Staatsoper was for *Fidelio* (1973), followed by débuts at the Metropolitan (1976) and Covent Garden (1978) with *Le nozze di Figaro*, and at the Teatro Colón (1977) with *Tristan und Isolde*. In 1981 he was appointed chief conductor of the Luxembourg RSO. He has given the first performances of works by, among others, Helmut Eder, Jean Françaix and Schnittke. He has recorded all the early Mozart operas, and other lesser-known 18th-century operas including Gluck's *La rencontre imprévue* and Haydn's *L'anima del filosofo*.

NOËL GOODWIN

Hägg, Jacob Adolf (*b* Östergarn, Gotland, 27 June 1850; *d* Hudiksvall, 1 March 1928). Swedish pianist and composer. He began his musical training in 1865 at the Stockholm Conservatory, and as a Jenny Lind Scholar (Jenny Lind was his personal patron) he was able to continue his studies from 1870 to 1874: in Copenhagen with Gade (composition and instrumentation) and Edmund Neupert (piano); in Vienna with Anton Door (piano); and in Berlin with Friedrich Kiel (counterpoint). In his earlier years his skills as a solo pianist, accompanist and chamber music player were highly appreciated and his improvisations were admired. In 1873 he became ill, probably with encephalitis, and after his return to Sweden around 1875 – he had visited England, Italy (where he met Brahms), Switzerland and Austria in the meantime – he was mentally ill for over 20 years; however, he continued to revise and correct his scores while he was in hospital. He lived in Norway for six years but moved to Hudiksvall in 1906, where he was able to continue composing and working as a pianist. He was elected a member of the Swedish Royal Academy of Music in 1917.

As a composer Hägg followed the tradition of Mendelssohn, Schumann and Gade, although he also experimented with harmonies and style. His output was extensive, with instrumental works predominating, including five symphonies, three overtures and chamber music. His works for piano are the most important within the early Swedish Romantic style, and include two sonatas and a sonatine, ten suites, many impromptus, novelettes, bagatelles and other works. His chamber works include a cello sonata (first performed in 1872), three string quartets, trios and numerous works for violin.

LENNART RABES

Haggard, Merle (Ronald) (*b* Bakersfield, CA, 6 April 1937). American country singer and songwriter. As a teenager he was arrested on suspicion of armed robbery and committed to a reform school. Eventually imprisoned in San Quentin, in 1958 he attended a concert given there by Johnny Cash, subsequently joined the prison band, and turned to music as a profession upon his release in 1960. Returning to Bakersfield, with its burgeoning country music scene, Haggard began to play in local clubs and develop his songwriting. He began recording in 1962 and his second release, *Sing me a sad song* by Wynn Stewart, became his first hit record, the first of about forty number one records in the country music charts, followed with *When I'm a Lonesome Fugitive* (Capitol, 1966). He became a leading figure in outlaw music, a new sub-genre of country espoused by the likes of Waylon Jennings, Willie Nelson and Kris Kristofferson. His 1969 hit, *Okie from Muskogee*, a wry comment on the hippy culture, prompted the then Governor of California, Ronald Reagan, missing the song's irony, to grant him an official pardon for his past crimes.

Haggard is one of country music's most versatile writers, breathing new life into a variety of styles. His songs are often autobiographical: he drew on his childhood for *Mama tried* (1968), and recalled his time in jail in *Sing me back home* (1967). His songs chronicling the underside of the American dream have also been recorded by such performers as Willie Nelson, George Jones and Emmylou Harris. As a performer he has embraced western swing, honky tonk, blues and much besides, paying tribute to Jimmie Rodgers (*Same Train, Different Time*), the Carter Family, Hank Williams, and also to Elvis Presley on *My Farewell to Elvis* (1977).

LIZ THOMSON

Haggin, B(ernard) H. (*b* New York, 29 Dec 1900; *d* New York, 29 May 1987). American music critic. He wrote for the *Brooklyn Daily Eagle* (1934–7) and *The Nation* (1936–57), and supplied a record review column for the *Yale Review* (1957–86). An extremely important figure in American music criticism, particularly during the 1930s and 40s, he was forceful in the articulation of his opinions and uncompromising in his artistic standards, which centred on the concept of fidelity to the composer's score; his powerful advocacy of the career of Toscanini was characteristic. Haggin undoubtedly influenced the tastes of a generation of music lovers (his readers, to paraphrase one of his book titles, were the sort of people who enjoy *Hamlet*). Throughout his career he insisted on the value of phonograph records as educational documents of performance. He displayed little sympathy for most

developments in music of the 20th century. He also wrote on ballet topics, beginning in 1935, and was one of the first American critics to recognize the importance of Balanchine.

PATRICK J. SMITH/MAUREEN BUJA

Hagius [Hagen], **Johann** (*b* Marktredwitz, Bavaria, *c*1530; *d* Marktredwitz, in or after 1575). German composer and poet. In 1553 he became a student at Wittenberg University, where he took his master's degree in 1556. On 25 March 1556 he became a preacher at the former Jungfrau monastery at Reichenbach, in the Upper Palatinate. At the beginning of 1569, 'like many other Christian men from the Palatinate', he was forced to resign his post under pressure from supporters of the Zwinglian cause, but on 26 April 1570 he was appointed town preacher (superintendent) at Eger (now Cheb), Bohemia. When in 1574 it became known that he had been responsible for an anonymous satire against the town of Erfurt, he was condemned to house arrest. It had created such a scandal on its publication in 1571 that the authorities set up a widespread search for the author in central Germany that lasted three years, and the printer, Michael Mülmarckart of Eger, was forbidden from publishing. In December 1574 Hagius was released from house arrest, and in the summer of 1575 he returned to his native town. Like many of his fellow Protestant clergymen he was a composer. His compositions are for the most part settings of the mottoes of personalities and towns, or *symbola*, as they were called. He claimed in the preface to his *Kurtze ausserlesene Symbola* (Nuremberg, 1569) that this collection would provide poets and musical directors with the means to praise their princes and bring them closer to the people. In contrast to Othmayr's Latin *symbolum* compositions, which link the given mottoes with ostinato motifs, Hagius's *symbola* are simple, strophic song motets to his own German texts. According to the preface to his *Symbola ... Martini Lutheri und Philippi Melanthonis* (Eger, 1572), he used a 'cantus gravitatis' in the old manner, composed each part 'ad verum rationem toni' and eschewed the more recent art of the madrigalists. Concerning his texts Wolkan (1894) praised 'the flow of the language and the relative purity of the strophic form'.

WILFRIED BRENNECKE

Hagius [von Hagen], **Konrad** [Conrad, Conradus] (*b* Rinteln, Westphalia, 1550; *d* Rinteln, 1616, before 23 Sept). German composer and singer. He led a restless life that took him to many parts of Europe in the service of both Protestant and Catholic masters. He is first heard of in 1581–2, when he applied to be a bass in the Protestant Stuttgart Hofkapelle. In 1584 he is mentioned as court composer to Count Ezard II of East Friesland at Emden. In that year he also applied for the post of 'Sangmeister' at the Reformed Grote Kerke there, though he seems not to have secured a permanent position.

From 1586 until the early 1590s Hagius was employed by the Catholic Duke Johann Wilhelm of Jülich at Düsseldorf. It was there that in 1589 he published his setting of Kaspar Ulenberg's psalter, composed in close collaboration with the author. Later he seems to have travelled widely through Germany, Austria, Bohemia, Hungary, Poland, Prussia and Lithuania, although only his publications in Danzig and Thorn in 1594 and his application for a post at the court of Count Simon zu Lippe at Detmold in 1596 provide evidence of this. There are grounds for believing that a portrait of him, which was the source of the woodcut in his prints of 1604 and 1616 (reproduced in *MGG1*), was painted in Poland in 1595. From November 1600 to June 1603 he sang bass in the Stuttgart Hofkapelle. In 1604 he described himself on the title-page of his *Newe deutsche Tricinien* as a musician to the Elector Palatine at Heidelberg. In 1606 he dedicated the second edition of his psalter to the Archbishop and Elector of Mainz and published from Mainz a book of *Magnificat* settings for the Catholic rite, which he dedicated to Marcus and Christoph Fugger. From November 1607 he was again a bass in the Stuttgart Hofkapelle until in February 1609 he was dismissed because he was a papist. Later that year Count Ernst III of Holstein-Schauenburg and Sternberg, who did much for the arts, summoned him to set up a musical establishment at his Reformed court at Bückeburg and appointed him Kapellmeister. He was, however, getting on in years and apparently found his administrative duties irksome, so in 1611 he was allowed to return to his native town on condition that he composed something for the court every year. At the baptism of a son on 23 September 1616 he is referred to as having already died.

Konrad Hagius belongs to a group of late 16th-century German composers in whose work traces of several traditions may be discerned, notably the Lutheran, Flemish and Italian. The few compositions by him available in modern editions are expressive pieces in a madrigalian manner, tightly knit and sensitively underlaid. The Ulenberg Psalter, which he wrote 'for young people', is mainly in a simple and attractive note-against-note style that made it suitable for everyday use in Catholic schools and churches; for educational reasons it also includes a few simple polyphonic pieces.

WORKS

Die Psalmen Davids ... durch den Herrn Casparum Ulenbergium in Truck verfertigt, 4vv (Düsseldorf, 1589, enlarged 1606); ed. in DRM, iii (1955)

WILFRIED BRENNECKE

Hagley, Alison (*b* London, 9 May 1961). English soprano. She studied at the GSM, then at the National Opera Studio. After appearances in Handel at the Batignano Festival in 1985 and in *La finta giardiniera* at the Camden Festival the following year, she made her Glyndebourne début in 1988 as the Little Owl in *L'enfant et les sortilèges*, returning as Papagena, Zerlina, Nannetta and, most notably, as a delightful and quick-witted Susanna at the reopening of the new house in 1994, a performance preserved on video. Her ENO début in 1991 was as Lauretta in *Gianni Schicchi*, and she has subsequently returned there to sing Gretel and Nannetta. In 1992 she was a subtle and affecting Mélisande in Peter Stein's staging of *Pelléas et Mélisande* with the WNO, with Boulez conducting. For Scottish Opera she has undertaken Musetta and Adèle (*Die Fledermaus*) and for the Staatsoper in Munich Susanna, Zerlina and Bella (*The Midsummer Marriage*). After smaller roles at Covent Garden, Hagley sang Susanna there in 1997. She was Dorabella in Rattle's recording of *Così fan tutte*, based on live performances, in 1995. She is also a noted concert singer, and took part in McCreesh's admired recording of Handel's *Solomon*, where her warm, finely phrased singing epitomizes her work in all fields.

ALAN BLYTH

Hague, Charles (*b* Tadcaster, 4 May 1769; *d* Cambridge, 18 June 1821). English violinist and composer. He received his first instruction from his older brother William, who had inherited a music shop in Cambridge. Later Antonio Manini (a pupil of Tartini) gave him lessons in violin playing and singing, and Pieter Hellendaal (the elder) in thoroughbass and composition. During 1783–4 he sang under Manini in Cambridge and other East Anglian towns, and after Manini's death in 1786 went to London to continue his studies with the violinist Salomon and the composer Benjamin Cooke.

On his return to Cambridge he became 'first master of the violin' as successor to Manini; the young William Crotch was one of his pupils. In 1794, as a member of Trinity Hall, he took the degree of MusB, submitting as his exercise an anthem with orchestral accompaniment *By the Waters of Babylon* which was performed in the Church of St Mary the Great on 29 June, and published in London later the same year. As a result of his association with the short-lived Harmonic Society of Cambridge he published *A Second Collection of Glees, Rounds and Canons* (1800). On the death of John Randall, Hague was elected professor of music on 17 April 1799, and became MusD in 1801. His last large-scale composition was an *Ode at the Installation of the Duke of Gloucester* (the words by William Smythe) for the installation of the new chancellor of the university on 28 June 1811. In addition to various song settings, and a *Duett for Two Performers on One Violin* (Cambridge, *c*1795), in 1815 he published 12 of Haydn's symphonies arranged as quintets for flute and strings (H I: 66, 69, 74, 44, 63, 75, 70, 41, 71, 47, 77 and 53). He outlived his eldest daughter, Harriet (*b* 1793; *d* 9 Feb 1816), whose six songs with piano accompaniment were published in 1814. An obituary by Rev. Thomas Twiton was published in *The Quarterly Musical Magazine and Review* (no.4, 1822, pp.123–8).

CHRISTOPHER HOGWOOD

Hague, The (Dut. Den Haag; 's-Gravenhage). Dutch city. As the seat of government since the 16th century, The Hague takes second place in Dutch musical life after Amsterdam. Apart from records of bells for the Jacobskerk, the earliest records of musical life date from the 17th century, under the government of stadholder Frederik-Hendrik, when Constantijn and Christiaan Huygens lived there. In the 1670s the viol player Carolus Hacquart organized performances in the Mauritshuis; in 1699 the theorist and composer Q.G. van Blankenburg was appointed organist at the Nieuwe Kerk. From the 17th century the stadholders were patrons of music, but it was only under Willem V (1766–95) that the court orchestra flourished. Its German conductor C.E. Graaf had talented local musicians at his disposal and he also collaborated with visiting foreign musicians (in 1765–6 with the Mozart family). In the 18th century the city had a flourishing amateur orchestra consisting chiefly of members of the nobility. One of these was the composer Count Unico Wilhelm van Wassenaer (1692–1766), whose six *Concerti armonici* were long presumed to be the work of Pergolesi. The vicissitudes of the French occupation prevented the establishment of a royal chapel until 1821, when one was founded by King Willem I; it existed until 1841.

Opera, cultivated in The Hague from the 17th century, always depended on foreign companies, particularly at the Théâtre Français, whose 18th-century scores and librettos, now in the Gemeentemuseum, indicate its extensive repertory. Most performances were given in a theatre (now demolished) in the Casuaristraat; there was constant rivalry between various Italian and German companies. In 1804 the Korte Voorhout (a former palace) was rebuilt as the Royal Theatre (Koninklijke Schouwburg). It was extensively renovated in 1863 and 1998. Now it is used for theatrical productions. After World War I the French opera was discontinued, and opera life was reduced to occasional performances by Dutch and foreign companies. In 1966 the 1600-seat Circustheater at Scheveningen, the city's seaside resort, was renovated. The Amsterdam-based Nederlandse Operastichting has given the premières there of several Dutch operas. In 1987 most operatic performances were transferred to the Lucent Danstheater, which has a capacity of 1000.

The oldest existing concert hall is the Diligentia at the Lange Voorhout, built in 1821, where all important orchestral and chamber music concerts were given. Because of the Diligentia's small capacity, the noted

Gebouw voor Kunsten en Wetenschappen was built in 1874; it also housed opera and ballet but was destroyed by fire in 1964. In the Kurhaus at the beach at Scheveningen (opened 1885) annual summer concerts were given by the Berlin PO for 25 years, and later by the Lamoureux Orchestra and the Residentie-Orkest (under Carl Schuricht and Ignaz Neumark). The Nederlands Congresgebouw was completed in 1969 and a new concert hall, the Dr Anton Philipszaal, opened in 1987.

In the mid-18th century concerts were given in the garden of the Nieuw Vaux-Hall inn, arranged by Albertus Groneman. From 1821 to 1906 the Concert Diligentia Society organized subscription concerts conducted by, among others, the composer Johannes Verhulst (1816–91), who dominated the city's musical life for much of the 19th century, Richard Hol and Willem Mengelberg. In 1891 the Amsterdam Concertgebouw Orchestra began to give an annual series of concerts. The Hague's own orchestra, the Residentie-Orkest, was founded in 1903 by Henri Viotta; its subsequent conductors have been Peter van Anrooy (1917), Frits Schuurman (1938), Willem van Otterloo (1949), Jean Martinon (1974), Ferdinand Leitner (1976), Hans Vonk (1980) and Evgeny Svetlanov (1992). The orchestra has established an international reputation, attracts many guest conductors, and through its concerts and recordings has done much to promote Dutch composers. In 1910 it first visited London, and in 1963 first toured the USA. The internationally known Nederlands Dans Theater, founded in 1959, is also based in The Hague. There are several choral societies, of which the most important are the Toonkunstkoor (1829), the Excelsior (1881) and De Stem des Volks (1907); noted male choirs include the Cecilia (1830) and Die Haghe Sanghers (1917). The Maatschappij tot Bevordering der Toonkunst has organized festivals since 1834, and the annual HOLLAND FESTIVAL was founded in 1948.

Musical education in The Hague dates from 1826 when the Koninklijke Muzijkschool was founded; it became a conservatory in 1900 and moved into new premises in 1980; its directors have included the composers Johan Wagenaar, Sem Dresden, Henk Badings, Hendrik Andriessen and Kees van Baaren. Before musicology was introduced in Dutch universities D.F. Scheurleer was active in this field and founded the Union Musicologique (1921–7). His extensive collection (a library and musical instruments) now belongs to the music department of the Gemeentemuseum. The Hague also has an important public music library.

CLEMENS VON GLEICH (with MICHAEL DAVIDSON, WILHELMUS HERMANUS THIJSSE)

Hahn, Georg Joachim Joseph (*b* ?Münnerstadt, Bavaria, *c*1690; *d* after 1769). German composer and theorist. All that is known about this mid-18th-century composer, who contributed a significant thoroughbass manual, are the few sketchy biographical details he revealed in his own works and one comment in a contemporary edition of his music in which he is identified as a Benedictine monk at Gegenbach (*Geistliche Arien mit Melodien*, 1769). In his thoroughbass work of 1751 he said he had devoted many hours to music during the past 40 years; according to the title-page, he was senator and choir director at Münnerstadt. In the next year, the title-page of his *Sing- und klingendes Lieb-, Lob-, und Danck- und Denckopfer* indicates that he had become *Ratsverwandter*. A composer of sacred music and some keyboard pieces, which remain to be investigated, he also wrote the *Wohl unterwiesene General-Bass-Schüler*, as 'a conversation between a teacher and student concerning thoroughbass in which are clearly explained all the serviceable rules of this science, theoretical as well as practical, together with which are shown some preludes using the important keyboard finger patterns' (*Handgriff*). The first part gives the usual basic rules of keyboard playing, together with an explanation of thoroughbass figures which seems to be influenced by G.P. Telemann's *Singe-, Spiel-, und General-Bass-Übungen* (Hamburg, 1733). The second part opens with an explanation of the 24 scales and the appropriate chord for each degree of the major and minor scale. Much of this part consists of helpful comments regarding the accompaniment of recitatives and plainchant. Hahn gave some particularly good examples for the improvisatory style of performing preludes and fantasies (which he warns is not an appropriate style for normal thoroughbass accompaniment). His practical manual is too little recognized in modern literature on thoroughbass practice.

WORKS

VOCAL

Cornucopiae musicum in se sono vocali-instrumentali continens 32 cantilenas; nimirum arias XX. tam latinas tam germanicas ... et threnodias XII, 1–2vv, insts (Augsburg and Graz, 1735)

Partus harmonicus exhibens 6 missas nimirum III. solennes diductiores III. minus solennes breviores cum II. de Requiem, 4vv, 2 vn, va, org (2 tpt and timp ad lib), op.2 (Augsburg, 1746)

Marianisches Sing- und Kling-Opffer, bestehend aus XXIV. leichten Teutschen Arien, XXIV. auf die Fest-Täg Mariae, und X. zugesetzte, 1–2vv, insts, op.3 (Augsburg, 1749)

Sing- und klingendes Lieb-, Lob-, und Danck- und Denckopfer, ... XXXIII. leichten teutschen Arien, auf die fürnehmste Feste des Herrn, 1–2vv, insts, op.5 (Augsburg, 1752)

Liturgia vocali ac instrumentali sono magnificata sive VI. missae, 4vv, 2 vn, 2 tpt, org, vc, op.6 (Augsburg, 1754)

Wiederhohltes Marianisches Sing- und Kling-Opffer, bestehend aus XXXIV. leichten teutschen Arien, XIV. auf die besondere Fest-Täg Mariä, X. von Maria zu allen Zeiten. und X. zugesetzte, 1–2vv, insts, op.7 (Augsburg, 1756)

Officium vespertinum tum rurale, tum civile exhibens III. vesperas stylo brevi ac levi elaboratas ... cum psalmis residuis per annum occurentibus, SA, vn, org (TB, 2 tpt, vc ad lib), op.7 (Augsburg, 1759)

Wiederhohltes Sing- und Klingendes Lob deren Heiligen, Oder: XXXII. leichte Teutsche Arien von denen Heiligen Gottes, 1–2vv, insts, op.8 (Augsburg, 1759)

XXII. Antiphonae de B.V. Maria. nimirum V. Alma, V. Ave. V. Regina coeli. VII. Salve Regina, 1v, vn, org, op.9 (Augsburg, 1762) [nos. 1, 6, 11, 16, 21, 22 for 2vv]

G.J.J. Hahns ... geistliche Arien mit Melodien, in melismatischer Schreibart, versehen von R.P. Ildephons Haas, 1. Slg. bestehend in 40 Arien (Augsburg, 1769) [a selection from Hahn's pubd arias]

INSTRUMENTAL

Harmonischer Beytrag zum Clavier, bestehend in X. nach jetziger Art eingerichteten Praeambulis, XVI zum Choral-Gesang anständigen Versetten und einer Sonata, kbd (Nuremberg, n.d.)
Clavier Übung bestehend in einer leichten und kurz gefasten Sonata, kbd (Nuremberg, *c*1746)
Leichte und zur Ermunterung dienende Handarbeit in 2 Sonaten, kbd (Augsburg, 1753), see Heussner
Sonata, hpd/pf, vn, in *D-SWl* according to *EitnerQ*

THEORETICAL WORKS

Der wohl unterwiesene General-Bass-Schüler, oder Gespräch zwischen einem Lehrmeister und Scholaren vom General-Bass, worinnen alles zu dieser Wissenschafft dienliche nach richtigen Grund-Sätzen, so theoretisch als practisch deutlich vorgetragen (Augsburg, 1751, enlarged 2/1768)

GEORGE J. BUELOW

Hahn, Reynaldo (*b* Caracas, 9 Aug 1874; *d* Paris, 28 Jan 1947). French composer, conductor and writer of Venezuelan birth. Hahn's mother, Elena Maria Echenagucia, came from a Spanish family, established in Venezuela since the 18th century. His father, Carlos Hahn, was born in Hamburg and emigrated to South America as a young man. Reynaldo was the youngest of 12 children and was not quite four years old when the family moved to Paris. Hahn had already shown a talent for music in Caracas; once in France he began to play, making his début, aged six, at a musical soirée hosted by the Princesse Mathilde, niece of Napoleon I. Hahn entered the Paris Conservatoire in October 1885, where his teachers included Massenet. While there he made the acquaintance of Ravel, Cortot and Edouard Risler, and began to compose songs, among them one which brought him early fame, *Si mes vers avaient des ailes*. This was dedicated to his sister Maria, who had married the painter Raymundo de Madrazo. It was at their house that Hahn met many of the leading young artists of the time, including Daudet, for whose play *L'obstacle* Hahn composed incidental music when he was only 16.

Hahn's song cycle to poems by Verlaine, *Chansons grises*, was completed while he was still a student at the Conservatoire. The first performance was given by Sybil Sanderson, Massenet's favourite soprano, at Daudet's house, with Verlaine present. Even during the years after his death, when Hahn's music fell out of favour, 'L'heure exquise', the fifth song of the group, remained known. Hahn's own voice, a light baritone, was put to good use throughout his career; he accompanied himself in his own songs, and in opera arias and popular songs of the day. A collection of 20 of Hahn's songs, published by Heugel in 1895, increased his celebrity, so much so that the novelist and explorer Pierre Loti allowed Hahn to adapt his autobiographical *Le mariage de Loti* as the opera *L'île du rêve*. By the time this received its first performance at the Opéra-Comique in 1898, France had been divided by the Dreyfus affair. Hahn and his two closest friends, Marcel Proust and the actress Sarah Bernhardt, joined the Dreyfusard camp. This political turmoil affected the lives of everyone in France, even after 1906 when Dreyfus was finally cleared. Hahn, partly Jewish and fiercely attached to France, was deeply disturbed by this conflict.

Neither *L'île du rêve*, nor Hahn's second opera, *La Carmélite*, which was given a prestigious première with Emma Calvé in 1902, remained in the repertory. This disappointment meant that most of Hahn's music composed between 1902 and the outbreak of war in 1914 was not for the stage, although his ballet *Le bal de Béatrice d'Este*, conceived merely as a *divertissement*, has remained one of his best-known and most regularly performed pieces. During the 1900s his career as a conductor and critic gained momentum. He began to write for journals (he was critic for *La presse* from 1899, then for *La flèche* from 1904); as well as conducting concerts of his own music, he organized a Mozart Festival in Paris, and was invited to conduct *Don Giovanni* at Salzburg. Although he continued to compose and publish songs, notably the cycle *Etudes latines* in 1900, his most extensive work from this period is the sequence of piano pieces gathered under the title *Le rossignol éperdu* (1902–10). A Proustian ethic seems to drive the music, with its evocations and memories of places and impressions. After long neglect, there was a revival of interest in Hahn's instrumental music in the 1990s.

Hahn took French nationality in 1909 and, at the outbreak of war in 1914, volunteered for the army (although he was over the official age limit for conscription). He served as a private, and was eventually promoted to corporal. While at the front he composed the cycle of five songs on poems by Robert Louis Stevenson, and began to sketch his opera based on Shakespeare's *The Merchant of Venice*.

Hahn's greatest commercial success as a composer dates from the early 1920s. Returning to Paris after the war, and following the deaths of Proust and Bernhardt, Hahn composed *Ciboulette*, a nostalgic evocation of 19th-century Paris, set in the old market of Les Halles. This was a huge success, and was followed by the musical comedy about the adventures of the young Mozart in Paris, created for Yvonne Printemps (wife of the playwright Sacha Guitry) who acted and sang the role of the composer. *Mozart*, although tailored for the Guitrys, has been revived several times, as has a second collaboration with Guitry, *O mon bel inconnu*.

In the late 1920s Hahn composed what became his best-known concert work, a piano concerto, which was given its first performance by Magda Tagliaferro, who subsequently recorded it with the composer. Hahn's only major commission for the Paris Opéra was *Le marchand de Venise*. Although it was received with some enthusiasm, and had several revivals, Hahn's mixture of light, operetta-like music for the romantic scenes and his dramatic declamatory style for Shylock is problematic.

Because of his Jewish ancestry, Hahn's music was banned by the Nazis during the occupation of France (1940–44), and the elderly composer spent the war years partly in hiding, but still working on songs, instrumental music, and his final work for the stage, *Le oui des jeunes filles*, which was first performed posthumously.

At the end of the war, when Hahn returned to Paris (he had eventually settled in Monte Carlo), he was appointed director of the Opéra and during his tenure there he conducted an important revival of Méhul's *Joseph*, and gave his last concerts, with Tagliaferro and Ninon Vallin, one of his favourite sopranos, with whom he had recorded several of his own songs before the war.

Hahn's music, dismissed by critics of the 1950s and 60s as merely evocative of Paris salons around 1900, gradually began to attract musicians and audiences after 1970, in particular, his *mélodies*. His settings of Verlaine and Leconte de Lisle have been compared to those by Fauré and Duparc. His piano and violin concertos, and his music for piano, have a mixture of the romantic and the experimental that lifts them above nostalgia. Although *Ciboulette* has never found a wide public outside France, it holds its place in the repertory, and revivals of his other light operas suggest that there may be a future for his other stage works.

WORKS

STAGE

first performed in Paris unless otherwise stated

Fin d'amour (ballet-pantomime), 1892
L'île du rêve (idylle polynésienne, 3, A. Alexandre and G. Hartmann, after P. Loti), OC (Favart), 23 March 1898
La Carmélite (comédie musicale, 4, C. Mendès), OC (Favart), 16 Dec 1902
La pastorale de Noël (Christmas mystery, 3, La Tourasse and de Taurines), Arts, 23 Dec 1908
Le bal de Béatrice d'Este (ballet), 1909
La fête chez Thérèse (ballet, Mendès), Opéra, 1910
Le bois sacré (ballet-pantomime), 1912
Le dieu bleu (ballet, J. Cocteau, F. de Madrazo), Châtelet, 13 May 1912
Miousic (opérette, 3, P. Ferreir), Olympia, 22 March 1914 [incl. music by Saint-Saëns, Lecocq, Messager and others]
Nausicaa (oc, 3, R. Fauchois), Monte Carlo, Opéra, 10 April 1919
Fête triomphale (op, 3, St Georges de Bouhélier), Opéra, 14 July 1919
La colombe de Bouddha (conte lyrique, 1, Alexandre), Cannes, 21 March 1921
Ciboulette (opérette, 3, R. de Flers and F. de Croisset), Variétés, 7 April 1923
Mozart (comédie musicale, 3, S. Guitry), Edouard VII, 2 Dec 1925
Degas (spectacle de danses), 1925
La reine de Scheba (scène lyrique, 1, E. Fleg), Châtelet, 6 March 1926
Une revue (comédie musicale, 1, M. Donnay and H. Duvernois), Porte-St-Martin, 28 Oct 1926
Le temps d'aimer (comédie musicale, 3, P. Wolff, Duvernois and H. Delorme), Michodière, 7 Nov 1926
Brummell (opérette, 3, Rip and R. Dieudonné), Folies Wagram, 16 Jan 1931
Valses (ballet), 1932
O mon bel inconnu (comédie musicale, 3, Guitry), Bouffes-Parisiens, 5 Oct 1933
Malvina (opérette, Donnay and Duvernois), Gaîte-Lyrique, 23 March 1935
Le marchand de Venise (3, M. Zamacoïs, after W. Shakespeare), Opéra, 25 March 1935
Beaucoup de bruit pour rien (comédie musicale, 4, J. Sarment, after Shakespeare), Madeleine, March 1936
Aux bosquets d'Italie (ballet, A. Hermant), Opéra, 1937–8
Le oui des jeunes filles (op, Fauchois, after Moratin), orchd Büsser, OC (Favart), 21 June 1949
Incid music: L'obstacle (A. Daudet), 1890; Nocturne (M. Star), 1895; Esther (J. Racine), 1898; Dalila (O. Feuillet), 1899; Les deux courtisanes (F. de Croisset), 1902; Werther (Decourcelle and Grisafulli), 1902; Angelo, tyran de Padoue (V. Hugo), 1905; Scarron (Mendès), 1905; La vierge d'Avilla (Mendès), 1906; Méduse (M. Magre), 1911; L'homme à la rose (H. Bataille), 1919; Andrea del Sarto (A. de Musset), 1920; Manon, fille galante (Bataille and A. Flament), 1923; Seigneur Polichinelle (Zamacoïs), 1925; L'homme avec dix femmes (Zamacoïs), 1937
Film scores: La dame aux camelias, 1934; Sapho, 1934

SONGS

for solo voice and piano unless otherwise stated

Song cycles: Chansons grises (P. Verlaine), 1887–90; Rondels (C. d'Orléans, T. de Banville, Mendès), 1898–9; Etudes latines (Leconte de Lisle), 1900; Venezia (Venetian dialect, trans. M. Léna), 1901; Les feuilles blessés (J. Moréas), 1901–6; Chansons et madrigaux (d'Orléans, J.A. de Baïf, A. d'Aubigné, A. Boesset), 1907; Amour sans ailes (M. Robinson), 1911; 5 petites chansons (R.L. Stevenson), 1915; Chansons espagnoles (1947)
Mélodies: Rêverie (Hugo), 1888: Si mes vers avaient des ailes (Hugo), 1888; Mai (F. Coppée), 1889; Aubade espagnol (Daudet), 1890; Paysage (A. Theuriet), 1890; Dernier voeu (de Banville), 1891; Infidélité (T. Gautier), 1891; La nuit (de Banville), 1891; Offrande (Verlaine), 1891; Trois jours de vendange (Daudet), 1891; D'une prison (Verlaine), 1892; Fêtes galantes (Verlaine), 1892; Séraphine (H. Heine), 1892; L'énamourée (de Banville) (1892); Seule (Gautier) (1892); Cimetière de campagne (G. Vicaire), 1893; L'incrédule (Verlaine), 1893; Nocturne (J. Lahor), 1893; Les cygnes (A. Renaud), 1893–4; Fleur fanée (L. Dierx) (1894); A Phidylé (Leconte de Lisle), B, 6 S, 4 T, pf 4 hands, 1895; Cantique (Racine), 1v/women's chorus, pf (1896); Naguère, au temps des églantines (Mendès), 1896; Théone (J. Moréas) (1897); La délaissée (Mme Blanchechotte) (1898); Le souvenir d'avoir chanté (Mendès) (1898); Le marchand des marrons (P. Collin), 1899; Le printemps (de Banville) (1899); Quand je fus pris au pavillon (d'Orléans) (1899)
La chère blessure (Blanchechotte) (1900); Quand la nuit n'est pas étoilée (Hugo) (1900); J'ai caché dans la rose en pleurs (A. Silvestre) (1903); O fons Bandusiae (Horace), ?1905; Au pays musulman (H. de Régnier), 1906; Les fontaines (de Régnier) (1910); A une étoile (de Musset), ?1911; Avoir des ailes de colombe (Robinson, trans. Duclaux) (1911); Chanson au bord de la fontaine (M. Magre) (1912); Le rossignol des lilas (L. Dauphin) (1913); A Chloris (T. de Viau) (1916); Le plus beau présent (Magre) (1917); Puisque j'ai mis ma lèvre (Hugo) (1917); Ma jeunesse (H. Vacaresco) (1918); A nos morts ignorées (L. Hennevé) (1918); Dans la nuit (J. Moréas) (1921); La douce paix (G. de Saix) (1921); Fumée (Moréas) (1921); Sur l'eau (Sully-Prudhomme) (1921); Au rossignol (de Saix) (1955); L'amitié (1955); Chanson (1955); Je me souviens (de Saix) (1955); La nymphe et la source (1955); Sous l'oranger (1955); Ta main (1955); La vie est belle (1955); Dans l'été

Hahn, Ulrich. *See* HAN, ULRICH.

Hähnel, Johannes. *See* GALLICULUS, JOHANNES.

Haibel [Haibl, Heibel], **(Johann Petrus) Jakob** [Jacob] (*b* Graz, 20 July 1762; *d* Djakovar [now Đakovo], 24 March 1826). Austrian composer, singer and choirmaster. He joined Schikaneder's company at the Freihaus-Theater auf der Wieden in or around 1789, acted and sang tenor roles and, from the mid-1790s, supplied the theatre with Singspiele and incidental music. After the death of his first wife in 1806 he left Vienna and went to Djakovar, Slavonia, where he spent the rest of his life as choirmaster at the cathedral. On 7 January 1807 he married Sophie Weber, thereby becoming Mozart's posthumous brother-in-law. After Haibel's death, his widow moved to Salzburg and lived with her sister Constanze; Sophie Haibel had been close to Mozart in his last months, as is made clear by the moving report she wrote in 1825 for Constanze's second husband, G.N. Nissen.

Haibel's first score for Schikaneder, the ballet *Le nozze disturbate*, was given no fewer than 39 times in 1795, the year of its première; Beethoven's set of 12 variations on a *Menuett à la Viganò* WoO68 (1795) is based on an air from this work. Haibel's greatest success was *Der Tiroler Wastel* of 1796, to an 'opera' libretto by Schikaneder; it was given 66 times that year and 118 times in all at the Freihaus-Theater, and was also staged in innumerable other theatres. None of Haibel's other original scores even remotely equalled its success, though in 1809 the 'musical quodlibet' *Rochus Pumpernickel* began its triumphant progress: 136 performances in the Theater an der Wien between 1809 and 1843, productions in numerous Austrian and German theatres, and at least three sequels. It is not known what direct part Haibel (then a distant provincial choirmaster) took in preparing the work. Recent research has brought to light a quantity of sacred works by Haibel (see Blažeković and Stipčević, 1992).

PETER BRANSCOMBE

Haibel, Sophie. *See* WEBER family, (7).

Haiden [Heyden, Heiden, Hayden, Heyd]. German family of composers, organists, copper merchants, instrument makers and writers. They were patricians, qualified for senatorship, who enjoyed great esteem in 16th- and 17th-century Nuremberg. The brewer Hans Haiden (*d* 1532) settled in Nuremberg shortly after 1500. The first musician in the family was his son (1) Sebald Heyden, who in turn was the father of (2) Hans. Of Hans's seven sons two – (3) Hans Christoph and (4) David – became musicians, and another, Hans Georg, helped his father build his *Geigenwerk*. The Hans Philipp Haiden (*b* Nuremberg, baptized 10 Nov 1639) who is credited with the composition of a four-part song written for a wedding on 25 February 1645 (in *D-Nst*), was not a musician and cannot, on grounds of age alone, have written it; it must be by some other member of the family.

(1) Sebald Heyden (*b* Bruck, nr Erlangen, 8 Dec 1499; *d* Nuremberg, 9 July 1561). Writer, teacher, music theorist and ?composer. He moved with his parents to Nuremberg early in life and entered the school of St Lorenz in 1505: he was a pupil there when Cochlaeus became rector of the school in 1509 and recognized Heyden as an outstanding student. In 1513 he entered the university at Ingolstadt, where he gained the master's degree in 1519. The same year, after short periods teaching at Knittelfeld, Bruck an der Mur and Leoben, he returned to Nuremberg where he spent the rest of his life. He was appointed Kantor at the Spitalkirche and rector of its school from 1521, and in 1525 he became rector of the school of St

Sebaldus. He appears to have first turned towards Lutheranism while rector at the Spital school. In 1523 he provided a contrafactum text for a *Salve regina* antiphon, to be sung at the Nuremberg Reichstag. This angered the Roman Church and led to bitter attacks by Kaspar Schatzgeyer of the Nuremberg Barfüsser monastery: the *Salve regina* was proscribed both at St Sebaldus and in the following year at St Lorenz. The Nuremberg city council appointed Heyden to organize the meetings about the Reformation held there in 1525. Later his Calvinist leanings regarding the Eucharist for long placed him in a controversial position.

Heyden's enthusiasm for the new church led him to produce numerous theological and educational essays and to attempt to supply an appropriate repertory of hymn texts for use in church services. He encouraged hymn writing, and frequently included in his publications hymns of his own and by others, such as Senfl. Eight extant hymn texts can be attributed to him (another has been suggested by Kosel, but this is questionable). He may have been the composer of melodies for two of these hymns – *Gott, du Hirt Israels, merck auff* and *Herr Gott, dein Namen rueff wir an*; this is suggested by the fact that the melodies appear only with his texts.

Heyden was recognized widely as a teacher, highly learned man and musician, but he was most important for his contributions to music theory. He wrote three treatises, all dedicated to Hieronymus Baumgartner, a Nuremberg patrician and city council member, whom he admired for his remarkable learning and for his support of the fine arts. All three are primarily concerned with the teaching of performing skills; as such they are within the German tradition of school tutors and deal with notation and solmization in a clear and simplified manner. They were used extensively and brought him widespread acclaim from his contemporaries, including several distinguished theorists; his definitions, discussions of mensuration and music examples were drawn upon by his contemporaries and by theorists well into the 17th century.

Heyden's earliest extant treatise is *Musicae stoicheiōsis* (1532); an earlier edition – *Rudimenta* (1529) – cited by Zeltner and other early writers, is lost. The treatise was designed to present the essential aspects of polyphony and mensural notation, dealing with the staff, clefs, solmization, notes, intervals, perfect and imperfect values, mensuration, augmentation and diminution. It contains no practical examples and bypasses all discussion of plainchant and monophony. His second book, *Musica (Ars canendi)* (1537), is more comprehensive, though he limited himself to matters of musical composition without discussion of the purely theoretical concerns. This publication was outstanding for its many examples, drawn, according to the author's prefatory statement, from the works of the best and most renowned composers – Josquin, Obrecht, La Rue, Isaac, Brumel, Ghiselin – not only as the most useful examples but also as demonstrations of great music. The examples are presented mostly without texts or with incipits only. The treatise *De arte canendi*, effectively a second edition of *Musica (Ars canendi)*, appeared in 1540; though considerably enlarged it covers similar subjects. There are also more music examples, particularly of the works of Ghiselin and Obrecht, and Senfl is referred to as 'the chief of all Germany at this time for Music'. Some of the anonymous polyphonic examples may be by Heyden himself.

WRITINGS

only those on music

Rudimenta [*Institutiones musices*] (Nuremberg, 1529 [lost], 2/1532 as *Musica stoicheiōsis*)

Musica, id est Artis canendi, libri duo (Nuremberg, 1537)

De arte canendi, ac vero signorum in cantibus usu, libri duo (Nuremberg, 1540/*R*; Eng. trans., MSD, xxvi, 1972)

(2) Hans Haiden (*b* Nuremberg, bap. 19 Jan 1536; *d* Nuremberg, bur. 2 Oct 1613). Copper merchant, instrument maker, organist and writer, son of (1) Sebald Heyden. He invented the GEIGENWERK, a keyboard instrument shaped like a harpsichord but sounded by parchment-covered wheels instead of jacks. When a key was depressed a string came into contact with a revolving wheel producing a sound like a bow being drawn across the string. He chose not to follow his father's example but to enter the world of business, and as a successful merchant had spare time in which to pursue various learned interests. He studied problems of perspective and perpetual motion, built model war-machines and learnt music. He was accomplished enough as a performer to take the position of organist at St Sebald between 1567 and 1571. During that time he directed some of the music performed when Emperor Maximilian II visited the city in 1570.

His first *Geigenwerk*, finished by 1575, was built for August, Elector of Saxony, who lived in Dresden. The instrument was moved to Munich the next year, however, when August presented it to Duke Albrecht V of Bavaria, Lassus's patron. Haiden continued to improve his invention, which probably did not take its final form until the very end of the century. He published a small book in German praising the *Geigenwerk*, *Musicale instrumentum reformatum* (Nuremberg, 2/1610), translated into Latin as *Commentatio de musicale instrumento* (Nuremberg, 1605). Besides describing the *Geigenwerk*, the pamphlet quotes a variety of ancient and modern authors in praise of music and its effects on man and beast, and comments on musical practices of the time and on the characteristics of various instruments. Haiden extolled, among other things, the capability of the *Geigenwerk* to sustain notes indefinitely, to produce vibrato and, most important, dynamic shadings impossible on other keyboard instruments. The best-known description of the *Geigenwerk*, in Praetorius's *De organographia* (2/1619), chapter 44, mostly quotes from Haiden's pamphlet.

(3) Hans Christoph Haiden (*b* Nuremberg, bap. 14 Feb 1572; *d* Nuremberg, bur. 9 Feb 1617). Composer, organist and poet, son of (2) Hans Haiden. He first went to 'the office of Philipp von Ortl', but thereafter made music his profession. After Isaak Hassler's death on 14 July 1591, he became organist of the Spitalkirche, Nuremberg. In 1596 he obtained a similar position at St Sebaldus, the most important church in Nuremberg. At the end of December 1600 he petitioned the town council for an increase in pay and for living quarters. In January 1601 his first daughter was born, a few days before 'by command of the authorities' he married Anna Maria Petz, daughter of a 'respectable' and thus highly regarded family. He and his wife atoned for this untimely birth by being arrested and put on a diet of bread and water, Anna Maria having also to suffer 'bench and irons' and the decree that for four years she should wear only 'workday

clothes'. Late in 1603 Haiden again came into conflict with the town council when he applied for a higher fee for playing the organ; when his request was refused, he sent a pupil to deputize for him, and for this the council again punished him with imprisonment. He nevertheless enjoyed great esteem as a musician, and his professional judgment was sought on a number of occasions. In about 1606 the Margrave of Ansbach also called on his services. In 1608 he procured two English dogs for the Bishop of Eichstätt and Bamberg, thereby establishing a contact that was to be useful to him in the final weeks of his life. In the same year he visited Kassel, where he demonstrated his father's *Geigenwerk* before Moritz, Landgrave of Hesse, and Frankfurt, where he delivered the instrument, for which an order had been placed. In 1615 he became involved in a lawsuit, which he lost, with Pastor Erhard Pantzer of Eltersdorff. In addition, he brought an action together with his brothers against the son of a Stadtpfeifer who after Hans Haiden's death had unlawfully built a copy of his patented *Geigenwerk*. His relationships with other women had a disastrous outcome. In the autumn of 1616 he was charged and convicted of adultery, and on 11 November he was summarily dismissed as organist of St Sebaldus. He was succeeded by his brother-in-law Kaspar Hassler. In the last weeks of his life he worked as treasurer for the Bishop of Eichstätt and Bamberg. He died barely three months after the disgrace of his expulsion from St Sebaldus, leaving his widow a burden of debts which she had to pay from the sale of a house and of her husband's printed works.

This talented musician and composer, who was so little able to adapt himself to Nuremberg's strictly ordered way of life, made an important contribution to German song in the transitional period between the Renaissance and Baroque eras in two publications: *Gantz neue lustige Täntz und Liedlein, deren Text mehrer-theils auff Namen gerichtet mit vier Stimmen* (Nuremberg, 1601; 9 in Vetter, ii) and *Postiglion der Lieb', darinnen gantz neue lustige Tantz, dern Text mehrtheils auff Namen gerichtet neben ettlichen Intraden und … schlaftruncksliedlein mit vier Stimmen* (Nuremberg, 1614). These songs, whose texts he himself 'had written according to his own fancy', do not aim at being great art but are simple songs for singing and dancing. They are generally homophonic, with an emphasis on the melody in the top part. They were intended for practical use and are well suited to this purpose by virtue of their charming, carefree freshness and their truly songlike character; they are largely uninfluenced by the Italian manner in vogue at the time. The 1614 collection can be seen as an early attempt, in both text and music, at a unified song cycle.

(4) David Haiden (*b* Nuremberg, bap. 9 Nov 1580; *d* Nuremberg, bur. 6 Dec 1660). ?Composer, instrumentalist, poet and copper merchant, youngest son of (2) Hans Haiden. He was a pupil of his father and of Kaspar Hassler. His father wished to send him to Augsburg for further study with Hans Leo Hassler. The arrangements had been made, but were thwarted by Kaspar Hassler, who was concerned 'that David might one day harm him', i.e. be a rival to him. An agreement reached with Giovanni Gabrieli in Venice also came to nothing when the opportunity arose to find a place for the 18-year-old David in the same 'copper business in which his father too had served'. To the publicity for his father's *Geigenwerk*, to which H.L. Hassler contributed a eulogistic poem, he added a long poem written in the rhyming manner of the Meistersinger in which all the advantages of the instrument are enumerated. He himself possessed a *Geigenwerk*, on which he played for the Weimar court Kapellmeister Adam Drese as late as 1653: 'he played on it for almost an hour, performing many kinds of music regardless of the fact that it has no stops'. It seems very likely that the 12 ballettos in RISM 1610[21] (inc.) signed 'DHN' ('David Haiden Norimbergensis') – nos.28–31 with text, nos.32–9 without – can be attributed to him. They are written in the homophonic dance style of the time, to which the lost cantus part possibly contributed an individual touch. A four-part wedding song of 1644, *Man sagt und klagt, die Ehe bringt Wehe* (in *D-Nst*), is signed 'DH' and is also probably by him.

VICTOR H. MATTFELD (1), HOWARD MAYER BROWN (2), LINI HÜBSCH-PFLEGER (3–4)

Haieff, Alexei (Vasilievich) (*b* Blagoveshchensk, Siberia, 25 Aug 1914; *d* Rome, 1 March 1994). American composer of Russian birth. When he was six his family moved to China, and in 1932 he came to the USA; he became an American citizen in 1939. Haieff studied at the Juilliard School with Jacobi and Goldmark (1934–8), and in 1938–9 he was a pupil of Boulanger in Cambridge, Massachusetts, and in Paris. In 1942 he received the Lili Boulanger Memorial Award and a medal from the American Academy in Rome. Other honours included an award from the American Academy of Arts and Letters (1945), Guggenheim Fellowships (1946, 1949), the Rome Prize (1947, 1948) and the New York Music Critics' Circle

Award for the Piano Concerto no.1 (1952). He was composer-in-residence at the American Academy in Rome in 1952–3 and 1958–9, visiting professor at SUNY, Buffalo (1962, 1964–5), Andrew Mellon Professor at the Carnegie Institute of Technology (1962–3), visiting professor at Brandeis University (1965–6), and composer-in-residence at the University of Utah (1967–70). He then divided his time between Europe and the USA before settling in Rome. Haieff's music is neo-classical, moving with vitality and clean crispness.

Obituary, *New York Times* (3 March 1994)

PEGGY GLANVILLE-HICKS/OLIVER DANIEL

Haifa. City in Israel. The site has been inhabited since the Bronze Age; the first modern settlers recorded there were German Templars in the mid-19th century. The city's rapid growth after World War I was a result of the immigration of Jews from the Diaspora and was accelerated by the completion of the deep-water port in 1933; Haifa is now Israel's third largest city and main port. In 1918 the piano teacher Dunya Weizmann opened the city's first conservatory, later named after her. The Rubin Academy of Music was opened in 1948; a musicology department at the university (1964) was established in 1974. The Haifa SO, the third largest orchestra in Israel, was founded in 1950, followed in 1955 by the Haifa Chamber Choir, which appears mainly with the orchestra. The Haifa SO gives full subscription seasons in Haifa and nearby Kiryat Haim, as well as concerts in the northern region of Israel and youth concerts. Stanley Sperber became musical director in 1985. The Beith Hagefen Arab-Jewish Centre founded an Arabic orchestra in 1968. In 1954 the ISCM Festival took place in the city. The Haifa Chamber Music Association arranges concerts, mostly at the Beth Rothschild Hall, and the Israel PO has its own subscription series in the city; concerts take place at the Haifa Auditorium (cap. 1500), where the Haifa SO also performs. In the late 1960s the Pro Musica chamber orchestra was founded and conducted by Dalia Atlas, also founder of the Technion (Israel Institute of Technology) SO. Outstanding figures in Haifa's musical life were the composer Marc Lavry (1903–67) and the pianist and conductor Frank Pelleg (1910–68), who lived there from 1951 until his death; Pelleg was a founder of the Haifa SO and was music director at the Municipal Theatre (1961), for which he wrote incidental music.

In 1959 the Haifa Music Museum and AMLI Library was established by Moshe Gorali (1910–96); it houses more than 1000 instruments from all over the world, including ancient instruments of Israel, Egypt, Babylon, Assyria and Greece. The library issues a musicological yearbook *Tatzlil* ('The chord'). Since 1943 the Ein Gev Festival (Ein Gev Music Weeks until 1948) has been held annually at Kibbutz Ein Gev near Haifa on the Sea of Galilee; its early supporters included Jacob Steinberger (its founder and director) and Koussevitzky. William Steinberg established the Lotte Steinberg Memorial Fund for commissioning Israeli works for the festival, at which performers include the Israel PO, the Jerusalem SO, the Israel Chamber Ensemble and many visiting artists.

WILLIAM Y. ELIAS/JEHOASH HIRSHBERG

Haig, Al(an) [Allan] **(Warren)** (*b* Newark, NJ, 19/22 July 1922; *d* New York, 16 Nov 1982). American jazz pianist. Haig's year of birth has appeared incorrectly as 1924 in all known reference sources. He studied classical piano at Oberlin College, Ohio, from 1940, but left in 1942 to serve in the Coast Guard. Stationed in the New York area, he was able to pursue his blossoming interest in jazz. After working with Tiny Grimes in 1944, he joined the quintet of Dizzy Gillespie and Charlie Parker, contributing outstanding solos to what are widely regarded as the first full-blown bop recordings, including *Salt Peanuts* (1945, Guild). After joining Charlie Barnet's big band, he worked with Gillespie in Los Angeles and made further important recordings with the trumpeter in New York (1946). He toured with Jimmy Dorsey and continued recording bop as a freelance pianist before joining Parker's quintet (1948–50), which performed in Paris in 1949; Parker's rhythm section also worked as accompanists to Stan Getz, with whom Haig continued in 1951. His career then quickly declined. He worked in obscurity in Puerto Rico, Miami and the greater New York area until he was rediscovered; he then toured widely and recorded as an unaccompanied soloist and the leader of a trio during the 1970s and early 80s. Haig's early bop recordings are remarkable for his ability to improvise single-note lines with clarity at blistering tempos. During his second, revived career, he sometimes played in a more rhapsodic and contrapuntal manner, but without any loss of his characteristic dexterity.

BARRY KERNFELD

Haigh, Thomas (*b* Wakefield, bap. 30 Jan 1769; *d* London, April ?1808). English composer, violinist and pianist. It is possible that he was the violinist, Mr Haigh, who played in the theatre band in Manchester, and who was responsible for the music in a production of S.W. Ryley's *The Civilian* there in 1789. By the early 1790s he was in London. He studied with Haydn during the latter's first

visit to London in 1791–2 and dedicated his violin sonatas opp.8 and 10 to his famous master. He also arranged many of Haydn's works (for instance Symphonies nos.70 and 81 and the *Armida* overture) for the piano. From 1793 to 1801 he lived in Manchester (he is sometimes known as 'Thomas Haigh of Manchester'); Doane's *Musical Directory* of 1794 describes him as a violinist and pianist of Manchester who took part in the Handelian concerts at Westminster Abbey. In 1799 he was elected a member of the Royal Society of Musicians and in 1801 he returned to London. Between 1796 and 1807 he often performed in Ireland. The date of his death is usually given as April 1808, but the publication of several works which seem to date from 1815–19 suggests that 1808 may be too early; posthumous publication of new works was then rare.

Haigh was a fluent and prolific composer and a good deal of his work is fresh and imaginative. Gerber may have been right on the whole to suggest that 'English people will find in it rather the spirit of their own Arne and Boyce than that of a Haydn', yet there is a general avoidance of rhythmic platitude that seems to show the influence of the Austrian master.

PETER PLATT/R

Hail. *See* HAYL family.

Hailland [Hayland, Heylanus], **Petrus** (*d* after 15 Dec 1571). Singer and composer active in Austria. Eitner's assumption that Hailland and Heylanus were the same man has since been confirmed. He first appears in Archduke Maximilian of Austria's court register for 1554 as second alto, with a monthly stipend of ten guilders, which was increased to 12 guilders when Maximilian became emperor in 1564. In September 1568 he left the court for a short period with the balance of his salary and an allowance of 80 guilders a year. The reason for this is unknown, but such a substantial payment indicates that he must have been held in high esteem. By 1 December 1569 he had returned to his old position, but on 30 November 1570 he left once more, this time for good. He was much loved and he received countless *ex gratia* payments, among them one in 1566 for compositions and in 1568 a gift of 300 guilders – an exceptionally high payment – in addition to the above-mentioned allowance. He is last heard of on 15 December 1571. There are eight three- and five-part motets by him (in RISM 1556[8], 1564[4], 1567[2] and 1569[5]) and a four-part chanson (in 1554[24]).

WALTER PASS

Hailstork, Adolphus (Cunningham) (*b* Rochester, NY, 17 April 1941). American composer. He studied composition with Mark Fax at Howard University, Washington, DC (BMus 1963), with Boulanger at the American Conservatory, Fontainebleau, France (summer 1963), at the Manhattan School (BMus 1965, MMus 1966) and at Michigan State University, East Lansing (PhD 1971). He taught at Michigan State (1969–71) and Youngstown (Ohio) State University (1971–6) before joining the faculty of Norfolk (Virginia) State College in 1977. As well as commissions for orchestral, choral and brass ensemble works, his opera *Paul Laurence Dunbar* was commissioned by the Dayton Opera Association. His honours include the Ernest Bloch award for choral composition (1971) and awards for his band music; he was made Cultural Laureate of Virginia in 1992. His musical language is postmodern and pluralistic, embracing a variety of contemporary techniques and including occasional references to black American idioms, as in *American Landscape no.2*. His master's thesis, *Statement, Variations and Fugue*, was performed by the Baltimore SO in 1966; later works have been given by the Pittsburgh SO, the New York PO and the Chicago SO.

WORKS

Stage: The Race for Space (musical comedy, D.R. Moore, Hailstork), 2 S, 2 T, chorus, spkrs, dancers, pf, 1963; Paul Laurence Dunbar: Common Ground (op, 1, Martin), 1992

DORIS EVANS McGINTY

Haindl [Heindl], **Franz Sebastian** (*b* Altötting, 11 Jan 1727; *d* Passau, 23 April 1812). German Kapellmeister, violinist and composer. His grandfather Philipp Haindl (*d c*1681) was a choral director at Ebersberg (near Munich), and his father Johann Sebastian Haindl (1645–1732) was a choirboy at Munich Cathedral, a singer in the Damenstift at Hall, and the choral director at Altötting (1683–1706, and from 1715). F.S. Haindl first studied music with his stepfather, the tenor Wolfgang Stängelmayr, and as a choirboy at the Altötting collegiate church. He studied the violin at Munich and went to Innsbruck in 1748. In 1752 Duke Clemens of Bavaria appointed him first violinist at the Munich court, a post he held until about 1778, though he stayed much of the time at Innsbruck, where he met Leopold Mozart. After Duke Clemens's death in 1770 he frequently performed festival music at monasteries in the Tyrol, where most of his extant works are held. From 1785 to 1803 he served the Bishop of Passau as a violinist, personal servant and (according to Gerber) from 1793 as musical director of the theatre. (*GerberL*; *GerberNL*; *MGG1*, W. Senn [incl. further bibliography])

Hainl, François [George, Georges] (*b* Issoire, Puy-de-Dôme, 16 Nov 1807; *d* Paris, 2 June 1873). French conductor, cellist and composer. He studied music with his father and in 1829 entered the Paris Conservatoire where he took cello lessons with Norblin and won the *premier prix* for cello the following year. He then played in various Paris orchestras and later toured Belgium, the Netherlands and the south of France as a soloist. In 1841 he was appointed conductor at the Grand Théâtre, Lyons, where he established a considerable reputation. In 1863 he succeeded Dietsch as conductor at the Paris Opéra and later that year he was selected (over Berlioz and Deldevez, among others) as conductor of the Société des Concerts du Conservatoire. During his stay at the Opéra he conducted the world premières of *L'Africaine*, *Don Carlos* and *Hamlet* as well as the first performance of the revised version of Gounod's *Faust* (with added ballets). He also became the conductor of court concerts and of the imperial chapel, and in 1867 conducted at the Paris Exposition Universelle. In 1872 declining health forced him to relinquish his various posts.

Hainl was, according to Pougin, a vigorous, precise and self-confident conductor with great ability to control large groups, but one better suited to operatic music than symphonic. Berlioz praised Hainl's clarity, warmth and expressiveness, and he complimented his well-rounded abilities as conductor, instructor and organizer. Nevertheless the administrators of the Opéra, although pleased with Hainl's conducting, appointed F.-A. Gevaert as supervisory music director in 1867. As a cellist, Hainl was praised for his precision and light staccato. He composed several fantasias for the cello and wrote *De la musique à Lyon depuis 1713 jusqu'à 1852* (Lyons, 1852).

JEFFREY COOPER

Hainlein [Heinlein, Hainla]. German family of brass instrument makers. They were a Nuremberg family, descended from a line of coppersmiths; Sebastian Hainlein the elder (bap. 3 Feb 1559; *d* 24 Feb 1631) was the first of the brass instrument makers. He became master of his trade in 1591. His son Sebastian Hainlein the younger (bap. 17 March 1594; *d* 31 Jan 1655) played the trombone; he waited in vain for years to be appointed as a Stadtpfeifer. He became master in 1621. Another son, Hanns [Johannes] Hainlein (bap. 22 April 1598; *d* 26 Oct 1671), was probably the teacher of Johann Wilhelm HAAS and Wolfgang Birckholz. He was appointed master in 1630. Paul Hainlein (*b* 11 April 1626; *d* 6 Aug 1686), a son of Sebastian the younger, was a noted composer and organist, as well as a trombonist and instrument maker. He became master in 1651. According to Wörthmüller (1954–5), Michael Hainlein (bap. 20 July 1659; bur. 4 Sept 1713), Paul's son, was the first Nuremberg craftsman to abandon the funnel-shaped bell, characteristic of the late Renaissance and early Baroque, in favour of one with a wider flare (later made famous especially by the Haas family). Michael was appointed master in 1686. His daughter Margareta (1687–1732) married the brass instrument maker Daniel Kodisch (bap. 10 Nov 1686; bur. 27 Jan 1747), who became master in 1710 and may have taken over his father-in-law's workshop in 1713.

Many of the surviving Hainlein instruments are trombones. Examples include: a tenor trombone made in 1627 by Sebastian the elder (Bayerisches Nationalmuseum, Munich); a bass trombone made in 1622 for Archbishop Paris Lodron by Sebastian the younger (Museum Carolino-Augusteum, Salzburg); and a trumpet in modern D♭ made in 1632 by Hanns (Stadtmuseum, Munich). Two trumpets (Carl Claudius Samling, Copenhagen, and the Trompetenmuseum, Bad Säckingen) and a trombone (Germanisches Nationalmuseum, Nuremberg) exist as examples of Paul Hainlein's work as an instrument maker.

A number of straight trumpets made by Sebastian the elder and his two sons survive, including three dated

1609, 1617 and 1659 which were used continually into the 20th century in the Sienese Palio and traditionally called 'chiarine' there (Civico Museo, Palazzo Pubblico, Siena). Another in the Historisches Museum, Basle, dated 1657 but bearing Sebastian's name (who died two years earlier), is probably attributed to his brother Hanns's taking over his stock. Of two more signed with Sebastian's name and the impossible dates 1460 and 1461, and a third bearing Hann's name and the date 1460 – no.198 in the Museum of Fine Arts, Boston (Galpin Collection), no.452 in the Museo nazionale degli strumenti musicali, Rome, and in the Historisches Museum, Frankfurt, respectively – the first mentioned at least is known to have passed through the hands of the forger Franciolini.

EDWARD H. TARR

Hainlein [Heinlein], **Paul** [Paulus] (*b* Nuremberg, 11 April 1626; *d* Nuremberg, 6 Aug 1686). German organist, instrumentalist, composer and instrument maker, son of Sebastian Hainlein the younger (*see* HAINLEIN family). His early instruction on wind and keyboard instruments and in singing led to his being paid an expectant's salary by the city of Nuremberg at the age of 17. During the period 1646–7 he was in Munich, where he at least heard – if he did not study with – G.G. Porro. From October 1647 to July 1648 he was in Italy. In five extant letters he said that he was displeased with Italian performers and was practising without the aid of a teacher. He referred to four living Italian composers, G.G. Arrigoni, Cavalli and Rovetta in Venice and Francesco Turini in Brescia, but he apparently did not study with any of them. He took up his first important position in Nuremberg in 1655, when he succeeded Kindermann as organist at the Egidienkirche. In 1656 he and Heinrich Schwemmer were appointed co-directors of Nuremberg's company of musicians, and they held these posts until their deaths, while retaining their other positions. Two years later Hainlein was promoted to the highest musical position in Nuremberg, that of organist at St Sebaldus, the parish church. He apparently acquired some fame as a keyboard player, for 'shortly after 1666' (according to Mattheson) he performed in Regensburg for the Emperor Leopold I. A trumpet made by him survives (in *DK-Kc*) and a trombone (in *D-Ngm*).

Hainlein's surviving music is among the least significant of the Nuremberg school. Of the 'excellent supply of vocal and instrumental pieces ... chiefly toccatas, fantasias, fugues, ricercars, etc' referred to by Doppelmayr, the only extant instrumental pieces are a sonata for five strings and continuo and a keyboard capriccio. His vocal works consist mainly of strophic songs, which were published in four collections during his lifetime. Some are for four voices without continuo, but most are for one or two solo voices accompanied by continuo alone or by

Paul Hainlein: engraving, after 1685

two or more strings and continuo; those with strings include ritornellos. Hainlein's music, like that of his contemporaries in Nuremberg, is modern only in its use of the continuo and the concertato idiom. That its style does not reflect his visit to Italy suggests that he went there primarily to improve his technique as a performer rather than to familiarize himself with the characteristics of contemporary Italian music.

HAROLD E. SAMUEL

Hair, Graham (*b* Geelong, Victoria, 27 Feb 1943). Australian composer. After attending the University of Melbourne (BA 1964, MMus 1967) he studied with Maxwell Davies at the Elder Conservatorium in Adelaide. He moved to England in 1967 on a Commonwealth Scholarship to work on a thesis on Schoenberg (PhD 1973), returning to Australia in 1971. He was a visiting fellow at Princeton in 1974; at La Trobe University in Melbourne (1976–9) he was involved with the Australian Contemporary Music Ensemble. In 1979 he worked in the laboratories at IRCAM in Paris. He was head of the school of composition at the Sydney Conservatorium of Music (1981–90). His music of this period is based on 12-note and hexachordal structures, and his frequent revisions reflect a fastidious approach to structure and textural refinement. In 1990 he became the Gardiner Professor of Music at the University of Glasgow. He founded Scottish Voices in Glasgow and Voiceworks in Sydney, both of which employ female voices and varying instrumental groups, a characteristic sound found in such works as *Songs of the Sibyls* (1983–9), *Serenissima* (1994) and the series of paraphrases of popular song written in the 1990s. His music often invokes cultural resonances from the Western tradition.

PETER McCALLUM

Haiti. County in the West Indies. It is located on the island of Hispaniola.

I. Art music. II. Traditional music.

I. Art music

The tradition of Western music may be dated to 6 January 1497, when Spanish colonists celebrated the first sung mass at Ysabella, near present-day Cap-Haïtien. Under Spanish rule important institutions that promoted sacred music were created: in 1504 the archdiocese of Santo Domingo was founded, and by 1540 the organist and canon of the cathedral Cristobal de Llerma had established music as a prerequisite for the degree of Doctor of Arts at the University of Santo Thomas de Aquino, founded in 1538.

In 1697 the Treaty of Ryswick confirmed French title to the western portion of Hispaniola, which was re-named Saint-Domingue, and by the early 18th century the rich plantation society was emulating the urban culture of France. In 1750 Port-au-Prince became the colonial capital; the wind band of its militia began the tradition of public concerts. The earliest efforts in theatre music can be dated to the 1740s in Cap-Français (now Cap-Haïtien), and from 1764 regular seasons of opera were given there. By the end of the colonial period there were theatres in Port-au-Prince, St Marc, Léogâne, Cap-Français, Les Cayes, Jérémie, Petit-Goâve and Jacmel. Some, such as that of Cap-Français, could seat 1500. As professional performances became more frequent, so there were growing numbers of private music instructors and music shops. In 1785 the colony's first professional music critic, Charles Mozard, noted in his journal *Affiches américanes* that the stages of St Domingue were graced by local talent of mixed race.

Before the slave revolts of 1791–1804 brought an end to this culture, the theatre repertory in St Domingue reflected that of Paris, dominated by such composers as Grétry, Philidor, Monsigny, Gluck and Gossec. A biographical dictionary lists more than 300 artists appearing in the colony's theatres in the late 18th century. Though the period immediately after the revolution saw an attempt to revive the theatre, the politically motivated fare found little favour with the citizens of the newly named republic of Haiti. But despite the expulsion of the French colonists, the cultural standards they established survived into the next century.

Haiti in the 19th century saw the establishment of the military wind band, or fanfare, as the only provider of a steady income for professional musicians. Fanfares were located in the principal towns and provided Sunday concerts featuring a repertory of fashionable quadrilles, marches and waltzes of European origin. In 1860 the concordat that Haiti signed with the Vatican resulted in an influx of trained music teachers of the religious orders who came to establish schools, which soon founded their own fanfares, rivalling the more polished, government-sponsored groups. In the 1960s, following the government's attempt to employ school fanfares to political ends, the music courses at these schools were officially disbanded. In 1955 the Conservatoire National was founded, to be reborn in 1987 as ENARTS (Ecole National des Arts), though the most important teaching institution promoting Western art music is the Ecole Ste Trinité in Port-au-Prince, with over 1000 students.

Indigenous art music has its origins in the French colonial period, when symphonies and concertos were composed by theatre musicians. After the revolution there was a desire to retain European standards while including local features. The compositions of Occide Jeanty (1860–1936), bandleader of the government's Musique du Palais, typify this tendency: his medium was the fanfare, for which he produced works with a political dimension, such as his *1804* commemorating the independence of Haiti. The shock of the American occupation of 1915–34 resulted in a greater emphasis being placed on folk elements by such composers as Ludovic Lamothe (1882–1953), Justin Elie (1883–1931) and Franck Lassègue (1890–1940). Werner Jaegerhuber (1900–53), the

most prominent Haitian composer, has had among his successors Frantz Casseus (1915–93), Robert Durand (1917–95), Carmen Brouard (*b* 1914) and Amos Coulanges (*b* 1955).

II. Traditional music

Following the 1804 declaration of independence from France, the first 'Black Republic' in the world was the site of a particularly rich encounter between African and European cultures. It is the poorest country of the western hemisphere, and its population is still largely rural. There is a deep divide between the city and countryside, marked by differences of language (French, Creole), religion (Christian, Vodou), literacy and culture. Creolized African and European genres, syncretic genres and popular music are heavily influenced by globally circulating popular culture.

1. VODOU. Slaves came to the former colony of Saint-Domingue from areas of West and Central Africa. In the new environment, they were often grouped by ethnic origins and came to conceive of themselves as members of various *nanchon* (nation) including Daome-Ginen (Dahomey), Kongo (Congo river delta peoples), Mina (Akan), Ibo (Igbo) and Nago (Yoruba). African religions flourished among colonies of escaped slaves and mixed with Catholicism on the plantations.

The religion that emerged is often called Vodou (from the Fon word for 'spirit') and draws heavily on Ewe-Fon and Kongo beliefs. Religious officiants are most often known as *ougan* (male) and *manbo* (female). During the early decades of Haiti's independence, when the Vatican refused to recognize the nascent state, Vodou became deeply entrenched as the folk religion and it is still practised by the majority, despite a nominal adherence to Catholicism on the part of most Haitians. Vodou, and its sense of the interdependence of humans and *lwa* (spirits), underlies much of Haitian peasant and lower-class worldviews.

Despite differences between the regions, *nanchons* or 'branches' of Vodou, there are many commonalities to Vodou worship. The *lwa*, who may also be called *zany* (angels) or *mistè* (mysteries), are thought to live in Ginen (a spiritual African homeland) or *anba dlo* (under the sea) and are invited into a Vodou *dans* (ceremony) to possess Vodou initiates (*ounsi*), who are considered as 'horses' to be riden by the *lwa*.

(i) Song. Drumming and song serve as offerings (along with food, drink, animal sacrifice, candles and dance), as calls to the *lwa* to enter the ceremony and as one of many 'points of contact' with the *lwa*. Songs may honour a deity or attempt to send away the *lwa*; honorific songs, which often display European-style drumming and harmonic implications, are called *ochan*.

Songs are almost always sung in call-and-response fashion between the song leader and the congregation, spoken of in Haiti as *voye chante* ('sending a song') and *ranmase chante* ('gathering a song'). There is considerable variation in the length, text and melodic patterns used. Tonal relations also vary considerably due to the many historical sources for the songs. However, the majority of Vodou songs are of an anhemitonic pentatonic character, occasionally with added transitional tones. Some alternate between two tonal centres, often a tone apart.

Vodou songs can be difficult to interpret as they make use of a mystical language called *langaj*, allusive lyrics that frequently shift subject, nonsense phrases and concepts accessible only to those who have attained *konesans* ('understanding'). Scholars have classed these songs according to the *lwa* to which they refer; the rites to which they belong; their formal structure, function or topic; or by the literary tropes with which they engage. Songs may list attributes of the *lwa* in the tradition of West African praise poetry, censure individuals or groups (as in the case of the *chan pwen* or 'sung point'), comment philosophically on life (perhaps employing *pawol granmoun* or proverbs), comment on ritual activities and actions of the service, or may speak more generally to issues such as slavery and separation from Africa.

(ii) Rituals. Major Vodou rituals include the *manje lwa* (offering of food to the *lwa*), *manje mò* (offering of food to the dead); initiation ceremonies such as *lave tèt* ('wash the head' or baptism), *kanzo* (fire ritual with the *boule zen* or 'burning of the pots'), or *prizdezyè* ('taking of the eyes', an initiation into the highest stage of priesthood); a *maryaj* (mystical marriage to a *lwa*) and Friday night *dans* (dance ceremonies). Many ceremonies commence with a litany of Catholic prayers, chants and canticles, known as the *priyè djò* (God's prayer) which is sometimes followed by the *priyè ginen* (African prayer).

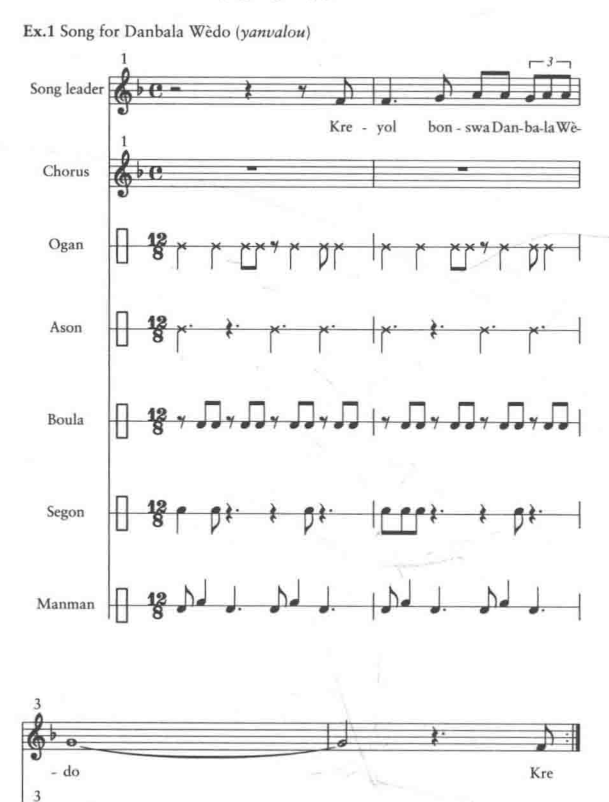
One can find Vodou practised informally within the family, contractually with specialists (*bokò*) in the preparations of protective magic, within congregations (*sosyete*) headed by an *ougan* and based in an *ounfò* (from the Fon for 'spirit house') or temple, or within a rural extended-family *lakou* (an African-style compound). 'Single-nation' rites such as Nago, Kongo, Banda or Daome ceremonies can also be found. However, the dominant pattern since the Haitian revolution has been to gather most Vodou deities and rituals within one of two major rites, Rada or Petwo.

Rada, which unites most of the *lwa* and ceremonies of the Daome, Mina, Nago and *nanchon*, is considered older, more African and 'cooler' than the fiery and militaristic Petwo. Petwo rituals (often referred to as Petwo-Kongo) come primarily from the Kongo peoples and were forged in the independence struggle. The distinctions between these rites are not always clear, and many *lwa* either straddle the two or exist on both sides of the divide (i.e. the Ibo, Gède or *djouba* families).

(a) Rada rites. These feature three cowhide-covered drums (of Dahomey origin) carved from logs with the skins attached by means of a system of cords and pegs (fig.1). The largest drum, the *manman* (mother) or *ountò*, is played with a single angled stick (*agida*) and a bare hand; it cues and signals the ensemble and dancers and plays elaborate variations. The mid-sized *segon* converses with the *manman* and is played with two sticks, one curved and one straight. The *boula* or *piti*, the smallest

1. Drum battery used in a Rada Vodou ceremony in northern Haiti: (left to right) segon, manman and boula

and highest in pitch, is played with two straight sticks, and plays a repeated pattern. In some areas, a frame drum (*bas*) may also be played. The timeline pattern is played on the *ogan*, an iron idiophone, while a sacred rattle called the *ason*, symbolic of the priesthood and sometimes beaded on the outside with snake vertebrae, is played by the priest or the *oudjènikon*, an assistant in charge of songs. The majority of Rada rhythms are in what might be described as a 12/8 metre. The *boula* pattern on the second and third beats of each group of three is also relatively invariant across this repertory (see the parts for *ogan*, *aeon* and *boula* in ex.1).



Rada songs are addressed to deities such as Legba, who opens the gates to the ceremony; the serpent *lwa* Danbala and his mate Ayida Wèdo; Agwe, spirit of the sea; or Kouzen Zaka, the archetypal peasant deity for whom the *djouba* is danced. Common rhythms played in Rada ceremonies include *yanvalou* (the centrepiece of a Rada *dans*), *mayi*, *zepòl* and *nago*. Dances typically proceed anticlockwise around the *poto mitan*, but changes in the choreography are introduced by 'breaks' (*kase*) in the rhythm, which often have the effect of precipitating possessions. Fleurant (1996) has classified the obligatory sequences of dances that appear in Rada ceremonial contexts.

In some areas of Haiti, a large Dahomey drum called the *asotò* (inhabited by the *lwa* Asotò) features in a ritual in which the congregation circles an *asotò* (or pair of *asotò*) and, on a cue from the *rada* drum battery, advances to strike the drumhead with sticks. All the instruments in Vodou ceremonies are treated as spirits: baptized, 'put to sleep' (*kouche tanbou*) when not in use, and given offerings as though they were *lwa*.

(b) Petwo-Kongo. These rites honour the *lwa* of the Kongo and Petwo families as well as featuring songs and dances dedicated to the *djouba*, *Ibo* and *Gède* deities (these may also figure in some Rada rites). The *lwa* of Petwo are typically hotter in temperament, more demonstrative and theatrical. Petwo drums are played in sets of two: *gwo baka* (*manman*) and *ti baka* (*piti*). These carved, conical drums are played with the hands and have goatskin heads which are laced to the body of the drum (and tuned) with ligament. The drums are accompanied by an *ogan* bell and a *tchatcha* rattle which is usually a gourd filled with pellets; there may also be a timeline (*kata*) beaten with sticks on a small drum or board. Various *kongo* rhythms as well as *kita*, *boumba*, *djouba*, *ibo* and *banda* rhythms can all be found in Petwo rites; with the exception of the *djouba*, almost all of these rhythms are in duple metre.

Other instruments used in Petwo-Kongo ceremonies include the *lanbi* or conch shell trumpet (a symbol of slave rebellion, maroon communities and deities of the

Ex.1 Song for Danbala Wèdo (*yanvalou*)

sea) and a whistle (*siflèt*). The latter is used with the whip in Petwo ceremonies in an intentional inversion of their oppressive roles during slavery (Wilcken, 1992). Kongo ceremonies can also take place outside of Petwo, when they utilize a three-drum Kongo ensemble featuring a double-headed cylindrical drum called *timbal*. The *timbal* is played with two sticks and is accompanied by drums similar (or identical) to Petwo *baka* drums.

(c) Gède and banda. The Gède spirits (such as Bawon Samdi and Gède Nibo) rule the cemetery, govern transitions between life and death, and have an important role in fertility and rebirth. Despite their Dahomey origins, they stand somewhat outside Rada and Petwo, tending to be comically obscene, unpredictable or even terrifying. The *banda* dance associated with the Gède family is a highly expressive solo form with an exaggerated rolling of the hips known as *gouyad*; it may take place at funerals during the Gède ceremonies around All Souls' Day. *Banda* drumming technique resembles that of *djouba* (see §2(iv)), including the use of a *kata* and a drum laid on the ground which is played with heel pressure. The rhythms themselves are closer to a fast Petwo.

A number of repressive campaigns have been carried out against Vodou in the belief that it is primitive or demonic, including the anti-superstition or renunciation campaign of the early 1940s. In the late 1980s, many Vodou priests were killed in the aftermath of the overthrow of the Duvalier dictatorship because of the high rate of *ougan* (officiants) in Duvalier's militia (the Tonton Makout). Vodou is disparaged by many of the middle class and élite, although elements of Vodou belief (or at least a fear of its power) are widespread even in these social groups. In addition, caricatures of Voodoo dolls and zombies, popularized through Hollywood horror films, have reinforced fears of Vodou that emerged among colonists during the African slave insurrections.

2. Music of festivals, daily life and recreation.

(i) Rara. This springtime festivity takes place largely during Lent and increases in frequency towards Easter weekend. It appears to have developed from the French colonial practice of holding a second carnival (*Carnaval Carême*) at the end of Lent, prior to Easter, when slave processionals with mock-royal costumes visited the 'great houses' on the plantation to solicit donations of food and money.

Rara bands are now organized throughout Haiti and among Haitians in the Dominican Republic with well-known centres of activity. In some areas a *rara* band may also be a *kongo* or a secret society (known as Bizango or Chanpwèl). *Rara* is considered a sacred obligation to the *lwa* and many of its rituals have roots in Vodou (fig.2). Deploying flag carriers (*pòt drapo*) and using military titles, *rara* bands reflect the militarism of Petwo-Kongo and may be understood as a public projection of Petwo-Kongo rites. For example, the *kata* pattern (played on a variety of iron instruments) is essentially a Petwo *kata*, while the *kolonèl* (colonel) figure makes use of a whip and whistle (as in Petwo) to direct the band and to purify space. Additionally, the drums and percussion instruments are essentially those used in Petwo and Kongo ceremonies: a *gwo baka* drum strapped to the drummer, *tanbouren* or *bas* frame drums, *timbal* (double-headed Kongo drums played with two sticks like a side drum), a *tchancy* (a large rattle made of tin, often in the shape of a cross), Petwo *tchatcha* and *graj* scrapers.

The *rara* instrumental ensemble features single-note bamboo trumpets, *vaksin* or *banbou*, and tin trumpets called *konè* (from coronet). The three *vaksin*, open at one end with a mouth-hole cut into a bamboo node at the other, sound a composite ostinato figure; the players also tap the bamboo tubes with sticks in order to add an additional layer of percussion. *Konè* players may reinforce the *vaksin* ostinato, play improvised patterns, or hum the melody of the song while blowing to create a mysterious, kazoo-like complement to the song.

There are many tuning systems used for *vaksin* but usually they exploit approximate minor 3rd intervals (creating tritones and arpeggiated diminished chords, but without a harmonic intent), with two of the *vaksin* often tuned approximately a semitone apart. One of the *vaksin* pitches generally serves as the tonal centre of *rara* songs. Like Vodou songs, most *rara* songs exhibit anhemitonic pentatonic melodies and may contain additional pitches that could be characterized as 'passing' tones, with the result that the *vaksin* and song melodies share some pitches, but also contain other pitches that are exclusive to each and add tension to the overall sound.

In the front of the *rara* group, a leader or *mèt* ('owner') parades with the *kolonèl*, a flag carrier and a group of costumed baton majors who carry and manipulate sacred batons while dressed in sequined vests and smocks, usually with pantalons, stockings and a cap or headdress. They dance tributes (*ochan*) to the patrons of the bands, while donations are collected by *rèn* (queens) dressed in red, who are the most ardent dancers of the band.

2. Rara band 'Rara La Bel Fraicheur de l'Anglade' ('The Beautiful Fresh Air of the Glade'): (front, centre) a kolonèl with a whistle, (left) a vaksin (or banbou) player and (right) two konè players

The procession dances to a *raboday* rhythm while marching, rolling waists in *gouyad* style. Graceful minuets from the French court are performed by the baton majors to the *mazoun* rhythm; various *banda* and Petwo-Kongo rhythms may also make an appearance. Songs, composed and led by a *sanba* (traditional peasant song leader), are topical and sometimes obscenely playful, often criticizing or ridiculing those perceived to have transgressed against the group or to have fallen short in public life.

The atmosphere in a *rara* is one of exuberant freedom and playfulness, but there is also a sense of danger. Suspicion and competition characterized the relationships between many *rara* bands and some even attempt to break up other bands with magic packets or powders; jealous *lwa* are also believed to interfere with the discipline and unity of *rara* groups devoted to their rivals. In general, the diverse mix of elements makes *rara* an exceedingly complex event and one of great importance in the ritual calendar of rural Haiti.

(ii) Kanaval. Haitian carnival (*kanaval* in Creole), taking place in the three or so days before Lent, was formerly a grand event in Haiti's major provincial cities, but has since declined; currently Port-au-Prince's carnival dwarfs the few remaining provincial events. Hundreds of *bann apiye* ('bands on foot') march through the streets playing percussion, singing and dancing. Costumes are not a central feature of carnival (as in Trinidad or Rio de Janeiro) but there are still many traditional masques in the procession, including *chaloska* (menacing soldiers), zombies and stickfighting *endyèn madigra* (Mardi Gras Indians). Many of the *bann apye* are similar to *rara* bands (indeed, many *rara* bands take part), featuring *vaksin* and *kongo* percussion (ex.2). The rhythms they play can include *rara* rhythms, a Kongo festival rhythm called *kongo payèt* and a carnival rhythm called *maskawon*. Songs in *méringue* (*merengue*) style and set to a frenetic carnival tempo are called *mereng kanaval* or *mereng koudyay*.

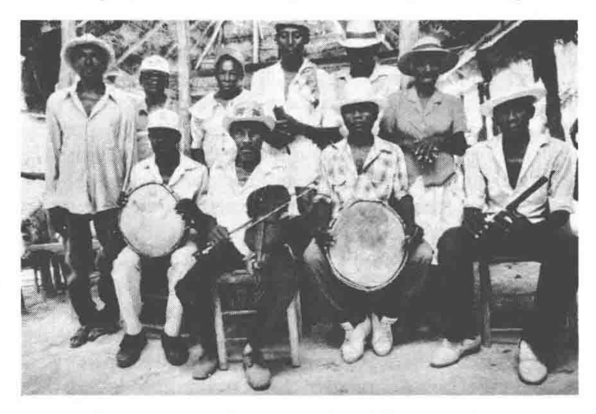
Ex.2 *M pap mache a tè anmwe* (Vocal, *kata* and *vaksin*)

In addition to the *bann apye*, modern carnival features processional brass bands and a number of popular music ensembles (featuring electric instruments and amplifiers) who record competitive carnival songs and perform on flatbed trucks and stages in downtown Port-au-Prince. As in other carnival-celebrating cultures of the Americas, prizes are awarded for the best song and best float. With its exuberance and its ability to mass tens of thousands from Haiti's poorer classes, carnival has been harnessed to serve a wide variety of political functions.

(iii) Konbit music. A *konbit* (cooperative work association) involves a system of mutual self-help and has counterparts in West African agricultural practices. *Konbit* are organized differently in various parts of Haiti but generally consist of a group that supplies labour for planting (or harvesting) to its members on a rotating basis. The recipient of the free labour reciprocates with a meal and often hosts a night of music and dance. In certain parts of Haiti, *konbit*s may also be *sosyete kongo* (kongo societies); elsewhere, the *konbit* may be called an *eskwad* (squadron) or a *kòvè* (Fr. *corvée*, a legacy of slave labour practices). The labour is often accompanied by a musical ensemble whose only duty is to entertain and inspire the workers and may include a simple hoe blade on which the singer taps a timeline, a *kongo* percussion ensemble or a full complement of *vaksin* as in a *rara* ensemble. The *simidor* (or *sanba*) leads songs and improvises lyrics on topical subjects. Most observers of rural agriculture note that the institution of *konbit* is in decline.

(iv) Dance. Among the many kinds of dances performed at parties is the *djouba* (juba), which is sometimes called *matinik*, perhaps through its association with immigrants from Martinique. The *djouba* drum, laid on its side, is played with the hands; the tension of the drumhead is adjusted by the player's heel while a timeline is beaten on the side of the drum by the *kata* player with two sticks. *Djouba* is really a family of rhythms and dances, some of which appear in Vodou ceremonies for the peasant *lwa* Kouzen Zaka; it has diffused widely throughout the Caribbean and the southern United States where body percussion has replaced drums to create the genre 'pattin' juba'.

Figure dances were brought to Haiti from France in the 18th century and were taught in rural as well as urban contexts by travelling *mèt dans* (dance masters); they are still practised in some remote locations. Accompanying ensembles can include a *tanbouren* (frame drum) or small percussion ensemble, *fif* (flute), violin, and a timeline instrument such as a hoe blade. Genres such as *kontradans* (contredanse), *kadri* (quadrille), *menwat* (minuet), and *eliyanse* (Lanciers) are still played under thatched shelters in some areas for recreation or to follow Vodou ceremonies (see Yih, 1995 for further discussion of this context).



(v) Children's songs. Many children's songs in Haiti are characterized by a strong European influence; they may follow an implicit harmonic progression and undoubtedly descend from European children's songs. There is also a class of game songs known as *gaj* ('it'), which are named after the types of games they accompany. Storytellers, called *mèt kont* ('master of the story'), still regale children and adults with stories of Bouki and Malice (the dim-witted country bumpkin against the city slicker), Anansi the trickster and various animal stories. The *mèt kont* uses every means at his disposal to hold the audience's attention, including interspersing the stories with songs involving audience participation.

(vi) Obscure instruments. The relative isolation of Haiti's rural areas has permitted obscure or peripheral instruments (many of African origin) to survive, in some cases played only by children. This is the case with the *tanbou marengwen* (mosquito drum), which consists of a cord stretched from a small, bent tree to a hole in the ground covered with thatch. The player plucks the cord with one hand and adjusts the tension with a curved stick in the other, producing a rhythmic pattern on multiple pitches with an ethereal buzzing sound. Another instrument of probable African origin is the *ganbo* (stamping tube), played in an ensemble in which each player stamps two bamboo tubes of different lengths (and pitches) on the ground to create an ostinato that may substitute for a drum battery. The tubes are open at one end and have a natural node at the other. Similar ensembles have existed in Jamaica and were once popular in Trinidad Carnival (*tambou bamboo*).

3. Popular music.

(i) Méringue. Throughout the Caribbean, European figure dances played by musicians of African descent evolved into new, hybrid styles, often as accompaniment for couple dances. One of the first of these (appearing soon after the founding of Haiti) was the *karabinyè* (*carabinier*, the army's artillery division), the direct precursor of the *méringue* (*see* Merengue). Throughout most of the 19th and 20th centuries, the *méringue* was a national genre, danced at rural informal parties, at working-class bars and at high-class *soirées* (especially after anti-American sentiment during the US occupation fuelled a nationalist movement among the élite). Some of the most enduring Haitian *méringues* (e.g. *Choucoune*, *Souvenir d'Haïti* and *Angelique O!*) were composed by middle-class poets, composers and troubadours; others circulated anonymously as comments on social or political affairs (e.g. *Panama M Tombe* and *Merci Papa Vincent*, both ridiculing former presidents of Haiti).

The instrumentation for *méringues* varies as widely as the contexts. They are played using only percussion instruments after a Vodou ceremony has ended, as parlour *méringues* (*méringues lentes*) for élite audiences by chamber groups of piano and strings, in dance halls and hotels by orchestras and in the streets, at festivals and hotels by small *troubadou* (troubadour) or *mizik gwenn*

3. Premye Nimewo (Number One), a kò mizik menwat ('minuet music corps') from the region around Les Cayes, southern Haiti (Yih, 1995)

siwèl ('nougat') ensembles. The latter typically use a conga drum, maracas, a *malimba* (a large lamellophone) and a string instrument such as a guitar or banjo. This instrumentation was strongly influenced by the Cuban *son trovador* style brought to Haiti by Cuban radio, returning Haitian cane workers and middle-class tourists. The *troubadou* role was inherited and appropriated by a series of male singers who sang populist songs of lighthearted social critique as well as tongue-in-cheek treatments of male-female relations, including Auguste 'Kandjo' de Pradines, Rodolphe 'Dodòf' Legros, Althierry 'Ti-Paris' Dorival, Rodrigue Milian and Gesner 'Coupé Cloué' Henry.

The diversity of *méringue* performance results in part from the use of the term as a catch-all for any piece with local flavour. However, many *méringues* have an implicit structuring rhythm similar to related Caribbean genres (e.g. the Cuban *danzón* and *biguine* of Martinique), featuring a bar of a syncopated figure alternating with a bar of pulse.

(ii) Vodou-djaz and the folkloric movement. After World War II, a boom in tourism fuelled Haiti's nightlife and caused an explosion of dance bands. Cuban-style bands playing *méringues* and Latin hits were based at hotels and casinos such as Riviera, Ibo Lélé and the Casino Internationale. The post-war period also saw the ascendence of the ideology of *noirism*, a Haitian parallel to *négritude*, which championed the black middle class as the more 'authentic' representatives of the Haitian nation and extolled Haiti's African heritage. A number of bands and singers of this period (including Jazz des Jeunes, Guy Durosier, Orchestre el Saïeh, Martha Jean-Claude and Emerantes de Pradines) performed in a folkloric style, which in its dance band versions was known as *vodou-djaz*. Jazz des Jeunes performed along with the new Troupe Folklorique Nationale d'Haïti, singer Lumane Casimir and the drummer Ti-Roro at the Bicentennial of Port-au-Prince exposition in 1949 that highlighted Haiti's new indigenous art movement. Jazz des Jeunes' composer, Antalcides O. Murat, orchestrated pieces from Haitian traditional repertories such as *rara*, Vodou, *méringue* and *contredanse* and composed new songs on traditional models. The group performed every Sunday at the open air Théâtre de Verdure until they emigrated to the United States in 1970. The Troupe Folklorique Nationale d'Haïti became the model for a generation of classically trained folkloric dance troupes performing stylized renditions of traditional Afro-Haitian dances.

(iii) Konpa, kadans and other genres. A fad for mid-1950s Dominican *merengue típico* convinced bandleader and saxophonist Nemours Jean-Baptiste to coin a similar dance music, which he and his band dubbed *compas-direct* ('direct beat'), *konpa dirèk* or *konpa* in Creole. He renamed his ensemble the Super Ensemble Compas-Direct de Nemours Jean-Baptiste, and his new sound soon made his band the most popular ensemble in Haiti's nightclubs and hotels. Saxophonist Wébert Sicot imitated Jean-Baptiste and developed a nearly identical rhythm and sound that he called *cadence rampas* ('ramparts rhythm'), naming his own band the Super Ensemble Cadence Rampas de Wébert Sicot. The rivalry between the two bands, expressed above all in their competition for crowds at carnival, was the dominant feature of the commercial music market for a decade (1958–68). Both bands featured one or more saxophones harmonizing or alternating with an accordion, in conjunction with a string bass, one or two singers, guitar, güiro, a conga, timbales, cowbell and *tamtam* (floor drum, played as a set with the bell).

While undergoing significant changes in instrumentation and even in its rhythmic formula, *konpa* continued to be Haiti's most popular dance music into the 1990s. Starting in the mid-1960s, small bands called *mini-djaz* (which grew out of Haiti's light rock and roll *yeye* bands of the early 1960s) played *konpa* featuring paired electric guitars, electric bass, drumset and other percussion, often with a saxophone. This trend, launched by Shleu Shleu after 1965, came to include a number of groups from Port-au-Prince neighbourhoods, especially the suburb of Pétion-Ville. Tabou Combo, Les Difficiles, Les Loups Noirs, Frères DéJean, Les Fantaisistes, Bossa Combo and Les Ambassadeurs (among others) formed the core of this middle-class popular music movement and trained a generation of *konpa* musicians. These bands became popular in the French West Indies as well as in Haiti and toured the expanding Haitian immigrant communities in North America, where many musicians stayed on to form their own bands. In the late 1970s, *mini-djaz* added extra wind instruments (trombones, trumpets) and synthesizers and borrowed widely from funk, soul, jazz-funk and other popular musics of the period.

Ibo Records, Marc Records and Mini Records dominated the small Haitian music market from the late 1950s until the mid-1980s. Popular bands recorded at least one and often two albums each year, and it was not unusual from the mid-1970s on for the Haitian recording industry to produce 75 to 100 albums per year. Although some bands achieved considerable local success and had hits in the French West Indies, the Haitian music industry remained small and marginally capitalized, operating out of storefronts, paying only fixed fees for recording (no royalties) and bartering much of the product of the industry among producers. Most of these producers were located in the USA (primarily in New York), but tracks were often recorded in Port-au-Prince at Audiotech Studios.

In the 1980s a number of outspoken recording artists, such as Roselin 'Ti-Manno' Jean-Baptiste, Manno Charlemagne and Farah Juste emerged as prominent critics of the Duvalier regime with a socially conscious music called *misik angaje* ('engaged' music). Some *mini-djaz* also joined the chorus of opposition and produced satirical carnival songs from 1981 to 1986. In the years since the overthrow of the Duvaliers, musicians have continued to play a visible political role, even as elected politicians.

One of the most influential movements in recent decades has been a new effort to bring traditional and peasant musics into popular music, influenced in part by the spiritual and political message of roots rock reggae in Jamaica. The musicians in this *mizik rasin* ('roots music') movement studied traditional drumming in Vodou temples and experimented with *rara* and Vodou rhythms using electric guitars and synthesizers. Boukman Eksperyans, Boukan Ginen, Ram, Kanpèch, Koudyay and other bands have all had some local and international success with their roots fusion. Through the politically troubled 1990s, *mizik rasin* songs (especially at carnival) served as a musical conscience of the progressive movement, focussing on the economic and cultural divide between the 'popular' classes and the élite. During the same period, a new generation of *konpa* bands and pop singers (inspired

in part by experimentalist groups of the early 1980s such as Magnum Band, Caribbean Sextet and Zèklè) streamlined and updated the *konpa* formula; one of these artists, Haitian pop diva Eméline Michel, released recordings on international labels. Haiti has also experienced a wave of popularity of rap and Jamaican-style ragga, especially following the international success of Haitian-American hip hop singer Wyclef Jean of the Fugees.

ROBERT GRENIER (I), GAGE AVERILL (II)

Haitink, Bernard (Johan Herman) (*b* Amsterdam, 4 March 1929). Dutch conductor. He took violin lessons as a child and later at the Amsterdam Conservatory, where he also studied conducting with Felix Hupka. After joining the Netherlands Radio PO as a violinist, he twice attended annual conductors' courses organized by the Netherlands Radio Union (1954–5) where his talent quickly flourished under the guidance of Ferdinand Leitner. It led to his appointment in 1955 as second conductor with the Radio Union, sharing responsibility for four radio orchestras, and two years later he became principal conductor of the Netherlands Radio PO at the age of 27.

Haitink first attracted wider attention in 1956 as a last-minute replacement to conduct Cherubini's Requiem with the Concertgebouw Orchestra at The Hague. His success was followed by his engagement as a guest conductor for some of the orchestra's regular concerts and, after the death of van Beinum, he became in 1961 the Concertgebouw's youngest-ever principal conductor, in a joint appointment with Eugen Jochum until 1964, when Haitink took over sole responsibility. Meanwhile he had made his American début in 1958 with the Los Angeles PO, and his British début the next year on a visit with the Concertgebouw Orchestra. In 1964 he became a guest conductor with the LPO and was its principal conductor and artistic adviser from 1967 (artistic director from 1970) to 1979. He much prefers a regular association to guest appearances, so that his activities were principally divided between the Amsterdam and London orchestras with few other commitments. His wide travels with both orchestras included America, Russia and East Asia. Haitink's orchestral recordings encompass much of the standard symphonic and concerto repertory, and include complete cycles of the symphonies of Beethoven, Schumann, Brahms, Bruckner, Mahler and Shostakovich, as well as the Liszt tone poems.

Undemonstrative in performance, he imparts an uncommon strength of character and conviction to the playing, whether of Classical or contemporary music, that is the fruit of his intensive study even before rehearsal. His repertory developed only slowly from its unusual basis of an enthusiasm for Mahler and Bruckner, instilled in him by his boyhood experience of Mengelberg's concerts and, later, of van Beinum's. His British opera début was in Mozart's *Die Entführung aus dem Serail* at Glyndebourne in 1972; he returned there to conduct *Die Zauberflöte* in 1973 and *The Rake's Progress* in 1975. In 1977 he succeeded John Pritchard as musical director of the Glyndebourne Festival, a post he held until 1988. During this time he conducted a wide range of repertory, much of which was recorded: *Così fan tutte, Don Giovanni, Le nozze di Figaro, Fidelio*, Strauss's *Arabella*, Prokofiev's *The Love for Three Oranges* and Britten's *A Midsummer Night's Dream*. He made his Metropolitan Opera début in 1982 in *Fidelio*. He first appeared at Covent Garden in 1977 with *Don Giovanni*, and in subsequent seasons conducted *Lohengrin, Parsifal* and *Jenůfa*. In 1987 he was appointed music drector of the Royal Opera. His performances of *Don Carlos, Prince Igor, Peter Grimes* and *Die Meistersinger* were greatly acclaimed, while his *Ring* was widely praised for its broad sweep and magnificent orchestral playing. Haitink also inaugurated concerts of non-vocal music to display the Royal Opera House orchestra. His other operatic recordings include a complete *Ring* with the Bavarian RSO (1988–91). He was made an honorary KBE in 1977 and was awarded the Erasmus Prize in 1991.

NOËL GOODWIN

Haizinger [Haitzinger], **Anton** (*b* Wilfersdorf, Lower Austria, 14 March 1796; *d* Karlsruhe, 31 Dec 1869). Austrian tenor. After teaching in Vienna he studied harmony with Wölkert and singing with Mozzati; he later continued his studies with Salieri. He was engaged at the Theater an der Wien as *primo tenore* in 1821 and made a successful début as Gianetto (*La gazza ladra*); he then sang Don Ottavio, Lindoro (*L'italiana in Algeri*) and Florestan to Schröder-Devrient's Leonore (1822). He created Adolar in *Euryanthe* at the Kärntnertortheater in 1823, and the following year sang the tenor solos in Beethoven's Ninth Symphony and *Missa solemnis* in the presence of the composer. He made successful visits to Prague, Pressburg, Frankfurt, Mannheim, Stuttgart and Karlsruhe, where he settled in 1826. In 1827 he married the actress and singer Amalie Neumann (1800–84), widow of the actor Karl Neumann. Together with Schröder-Devrient he gave a short season at the Opéra-Comique in Paris in 1831, singing Florestan, Max (*Der Freischütz*), and Huon in the Paris première of *Oberon*. In 1833 he sang Max, Tamino, Florestan and Adolar (in the London première of *Euryanthe*) at Covent Garden. Mount-Edgcumbe described his voice as 'very beautiful', although Chorley found it 'throaty and disagreeable'. He returned to England in 1841, and visited St Petersburg in 1835. He established a school of dramatic singing in Karlsruhe with his wife, and also published some music, including a song, *Vergiss mein nicht*, and a *Lehrgang bei dem Gesangunterricht in Musikschulen* (1843).

One of the finest German tenors of his generation, Haizinger contributed much to the success of *Fidelio* and of Weber's operas, especially as a partner to Schröder-Devrient. The dramatist P.A. Wolff wrote that, 'To hear Haitzinger is something extraordinary. It is a pity that he has not made much progress as an actor; but one forgives him everything when one considers his moving voice, his expressive delivery, his admirable technique' (letter to F.W. Gubitz, 31 January 1826).

JOHN WARRACK/ELIZABETH FORBES

Hajdu, André (*b* Budapest, 5 March 1932). Israeli composer, pianist and ethnomusicologist. As a young boy, he survived the Nazi invasion and miraculously escaped deportation. In 1949 he entered the composition department of the Franz Liszt Academy of Music in Budapest, where he studied the piano with György Kósa and Erno Szégedi, composition with Endre Szervánszky and Ferenc Szabó, and ethnomusicology with Zoltán Kodály. As a Kodály disciple, he spent two years among the Hungarian gypsies, collecting songs and stories. This resulted in his *Gypsy Cantata* on poems of Miklos Randoti, which won first prize at the Warsaw International Youth Festival (1955).

Following the failure of the Hungarian uprising, Hajdu escaped to France, where he studied with Milhaud and Messiaen at the Paris Conservatoire. At the same time he wrote music for films and conducted youth choirs. From 1959 to 1961 he taught the piano and composition at the Tunis Conservatory and was active in ethnomusicological research there. This period is represented in his *Diary from Sidi-Bou-Said* for solo piano (1960). After his return to Paris, Hajdu developed a deep interest in Jewish studies. In 1966 he emigrated to Israel and settled in Jerusalem, where he joined the Jewish Music Research Centre. Of special importance are his studies of Ḥasidic music, some of which were conducted jointly with Yaacov Mazor. He has taught at the Rubin Academy of Music, Tel-Aviv University (1966–91) and at Bar-Ilan University (from 1970).

In 1970 Hajdu's 'miniature opera' *Ludus paschalis*, based on Jewish and Christian texts and chants, was performed at the Jerusalem Testimonium festival for Jewish Heritage. The composition, which touched on controversial issues, created a public stir. Thereafter, Hajdu's music became deeply involved in Jewish topics, classical Jewish texts and traditional Jewish lore. *The Floating Tower* (1971–3), a cycle of 56 songs and choruses, is based on his personal interpretation of excerpts from the Mishnah. *'Tru'at Melekh': Rhapsody on Jewish Themes* for clarinet and string orchestra (1974), commissioned by the Klezmer-style clarinettist, Gyora Feidman, uses various Eastern European folk tunes and cantorial recitatives. Among other compositions on Jewish subjects are *Psalms* for baritone, boy alto, children's choir and orchestra (1984), the cantata *Eternal Life* (1984), the opera *The Story of Jonah* (1985) and the oratorio *Sueños en España/Dreams of Spain* (1991), commissioned in commemoration of the 500th anniversary of the Jewish expulsion from Spain. Of his later works, *Job and His Comforters*, a biblical and historical oratorio, and *Qoheleth*, a setting of the book of Ecclesiastes for narrator and cellos (both 1995) stand out. Jewish themes are not the exclusive domain of his work, however. His piano concertos (1968, 1990) and chamber works, such as the piano trio *Music for Three* (1999), show different areas of interest.

In addition to his activities as composer and musicologist, Hajdu is also a noted pedagogue. He has dedicated much of his time to teaching improvisation and composition to youngsters, especially in the Israel Arts and Science Academy of the Society for Excellence Through Education, Jerusalem. His five volumes of pedagogical graded compositions for piano, *The Milky Way* (1975–6), serve as a basis for studying composition and improvisation. Other pedagogical works include the Concerto for Ten Little Pianists and Orchestra (1977) and *Overture in the Form of a Kite* (1985).

Hajdu's style reflects his multi-faceted character. The influences of Bartók, Kodály and Milhaud mingle with his special affinity with Jewish tradition. Uncommitted to any fixed style, he delights in surprising, at times shocking his audience. His music is at once warm and ironic. His honours include the Israel Prize for Musical Composition (1997).

WORKS
(*selective list*)

Stage: *Ludus paschalis*: A Medieval Passover Play (miniature op), solo vv, boys' chorus, men's choirs, ens, 1970, Jerusalem, 1970; The Story of Jonah (op, Bible), A, children's chorus, 1985

ELIYAHU SCHLEIFER

Hajdu, Mihály (*b* Orosháza, 30 Jan 1909; *d* Budapest, 26 July 1990). Hungarian composer. He studied at the Budapest Academy of Music with Thomán (piano) and Kodály (composition), and then held teaching appointments in Budapest at several music schools (1941–9), at the Béla Bartók Conservatory (1949–60) and at the Liszt Academy of Music (1960–77) as professor of music theory and folk music. In 1957 he received the Erkel Prize; in 1970 his *Énekek Budapestről* ('Songs about Budapest') won him first prize in the competition organized on the occasion of the 25th anniversary of the liberation of the capital; and in 1974 he received the Public's Prize at the Hungarian Radio Review of Contemporary Hungarian Music for his *Capriccio all'ongarese*. His compositional language is strongly influenced by Hungarian folk music and the traditions of the Kodály school, particularly in its tonal structure and clearcut form. He produced a large quantity of educational music for youth orchestra, ensemble or solo instruments, and won popularity for his vocal works, such as *Fonóházi dal* ('Spinning Song') and *Tavaszi motetták* ('Spring Motets'). He regularly contributed articles and reviews to *Kóta*, the periodical of the National Hungarian Choral Association.

WORKS

MÁRIA ECKHARDT

Hajibeyov [Gadzhibekov], **Sultan (Ismail)** (*b* Shusha, 8 May 1919; *d* Baku, 9 Sept 1974). Azerbaijani composer. He studied the trumpet with Koplinsky at the Baku Musical Institute and then composition with Boris Zeydman at the Azerbaijan State Conservatory (1939–46), where he served as a teacher of instrumentation (from 1947), professor (from 1965) and rector (from 1969). In addition, he held appointments as conductor of the Baku Theatre of Musical Comedy (1938–40), artistic director of a *sazistki* ensemble (1940–42), artistic director (from 1948) and director (1956–72) of the Baku PO, and board member of the Composers' Union of the USSR (from 1958). In 1973 he received the title National Artist of the USSR.

Hajibeyov's first important work was the lyrical-epic Second Symphony (1946). His major achievement for the stage, the ballet *Gyul'shen* (State Prize 1952), celebrating the poetry and beauty of toil, was the first Azerbaijani ballet on a contemporary theme; mass scenes occupy a fundamental place in its dramatic development. A leaning towards programme music appears also in his colourful symphonic picture *Karavan* (1945) and his Overture (1956). These were followed in 1964 by one of his most significant pieces, the spirited and brilliant Concerto for Orchestra, which won the State Prize of the Azerbaijani SSR in 1970. Hajibeyov was a deeply national composer,

but he readily employed the folk music of other peoples, as in the *Bolgarskaya syuita* for folk orchestra, the *Syuita na indiyskiye temï* for string quartet and the *Indiyskiye zarisovki* ('Indian Sketches') for orchestra. His style shows a clarity in genre writing and a particularly sensitive grasp of the elements of national dance. Playful ideas have an important place in his music, a feature often displayed in his orchestration – for example, in the deliberate contrasts of texture and timbre.

WORKS
(*selective list*)

Stage: Gïzïl gyul [The Rose] (musical comedy, M. Alizade), 1940; Iskander i pastukh [Iskander and the Shepherd] (children's op, M. Seld-zade), 1947

YURY GABAY

Hajibeyov [Gadzhibekov], **Uzeir (Abdul Huseyn)** (*b* Agjabedï, nr Shusha, 17 Sept 1885; *d* Baku, 23 Nov 1948). Azerbaijani composer, musicologist and teacher. He was the founder of modern art music in Azerbaijan and of a national school of composers. It was while he was at the teachers' seminary in Gori (1899–1904) that his youthful interest in folk music developed into a professional one, for he sang in the choir as a baritone, played the violin, the cello and folk instruments and also began to compose. From 1905 he lived in Baku, where he worked as a teacher, engaged in compiling textbooks and dictionaries, translated Gogol into Azerbaijani and published newspaper articles on issues of the day, criticizing retrograde social attitudes. In 1907 he created the first opera of eastern Islam, *Leyli i Mejnun*, in which only the parts for chorus and European orchestral instruments were fixed. For the majority of cases he indicated only *mugam* and certain features of improvisational performance, using folksongs as well as *mugam* for his material. Within the next five years he had produced a further four examples of *mugam* opera.

In 1911 and 1912 Hajibeyov attended private courses in Moscow with Ladukhin for solfège and Sokolov for harmony; in 1913 he entered the organ class of the St Petersburg Conservatory and studied harmony with Kalafati. While in the capital he wrote his best musical comedy, *Arshin mal alan*, in which, as in his previous comedies, he reflected the morality of pre-Revolution Azerbaijan and satirized its patriarchal-feudal customs. In Azerbaijan the arias, couplets and dances of the work became accepted as folk music. Having returned to Baku in 1914, Hajibeyov became director of the arts section of the Red Army's political administration after the October Revolution, and then director of the National Commissariat of Enlightenment. He was also one of the founders, and from 1938 permanent director, of the city's conservatory. During the post-Revolution years he acquired a greater public, proving in both articles and compositions the originality and value of Azerbaijani music while protesting against the musical isolation of any nation; for him, Azerbaijani composers had to master European techniques as well as develop their own traditions.

The first collection of Azerbaijani folksongs, edited by Hajibeyov and Mahomayev, came out in 1927. A year earlier Hajibeyov had organized a polyphonic choir, a bold innovation at a time when monody was still dominant in Azerbaijani musical culture; in 1931 he formed the first orchestra of Azerbaijani folk instrumentalists playing from notation; and in 1936 he established the State Choir. His compositions of the 1930s included mass songs and marches, fantasias, the trio *Ashug sayagï* (the first chamber work based on Azerbaijani *mugam*) and choral pieces, while at the same time he worked on the basic research for his study *Osnovï azerbaydzhanskoy narodnoy muzïki* ('The foundations of Azerbaijani folk music'). But his most important work of this period was the epic-heroic opera *Kyor-oglï*, a more mature work than any of his previous dramatic compositions in which he succeeded in achieving the synthesis he desired of European operatic forms with the national melos: of Western with Eastern principles of development. The text is based on episodes from the Azerbaijani epic about Kyor-oglï, the leader of a peasant uprising and an *ashug* (folk musician); accordingly, his musical material is based on *ashug* intonations. The opera presents themes which concerned its composer all his life: art, love and his nation's struggle for freedom.

In 1941 *Kyor-oglï* won Hajibeyov a State Prize of the USSR; he had already been made a National Artist of the USSR in 1938, and in 1946 he won a second State Prize for the film version of *Arshin mal alan*. He wrote marches and battle songs for World War II, and during the war years made re-creations of the heroic genres of national music (*jengi* and *gakhraman*) and wrote the music for the national anthem of the Azerbaijani SSR. He was elected to the Azerbaijani Academy of Sciences in 1945, the same year that he was appointed director of the Institute of the History of Azerbaijani Art. In 1947, for the eighth centenary of the poet Nizami, he composed the remarkable romance-gazelles *Sensiz* ('Without You') and *Sevgili janan* ('The Beloved').

Hajibeyov's achievement was to prove the possibility of combining the traditions of Azerbaijani folk music with those of European art music. The singlemindedness with which he pursued this aim is clearly evident from his early *mugam* operas through to *Kyor-oglï*: from recitational constructions to a completely original folk-style work. His constant striving towards the unification of Eastern and Western sources, both philosophical and aesthetic, shows as much in the historical-legendary operas, celebrating the strength and beauty of human feelings, as in the musical comedies on social themes; and his success owed something to the fact that he was a gifted writer and wrote most of his own librettos. The theory of Azerbaijani folk modes he established is reflected in his compositional work. Indeed, his style is notable for its modal thought, which influences the principle of thematic development; national traits are particularly evident in his melodies, with their modality, cadences, sequences and so on, for the most part in a descending movement. He introduced many new genres into Azerbaijani music, and his greatest work, *Kyor-oglï*, proved a particularly important model: its monumental and dramatic choral

scenes contained the seeds for the cantatas and oratorios of later Azerbaijani composers, and its numerous dance numbers prepared the way for the evolution of a national ballet. There is a Hajibeyov archive at the Academy of Sciences of the Azerbaijani SSR (manuscript stocks M-22).

YURY GABAY

Hajiyev [Gadzhiyev], **Akhmet (Jevdet Ismail)** (*b* Nukha [now Shcheki], 18 June 1917). Azerbaijani composer. He studied the violin with Bretanitsky at the musical technical school of the Azerbaijan State Conservatory and then theory and composition with Rudol'f at the conservatory (1935–8). Among the works he composed at this time were the symphonic poems *Sotsialisticheskiy Azerbaydzhan* and *Poslaniye v Sibir'* ('Message to Siberia'), the first examples of the genre in Azerbaijan. In 1938 he entered the Moscow Conservatory, where he was a pupil of Anatoly Aleksandrov (composition) and Sergey Vasilenko (instrumentation). He worked in Baku during the war, as director of the Baku PO, and in 1945 he and Kara Karayev completed the heroic-patriotic opera *Veten* ('Fatherland'; State Prize, 1946). After the war he returned to the Moscow Conservatory for further composition studies with Shostakovich (1945–7). His Third Symphony, performed when he left the conservatory, was his first truly mature work, a piece typical of Hajiyev in its organic combination of *mugam* improvisation with energetic dynamics. He was artistic director of the Baku PO (1947–8) and was appointed to the staff of the Azerbaijan State Conservatory in 1947, serving as rector (1957–69) and as professor of composition (from 1963). In addition, he is a board member of the Azerbaijani Composers' Union and a National Artist of the Azerbaijani SSR (1960). His best works – the romantic *Ballada* for piano, the symphonic poem *Za mir* ('For Peace', State Prize, 1952) and the Fourth Symphony 'Pamyati Lenina' ('To the Memory of Lenin') – were composed during the 1950s. Characteristic of his style are monumental forms, programmatic development, an expressive astringent polyphony and frequent recourse to *mugam*-type improvisation, the last giving his work its distinctive nationalism.

WORKS
(*selective list*)

Op: Veten [Fatherland] (I. Idayat-zade), 1945, collab. K. Karayev

YURY GABAY

Haka, Richard (*b* London, 1645/6; *d* Amsterdam, 1705). Dutch woodwind maker of English birth. He moved to Amsterdam with his parents in or before 1652. His family appear to have retained certain connections with England, though details are obscure. His father, who married in London in 1635, was there named as 'Thomas Hakay', while three of Richard's sisters married Englishmen. He reportedly began to make woodwind instruments in about 1660, although nothing is known of his training as a maker. In 1676 he married Grietje van den Bogaert, stating that he was aged 30. He lived and worked in Kelverstraat until about 1681 when he moved to 'de Vergulde Basfluyt' (the gilded bass recorder) on the Spui. Haka retired in 1696, leaving his house, shop and tools in the hands of his nephew Coenraad Rijkel, his partner and former apprentice, later moving into a house he had built on the prestigious Keizersgracht.

Haka is considered today as the founding father of the important Amsterdam school of woodwind instrument

making; besides Rijkel his apprentices included Abraham van Aardenberg and Jan Steenbergen. His work, which is superbly crafted, was well regarded during his own lifetime, and his instruments were sought after across Europe: a 1700 Firenze inventory of the Medici court includes a consort of 16 Haka recorders. Today, examples of Haka walking-stick recorder, flageolet, alto flute, shawm, altpommer, oboe, tenor oboe, *deutsche schalmei* and bassoon survive.

LYNDESAY G. LANGWILL/R

Håkanson, Knut (Algot) (*b* Kinna, Älvsborgs län, 4 Nov 1887; *d* Göteborg, 13 Dec 1929). Swedish composer, conductor, pianist and teacher. He studied composition and the piano privately with Lindegren, Liljefors and Bäck (1906–15), and read philosophy and languages at Uppsala University (1906–13). Between 1916 and 1925 he directed the Borås Orkesterförening, and from 1927 he was music critic of the *Göteborg Handels- och Sjöfartstidning*. In his youth he was highly impressed by the fiddlers of the Skansen open-air museum, Stockholm; later he notated folk music in Uppland and Västergötland, and his original songs are the most important works of this period. Admiration for Bach led him to strive for what he termed 'objective music', and, in turning to instrumental music from around 1920, he became deeply interested in the variations of Reger and Brahms. His most individual achievement was in the use of Swedish folk themes in music aimed at 'polyphony, linear music, diatonicism and modern classicism', closely connected to the neo-classical tendencies current in Europe at that time. He spent his last years troubled by financial concerns, a divorce and kidney disease, difficulties which set the background for some profound works, among them the *Fyra madrigaler* and *Brusala*, a pearl of Swedish choral music.

ROLF HAGLUND

Hakart, Carel [Carolus]. *See* HACQUART, CAROLUS.

Hake [Hacke], **John** (*d* 1559). English composer. In 1523 Thomas, Lord Darcy tried to procure the services of a musician of this name for his chapel. He may possibly be identified with the John Hacket who was a conduct at St Mary-at-Hill, London (1539–40). By about 1541 Hake was a lay clerk and Master of the Choristers at St George's Chapel, Windsor, a post he retained, apart from a break in service during the reign of Edward VI, until his death. John Day's *The Whole Psalmes in Foure Partes* (RISM 1563[8]) included 17 of his harmonizations and a setting of a metrical version of the Ten Commandments, all of which are wholly chordal. There is also a Latin Kyrie in florid style in *GB-Lbl* Add.17802–5 (further discussion in D. Mateer: 'The "Gyffard" Partbooks: Composers, Owners, Date and Provenance', *RMARC*, no.28, 1995, pp.21–50), and an In Nomine in *GB-Ob* Mus.Sch.D.212–6 that is attributed to 'Hawkes' in *Ob* Tenbury 389. The Edward Hake who wrote the preface to William Daman's *The Psalmes of David* (1579) may have been his son.

PETER LE HURAY/DAVID MATEER

Hakenberger, Andrzej (Andreas) (*b* Koszalin [Köslin], in Pomerania *c*1574; *d* Danzig [now Gdańsk], 5 June 1627). Polish composer and lutenist. He joined the royal chapel in Warsaw as a singer, lutenist and (possibly) composer in 1602, when 'his name was included among "gentlemen musicians of Polish nationality" on the pay list' (Wecowski). He probably studied with the lutenist Diomedes Cato, who went to the royal court from Pomerania the previous year. During Hakenberger's stay at Warsaw he had contact with Asprilio Pacelli, Kapellmeister from 1603 to 1623. Under King Sigismund III the standard of the Polish court chapel was exceptionally high at this time, and it was richly endowed with music manuscripts and prints. It attracted many Italian composers, including Luca Marenzio, Giulio Osculati and Vincenzo Bertolusi, and promoted concerted multi-choral music in the Venetian style.

On 9 July 1607 Hakenberger applied for the position of Kapellmeister at the Lutheran Marienkirche in Danzig, one of the largest of all Christian churches, and was selected in preference to several prominent composers on 27 April 1608. Other towns scrupulously examined the Lutheran beliefs of such applicants, but the Danzig council put musical considerations first and, beginning with Hakenberger, employed several Catholic musicians. The decision to employ Hakenberger depended mainly on the opulent style of his compositions, which reflected the prosperity of a wealthy commercial city. His first publication at Danzig was of music for social occasions. His *Newe deutsche Gesänge* (1610), a collection of one eight-part and 18 five-part polyphonic madrigals with German texts, were probably intended for performance at the Artushof, the centre of secular musical practice in Danzig. At the Marienkirche, which in 1614 employed 14 singers and 11 instrumentalists, Hakenberger cultivated the Venetian *cori spezzati* style, for example in his *Sacri modulorum concentus* (1615) which consists of 21 Latin motets for eight voices and his *Harmonia sacra* (1617), which consists of 41 Latin motets for six to 12 voices and continuo in two or three choirs. By the second decade

public taste had changed; the new concerted style, with the singers accompanied by the great organ, began to attract more listeners, while Hakenberger continued to cling to the outmoded Venetian style. Paul Siefert, who came to the Marienkirche as organist in 1623, added misery to Hakenberger's final years through countless arguments. Hakenberger's first two marriages, in 1612 and 1625, ended with the deaths of his wives; a third marriage, in 1627, ended with his own death four months later.

Hakenberger's music shows a preference for homophonic texture; when polyphony is employed the parts clearly follow a harmonic framework. Repetition of phrases in alternation between opposing choirs is standard practice, but repetition of whole sections is unusual. Text declamation usually follows normal word stress but occasionally becomes the servant of the rhythm. While a few multi-voice works are for a single choir, Hakenberger clearly favoured antiphonal forces. These opposing choirs, which may consist of instruments as well as voices, usually have an equal number of parts, but contrast between a high and a low choir is preferred to equal forces. His final two publications are collections of smaller works for three voices without continuo. A main source of Hakenberger's music is the Pelplin Organ Book, a six-volume collection of transcriptions which 'testifies to the high level of Polish musical culture in the 17th century' and reveals 'its connections with other European musical centres' (Feicht). It contains 911 compositions by 111 composers, including 55 by Hakenberger.

WORKS

[7] Newe deutsche Gesänge, 5, 8vv, nach Art der welschen Madrigalen (Danzig, 1610)

A. DENNIS SPARGER

Hakim, Naji (*b* Beirut, 11 Nov 1955). French organist and composer of Lebanese birth. He studied with Langlais and then with Falcinelli, among others, at the Paris Conservatoire, where he gained *premiers prix* in harmony, counterpoint, fugue, orchestration, analysis, organ and improvisation. He won the organ competitions at Beauvais (1981), Haarlem (1982), Lyons, Nuremberg and St Albans (1983), and Chartres (1984), and was awarded the composition prize of the Amis de l'Orgue for his Symphony in Three Movements (1984), the Anton Heiler Prize for *The Embrace of Fire* (1986), and the André Caplet Composition Prize by the Académie des Beaux-Arts (1991). From 1985 to 1993 Hakim was organist of the Sacré-Coeur in Paris, and in 1993 succeeded Messiaen as organist of La Trinité. He taught at the Schola Cantorum in Paris, 1986–8, and was appointed visiting professor of organ, improvisation and composition at the RAM in London in 1993. As a composer and improviser Hakim belongs to the French school of his teachers Langlais and Falcinelli; his works include several pieces for solo organ, a concerto for organ and strings, a sonata for trumpet and organ, an oratorio *Saul de Tarse* and the *Missa Redemptionis*. With his wife, Marie-Bernadette Dufourcet, he wrote *Guide pratique d'analyse musicale* (Paris, 1991) and *Anthologie musicale pour l'analyse de la forme* (Paris, 1995)

FRANÇOIS SABATIER

Hakim, Talib-Rasul [Chambers, Stephen Alexander] (*b* Asheville, NC, 8 Feb 1940; *d* New Haven, CT, 31 March 1988). American composer. He studied at the Manhattan School of Music (1958–9), the New York College of Music (1959–63) and the New School for Social Research, New York (1963–5). His major teachers and advisors included Hall Overton, William Sydeman, Hale Smith, Charles Whittenberg, Morton Feldman, Margaret Allison Bonds and Ornette Coleman. He taught at Pace College (1970–72), Adelphi University (1972–9), Nassau Community College (1971–81) and Morgan State University. He also coordinated the Brooklyn Philharmonic Community Concert Series and was active as a radio and television producer. He was the recipient of awards from the Bennington Composers Conference (1964–9) and the Connecticut Commission on the Arts (1981–2), among others. In 1973, on his conversion to Sufism, he changed his name.

Hakim's compositions, frequently scored for unusual instrumental combinations, feature rich harmonies and often incorporate extended performance techniques. *Birming-ham Reflections* (1985), in honour of Martin Luther King, was commissioned by the New Haven SO. *Ramadhān-Meditations* for winds and piano (1986), a work written for The Woodhill Players, creates a meditative feeling using free improvisation on a set of given pitches accompanied by a repetitive piano drone.

ALISON DEBORAH JONES

Hakobian, Levon Hovhannesovich *See* HAKOPIAN, LEVON HOVHANNESOVICH.

Hakola, Kimmo (*b* Jyväskylä, 27 July 1958). Finnish composer. He took private lessons in composition from Einojuhani Rautavaara before enrolling at the Sibelius Academy in 1981. There he studied with Eero Hämeenniemi and Magnus Lindberg. His reputation spread after he was awarded the first prizes at the UNESCO Rostrum of Composers in 1986 (for his String Quartet no.1) and in 1993 (for *Capriole*). His works have been performed at several European festivals, including Ars Musica, the Edinburgh Festival, the Huddersfield Festival and the ISCM. In the early 1990s he moved from Helsinki to Kesälahti in eastern Finland, where the calm and peaceful atmosphere allowed his highly individual music to develop more fully. He occasionally performs as a pianist and conductor; he was also the artistic director of the Musica Nova Festival, Helsinki, in 1999 and 2000.

Hakola's output is small but noteworthy and consists, apart from a monumental piano concerto, largely of chamber music and solo instrumental pieces. His meticulously notated music uses advanced compositional techniques and is of a violent and aggressive character, demanding exceptional virtuosity and endurance from its performers. The continuous fury of the sound is on occasion cut off suddenly by periods of quiet meditation that serve to increase further the tension of the music.

ILKKA ORAMO

Hakopian [Akopyan, Hakobian], **Levon Khovhannesovich** (*b* Yerevan, 9 Sept 1953). Armenian musicologist. He graduated in 1975 from the Yerevan State University and in 1977 entered the Yerevan Conservatory, where he studied music theory and composition with G. Geodakyan, T.Ye. Mansuryan, A. Terteryan and L. Saryan, graduating in 1981. From 1981 to 1992 he was a senior scientific officer at the Institute of Arts in the Armenian Academy of Arts (Yerevan) and from 1995 he has been a leading scientific officer with the Russian State Institute of Art in Moscow.

Hakopian's scholarly work embraces a broad spectrum of topics that include Armenian church music, the poetry of the Middle Ages, the methodology of musical analysis and the theory and history of 20th-century music. He has also made Russian translations of the work of K.-G. Yung and K. Yaspers. In 1995 he gained the doctorate with a dissertation on the remote structure of a musical text. In this work his examinations move beyond the empirical structure of a musical text towards its inherent meaning. He interprets the 'remote structure' as a structural basis inaccessible to direct observation and embedded in the universal constants that can shape its relationship with a surface layer of text. For his analyses he uses musical texts of a variety of styles and types that range from the hymnody of the Middle Ages and the music of Monteverdi to the works of Stravinsky, Varèse and Shostakovich.

MARINA RAKU

Halaczinsky, Rudolf (*b* Emmagrube, Upper Silesia, 31 July 1920). German composer. In 1940 he enrolled at the Graz Staatliche Hochschule für Musik, where he studied composition with Karl Marx, the piano and conducting. From 1946 to 1952 he served as co-répétiteur, Kapellmeister and composer at the Augsburg Stadttheater. He pursued further composition study with Karl Höller at the Musikhochschule in Munich (1952–5), and later worked as organist at Herz-Jesu, Rheydt (1955–69). After teaching music at a Mönchengladbach Gymnasium (1967–71), he was appointed lecturer in theory at the Pädagogische Hochschule, Cologne, a position he held until his retirement in 1984. His awards include third prize in the international La Reine Elisabeth competition (Brussels, 1969), the Johann Wenzel Stamitz prize (1981) and the prize of the Gerhard-Maass-Stiftung (1985).

Influenced by Romanticism and the music of Skryabin, Halaczinsky also explored Impressionism and 12-note composition before developing a unique style characterized by textural layering and extensive formal freedom. He has used serial and aleatory techniques in a number of works, has composed for electronic instruments and has written for prepared piano (*Episoden für Klavier*, 1970). Some of his compositions employ extra-musical elements. *Lumière sonante* (1971), for example, includes lighting effects, while *Tönende Sonne* is intended as the simultaneous experience of an idea expressed in both musical and sculptural terms.

WORKS

HANSPETER KRELLMANN/LOTHAR HOFFMANN-ERBRECHT

Halary. French firm of wind instrument makers. It was founded in 1768 and was taken over in 1804 from one 'Engoulevant' (possibly Amboulevart, a maker of hunting horns) by Jean-Hilaire Asté. Asté had gone to Paris in 1796 and later adopted the name Halary (i). In 1825 Jean-Louis Antoine (*b* Paris, 14 Jan 1788; *d* Paris, 1861), a former worker with Courtois, joined Halary (i) and succeeded him about 1840; he similarly adopted the name (Halary (ii)) but used the spelling 'Halari' on his instruments. His son Jules-Léon Antoine (*b* Paris, 1 May 1827; *d* after 1872), i.e. Halary (iii), was a fine horn player; he joined the business and took control on his father's death, selling it in 1873 to Coste & Cie., which was taken over by François Sudre in 1875.

The firm of Halary made a reputation for considerable experiment in the invention and manufacture of brass instruments and of woodwind instruments made of brass or other metals. Halary (i) made three new instruments about 1817 and patented them in 1821: the clavitube, a seven-keyed bugle; the quinticlave, a nine- or ten-keyed alto or bass bugle; and the ophicleide, originally with seven or nine keys, but in an 1822 patent including 12. Also included in the 1821 patent was 'Le clairon métallique, ou la clarinette en cuivre', one of a number of woodwind instruments made of brass. The KEYED BUGLE may have been copied from Haliday's design of 1810, of which the ophicleide was certainly a modification. In 1817–8 he made brass flutes, bassoons and clarinets.

Halary (ii) quickly made a reputation for enterprise, gaining a medal in 1827 for brass flutes, clarinets and horns. He made a number of natural horns with a full range of interchangeable crooks from early in his career. One such instrument, now in the collection of Charles Valenza (Rochester, New York) is the model for excellent modern copies by Richard Seraphinoff of Bloomington, Indiana. He devised *plaques tournantes* (disc valves) for brass instruments, possibly after designs by John Shaw, although he also used the more effective Stölzel valve. He later improved the piston mechanism. In 1855 he built a contrabass double-slide trombone. In 1849 Halary (iii) constructed a three-valve horn (as opposed to the then normal two-valve instrument) with an ascending third valve.

See also CORNET (i), §2; for illustration of a late 19th-century instrument by Halary, *see* TROMBONE, fig.3*a*.

Hale, Binnie [Hale-Monro, Beatrice Mary] (*b* Liverpool, 22 May 1899; *d* Hastings, 10 Jan 1984). English soprano. She was born into a theatrical family; both her parents were on the stage and her brother was the comedy actor Sonnie Hale (1902–59). She first appeared professionally in *Follow the Crowd* at the Liverpool Empire (1916), and in the same year was engaged by C.B. Cochran as Annette in *Houp La!* She appeared in many revues and musical comedies, notably *Puppets!* (1924, with music by Ivor Novello), in which she displayed her abilities as a mimic. She created the title role in Youmans's *No, No, Nanette* (1925) and Jill in Vivian Ellis's *Mr Cinders* (1929). She also appeared in Kern's *Sunny* (1925), Billy Mayerl's *Nippy* (1930), and introduced 'A Nice Cup of Tea' in C.B. Cochran's revue *Home and Beauty* (1937). A versatile and lively light soprano, she played in roles from light opera, such as Posford's *Magyar Melody* (1938), to pantomime. She continued in musical theatre until the late 1940s, after which she acted in straight roles until 1959.

□

Hale, Philip (*b* Norwich, VT, 5 March 1854; *d* Boston, MA, 30 Nov 1934). American music critic. After graduating from Yale (1876) he studied in Europe with Carl Haupt, Bargiel, Rheinberger and Guilmant (1882–7) and settled in Boston in 1889. He was music critic for the Boston *Post* (1890–91) and Boston *Journal* (1891–1903), Boston correspondent for the *Musical Courier* (1892–8), music and drama critic for the Boston *Herald* (1903–33) and editor of the *Musical Record* (1897–1901), the *Musical World* (1901–2) and the two-volume collection *Modern French Songs* (Boston and New York, 1904).

Hale is best known for his programme notes for the Boston SO; written between 1901 and 1934, these are scholarly, witty and ample, and became the model for American programme annotators. His insistence on evaluating each work as it appeared to him, and the quotableness of his negative opinions (he once said of Beethoven's Fifth Piano Concerto that 'the finale, with the endless repetitions of a Kangaroo theme, leads one to long for the end') have caused him to be represented as a crabbed reactionary, cringing at Brahms. In reality he was a fair-minded and forward-looking critic, one of the first American champions of Debussy and an often shrewd evaluator of later music. Selections from Hale's criticism and programme notes were published as *Philip Hale's Boston Symphony Programme Notes* (Garden City, NY, 1935, ed. John N. Burk, 2/1939/*R*) and an evaluation of his work is given in J.A. Boyd: *Philip Hale, American*

Music Critic, Boston, 1889–1933 (diss., U. of Texas, Austin, 1985).

WAYNE D. SHIRLEY

Hale, Robert (*b* San Antonio, TX, 22 Aug 1943). American bass-baritone. He studied in Boston, making his début in 1966 with the Goldovsky Opera. In 1967 he joined New York City Opera, where he sang Mozart's Figaro, Count Almaviva, Don Giovanni, Raimondo, Henry VIII (*Anna Bolena*), Oroveso, Giorgio (*I puritani*) and the Father (*Louise*). At San Diego (1978) he sang Claudius (*Hamlet*), and at Buenos Aires (1980) the four *Hoffmann* villains. Meanwhile, after singing the Dutchman in Stuttgart (1978), he began to take on heavier roles: Pizarro, Iago, Mephistopheles (Gounod and Boito), Scarpia and Escamillo, which he sang in Germany and at Zürich, Lisbon and San Francisco. Having made his Covent Garden début as John the Baptist (1988), he returned as Orestes (*Elektra*, 1994). His débuts at La Scala (1989) and the Metropolitan (1990) were both as the Dutchman. At Salzburg he has sung Pizarro and Barak (*Die Frau ohne Schatten*). An imposing presence, great dramatic intensity and a strong, expressive voice make him a superb Wotan, a role he has sung throughout Europe and in North and South America, and also recorded.

ELIZABETH FORBES

Hales, Robert (*fl* 1583; *d* before 12 Jan 1616). English court singer and lutenist. His appointment was from 3 July 1583 and he kept it to the time of his death, at a salary of £40 a year. The earliest occasion on which he is known to have sung before Queen Elizabeth I at a public function was at the Accession Day celebrations in 1590, when he performed the song *His golden locks time hath to silver turnd* (*see* JOHN DOWLAND). He is known to have been in the confidence of such prominent courtiers as the Earl of Essex and Sir Robert Cecil, to have set their verses to music, and to have sung them on private and intimate occasions. It is possible that he sang *Come away death* in the first performance of Shakespeare's *Twelfth Night*. The warrant appointing his successor at court is dated 12 January 1615/16. His only surviving composition is the song *O Eyes leave off your weeping* in Robert Dowland's anthology *A Musicall Banquet* (1610/*R*; ed. in EL, 2nd ser., xx, London, 1968).

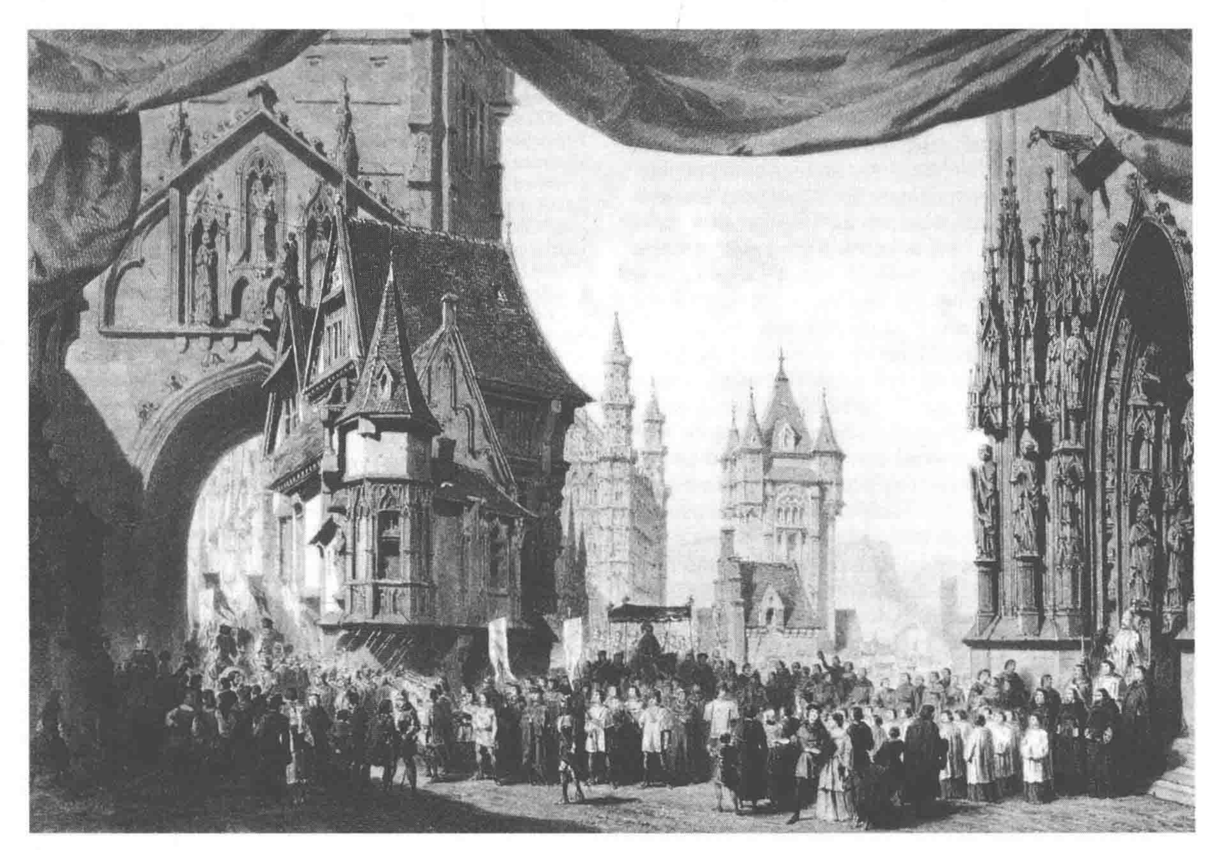
DIANA POULTON

Halévy, (Jacques-François-)Fromental(-Elie) [Fromentin (-Elias)] (*b* Paris, 27 May 1799; *d* Nice, 17 March 1862). French composer, teacher and writer on music. His parents were Jewish; his father, Elias Levy, was a scholar and poet from Fürth, and his mother, Julie Meyer, came from Malzéville, near Nancy. The family name was changed to Halévy in 1807. Fromental's musical ability was evident very early and in 1810 he entered the Paris Conservatoire. In 1811 he became a pupil of Cherubini for composition, an important step, for Cherubini showed great interest and confidence in Halévy and guided his career with all his considerable influence. Halévy acknowledged a profound debt to his teacher; his brother Léon wrote: 'The teaching and friendship of Cherubini implanted in Halévy his love of great art and confirmed his instinctive repugnance to everything vulgar or shoddy'. He was also a pupil of H.-M. Berton (for harmony) and Méhul. In 1816 and 1817 he won the *second prix* in the Prix de Rome and the *premier prix* in 1819, having not entered the previous year. Before leaving for Rome he composed, in 1820, a funeral march and *De profundis* in Hebrew on the death of the Duke of Berry, which was performed in a synagogue and later published.

In Italy Halévy composed a number of works, some of them in Italian genres, including the finale of an Italian opera *Marco Curzio*. In 1822 he was in Vienna, where he met Beethoven on several occasions. He had already composed an opera *Les bohémiennes* before going to Italy, and he continued, after returning to Paris, to seek success in the theatre, at that time the only avenue to fame for a composer of ambition. His career as a composer is a history of success crowning early reverses, a success which he spent his life sustaining. He was a tireless composer of operas and led a full life as a teacher and administrator as well. In 1827 he became professor of harmony and accompaniment at the Conservatoire, in 1833 of counterpoint and fugue, and in 1840 of composition, a position of wide influence; his pupils included Gounod, Massé, Deldevez, Bizet, Lecocq and Saint-Saëns. The last two were to complain that they learnt very little from him. From 1826 to 1829 he was *chef du chant* at the Théâtre Italien, and from 1829 to 1845 he held the same post at the Opéra, the period of his greatest successes there. In 1836 he was elected to the Institut and in 1854 he became its secretary, a position of considerable eminence in the field of arts and letters.

Halévy's first few operas, *Les bohémiennes*, *Les deux pavillons*, *Erostrate* and *Pygmalion*, were never produced, although *Pygmalion* was rehearsed in 1827. By that time



1. *Fromental Halévy*

L'artisan had been played at the Opéra-Comique, where it enjoyed only moderate success, though it was important in being the first of Halévy's many collaborations with Vernoy de Saint-Georges, one of the most able and sought-after librettists of the day. The post at the Théâtre Italien brought him into contact with Maria Malibran, for whom he wrote *Clari*, an opera to an Italian text, in 1828. But his first true success was with *Le dilettante d'Avignon*, played at the Opéra-Comique in 1829 and retained for many years in the repertory. Part of its success lay in Léon Halévy's skill in turning a libretto by F.-B. Hoffman into a topical satire on Italian librettos; Léon also remained a faithful collaborator to the end of his life.

Having moved to the Opéra as *chef du chant*, Halévy had his ballet on Prévost's *Manon Lescaut* played there in 1830 and another ballet, *La tentation*, two years later. He also wrote four more *opéras comiques* – one of them, *Ludovic*, being the completion of an unfinished opera by Hérold – before attempting his first serious grand opera, *La Juive*. This became the greatest success of his life and the single work on which his fame has rested. It received its première at the Opéra on 23 February 1835, took an instant hold on the public and became, with Meyerbeer's operas, one of the central pieces in the French repertory. Excepting the ballet *Manon Lescaut*, it was his first collaboration with Scribe (to be followed by many more), and it epitomized the type of grand opera which is associated with Véron's directorship of the Opéra (fig.2). It preceded Meyerbeer's equally successful *Les Huguenots* by more than a year.

In the same year Halévy won yet another success at the Opéra-Comique, with *L'éclair*. These two successes gave him a commanding position in the principal opera houses of Paris and unquestioned entrée to both for the rest of his life. *Guido et Ginevra* followed in 1838, to another Scribe text in which a series of improbably violent situations are set to music of considerable invention and freshness. The main tenor role (Guido) was sung by Duprez following his earlier success as Eléazar in *La Juive*. *Le drapier* (1840), also by Scribe, provided a mélange of the tragic and the burlesque. Two more grand operas, *La reine de Chypre* (1841) and *Charles VI* (1843), may be considered among Halévy's most successful achievements. The first acquired celebrity as one of the operas on which Wagner laboured as an arranger; he devoted a series of articles to it in the *Revue et gazette musicale* in 1842. The contrast of characters and locales provided by Saint-Georges' libretto drew out all Halévy's considerable resourcefulness and skill. The text of *Charles VI*, by the Delavigne brothers, sounds a strong note of French patriotism with the rousing chorus 'Guerre aux tyrans' appearing both at the beginning and at the end of the opera. Act 3 closes with another patriotic ensemble 'Vive le roi! vive la France!'. In this work Halévy portrayed the madness of the king with considerable imagination.

Le lazzarone (1844) is more nearly an *opéra comique* than a grand opera, although it was played at the Opéra; *Le Juif errant* (1852) suffers from the confinement of the far-reaching fantasy of Eugène Sue's immensely popular novel to the stage. In 1850 Halévy set an Italian translation

2. Procession through the city of Konstanz in Halévy's 'La Juive', Act 1, Paris Opéra (Salle Le Peletier), 1835: lithograph after a design by Charles Séchan, Léon Feuchère, Jules Diéterle and Edouard Desplechin

of a Scribe libretto on Shakespeare's *The Tempest* for Her Majesty's Theatre, London; the result is uncomfortably bizarre. Despite the fact that his later works offered little that was different from the well-proven style of earlier years – or perhaps because of it – public interest in Halévy's music remained keen. *La magicienne* (1858), to another Saint-Georges libretto, treats the world of spectres and spirits with notable success, but was never revived.

Halévy's principal comic operas after *L'éclair* were *Le shérif* (1839), *Le guitarrero* (1841), *Les mousquetaires de la reine* (1846), *Le val d'Andorre* (1848) and *Jaguarita l'Indienne* (1855).

Halévy's literary output was small but varied, most of it being collected into two volumes, *Souvenirs et portraits* (1861) and the posthumous *Derniers souvenirs et portraits* (1863). He was very widely read and had the social gifts of tact and adaptability; Wagner described him as 'frank and honest; no sly, deliberate swindler like Meyerbeer'. All his life he felt under pressure to keep his name in the public eye. Doubtless he felt the inevitable inferiority of being outplayed at the Opéra by Meyerbeer and at the Opéra-Comique by Auber despite his repeated successes in both houses. He led a tireless social life, especially after his marriage in 1842 to Léonie Rodrigues, who was both rich and extravagant; their daughter married Bizet. Yet his well-balanced exterior harboured, according to Sainte-Beuve, 'an intimate sadness, a hidden wound', although he added that 'Halévy was too rich, too complex a nature, too open and communicative, too well organized in every sense, too susceptible to the pleasures of social and family life; he was a man with too many strings to his bow ever for any length of time to be profoundly unhappy'.

Halévy's music was fluent and professional. The style, like Meyerbeer's, owed much to Italian music and also to Boieldieu and Auber. His works display most of the mannerisms associated with 19th-century grand opera, both French and Italian: block choruses without counterpoint, triple metres, dotted rhythms, large ensembles built out of a single dramatic moment, and fondness for local colour, especially in divertissements. Two good examples of local colour are the Spanish flavour in *Le guitarrero* and the Jewish prayer scene in *La Juive*, in which Halévy wrote less as a Jew than as a seeker of operatic effect. He liked G♭ major for special occasions (for example the love-scene at the beginning of *La reine de Chypre*) and was fond of the German 6th. He had a fair gift for melody, but it was impaired by monotonous phrase lengths and by a lack of concern for word stress that allowed him to let a musical pattern override the natural stresses of speech. He also lapsed too readily into repetitiousness, using self-contained four- and eight-bar units to extend the musical structure; this feature was common to Meyerbeer, Verdi and many contemporaries. Halévy owed many of his most powerful moments to his librettists. *La Juive* clearly exemplifies the dramatic effect of successive revelation of previously unknown truths. When Léopold reveals to Rachel in Act 2 that he is a Christian, not a Jew, the stunned silence is deeply impressive. Such dramatic peaks generally inspired Halévy to write big choral movements in which the musical motifs are simple, with the accumulation of voices and instruments creating a vast stage tableau; the large ensembles before and after Brogni's curse in Act 3 of *La Juive* are good examples.

As an orchestrator Halévy earned the praise of Berlioz and was considered an innovator, especially in his use of chromatic brass. He should be recognized as a writer for woodwind, which he always handled with imagination. His use of the organ at the beginning of *La Juive* with the *Te Deum* sung off-stage is strikingly bold. One of his most remarkable works is the music to his brother's translation of Aeschylus's *Prométhée enchaîné* (1849), in which the writing for strings is particularly imaginative in its use of *divisi* and pizzicato effects, and even includes quartertones; the overture has a truly Lisztian force.

Wagner held Halévy's work in high esteem (especially *La Juive* and *La reine de Chypre*) and drew attention to his sense of period achieved without recourse to mock-antique devices: 'For my part' he wrote, 'I have never heard dramatic music which has transported me so completely to a particular historical epoch'. Berlioz admired certain parts of what he nonetheless called 'cette misérable *Juive*' and liked *Le shérif* and *Le val d'Andorre*. His view was that Halévy's gifts were better suited to lighter genres, and it is clear that tripping rhythms, regular phrase lengths and brisk orchestration came easily to his pen. Halévy would not have wished to be found wanting in any genre and he spread his talents widely; yet they were not sufficient to ensure immortality and even *La Juive* has now all but vanished from the stage.

HUGH MACDONALD

Haley, Bill [William John Clifton] (*b* Highland Park, MI, 6 July 1925; *d* Harlingen, TX, 9 Feb 1981). American rock and roll singer and bandleader. Featured in the film *The Blackboard Jungle* (1955), Haley's 1954 version of Max Freedman and Jimmy DeKnight's *Rock around the Clock* was the first internationally known rock and roll recording. Haley sang in the clear, clipped manner of a square-dance caller, while his backing group, the Comets, included the raucous saxophone of Rudy Pompilli, guitar, double bass, played in a slap-bass style by Al Rex and drums. During the group's concerts, Pompilli and bassist Rex would lie on the stage to play their instruments. Their style had been fashioned mainly from the heavily rhythmic western swing of Haley's earlier group the Saddlemen, and the jump style associated with Louis Jordan. In 1951, the Saddlemen had recorded a cover version of *Rocket 88*, whose original version by Jackie Brenston is sometimes cited as the first rock and roll record. Other hits added current hipster and jive-talk phrases in the titles of such songs as *Crazy Man Crazy*, *Razzle Dazzle* and *See you later alligator*. Bill Haley and his Comets appeared in the film *Rock around the Clock* (1956) and toured Europe and Australia but, compared with the teenage Elvis Presley, the avuncular Haley was an unlikely rock and roll star. He moved away from rock and played country music in the 1960s, occasionally returning to his hits at rock and roll revival concerts in later years. For further information see J. Swenson: *Bill Haley* (London, 1982).

DAVE LAING

Half-cadence. *See* IMPERFECT CADENCE.

Half-diminished seventh chord. A chord that consists of two superimposed minor thirds (forming a DIMINISHED TRIAD) and one major third (e.g. B–D–F–A). As a diatonic harmony its root may be the supertonic of a minor key, or more rarely the seventh degree of a major key (the above example could appear in A minor or C major); it is sometimes interpreted as a rootless dominant major NINTH CHORD. Like the DIMINISHED SEVENTH CHORD,

the half-diminished 7th may be reinterpreted through ENHARMONIC equivalence. Thus in E♭ minor the supertonic half-diminished 7th is F–A♭–C♭–E♭, but when spelled F–G♯–B–D♯ it is known as the 'TRISTAN' CHORD and is resolved by Wagner to the dominant of A minor. Even in diatonic form the chord is frequent in Romantic harmony, the supertonic form being borrowed to enrich the major mode; in Debussy it contributes to the atmosphere of IMPRESSIONISM.

JULIAN RUSHTON

Half-fall. A type of appoggiatura. *See* ORNAMENTS, §6.

Halffter. Spanish family of musicians of German origin. The father of (1) Rodolfo Halffter and (2) Ernesto Halffter came from a Königsberg family.

(1) **Rodolfo Halffter (Escriche)** (*b* Madrid, 30 Oct 1900; *d* Mexico City, 14 Oct 1987). Mexican composer of Prussian descent. He became a Mexican citizen in 1939. He was the eldest of six brothers, the second of whom was Emilio, father of (3) Cristóbal Halffter, and the third (2) Ernesto Halffter. A self-taught musician, he acquired his technique especially from the *Harmonielehre* of Schoenberg, who, together with Debussy, had a great influence on his work. The critic Adolfo Salazar, who 'discovered' Rodolfo and Ernesto Halffter, introduced them to Falla, who gave advice and criticism. While embarking on his career as a composer, Halffter earned his living by working in a bank; he also attended meetings of the Residencia de Estudiantes, where he became friendly with, among others, Garcia Lorca, Dalí, Gerardo Diego, Juan Ramón Jiménez, Rafael Alberti and Vázquez Díaz. Notable amongst his early works are the modernist *Naturaleza muerta*, *Dos sonatas de El Escorial* inspired by Soler, and *Marinero en tierra*, settings of poems by Alberti which contain some of his most accessible music.

In 1939, at the end of the Spanish Civil War in Spain, Halffter became a voluntary exile in Mexico, where he was welcomed by the government and assisted by fellow-musicians, including Chávez and Galindo. On his arrival he taught at the Escuela Superior Nocturna de Música in Mexico City, and two years later he became professor of musical analysis at the National Conservatory, where he taught for 30 years. He also worked for a time in 1928 as music critic of *El universo gráfico*, having earlier written music criticism in Madrid for *El sol*. From 1946 he was editor of the journal *Nuestra música* and director of the Ediciones Mexicanas de Música. In the same year the first performances of his Violin Concerto were given, with Dushkin as soloist. From then on his compositions gained increasing international recognition. Halffter returned to Spain in 1962 and the following year the Ministry of Information and Tourism arranged a concert in honour of his music and that of Ernesto and Cristóbal. His honours included of the Real Academia de Bellas Artes de S Fernando and of the Mexican Academia de Artes.

Halffter's music follows in the tradition of Falla: the basis is tonal, sometimes enriched with bold and witty polytonal inflections; the rhythm is asymmetrical and varied; the style is above all clear and spare. In 1953, in the *Tres hojas de album* for piano, he began to use 12-note serialism, the first Mexican composer to do so. This, however, did not alter the essentially melodic nature of his work.

WORKS
(*selective list*)

Stage: Clavileño (o b, 1, M. de Cervantes), op.8, 1934–6, unperf., destroyed; Don Lindo de Almería (ballet, J. Bergamin), op.7, 1935, Barcelona, 1936; La madrugada del panadero (ballet-pantomime, Bergamin), op.12, 1940, Mexico City, 1940; Elena la traicionera (ballet-corrido, choreog. Waldeen), 1945; Mexico City, 1945

Orch: Suite, op.1, 1924–8; Obertura concertante, op.5, pf, orch, 1932; Impromptu, op.6, 1931–2; Suite, op.7b, 1935 [from ballet Don Lindo de Almería]; Vn Conc. op.11, 1940; Suite, op.12a, 1940 [from ballet-pantomime La madrugada del panadero]; Obertura festiva, op.21, 1952; 3 piezas, op.23, str, 1954; Tripartita, op.25, 1959; Diferencias, op.33, 1970; 2 ambientes sonoros, op.37, 1975–9; Elegía (in memoriam Carlos Chávez), op.41, str, 1978

(2) **Ernesto Halffter (Escriche)** (*b* Madrid, 16 Jan 1905; *d* Madrid, 5 July 1989). Spanish composer and conductor, brother of (1) Rodolfo Halffter. He showed musical talent from an early age, composing his first notated piece, *Crepúsculos* for piano, when he was 13. This work is not at all Spanish in character, but it does show the underlying romantic lyricism that was to remain characteristic. The same is true of the *Piezas infantiles* for four hands (1919) and the *Cinco canciones de Heine* (1920). Halffter had his first music lessons from his mother, a pianist of considerable perception (her brother, Ernesto Escriche, was a concert pianist). He began formal studies with two friends of the family, Francisco Esbrí and Fernando Ember. In 1922 Ember gave the première of *Crepúscolos* and so aroused the interest of Adolfo Salazar, the leading Spanish music critic of the day, that

he sent Halffter's string trio *Homenajes* (1922) to Falla. Falla was greatly impressed, and a personal relationship developed between teacher and disciple. In the early years of their acquaintance Halffter spent long periods in Granada in order to take composition lessons with Falla. Through Falla he was introduced to the publishing house of Eschig, who brought out his *Dos canciones de Rafael Alberti* (1923), and *Dos bocetos sinfónicos* (1925, reworked from string quartet material).

At this time Falla was composing his Harpsichord Concerto, and it was natural that his neo-Scarlattian style should have influenced Halffter in the Alberti songs (1923), in parts of the Sinfonietta (1925) and in some dances in the ballet *Sonatina* (1928). Like the poets of the 'Generación de 1927', Spanish composers of this period were given to evoking the Spanish Renaissance, and this tendency was in accord with Halffter's neo-Scarlattian leanings. He was also stimulated by the early works of Stravinsky, by Ravel's orchestration and by the freedom of expression evinced by Les Six. All these influences left their mark on what remains one of Halffter's most beautiful works, the Sinfonietta, which won the Spanish National Prize in 1925.

The Sinfonietta encouraged the hope that Spain might now see a national school deriving from the music and personality of Falla, but Falla refused to see himself in that position of authority. Moreover, Halffter's tastes, which were for spirited brilliance and 'everyday music-making' (to quote Cocteau), could hardly have been further removed from the gravity of Falla's Harpsichord Concerto. For Falla's compression, density, synthesis and expressive restraint Halffter substituted expansiveness, abandon, lucidity and grace. But in terms of technique Halffter was greatly indebted to Falla, and also to Ravel, with whom he came into contact in Paris after the composition of the Sinfonietta. Ravel's influence is evident, for instance, in the *Rapsodía portuguesa* for piano and orchestra (1940).

Thanks to his relationship with Falla, Halffter in 1924 became official conductor of the Orquesta Bética de Cámara, and he also conducted the orchestra of the Seville Conservatory, which he directed from 1934 to 1936. He had made his home, however, in Lisbon since marrying the Portuguese pianist Alicia Cámara Santos in 1928. Falla's removal to Argentina in 1939 meant that contact between him and Halffter had to continue by post alone. Halffter received from Argentina the score of the orchestral *Homenajes*, which he introduced to Spain and France, and after Falla's death he took on, at the invitation of the family, the task of completing the 'scenic cantata' *Atlántida*. Work on this occupied him from 1954 until 1960, and there were further revisions before the definitive version had its first performance in 1976. Halffter's completion of *Atlántida* has been the subject of controversy, but this has centred not so much on his work *per se* as on the propriety and feasibility of finishing a score so full of problematic fragments.

As on so many occasions, Halffter's close contact with a work of Falla brought about a creative response. Identification with the spirit of *Atlántida*, and in particular with its religious content, provided a point of departure for the *Canticum in memoriam P.P. Johannem XXIII* (1964), the *Elegía en memoria de S.A.S. Príncipe Pierre de Polignac* (1966), *Dominus pastor meus* (1967) and the *Gozos de Nuestra Señora* (1970) – but only a point of departure, for once he had chosen his road Halffter arrived at very different results from those of Falla, his evolution paralleling rather that of Poulenc. He always held an immutable belief in tonality, but in the 1960s he listened to some post-Webernian scores, and this stimulated him to undertake a thorough cleansing of his style in these later works. At the same time they display a return to his past manner, with its imitation of the Spanish Renaissance; this is particularly true of the *Gozos*, while the *Madrigal* (1969) for guitar or violin is a very free evocation of the Renaissance spirit.

In 1973 Halffter was elected to the Spanish Academy of Fine Arts, and gave his inaugural address on 'the enduring mastery of Manuel de Falla'. His own mastery provided an outstanding model for succeeding generations of composers of individuality within a national idiom.

WORKS

E. Salvador de Puigvert: *Tratando a los famosos* (Madrid, 1997)

(3) Cristóbal Halffter (Jiménez) (*b* Madrid, 24 March 1930). Composer and conductor, nephew of (1) Rodolfo Halffter and (2) Ernesto Halffter. His childhood was spent partly in Germany because of the civil war in Spain. He subsequently studied with Del Campo at the Madrid Conservatory, graduating in 1951 and winning a prize for his *Scherzo*; he also took private lessons with Tansman. At the beginning of his professional career he worked for a time in Spanish radio, before taking up a chair in composition (1960) at the Madrid Conservatory, of which, in 1964, he became director. He resigned the post two years later in order to concentrate on composing and conducting. He later taught at Darmstadt and served as honorary president of the International Festival of Contemporary Art, Ruyan.

Halffter's early works, such as the *Antífona pascual* for soloists, choir and orchestra, first performed at the Ateneo (1952), show the clear influence of Falla (especially of the Harpsichord Concerto and *El retablo de Maese Pedro*) and also of Rodolfo and Ernesto Halffter. At that time Spanish music was considerably out of touch with developments in the rest of Europe. Contemporary scores and writings were hard to find, and the progress of decades had to be made up in a mere matter of years. Gradually Halffter began to explore other paths, approaching first the neo-classicism of Bartók and Stravinsky, then Webern and Schoenberg. His work gained critical esteem and in 1954 he won the National Music Prize for his Piano Concerto, first performed by the National Orchestra under Toldrá. The rigorous *Tres piezas* for string quartet and *Saeta*, a simple piece for ballet soon performed in Paris, signal the newly international character of Halffter's work.

During the latter part of the 1950s, Halffter further defined his musical personality with the *Misa ducal* (1955), commissioned by the Casa de Alba to commemorate the restoration of the Palacio de Liria, and, most important, with *Microformas* for orchestra (1959–60), a work whose avant-garde credentials were both a shock to its first audience and a provocation for Halffter's contemporaries. As a result of this piece, Halffter was taken on by Universal Edition of Vienna. In the 1960s and early 70s he continued to pursue a modernist path in works such as *Líneas y puntos* (1967) for wind instruments and tape and *Anillos* for large orchestra, which both display a confident handling of the complex texture and refined pointillism typical of the period. At the same time Halffter revealed, his social conscience in *Yes, speak out, yes* (1968), commissioned by the United Nations to celebrate the 20th anniversary of the UN Declaration of Human Rights, *Planto para las víctimas de la violencia* (1970), written for the Donaueschingen festival, *Requiem por la libertad imaginada* (1971) and *Gaudium et spes–Beunza* (1972–3), a large-scale vocal and tape work on the theme of conscientious objection. Later, his defence of human values and freedom was recognized by the award of the Montaigne Prize of the Foundation of Hamburg (1994).

Halffter's attitude to his musical language has remained open and exploratory. In the 1970s, for example in the Cello Concerto no.1 (1974), aleatory techniques made up part of his vocabulary, while developments in electroacoustic music have fed into his output up to the 1990s. In a number of works from the 1980s onwards, he has revealed an interest in creating a dialogue with music of the past, in particular with the Renaissance and Baroque. These include the *Fantasia para una sonoridad de G.F. Haendel* (1981), *Paráfrasis* (1984) and the highly successful *Tiento de primer tono y batalla imperial* (1986), in which the re-creation or citation of older Spanish music – Cabezón's *Tiento* and Cabanilles's *Batalla imperial* – is sharply contrasted with a contemporary idiom. A similar technique is found in the Second Cello Concerto, which quotes the popular song *¡Anda jaleo!*, and in the *Fandango* for eight cellos and the *Preludio para Madrid '92*, both of which refer to the works of Soler. Other important works of the 1980s include the *Variaciones Dortmund* (1986), *Preludio a Némesis* (1988) and *Carcion callada* (1988, written in memory of Mompou). In the 1990s, a fully achieved maturity, coupled with stylistic pluralism is abundantly evident in, for example, the concentrated drama of *Memento a Dresden* (1994–5), the interaction of a sense of reality and surrealism in *Odradek 'Homenaje*

a F. Kafka' (1996), and the spectacular *Turbas* (1997), first performed during the Semana de Música Religiosa at Cuenca, which reflects the popular ambience, somewhere between passion and celebration, of the grand street procession. In this work, as in the earlier *Siete cantos de España* (1991-2) and the *Endechas para una reina de España* (1994), Halffter may be seen to return to the Spanish roots of his early works without falling into folklorism.

Alongside the changing techniques and stylisitic traits during Halffter's career, many aspects of his music have remained consistent, especially the great flexibility of sonorous play and the expressive contrasts between outbursts of savagery on the one hand and, on the other, havens of serenity, in which time and sound itself appear to vanish. Continuity is often achieved by a process of gradual accumulation of sound (or its opposite) until a maximum point of tension is reached. Each work outlines very clearly its own individual space and sphere of action, playing microforms off against macroforms and maintaining a sense of continuity and causality from one moment to the next. On other occasions tension is created by the play of textural density (not necessarily in tandem with dynamics) or by the juxtaposition of harmonic complexity and spare polyphony. Another constant has been his interest in the other arts: *Tiempo para espacios* was written in homage to Chillida, Munoz, Sempere and Rivera; *Mural sonantez* (1993) is dedicated to Tapies; *Daliana* (1993-4) was inspired by the work of Salvador Dalí. In the opera *Don Quijote*, his most ambitious work to date, Halffter applies aleatory techniques to certain parameters, using them to construct a kind of polyphonic recitative in which certain recurring sounds, articulated clearly by timbral, rhythmic, harmonic and dynamic means, give meaning and expression both to the unfolding drama and to Halffter's allusions to music of the past, imparting a sense of unity to the work as a whole.

Halffter has come to be regarded as the most significant Spanish composer of his generation. His many awards include the National Music Prize of Spain in 1989, and honorary doctorates from the University of León and the Universidad Complutense, Madrid (1998).

WORKS
(*selective list*)

Stage: Saeta (ballet), Paris, 1955; Don Quijote (op), Madrid, Real, Feb 2000

Orch: Scherzo, 1951; Pf Conc., 1953; Concertino, str, 1956; 2 movimientos, timp, str, 1956; 5 microformas, 1959–60; Sinfonia, 3 groups, 1963; Secuencias, 1965; Anillos, 1967–8; Fibonaciana, fl, small orch, 1969; Requiem por la libertad imaginada, 1971; Pinturas negras, org, orch. 1972; Procesional, 2 pf, 29/23 wind, 4 perc, 1973–4; Vc Conc. no.1, 1974; Tiempo para espacios, hpd, 12 str, 1974; Elegías a la muerte de tres poetas españoles, 1974–5; Pourquoi, 12 str, 1974–5; Vn Conc. no.1, 1979; Tiento, 1980; Fantasia para una sonoridad de G.F. Haendel, str, 1981; Versus, 1983; Paráfrasis, 1984; Vc Conc. no.2, 1985; Tiento del primer tono y batalla imperial, 1986; Variaciones Dortmund, 1986; Pf Conc., 1987–8; Preludio a Némesis, 1988–9; Vn Conc. no.2, 1990–91; Mural sonantez, 1993; Daliniana, chbr orch, 1993–4; Memento a Dresden, 1994–5; Odradek 'Homenaje a F. Kafka', 1996

Vocal: Antífona pascual a la virgen 'Regina coeli', 4 solo vv, chorus, orch, 1952; Songs (G. Vicente, J. Manrique, Alberti), 1v, pf, 1952–3; Ave Maria, Panis angelicus, chorus, 1954; Misa ducal, chorus, orch, *c*1955; Canciones populares leonesas, 1v, pf, 1957; Pater nostra, chorus, 1960; In exspectatione resurrectionis Domini, Bar, SATB/TTBarB, orch, 1965; Misa para la juventud, 1965; Brecht-Lieder, Mez/Bar, orch, 1967; In memoriam Anaick, child reciter, chorus, ens ad lib, 1967; Symposion (Ancient Gk. texts), Bar, chorus, orch, 1968; Yes, speak out, yes (N. Corwin), 6 spkrs, S, Bar, 2 choruses, 2 orchs (2 conds.), 1968; Oración a Platero (J. Ferrer-Vidal), spkr, children's chorus, SATB, 5 perc, 1975; Officium defunctorum (Lat. texts), chorus, orch, 1977–8; Preludio para Madrid '92 (Lat. text), chorus, orch, 1991; 7 cantos de España (G. de Cetina, J. Manrique, F. de Quevedo), S, Bar, orch, 1991–2; La del alba sería (A. Amorós, after M. de Cervantes and others), solo vv, chorus, orch, 1997 [frags. from op Don Quijote]; see also El-ac

Chbr: Pf Sonata, 1950; Str Qt no.1, 1955; 3 Pieces, str qt, 1956; Sonata, vn, 1959; 3 Pieces, fl, 1959; Formantes, 2 pf, 1961; Codex, gui, 1963; Antiphonismoi, fl + a fl, ob + eng hn, cl, pf, vn, va, vc, 1967; Oda, fl, b cl, perc, pf + cel, va, vc, 1969; Studie II, fl, 1969 [from orch work Fibonaciana]; Str Qt no.2 'Mémoires', 1970; Mizar, 2 fl, str, perc, 1977; Str Qt no.3, 1978; Canción callada, pf trio, 1988; Fandango, 8 vc, 1988–9; Endechas para una reina de España, str sextet, 1994

Halfpenny, Eric (*b* London, 28 June 1906; *d* Ilford, 14 Feb 1979). English organologist. He was a versatile amateur musician and an expert on the history of instruments and music-making in England. He played the double bass, trumpet, oboe and other instruments, and carried out pioneering research on early forms of wind instruments (for example the oboe, bassoon, recorder and trumpet) by detailed measurement and comparison. His work on early English makers includes a valuable investigation of

the Stanesby family. His articles, which combine meticulous scholarship with dry humour, appeared in various journals, notably that of the Galpin Society, which he edited (1963–70). He was a founder-member of the society and its secretary (1946–65), and was elected FSA in 1959. He made a valuable collection of musical instruments, partly illustrated in the *Concise Encyclopaedia of Antiques* (London, 1955).

WILLIAM WATERHOUSE

Half step. *See* SEMITONE.

Halifax (i). English town in West Yorkshire. It assumed importance in the 15th century as a centre of the wool trade. Industrial developments of the 18th and 19th centuries brought new cultural stimulus to the life of the community, and incentives for choral and brass music in particular. In the early part of the 17th century a body of civic musicians, the 'Halifax fiddlers', were in demand in other towns. But it was the installation of a new organ in the parish church of St John the Baptist in 1766, said to have been the finest instrument built by Snetzler, that provided an effective starting-point for the growth of musical activity in the town. The organ was enlarged by Gray in 1836 and by Hill in 1842. Much of the pipework was incorporated into the instrument built by Harrison & Harrison in 1928. In 1766 there was a performance of Handel's *Messiah*, led by Herschel, organist of the parish church for one quarter during that year. Enthusiasm for Handel's music is shown by the fact that a music society which met at the Old Cock Inn was among the subscribers to Randall's edition of the oratorios. Thomas Stopford, organist from 1766 to 1819, was vigorous in promoting Handel's music and he was also engaged to play in Handel performances in Leeds.

Towards the end of the 18th century Charles Dibdin described Halifax as 'the most musical spot for its size in the kingdom' and observed that 'the facility with which the common people join together throughout the greatest part of Yorkshire and Lancashire, in every species of choral music, is truly astonishing'. The Halifax Choral Society was founded in 1817 and gave a performance of Haydn's *Creation* at its first concert on 9 February 1818. Samuel Smith (secretary, 1836–41) actively promoted the interests of Mendelssohn, who, in token of 'so much zeal and energy in a country choral society', promised Smith, whom he met in Germany in 1839, that he would dedicate a work (Psalm cxiv) to the society.

The rapid growth of Protestant bodies other than the Church of England stimulated the institution of Sunday schools in which hymn singing played a prominent part. John Ella described how the Sunday school jubilee of 1866 was celebrated by a chorus of some 30,000 singers supported by 500 instrumentalists who interspersed hymns with Handelian choruses arranged by the conductors A. Dean and T. Wadsworth. The importance of hymn singing in the district encouraged music publishing. The first Halifax publishing firm was that of W. Dyson (also in Huddersfield) who issued *The Spiritual Man's Companion* (*c*1724); later editions were issued by R. Austin of Ripon. In 1731 Martin Fielden published *Psalmody Epitomiz'd*; in 1800 E. Jacob published *The Yorkshire Musical Miscellany*, and in 1811 an edition of John Chetham's *Sacred Music* with corrections by Stopford. Pohlman & Son and Whitley & Booth were active as music publishers in the late 19th century.

Organs were installed in many local churches in the 19th century by Holt & Joy, Abbott & Smith, J.J. Binns, J. Conacher & Sons, and Norman Brothers & Beard. The outstanding instrument of the period was that in All Souls Church, in which there was work by Schulze of Paulinzelle, Cavaillé-Coll, and Forster & Andrews. In 1901 a large organ (rebuilt in 1964) was designed for the Victoria Hall by William Hill & Son.

Halifax provided instrumentalists for the first Yorkshire Festival (1823). In 1827 instrumental concerts were begun with the founding of a subscription series. In and around Halifax the brass band movement involved many working men. William Swingler, associated with the Halifax North Parade and Lee Mount bands, became famous as a player and conductor.

The opening of the Victoria Hall in February 1901 was marked by a Hallé concert conducted by Richter. After extensive modernization the hall was reopened as the New Victoria Hall on 3 January 1964; it is now the Civic Hall. The principal musical organizations in Halifax include the Madrigal Society, Male-Voice Choir, Orchestral Society, Philharmonic Club (founded 1944) and, most famously, the Choral Society, which celebrated its 150th anniversary in 1968 with the performance of specially commissioned works by John Joubert (*The Choir Invisible*, op.54) and its conductor, Donald Hunt. Hunt was succeeded as conductor of the Choral Society by John Pryce-Jones, who is also conductor of the Halifax-based Northern Ballet Theatre. There are several amateur operatic societies in the town, of which one is devoted to the operettas of Gilbert and Sullivan. Brass bands, including the Brighouse and Rastrick Brass Band and the band of the Salvation Army, are still important for their contribution to the musical life of the area.

PERCY M. YOUNG

Halifax (ii). Capital city of Nova Scotia, Canada. The Halifax Regional Municipality came into existence on 1 April 1996 as a result of the amalgamation of the cities of Halifax and Dartmouth, the town of Bedford and Halifax County Municipality. With a population of 340,000 and an area of 3840 km², it is the major cultural, government and institutional centre of Atlantic Canada. It was founded as a British settlement and military base in 1749 and has had an active musical life from its early days. The first Canadian newspaper, the *Halifax Gazette*, advertised guitars and violins for sale as early as 1752; in 1765 the city's first organ was installed in St Paul's Anglican church; and in 1769 an oratorio, possibly the first such performance in Canada, was presented by a Philharmonic Society augmented by regimental officers. St Paul's became the country's first Anglican cathedral in 1787. Dissenters formed St Matthew's church and used a 'kirk fiddle' (a cello, still on display in St Matthew's) to lead the singing. No organ was installed there until 1873. Musical entertainment was offered by both amateurs and professionals, including visiting performers, in a variety of locations, among them coffee houses and taverns. Opera was first heard in 1790; throughout the 1790s there were performances, including Grétry's *Richard Coeur-de-lion* and comic operas, at the Theatre Royal. Regimental bandsmen served as performers and teachers; the arrival of Prince Edward Augustus in 1794 with his own band was a great boost to musical activities. The Canadian Forces Stadacona Band is stationed in Halifax.

Singing schools were organized by 1800, and throughout the 19th century singing societies were popular; such groups as the Halifax Philharmonic Society presented oratorios in the Temperance Hall. Choral singing has remained an important part of the city's musical life. A limited amount of piano manufacturing and musical publishing took place in the city. During the mid-19th century Cunard steamers stopped there; by 1876 a railway line to Montreal was completed, making it easier for performers to visit Halifax. The 1500-seat Academy of Music auditorium opened in 1877 with a concert given by the Halifax Philharmonic Union with soloists from Boston. It was demolished in 1929; most concerts were then held in church halls, hotel ballrooms, the Dalhousie University gymnasium or high school auditoriums.

In the mid-1800s the Sisters of Charity established Mount St Vincent Academy (later granted university status); music was important in the curriculum, as it was at the Academy established by the Sisters of the Sacred Heart and at the Maritime School for the Blind (established 1871). A music instructor was hired for the public schools in 1867; the first school music festival was held in 1870, modelled after those of Boston. The Halifax Ladies' Musical Club (founded 1905) actively supported the school music programme. The Halifax Conservatory was founded in 1887; connected at first with the Halifax Ladies' College, it later became affiliated with Dalhousie University, which awarded music degrees and diplomas. The Maritime Academy of Music, established in 1934, joined with the Halifax Conservatory in 1954 to form the Maritime Conservatory of Music. An affiliation with Dalhousie University continued but in the late 1960s Dalhousie established its own music department. A competitive festival sponsored by the Halifax Conservatory from 1935 has become a major regional festival. School music broadcasts produced in Halifax gained wide recognition in the 1940s. Public school music instruction was expanded in the late 1960s; the extensive programme ranged from Kodály-based elementary classes to excellent choral and instrumental ensembles in the senior grades and a unique ukulele programme. The folklorist Helen Creighton, who did pioneering work in collecting regional materials, spent many years in her native area.

Orchestral music was heard in Halifax before 1800 and various orchestral groups performed throughout the 19th century. A Halifax SO operated from 1897 until 1908. A second Halifax Symphony was formed in 1955 (preceded by the Lord Nelson Hotel Salon Orchestra, the Halifax Symphonette and the CBC Halifax Orchestra). In 1968 the Halifax SO merged with the New Brunswick SO to become the Atlantic SO, a professional ensemble based in Halifax; it gave concerts, often with local choral groups, as well as broadcasts, educational concerts and recordings, and toured in the four Atlantic provinces. It ceased operation in 1983, but in the same year Symphony Nova Scotia was formed; based in Halifax, this professional ensemble presents over 50 concerts annually. In 1971 an arts complex including the 1100-seat Rebecca Cohn Memorial Auditorium and the smaller Dunn Theatre was built on the Dalhousie University campus. A 10,000-seat Metro Centre built as a sports facility has been used for large musical extravaganzas. Recitals and musicals have been presented at the Neptune Theatre; concerts are also held at St Mary's University Art Gallery. Jazz musicians can be heard in many venues and there are frequent performances of new music. In addition to touring productions, local groups including the Dalhousie music department have presented operas (a Nova Scotia Opera Association formed in 1949 lasted only seven years). The CBC English-language radio and television headquarters for the maritime provinces, the Nova Scotia Choral Federation (established 1976), the concert touring organization Debut Atlantic and the Scotia Festival of Music (established 1971) are all located in Halifax.

NANCY F. VOGAN

Halil (Heb.). Ancient Jewish reed instrument, analogous to the Greek aulos. *See* JEWISH MUSIC, §I, 4(iii).

Halim, M. (*b* Bukittinggi, Sumatra, 1963). Indonesian composer. His musical activity began early in the rural environment of his home, where traditional arts played a

central part. After graduating from the Academy for the Indonesian Performing Arts in Padangpanjang in 1988, Halim studied *karawitan* (traditional music) at the Indonesian Academy for the Performing Arts in Surakarta, one of the centres for the development of contemporary traditional Indonesian music, where the teaching staff included the composers Rahayu Supanggah, A.L. Suwardi, Pande Sukerta and I Wayan Sadra. Having displayed great compositional talent during his time as a student, in 1990 he formed a collaboration with the contemporary dance group Gumarang Sakti led by the leading Minangkabau choreographer Gusmiati Suid. Among Halim's many outstanding works for the group were *Amai-Amai* (1992), presented at the Jakarta Arts Building in 1994, and *Awuak Tongtong* (1993), performed at the Indonesian International Drum Festival in Jakarta. In *Amai-Amai* he employs almost the whole range of traditional Minangkabau instruments, while in *Awuak Tongtong* he uses the ritual forms of the Minangkabau culture to create a dynamic and involving work. A series of performing tours to Europe, America and New Zealand and to other Asian countries began in 1994. He teaches composition at the Academy for the Indonesian Performing Arts in Padangpanjang.

FRANKI RADEN

Halíř, Karel [Halir, Karl] (*b* Hohenelbe [now Vrchlabi], Bohemia, 1 Feb 1859; *d* Berlin, 21 Dec 1909). Czech violinist. He studied with Antonín Bennewitz at the Prague Conservatory (1867–73) and with Joachim in Berlin (1874–6), where he joined Benjamin Bilse's orchestra (1876–9). He then led orchestras in Königsberg (1879), in Nice and Lugano for Baron Derviz (1880–81), in Mannheim and in Weimar (from 1883). After touring widely he became leader at the Berlin Hofoper (1893–1907) and professor at the Hochschule für Musik. In 1896 he toured the USA with much success, then joining the Joachim Quartet as second violin in 1897; he also led a quartet of his own with Exner, Markees (later Müller) and Dechert. In 1888 he married Teresa Zerbst, a successful concert soprano. He published a teaching manual, *Neue Tonleiterstudien*.

Halíř possessed a well-disciplined technique and an excellent sense of style. He is notable as one of the earliest and most enthusiastic advocates of Tchaikovsky's music outside Russia, especially of the Violin Concerto: he gave the first performance in Germany. In 1888 Tchaikovsky heard him play the work in Leipzig, and noted in his diary, 'It seems to me that this artist, who is gifted with wonderful beauty of tone, prodigious technique, passion, brilliance and power, must very soon take one of the first places among the violinists of our time'.

JOHN WARRACK

Hall, D(avid) C. (*b* Lyme, NH, 16 May 1822; *d* Boston, 11 Feb 1900). American bandleader, bugle player and brass instrument manufacturer. He was an accomplished keyed bugle player and led several bands, first in Hartford, Connecticut (1844–5), then in New Haven (1845–6). Shortly after he became director and E♭ bugle soloist with the Lowell, Massachusetts, brass band. He was presented with an extremely fine E♭ keyed bugle of solid gold on 15 April 1850 by the members of the Lowell band. In 1856 Hall succeeded Patrick S. Gilmore as leader of the Boston Brass Band, a position he retained for many years.

In 1862, after a year of partnership with J. Lathrop Allen, a leading Boston instrument maker, Hall began his own brass instrument manufactory and importing business. He was joined by Benjamin F. Quinby, and from 1866 to 1875 Hall & Quinby were leading producers and importers of brass instruments in Boston. Their instruments were made in circular and over-shoulder forms as well as in the shapes common today, and they were usually equipped with Allen valves. Although most of Hall & Quinby's instruments were pitched alternately in E♭ and B♭ like saxhorns, they also made brass instruments pitched a 3rd apart, like those in the 1872 patent of R.H. Gates. A set of these is in the Janssen Collection, Claremont, California. The firm also made instruments with echo or mute attachments for the fourth valve. A cornet with this attachment was used with great success by the maker's brother, Rhodolph Hall, on a tour of England in 1861, and a set in all sizes, used by the Boston Brass Band, is preserved at the Henry Ford Museum, Dearborn, Michigan. After 1880 Hall retired from instrument making but continued his bandleading career until late in the century. Many examples of D.C. Hall and Hall & Quinby instruments are found in the John H. Elrod Memorial Collection, Germantown, Maryland; the Henry Ford Museum; the Museum of Fine Arts, Boston; and America's Shrine to Music Museum, University of South Dakota.

ROBERT E. ELIASON

Hall, Elsie (Maud Stanley) (*b* Toowoomba, Queensland, 22 June 1877; *d* Cape Town, 27 June 1976). South African pianist of Australian birth. She was playing publicly in Australia before she was ten, and at 12 played at the Paris Exhibition and was favourably reviewed in London by Bernard Shaw. Her principal training was under Ernst Rudorff at the Berlin Hochschule, where Joachim was director. She gave innumerable concerts in some 90 years of public performance and played under Joachim and Elgar among others. In chamber music her partners included Casals, Draper, Tertis and the Loewenguth and Griller quartets. Settling in South Africa (1920), she toured extensively over that continent and abroad. She played works unfamiliar in South Africa: Glazunov's Piano Concerto and works by Skryabin and Medtner (she included his *Danza Festiva* op.38 in her 90th birthday recital), though her programmes were customarily of Bach, Beethoven, Schumann and Brahms. She was awarded an honorary doctorate from the University of Cape Town in 1957.

CAROLINE MEARS

Hall, (Alexander) Ernest (*b* Liverpool, 24 Aug 1890; *d* London, 16 Oct 1984). English trumpeter. He started his career playing the cornet at the Royal Court Theatre, Liverpool, at the age of 14, and in 1910 went to study at the RCM under Walter Morrow. He played in the LSO from 1912 to 1929, becoming principal trumpet in 1924, and in 1930 joined the BBC SO, in which he played first trumpet until 1950. His broadcast of Haydn's Concerto in March 1932 was probably the first performance of the work in England. He taught the trumpet at the RCM from 1924 to 1960, and directed orchestral wind repertory classes there until 1970. As an editor, his work includes two volumes of *Difficult Passages for the Trumpet*, and Otto Langey's tutor for trumpet and trombone.

Hall used a small-bore Brussels Mahillon B♭/A trumpet (which had once belonged to his father) for most of his career, only changing to a Besson B♭ in about 1945. His direct playing style, which was without vibrato, contrasted strongly with the lyrical manner of his contemporary, George Eskdale. During his long teaching career, Hall exerted a strong influence on the modern English trumpet school; many professional players, both in the provinces and in London, were his pupils. His approach to the instrument was unreflective, his influence was by example, his inspiration intense.

EDWARD H. TARR

Hall, Frederick Douglass (*b* Atlanta, GA, 14 Dec 1898; *d* Atlanta, GA, 28 Dec 1982). American composer and arranger. He studied at Morehouse College (BA 1921), Chicago Musical College (BMus 1924), the RAM (Licentiate Degree 1933–5) and Columbia University Teachers College (MA 1929, DMusEd 1952). His teaching appointments included positions at Dillard University (1936–41, 1960–74), Alabama State University, Montgomery (1941–55), and Southern University (1955–9). A prolific composer and arranger of works for chorus, he was known both for his unique compositions and his arrangements of spirituals. He also wrote music for the piano and, as a result of his study of West African folksong, made many arrangements of African songs. Internationally known as a lecturer, choral workshop director and choral conductor, he was the recipient of numerous honours, including the Julius Rosenwald Fellowship, the Phelps-Stokes Fund Research Fellowship and the General Education Board Fellowship. (*SouthernB*)

JAMES STANDIFER

Hall, Henry (i) (*b* *c*1656; *d* Hereford, 30 March 1707). English organist and composer. He was the son of Captain Henry Hall of New Windsor, and was one of the Children of the Chapel Royal under Cooke and then Humfrey. He was a chorister until about the end of 1672, for on 17 January 1673 Humfrey was assigned the customary annual payment of £30, as from 25 December 1672, to keep Henry Hall 'late child of the Chappell, whose voyce is changed, and is gone from the Chappell'. It is possible that at this period Hall studied composition with Humfrey; by his own account he subsequently did so with Blow, who in 1674 succeeded Humfrey as Master of the Children of the Chapel. In summer 1674 Hall served as temporary organist of Wells Cathedral, and he moved that autumn to a permanent post as organist of Exeter Cathedral. In 1679 he became assistant organist of Hereford Cathedral, where by the end of the year, having taken holy orders, he secured an appointment as vicar-choral; in 1688 he became organist. In 1698 he took deacon's orders to qualify himself, it is said, for some preferment in the gift of the Dean and Chapter of Hereford.

Hall dabbled in poetry. He wrote a dedicatory poem for each volume of Purcell's *Orpheus Britannicus* (1698, 1702), referring in the first of them to his erstwhile fellow chorister at the Chapel Royal as 'my Dear Friend Mr. Henry Purcell'; in another dedicatory poem, for Blow's *Amphion Anglicus* (1700), he described how he and the young Purcell once studied composition together, under Blow's impartial tutelage, and reflected with wry and self-deprecatory humour on his own subsequent exile from the musical excitements of London. On his death he was succeeded as organist of Hereford by his son, also named Henry (*d* 1714) and also a composer (two anthems, *Deliver us, O Lord* and *If we believe that Jesus died*, are in *GB-H*) and amateur poet.

Hall was undoubtedly the most distinguished among the lesser composers of Purcell's generation. His debt to Humfrey and Blow is clear, though he lacked the latter's command of the old polyphonic style; even in his earliest works, italianate declamatory writing and harmonic boldness are often striking. His later use of florid mannerisms is less successful, but his solo songs are deftly turned and possess genuine melodic grace. On a larger scale, his elegy for Purcell, *Yes, my Aminta*, is an eloquent and finely crafted essay in the pathetic style; its wealth of telling detail and its expressive chromaticism recall the elegies of Purcell's own early works.

BRUCE WOOD

Hall, Henry (Robert) (ii) (*b* London, 2 May 1898; *d* Eastbourne, 28 Oct 1989). English band-leader and trumpeter. In London he studied the trumpet and orchestration at Trinity College of Music and the RAM before World War I, and at the Guildhall School of Music in 1922. In 1914 he joined the music editorial department of the Salvation Army and after the war worked in music halls, as a cinema pianist, and as a member of provincial bands; from 1924 he led his first important band, at Gleneagles Hotel, Perthshire, with which he made his first recordings. By 1930 he was musical director for a hotel chain and controlling 32 bands. He replaced Jack Payne as leader of the BBC Dance Orchestra in 1932. As director of dance music for the BBC (1932–7) he had an unusually heavy broadcasting schedule, including (from 1934) a weekly 'Guest Night' show which ran until the late 1950s. In 1935 his band starred in the film *Music hath Charms*. On leaving the BBC he formed a group that toured Britain, the Continent and the USA besides playing in London. After the war, during which his band played to the troops and broadcast frequently, Hall again toured Britain until the late 1940s, when he became an impresario. He continued to conduct on broadcasts and recordings until 1969, and also appeared occasionally on television.

BIBLIOGRAPHY

H. Hall: *Here's to the Next Time* (London, 1955)
A. McCarthy: *The Dance Band Era* (London, 1971)

Hall, John (*b* ?1529; *d* October 1568). English physician, writer and ?composer. He practised as a physician at Maidstone and published several medical treatises and religious works. Among the latter is *Certayn chapters taken out of the Proverbes of Salomon, wyth other chapters of the holy Scripture & certayne Psalmes of David* (London, 1550), which contains metrical versions of various parts of the Bible, including several psalms. Its 'epistle dedycatory' suggests that the verses were intended for singing. Hall's most interesting work from the musical and literary points of view is *The Couurte of vertu* (London, 1565; ed. R.A. Fraser, London, 1961). This collection of didactic and religious verses (which contains references in cipher to many of Hall's local contemporaries) was clearly intended as a 'moralization' of *The Courte of Venus* (n.d., ed. Fraser, Durham, NC, 1955), a popular anthology of secular lyrics (including some by Sir Thomas Wyatt), of which only fragments survive. Hall inveighed against it in the preface to *Certayn chapters*, and *The Couurte of vertu* includes sacred parodies of poems by Wyatt. It contains 30 single-line tunes and one four-part setting. It is not definitely known whether Hall wrote the music, which is undistinguished, recalling contemporary psalm tunes; 'The dauning day' reproduces two phrases of 'Old Hundredth'. Fraser (1952) suggested that Hall envisaged instrumental or additional vocal accompaniment to the single-line tunes, but they can well be compared to the early unharmonized settings of metrical psalms, which were intended for unison singing. Hall's popularizing metrical paraphrases of scripture, crude devotional and didactic verse and simple musical settings are typical of the early English Reformation, though they can also be linked to older traditions of personal satire and sacred parody. Apart from the metrical psalters, the closest parallel is probably the work of WILLIAM HUNNIS; a more sophisticated example is Tye's *The Actes of the Apostles*. Despite his apparent criticism of Wyatt's work, Hall joined the Wyatt family's Protestant uprising at Maidstone in 1554; such political activity offers a further parallel with Hunnis's career.

MICHAEL SMITH

Hall, Marie (*b* Newcastle upon Tyne, 8 April 1884; *d* Cheltenham, 11 Nov 1956). English violinist. She took violin lessons from an early age and was heard by Emile Sauret when she was nine. Despite his recommendation that she should attend the RAM in London she continued to study locally, receiving occasional instruction from eminent teachers, including Elgar at Malvern (1894), Wilhelmj in London (1896), Max Mossel at Birmingham (1898) and, after she was unable to take up a scholarship to the RAM, Johann Kruse in London (1900). In 1901 she was heard by Jan Kubelík, on whose advice she went to Prague and completed her studies at the conservatory under Ševčík in 1903.

She appeared with success in Prague in 1902, and in Vienna and London the next year, after which she toured widely in Britain, the USA, Australia and India. She was the dedicatee of Vaughan Williams's *The Lark Ascending*, which she first performed in 1921 in London with the British SO under Boult; she also introduced new works by Boughton, Brian and Percy Sherwood. In the standard

repertory she was considered one of the finest violinists of her time in any country.

W.W. COBBETT/NOËL GOODWIN

Hall, Pauline (*b* Hamar, 2 Aug 1890; *d* Oslo, 24 Jan 1969). Norwegian composer. She studied the piano with Backer Lunde and composition with Elling (1910–12). She then undertook further studies in Paris (1912–14), spending six months in Dresden during this period. Between 1926 and 1932 she lived in Berlin as a theatre and music critic for the Oslo newspaper *Dagbladet*. After her return to Oslo she continued as a music critic for the *Dagbladet* (1934–42 and 1945–56). Hall was active as a member of various musical organizations: she became a member of the board of the Norwegian Composers' Association in 1920, and her work (1938–60) as chairman of the board of Ny Musikk, the Norwegian branch of the ISCM, was outstanding.

In her compositions two main traits can be found: up to about 1930 French music (especially Debussy) is a strong influence; after 1930 her music became more neo-classical. Her first works were for piano and for the voice; she later composed chamber music and works for orchestra, closing her composing career with some very fine music for stage and film productions. She is the author of *25 år Ny musikk* (Oslo, 1963).

RUNE J. ANDERSEN

Hall, Sir Peter (Reginald Frederick) (*b* Bury St Edmunds, 22 Nov 1930). English director. He was educated at Cambridge and directed his first West End play, the English-language première of *Waiting for Godot*, in 1955. He was director of the Royal Shakespeare Company (1960–68), and of the National Theatre (1973–88). In 1969 he was made joint director (with Colin Davis) of the Royal Opera, but he resigned before officially taking up the post. He was artistic director of Glyndebourne Festival Opera from 1984 to 1990. He was made a CBE in 1963, and knighted in 1977.

His first opera production was the première of John Gardner's *The Moon and Sixpence* (1957, Sadler's Wells), but the first to catch the public eye was the British stage première of *Moses und Aron* (1965, Covent Garden), in which the presence of a cow and, until quite late in rehearsals, a camel, not to mention four semi-naked virgins, ensured that the production received plenty of publicity in the popular press. His first Glyndebourne production was *La Calisto* (1970), which led to *Il ritorno d'Ulisse in patria* (1972) and *L'incoronazione di Poppea* (1984), all three in very free realizations by Raymond Leppard. His most valuable work at Glyndebourne, however, was centred on his outstanding Mozart-Da Ponte productions: *Figaro* (1973), *Don Giovanni* (1977) and *Così fan tutte* (1978). His Britten productions – *A Midsummer Night's Dream* (1981) and *Albert Herring* (1985) – were also much admired.

His work outside the UK has generally found less favour. His most notable American production has been *Salome* (1986, Los Angeles), designed, like so many of his successes, by John Bury, with whom he has enjoyed a most fruitful partnership. He has also been closely associated with Michael Tippett, staging the premières of *The Knot Garden* (1970, Covent Garden) and *New Year* (1989, Houston).

Hall's generally representational approach to opera is based on fidelity to the text (his Mozart triptych was given without cuts) and sobriety almost to a fault – his *Così fan tutte* was thought by many not to be funny enough. His scrupulously faithful productions emerge from, as he puts it, joint discovery of the work during a long rehearsal period, which sometimes makes his singers impatient; the productions, however, have often brought startling revelations in their wake, none more so than *Fidelio* (1979, Glyndebourne), whose roots in French *opéra comique* were exposed greatly to the advantage of the dramaturgy of a work traditionally subjected to romantic and epic interpretations.

RODNEY MILNES

Hall, Richard (*b* York, 16 Sept 1903; *d* Horsham, 24 May 1982). English composer and teacher. He was educated at Loretto School, Edinburgh, and Peterhouse, Cambridge, where he was an organ scholar. His first appointments were in the church in Leeds, as organist of All Souls and precentor at the parish church; he was ordained an Anglican minister in 1926. But he made his most valuable service to music as professor of composition at the Royal Manchester College of Music, a post he held from 1938 to 1956, when he became director of music at Dartington. He left Dartington in 1967 to return to the church, as a Unitarian minister. His pupils at the RMCM included Stevenson, Butterworth and, at one time in the early 1950s, Goehr, Maxwell Davies, Birtwistle and Ogdon, all members of the MANCHESTER SCHOOL.

Hall's success as a teacher has overshadowed his achievement as a composer. His own music is not as progressive as that of some of his pupils but he was always receptive to new ideas. Thus, although his principles derive basically from Hindemith (by way of Arnold Cooke, his predecessor at the RMCM), his music is less conservative than this would imply. There is, for example, a remarkable set of Four Piano Pieces (1944) which are serially constructed, canonically organized, and virtually atonal in spite of their key signatures and their final triads. His symphonies are distinguished by thoughtfulness and contrapuntal interest. He is also the author of several collections of poetry.

GERALD LARNER (work-list with DAVID C.F. WRIGHT)

Hall, Thomas S. (*b* England, Feb 1794; *d* New York, 23 May 1874). American organ builder. He emigrated to Philadelphia about 1803, and was apprenticed to John Lowe. He began his own business in Philadelphia in 1811; he moved to New York about 1818, becoming the founder of the New York group of organ builders in the 19th century and counting among his former workmen HENRY ERBEN, Richard M. Ferris and Reuben Midmer. One of his first important organs was built in 1818 for the Unitarian Church of Baltimore. In 1824 he formed a partnership with Henry Erben, his brother-in-law and former apprentice, which lasted until 1827 and resulted in several organs for large churches in New York and elsewhere. In 1832 Hall built a substantial organ for St Thomas's, New York. In 1846 he formed a new partnership with John Labagh (1810–92) under the name of Hall & Labagh; one of the largest organs by this partnership was built in 1855 for St Joseph's Church, Troy, New York. In 1868 James L. Kemp joined the firm, which continued a steady production of quality instruments, including a replacement for their earlier St Thomas's organ in 1870. Hall retired in 1872, and the firm continued under the name of Labagh & Kemp until 1891, when it was sold to the short-lived partnership of Chapman & Symmes.

BARBARA OWEN

Hall, William (*d* Richmond, Surrey, 28 April 1700). English violinist and composer. He appears in lists of the Twenty-Four Violins several times between November 1671 and July 1680, when he received one of the posts in the King's Private Music that were used at the time to augment the group. He served until his death, though he also worked in James II's Catholic chapel, and ran a series of concerts in the 1690s at his house in Norfolk Street, off the Strand. They must have had a following, for they were still referred to in March 1707 when a benefit concert for his daughters was advertised. He was one of those who handled the subscriptions for Purcell's 1683 set of trio sonatas. He was described on his memorial as 'a superior violin, admir'd, belov'd of all Men', and there are three-part pieces entitled 'Mr: Halls Farewell' by Francis Forcer and John Lenton in the manuscript *US-NH* Filmer 9. There are more than 30 consort pieces by Hall in *Tripla Concordia* (1677) and in the manuscripts *GB-Ob* Mus.Sch.C.44, E. 446, *GB-Och* Mus.361–2 and *US-NH* Filmer 7. There is also a keyboard corant in Loche's *Melothesia* (1673[6]; ed. C. Hogwood, Oxford, 1987). They seem to be rather incompetent, though most survive only in fragmentary or corrupt sources.

PETER HOLMAN

Hallart [Allard], **Michel** (*fl* 1511–18). French singer, possibly identifiable with the composer ALART.

Hallberg, Bengt (*b* Göteborg, 13 Sept 1932). Swedish jazz pianist, composer and arranger. He began to play piano professionally in his early teens and made his first trio recording at the age of 17. During the early 1950s he was the leading jazz pianist in Sweden; he played regularly with local bands in Göteborg and made numerous recordings with various international and Swedish all-star groups of which Lars Gullin, Arne Domnérus, Stan Getz, Quincy Jones and Clifford Brown were members. In 1957, *Dinah*, his first album, recorded with a trio, was awarded a Gold Disc by *Orkester journalen*. After studying counterpoint and composition at the Swedish Royal Academy of Music (1954–7) he turned principally towards composing and arranging, especially for films, television and stage productions. Nevertheless he continued to perform as a member of the Swedish Radio Big Band (1956–63) and the Radiojazzgruppen (from 1969). In the 1970s he was much sought after as a pianist, arranger and composer; he performed as a soloist in George Russell's composition *Living Time* and worked with Ove Lind. He also made solo recordings, such as *The Hallberg Touch* (1979, Phon.), and worked with Arne Domnérus, Karin Krog and others. In the early 1980s he formed the Trio con Tromba with Jan Allan and Georg Riedel, producing an album of the same name (1985, Four Leaf Clover). During the 1980s and 90s he has specialised in solo improvisations based on well-known classical and popular repertory (e.g. *Bengt Hallberg Improvisation*, 1988, Musik på Drottingholm) as well as more jazz-orientated solo recordings, such as the slightly retrospective *The Tapdancing Butterfly* (1992, Aquila). He has also composed extensively for choir, chamber orchestra and symphony orchestra.

ERIK KJELLBERG

Halle. Town in Germany, on the Saale river. Its known history goes back to 806; its musical tradition began with the foundation of the Halle monastery at Neuwerk in

1121, followed by the Stadtsingechor, a boys' choir (still active) which dates from the 12th century.

Protestant church music developed rapidly in Halle; in the early 16th century Wolff Heintz, admired by Martin Luther, was organist at the Marktkirche or Liebfrauenkirche (*c*1523–52). The town's first important musical figure was Samuel Scheidt, who worked there for much of the first half of the 17th century. During the second half of the 17th century such distinguished musicians as Philipp Stolle, David Pohle, Johann Philipp Krieger and Johann Beer worked at the Halle court; they all wrote German operas there, although only Stolle's *Charimunda* (1658) has survived complete. At the end of the century the court moved to Weissenfels, about 30 km to the south; however, Halle's strong tradition of keyboard music survived, particularly in the work of Friedrich Wilhelm Zachow, organist of the Marktkirche and Handel's teacher. Handel was born in Halle in 1685, but after studying law and working as organist at the cathedral he left for Hamburg in 1703; only a few of his surviving works were composed in Halle.

After a period during which only minor composers, such as Gottfried Kirchhoff and J.G. Ziegler, were active in Halle, the town's musical life was revived in the mid-18th century by the arrival of W.F. Bach. He was organist at the Marktkirche from 1746 to 1764, although in later years he became erratic in the performance of his duties. Later in the century J.F. Reichardt, one of the first to compose settings of Goethe, went to Halle as inspector of the salt-works after quarrelling with the Prussian court, where he was Kapellmeister. His home became a meeting place for philosophers, poets and musicians. Together with the university music director, D.G. Türk, he organized performances of Handel's oratorios in Halle, the first of which was *Messiah* (1803). Public concerts organized by Türk included concert performances of opera and Singspiele from 1780.

Marktkirche, Halle: engraving by J.D. Schleuen from J.C. von Dreyhaupt's 'Beschreibung des Saal-Creyses' (1755)

The most important musician in Halle in the first half of the 19th century was Johann Friedrich Naue (1787–1858), who distinguished himself as music director at the university, organist, and conductor at music festivals. On 1 July 1859 Heidel's Handel monument was dedicated in the Halle market-place, in the presence of Liszt. At the Stadttheater, opened in 1886, the opera flourished under Max Richards (1897–1915).

After the mid-19th century, the town's musical life centred on the composer Robert Franz who, as choral conductor, continued the tradition of performing Bach and Handel. During the turbulent early decades of the 20th century, these traditions were maintained; the first large Handel Festival was held in Halle in 1922, when Alfred Rahlwes and Karl Klanert distinguished themselves as conductors of the Robert-Franz-Singakademie and the Stadtsingechor. Several then unknown works of Handel were revived, such as *Susanna* (1922) and *The Triumph of Time and Truth* (1937). Although musical activity was curtailed between 1933 and 1945, in 1935 a 'Reichs-Händel-Fest' took place, and later 'Händel-Feste' (1936–8) and 'Händel-Tage' (1941–3) were organized. In 1937 the 350th anniversary of Scheidt's birth was commemorated by a series of performances of his vocal works by the Singakademie.

After 1949 Halle became one of the leading musical centres of the DDR. The Hallische Musiktage, concentrating on contemporary music, have taken place annually since 1963. In 1948 Handel's birthplace became a museum containing an important collection of instruments. From 1952 the town mounted annual Handel festivals, which have been particularly important for their revival of Handel's operas; they have been supported by the Georg-Friedrich-Händel Gesellschaft since its foundation in 1955. In 1948 the opera and the Handel Festival orchestra were joined by a symphony orchestra, from 1992 called the Philharmonisches Staatsorchester Halle. The Stadttheater, damaged in World War II, reopened as the Theater des Friedens in 1951 and was renovated in 1968 as the Landestheater Halle. Three to four opera productions a season are given there, usually including one Handel opera.

In 1952 a branch of the Verband Deutscher Komponisten und Musikwissenschaftler (now the Landesverband Deutscher Komponisten Sachsen-Anhalt) was founded in Halle; among its members the composers Hans Stieber (1886–1969), Gerhard Wohlgemuth (*b* 1920), Hansjürgen Wenzel (*b* 1939), Thomas Müller (*b* 1939) and Gerd Domhardt (1945–97) have gained international reputations. Halle has a music school, a borough music school, an academy for church music, and a musicological institute, directed successively by Hermann Abert (1909–20), Arnold Schering (1920–28), Max Schneider (1928–60), Walther Siegmund-Schultze (1960–83), Bernd Baselt

(1983–93), compiler of the *Verzeichnis der Werke Georg Friedrich Händels*, and Wolfgang Ruf (from 1994). The institute sponsors Handel research and performances, and trains both music teachers and musicologists. The Hallische-Händel-Ausgabe, a new critical edition of Handel's works, is edited in Halle.

Halle, Adam de la. *See* ADAM DE LA HALLE.

Hallé, Sir **Charles** [Halle, Carl] (*b* Hagen, Westphalia, 11 April 1819; *d* Manchester, 25 Oct 1895). English pianist and conductor of German birth. He was born Carl Halle, but added the accent to the 'e' later in life allegedly to ensure more accurate pronunciation by the French and English. Hallé's father, Friedrich, was church organist and director of Hagen's mainly amateur orchestra. By the age of four, Carl could play the piano sufficiently well to manage a sonata written by Friedrich. He also learnt to play the organ, the violin and the timpani. Under the patronage of Louis Spohr, he gave a piano recital at the age of nine; thereafter his father limited his public appearances to one a year, in Hagen. He first conducted at the age of 11 when his father was taken ill during Hagen's annual visit from a touring opera company, for which the town's musicians provided an orchestra. The boy took over the direction of Weber's *Der Freischütz* and *Preciosa* and Mozart's *Die Zauberflöte*. In the summer of 1835, when he was 16, Hallé went to Darmstadt to study harmony and counterpoint under Johann Rinck and to receive general musical instruction from Gottfried Weber. In 1836 he moved to Paris, hoping to become a piano pupil of Kalkbrenner, but in fact studied under George Osborne.

In Paris, Hallé soon came to know Chopin, Liszt, Berlioz and Wagner. In recitals in the salons, he introduced Beethoven's sonatas to Parisian audiences: he was the first pianist to play the complete series in Paris and, later, in London. His edition of the sonatas was published by Chappell. He also appeared frequently as a chamber music player, with Alard (violin) and Franchomme (cello). During these years he became a passionate devotee of the music of Berlioz, attending the rehearsals and first performances of several of his works, including the Requiem and *Roméo et Juliette*.

In the revolutionary year of 1848 Hallé decided to leave Paris because of diminishing concert audiences and lack of pupils. Since 1841 he had been married to Désirée Smith de Rilieu, formerly of New Orleans, and he took her and their two children (later there were nine) to London, which he had first visited in 1843. But London was crowded with émigré musicians, so he accepted an approach from Manchester to settle there and to revivify musical life. His first action was to establish a series of chamber concerts; and in 1849 he was appointed conductor of the old-established Gentlemen's Concerts with a free hand to reorganize the orchestra. In 1857, when an art treasures exhibition was held in Manchester for six months, this orchestra was much enlarged and, rather than disband it, Hallé decided to engage it for a new series of concerts at his own risk. The first concert was given on 30 January 1858. Very soon the Hallé Concerts became Manchester's leading musical event; Hallé conducted them, often also appearing as piano soloist, for the remaining 37 years of his life. His programmes were adventurous and he engaged leading soloists of the day (*see* MANCHESTER, §2). He continued to give piano recitals in London every summer, concentrating on the sonatas of Beethoven and Schubert. In 1893 he saw the realization of one of his long-held ambitions for Manchester: the foundation of a music college in the city. He was appointed principal and piano professor at the RMCM, which opened in October of that year.

Charles Hallé

Hallé was knighted in 1888, the year in which he also married the celebrated violinist Wilma Norman-Neruda (his first wife had died in 1866). With Lady Hallé he gave sonata recitals not only in Britain but on tours of Australia

and South Africa. They had returned from the latter only a few weeks before Hallé's sudden death from cerebral haemorrhage. He is buried in Weaste Cemetery, Salford.

Hallé had great personal charm and humour. As a pianist he was regarded by some contemporaries as 'cold and scholarly', which he probably seemed by comparison with Liszt and other virtuosos. Bernard Shaw, on the other hand, wrote appreciatively of his fidelity to both the letter and spirit of Beethoven's sonatas, and it is some measure of Hallé's stature that he performed Brahms's new B♭ Concerto at the age of 63. As a conductor he was said by J.A. Fuller Maitland to be in the first rank, imposing interpretations on his players 'with an amount of willpower that was unsuspected by the public at large'.

Hallén, (Johannes) Andreas (*b* Göteborg, 22 Dec 1846; *d* Stockholm, 11 March 1925). Swedish conductor, composer, teacher and critic. Between 1866 and 1871 he studied in Leipzig with Reinecke, in Munich with Rheinberger and in Dresden with Rietz. He then returned to Göteborg, where he became conductor of the music society (1872–8); following this he taught singing in Berlin (1879–83). Back in Sweden he was conductor of the Philharmonic Society in Stockholm (1885–95) and of the Royal Opera (1892–7), as well as founder and conductor of the South Swedish Philharmonic Society (1902–7). From 1909 to 1919 he taught composition at the Stockholm Conservatory.

Hallén's compositions show an accomplished handling of formal elements and contain stylistic reminiscences of Swedish folk music and the works of other Swedish composers like Söderman. The salient feature of his style, however, and the one which strongly affected contemporary reaction, is its close, almost derivative relationship to German music. Wagner's works and aesthetic ideas had a particularly strong and lasting influence on Hallén; his operas, although conceived with considerable dramatic skill, are largely dependent on Wagnerian models. As an enterprising and versatile conductor, he gave sympathetic performances of the Wagner operas and brought about performances of many choral masterpieces then almost unknown in Sweden, including the first Swedish performance of Bach's *St Matthew Passion* (1890).

AXEL HELMER

Hallé Orchestra. Orchestra founded in 1858 by Charles Hallé. *See* MANCHESTER, §2.

Haller, Hans Peter (*b* Radolfzell, Lake Constance, 26 Oct 1929). German composer and electronics technician. He attended the Kirchenmusikalisches Institut, Heidelberg (1947–50), took private composition lessons with Fortner from 1948 and studied musicology with Gurlitt at Freiburg University (1954–8). From 1950 to 1972 he was head of recording and programme director for SWF, Baden-Baden. In 1972 he was appointed head of the experimental studio at the SWF Heinrich Strobel Foundation, Freiburg, a post which he held until 1989. Haller's early works were influenced by Hindemith's sound world and by classical 12-note technique; later he used serial procedures more generally. After a meeting with Hiller and the experience of Boulez's *Poésie pour pouvoir*, he began to involve himself intensively with electronic and computer music. A major result of this activity was the invention of the halaphone, an apparatus for combining, distributing and moving sounds; the halaphone was used by Boulez in the early versions of *'... explosante-fixe ...'* and again in *Répons*. Haller's own precisely constructed music has also been enriched by his technical work.

WORKS

JOSEF HÄUSLER

Haller, Hermann (*b* Burgdorf, canton of Berne, 9 June 1914). Swiss composer. In 1933 he entered the Zürich Conservatory to study with Volkmar Andreae, Paul Müller and Rudolf Wittelsbach; he completed his training as a composer with Boulanger in Paris (1938–9) and as a pianist with Czeslaw Marek in Zürich. Haller taught at the Zürich Conservatory (1943–6) and from 1946 to 1979 he taught the piano at the Zürich cantonal teacher-training college in Küsnacht. Elected to the committee of the Association des Musiciens Suisses in 1963, he was its president from 1968 to 1973. He was also president of SUISA, the Swiss performing rights society (1979–87). His music is in a clean and economical style. The harmony and animated rhythm of his early works show certain affinities with the Hindemith of the 1930s; Haller's forms and textures were influenced by the Baroque, as in the Concertino (1942) and the cantata *Verkündigung* (1943). This diatonic style later gave way to greater chromaticism, but without the loss of a sense of tonality. In the 1960s he came to use almost impressionist elements, including complex harmonies that are not primarily functional, and a blurring of contours to achieve atmospheric effects. In all of Haller's work linear thought plays an essential role.

FRITZ MUGGLER/CHRIS WALTON

Haller, Jan (*b* Rothenburg, ?*c*1467; *d* Kraków, 7 or 8 Oct 1525). Polish publisher and bookseller of German birth. Granted the first royal privilege issued in Poland, he began its earliest publishing business in Kraków in 1494. In 1503 he issued the *Missale Wratislaviense* in which the music in Gothic notation was printed from movable type in two colours. Possibly on his initiative, the German printer Kasper Hochfeder went to Kraków in 1503 and from 1505 to 1509 served as the firm's technical manager. Haller's output of about 250 publications included scientific books, university textbooks, state documents and liturgical books. In the field of music he is principally known for the printing of *Bogurodzica* (the knights' hymn), and two treatises by Sebastian z Felsztyna, *Modus regulariter accentuandi* (1518) and *Opusculum musicae compilatum* (1517) in addition to the missal.

TERESA CHYLIŃSKA

Hallgrímsson, Hafliði (*b* Akureyri, 18 Sept 1941). Icelandic composer and cellist. After cello studies in Reykjavík, he worked during 1962–3 in Rome with Enrico Mainardi, while also studying visual/plastic arts (he still works as a painter and draughtsman). In the mid-1960s he studied the cello at the RAM in London with Derek Simpson, winning the Suggia Prize, while pursuing composition studies with Maxwell Davies and Alan Bush. After playing with the English Chamber Orchestra he became principal cellist of the Scottish Chamber Orchestra in 1977, relinquishing the position in 1983 to compose full-time.

Self-criticism led to the withdrawal of almost everything composed before the mid-1980s. *Poemi* (1984), a powerful concerto for violin and string orchestra based on biblical paintings by Chagall, was his first work to achieve international recognition, winning the second Wieniawski Prize in 1985 and the Nordic Council Prize in 1986. The orchestral texture, often aleatory, is at first hesitant, but soon becomes almost brutally direct. Every element of the work reflects his fascination with virtuosity: the music has overwhelming excitement and drive.

Hallgrímsson has an unusual sensitivity to the capabilities of string instruments, and music for strings lies at the heart of his output. Probably his most performed compositions are from the cycle of string orchestra pieces, *Daydreams in Numbers* (1986–96). Conceived as repertoire for young players, these pieces constitute a thesaurus of 20th-century string technique. Their fastidious, inspired simplicity is shared by Hallgrímsson's other music for young people, educational pieces for violin, cello and piano (often published with the composer's droll and quirky drawings). His work is paradoxical: the seemingly accessible educational music becomes eerie and otherworldly on deeper acquaintance. Yet the virtuoso works, such as the cello concerto Herma and *Words in Winter*, a cantata for soprano and orchestra, which at first seem impossibly strenuous, take on a disconcertingly 'right' and 'familiar' countenance.

What to others are special effects are central to his sound-world: they create magnetic fields, shape and structure. His musical language is unique and personal. There may be elements of Icelandic folk music, and other influences such as Lutosławski, but it is hard to hear them. What is heard is a startlingly original rethinking and new synthesis of the basic elements of music.

WORKS
(*selective list*)

Stage: Mini Stories (D. Kharms, trans. G. Gibian), op.25, nar, S, cl, tpt, hmn, vn, db, perc, 1997; Thurso, 1997, rev. 1999

Orch: Poemi, op.7, vn, str, 1984; Daydreams in Numbers, str, 1986–96; Herma, op.17, vc, str, 1994–5; Still-Life (after painting by C. Aitcheson), op.22, chbr orch, 1995; Crucifixion, op.24, 1997; Ombra, op.27, va, str, 1999

Chbr: Divertimento, hpd, vn, va, vc, 1974; Verse I, op.4, fl, vc, 1975; Fimma, op.5, vc, pf, 1976; Tristia, op.8a, gui, vc, 1984; Str Qt no.1 'From Memory', op.11, 1989; Str Qt no.2, op.11a, 1990; Intarsia, fl, ob, cl, hn, bn, 1992; Predikun á vatni [Sermon on Water] (Meditation on a biblical text), vc, org, 1993, withdrawn; Metamorphoses, op.16, pf trio, 1993; 7 Epigrams, op.23, pf trio, 1993, provisionally withdrawn; Ears Stretch a Sensitive Sail, op.26, solo perc, str qt, 1998

Choral: Triptych (Quasimodo), op.9, SATB, 1986; 4 Icelandic Folksongs, SATB, 1988; Níunda stund [Ninth Hour] (B. Óskarsson), op.14, SATB, 1993; Myrtuskógur (Ausonius), op.14a, SATB, 1993; 2 Old Icelandic Hymns, SATB, org, 1994

Other vocal: Elegy (Quasimodo), op.3, Mez, fl, 2 vc, pf, cel, 1971; You Will Hear Thunder (A. Akhmatova), op.6, S, vc, 1982; Words in Winter (Hallgrímsson), op.10, S, orch, 1987; Syrpa (various Icelandic texts), S, chbr ens, 1993; Ríma (Michelangelo), op.15, S, str orch, 1993

Solo inst: Solitaire, op.1, vc, 1970, rev. 1991; 5 Pieces for Pf, op.2, 1971; Jacob's Ladder, op.8, gui, 1984; 4 Icelandic Folksongs, pf, 1985; Strönd, hpd, 1982, rev. 1988; Offerto, op.13, vn, 1991; The Flight of Icarus, op.12, fl, 1991; Legg thú á djúpið, op.18, org, 1994, provisionally withdrawn; Homage to Mondrian, op.20, pf, 1995; Ummyndun Krists á fjallinu [Christ's Metamorphosis on the Mountain], op.21, org, 1995, provisionally withdrawn

Educational: 7 Icelandic Folksongs, vc, pf, 1985; Scenes of Poland, pf, 1988; Nordic Impressions, vn, pf, 1991; Sketches in Time, pf, 1992; 10 Pieces for Pf, 1995

Halling [parhalling]. A Norwegian folkdance in duple time, deriving its name from the Hallingdal between Oslo and Bergen and played on either the Hardanger fiddle or the violin. It may be notated in either 2/4 or 6/8 time and resembles the more common GANGAR, but may be played a little faster. It is chiefly a solo man's dance, but may be performed by two or more men dancing in competition. In some districts it has been danced by a couple; a man and a woman, in which instance it is known as 'parhalling'. The dance is a display of strength and includes some acrobatic movements, notably the *hallingkast*, in which the dancer either kicks down a hat held up in the air or kicks his foot up towards the ceiling. The *halling* is known in most districts of Norway. Some composers, for example Edvard Grieg, have used the term *halling* for compositions in folk dance style.

The term *halling*, or *parhalling*, is also used to refer to the *gangar*.

NILS GRINDE

Hallis, Adolph (*b* Port Elizabeth, 4 July 1896). South African pianist and composer. He studied at the RAM, London, under Beringer and Matthay. After his début (Wigmore Hall, 1919) he toured the major European centres and settled in South Africa in 1939. As a specialist in the contemporary music of his time he gave many premières, including Rawsthorne's Piano Concerto no.1 (written for him), Chisholm's Piano Concerto no.2 ('Hindustani') and the British première of Hindemith's Piano Concerto with the Hallé Orchestra under Barbirolli (1956). The Adolph Hallis Chamber Music Concerts (1936–9, London) were notable for their enterprising programmes. Hallis made the first complete recording of Debussy's Etudes, and gave numerous works their first South African performance. His compositions include a piano concerto, several works for solo piano and for chamber groups; his idiom is essentially conventional and melodious. He received the Honour award from the South African Academy for Science and Art in 1966.

CAROLINE MEARS

Hallmann, Paul (*b* Friedland [now Frýtland], nr Schweidnitz [now Świdnica], Silesia, 11 Aug 1600; *d* Breslau [now Wrocław], 11 Jan 1650). German composer. He was a member of the Kapelle of Duke Georg Rudolph at Liegnitz (Legnica). Described as a 'gentleman from Strachwitz, near Liegnitz', he became, through the duke's admiration for him, a member of the nobility on 31 January 1624, and he was nominated to the princely council in 1632. Of the sacred works he wrote for the Protestant ducal court, 14 were formerly kept in the celebrated Biblioteca Rudolphina at Liegnitz. Owing to the scattering of this collection during World War II, some of them disappeared and the rest remained incomplete. Scholz, who knew the Rudolphina before the war, divided Hallmann's works into three groups. The first comprises three masses, a Kyrie and a *Magnificat*. The five-part mass consists of Kyrie, Gloria and Sanctus, the first movement in Greek, the other two in German. The two six-part masses are both in Latin and both in the form of the *missa brevis*; one is based on the motet *Jerusalem gaude* by Jacobus Handl (150 of whose works were in the Rudolphina). According to Scholz no connection with the 5th tone is recognizable in the *Magnificat*; it was possibly heard, in accordance with *alternatim* practice, in the even-numbered verses: Hallmann set only the odd-numbered ones. The second category of works consists of four-part harmonizations of melodies, three of which – *A solis ortu cardine*, *Christum wir sollen loben schon* and *Was fürchtst du Feind Herodesz sehr* – are all based on the same Christmas melody. Hallmann's most interesting music is found in the four motets that make up the third element in his output. Even so, his relatively simple four-part setting of *Siehe wie fein und lieblich* is inferior to settings of this text by Hammerschmidt and Schütz. An eight-part

funeral motet, without continuo, *Ich habe Lust abzuscheiden*, is a substantially grander and indeed moving work. Hallmann's most modern piece is *Wer sich wider die Obrigkeit setzet*, a five-part concertato with instruments. It includes some expressive word-setting especially at the words 'Gebet dem Kaiser was des Kaisers, und Gott was Gottes ist', as though during the Thirty Years War which badly affected Liegnitz between 1627 and 1635 the composer wanted to underline the altercation between the Catholic emperor and the Protestant duke. The text of the only Latin work in this group, *Da pacem Domine*, is also appropriate to a time of war.

WORKS

all MSS incomplete

Missa, 5vv, *PL-LEtpn*, *Wn*
Missa in festo nativitatis Domini, 6vv, lost
Missa super 'Jerusalem gaude', 6vv, lost
Kyrie in festo Michaelis, 4vv, lost
Magnificat quinti toni, 6vv, *LEtpn*, *Wn*

Motets: Da pacem Domine, 4vv, *LEtpn*, *Wn*; Ich habe Lust abzuscheiden, 8vv, *Wn*; Wer in gutter Hoffnung will von hinnen verscheiden, 4vv, *LEtpn*, *Wn*; Wer sich wider die Obrigkeit setzet, 5vv, insts, *LEtpn*, *Wn*

Harmonizations: A solis ortu cardine, 4vv, lost; Christum wir sollen loben schon, 4vv, *Wn*; Heilig ist Gott der Herr Zebaoth, 4vv, *LEtpn*, *Wn*; Siehe wie fein und lieblich, 4vv, *LEtpn*, *Wn*; Was fürchtst du Feind Herodesz sehr, 4vv, *Wn*

FRITZ FELDMANN/DOROTHEA SCHRÖDER

Hallnäs, (Johan) Hilding (*b* Halmstad, 24 May 1903; *d* Stockholm, 11 Sept 1984). Swedish composer. He studied in Halmstad, at the Swedish Royal Academy of Music, with Cellier (organ) in Paris and with Grabner (composition) in Leipzig. From 1933 to 1973 he worked in Göteborg as an organist, precentor and theory teacher, and as a vigorous proponent of modern music. At an early age he began to compose in a general Nordic style, but student contacts with French Impressionism and German Expressionism led him to new paths. In the 1950s he adopted 12-note techniques, which he began to abandon after 1970. His lyrical, but at the same time powerful and strident, compositions are usually characterized by serious purpose and strict concentration. His later works were strongly influenced by his impressions of the austere archipelagic nature of west Sweden, and composed in a free metamorphic style, often in a pointillistic manner. The String Quartet had great success at the 1950 ISCM Festival, as did Cantata at the ISCM Festival in Stockholm in 1956.

ROLF HAGLUND

Hallström, Ivar Christian (*b* Stockholm, 5 June 1826; *d* Stockholm, 11 April 1901). Swedish pianist and composer. As a pianist he was a pupil of E. Passy and the German pianist Theodor Stein. In 1844 he studied at the University of Uppsala, where he took his degree of bachelor of law in 1849. During his years there he wrote many works for piano and solo songs; and together with Prince Gustaf he composed the opera *Hvita frun på Drottningholm* (orchestrated by J.N. Ahlström and produced at the Swedish Royal Opera, 9 April 1848). After the prince's death, Hallström became librarian to Prince Oscar (afterwards King Oscar II) in 1853, and settled in Stockholm. He gave piano lessons, and from 1861 to 1872 he was the director of A.F. Lindblad's music school. From 1881 to 1885 he coached singers at the Swedish Royal Opera.

Most of Hallström's compositions are vocal. His style is somewhat eclectic, reflecting Swedish classical and folk traditions (especially in *Den bergtagna*), and showing the influence of French composers (especially Gounod) and of Wagner. His musical characteristics include humorous or rhetorically pathetic expression; in some of his earlier works he developed a refined lyric sentiment. Technically he shows a sure feeling for melody and form.

WORKS

all printed works published in Stockholm

STAGE

all first performed in Stockholm unless otherwise stated; MSS in S-Skma

Hvita frun på Drottningholm [The White Lady of Drottningholm] (op), 1847; Köpmannen i Venedig [The Merchant of Venice] (incid music), 1854; Hertig Magnus och sjöjungfrun [Duke Magnus and the Mermaid] (romantic operetta, F. Hedberg), 1867; Den förtrollade katten [The Enchanted Cat] (fairy play), 1869; Stolts Elisif (incid music, Hedberg), 1870
Mjölnarvargen (operetta, after E. Corman, M. Carré: *Le diable au Molin*), 1871, vs pubd; En dröm [A Dream] (ballet), 1871; Den bergtagna [The Bride of the Mountain King] (op, Hedberg), 24 May 1874, vs pubd; Vikingarne (op, Hedberg), 1877; Silverringen (operetta, after J. Barbier, L. Battu), 1880; Rolf Krake (impromptu operetta), with V. Svedbom, 1880, vs pubd
Nero (op), 1882; Melusine (ballet), 1882; Jaguarita l'indienne (oc), unperf. (1883); Neaga (op, C. Sylva), 1885; Aristoteles (operetta),

1886; Per svinaherde [Peter the Swineherd] (fairy play, H. Christiernson), 1887; Granadas dotter (romantic op, Christiernson), 1892; Liten Karin (op), 1897; Hin ondes snaror [The Devil's Snares] (fairy play, Christiernson), Göteborg, 1900

OTHER WORKS

Songs: Sånger vid piano (1855), Nya sånger vid piano (*c*1857), Sång-Album (*c*1860), 6 sånger (1864), Trenne sånger (1870), 4 sånger (1872), 3 ernste Lieder (1877), Minnen från Italien (1878), 4 sånger (1882), 4 sånger af Z. Topelius (1884), 5 norske viser (1886), Tvenne sånger (1892), 4 sånger (1899), more than 60 others unpubd

AXEL HELMER

Hallyday [Halliday], **Johnny** [Smet, Jean-Philippe] (*b* Paris, 15 June 1943). French rock and roll singer. He was raised by an aunt who inculcated in him a love of theatre. His performing style was influenced by Elvis Presley and American rock and roll, and he became a singer at the Golf Drouot club, Paris, in 1958. At first he found little success, then adopted the stage name Johnny Halliday after relatives who formed the duo Les Hallidays. He released his first recordings in 1960, but a printing error changed the name to Hallyday. His subsequent success on radio and stage was heightened by the release of a cover version of *Let's twist again* (1961), and much of his future repertory was drawn from US pop, including versions of such standards as *The House of the Rising Sun* and *The Midnight Hour*. Several of his albums were recorded in the USA, including *Rock à Memphis* (1975, with Jerry Lee Lewis) and *Rough Town* (1994), and many of his recordings have been in English. Despite the longevity of his career, many albums and appearances in some 20 films (1954–91), his fame has remained essentially national. His autobiography was published as *Johnny raconte Hallyday* (Paris, 1982).

□

Halm, August Otto (*b* Grossaltdorf, nr Gaildorf, 26 Oct 1869; *d* Saalfeld, 1 Feb 1929). German writer on music, music educationist and composer. He had his first music lessons from his parents and at the Gymnasium in Schwäbisch Hall. In Tübingen he studied theology and composition with Emil Kauffmann, through whom he met Hugo Wolf, and from 1893 to 1895 he studied at the Akademie der Tonkunst in Munich with Rheinberger and Weingartner. He then taught music in Heilbronn, where he was administrator of the municipal music archives and conductor of the Society for Classical Church Music. In 1903 he was appointed music instructor at a private country boarding school (*Landerziehungsheim*), founded by Herman Lietz in Haubinda, Thuringia, and in 1906 he became a central figure at the newly founded Freie Schulgemeinde in Wickersdorf, Thuringia, a post he held for four years. After several assignments as conductor and music critic, Halm became music instructor at the Protestant teachers' training institute in Esslingen, Neckar in 1914. Six years later he returned to Wickersdorf, where he resumed his former post and remained until his untimely death.

Halm wrote many compositions in all genres, particularly for educational purposes. As a composer he was initially influenced by Wolf and later evolved an eclectic classical style. According to his principle of 'two cultures in music', he tried to merge fugue and sonata, partly based on Bruckner's example; and rejected the style of his contemporaries Debussy, Reger and Mahler. Halm is important chiefly as an author on music. In five books and more than 100 published essays, he charted new paths for music analysis, aesthetics and education, and reconceptualized the role of music in society. From aesthetic ideas rooted in German Idealism (Hegel, Schopenhauer), he evolved an approach to musical understanding related to Husserl's early phenomenology. His analyses focussed on form as an unfolding dynamic process in a 'drama of forces' (*Von zwei Kulturen der Musik*, 1913, p.50) that arise from music's formal will (*Formwille*), guided by musical logic. In an effort to reform a nostalgic pre-war and, later, a disillusioned post-war culture, Halm challenged then common beliefs about music and ways of understanding it. He inspired several generations of musicians, especially amateurs, toward a more thoughtful and serious involvement with the works of great masters, primarily Bach, Beethoven and Bruckner.

ALFRED GRANT GOODMAN/LEE ROTHFARB

Halpern, Ida (*b* Vienna, 17 July 1910; *d* Vancouver, 7 Feb 1987). Canadian musicologist and ethnomusicologist of Austrian descent. She received her PhD in musicology from Vienna University, where she studied with Lach; she also lectured on music at Shanghai University (1938–9) before emigrating to Canada in 1939. Her European background and education coupled with her enthusiasm for diverse types of music enabled her quickly to find a place in the Vancouver musical community as a broadcaster, organizer and teacher. Her affilation with the University of British Columbia began in 1940 when she introduced the first courses in music appreciation there, and extended through the 1960s when she taught the first courses in ethnomusicology. She was known primarily for her research with the Amerindian peoples of the northwest coastal area of Canada. She conducted fieldwork with the Bella Coola, Kwakiutl, Nootka, Haida and Coast Salish peoples, collecting over 500 songs; eight LPs based on this work, with her valuable field notes and analysis, were issued (Folkways). Among the first to draw serious scholarly attention to this music, her detailed transcriptions and analytical approach place her work within the comparative ethnomusicology of the 1950s and 60s. Her papers, including tapes, are housed in the British Columbia Archives and Records Services, Victoria, and at Simon Fraser University.

GORDON E. SMITH

Hals (i). Norwegian firm of piano makers and music publishers. The brothers Karl Hals (*b* Sörum, 27 April 1822; *d* Christiania [now Oslo], 7 Dec 1898) and Petter Hals (1823–71) set up as Brødrene Hals, piano makers, in Christiania in November 1847, having studied piano making abroad. They first made only oblique-strung upright pianos, but later changed to upright vertical and cross-strung instruments, better suited to the harsh Norwegian climate. They manufactured several thousand instruments and they also specialized in repair work. They received medals at exhibitions in 1862, 1866, 1867 and 1900. In 1890 the factory had 100 employees.

By 1869 their bichord and trichord upright pianos had three iron bars and metal plates bracing the deepest octaves, the larger trichord upright pianos having five iron bars with metal plates for all the strings. All vertical upright pianos had seven octaves whereas grand and cross-strung upright pianos had seven and a quarter octaves. In cross-strung upright pianos the strings were somewhat longer, giving a rich tone, the metal plate being fastened to an iron frame under the soundboard, and to three iron bars placed over it. The firm made harmoniums from 1886 to 1910.

When Petter died, Karl took sole charge of the business without changing the firm's name, buying out his brother's children for 100,000 kroner. In 1880 Brødrene Hals opened their own concert hall, which was known for its particularly good acoustics, and at the same time their concert agency was started. In 1887 they took over Petter Håkonsen's music publishing firm. Karl's sons, Thor (1852–1924) and Sigurd (1859–1931), joined the firm in 1888, which in 1900 became a limited company. In 1908 the number of publications was 1231; on 1 January 1909 the firm merged with Carl Warmuth to form Norsk Musikforlag. Brødrene Hals was taken over by Grøndahl & Son, of Øvre Slottsgatten, Oslo, in 1925.

MARGARET CRANMER, KARI MICHELSEN

Hals (ii) (Ger.). *See* NECK.

Halstead, Anthony (*b* Manchester, 18 June 1945). English horn player, conductor and harpsichordist. He studied at the RMCM with Sydney Coulston, who encouraged him to choose the horn rather than the piano as his main instrument. In 1966 he became principal of the BBC Scottish SO, and was subsequently principal of the LSO and the English Chamber Orchestra. In 1971 he was appointed to teach at the GSM in London. Following study with Horace Fitzpatrick, he has increasingly specialized in the hand horn. With the instrument maker John Webb he has developed copies of both Classical and Baroque horns, allowing him to give performances on these instruments with an assurance of technique previously unknown. He has been principal in several period instrument orchestras, and his recordings of Weber's Concertino (1986) and the Mozart and Haydn concertos testify to his accomplishment as a hand horn soloist. Halstead has conducted or directed from the harpsichord the Hanover Band and the Orchestra of the Age of Enlightenment, and has recorded Bach's Brandenburg Concertos (playing first horn in no.1), and, with himself as soloist, J.C. Bach's keyboard concertos.

OLIVER BROCKWAY

Haltenberger, Bernhard [Johann Nikolaus] [Montenelli, Bernardo] (*b* Schongau, 6 Aug 1748; *d* Weyarn, 19 Aug 1780). German composer. He began his musical training at the Gregorianum in Munich and later became a novice at the Augustinian monastery in Weyarn (1765). On taking his vows (14 September 1766) he assumed the brotherhood name of Bernhard; he was ordained priest on 8 June 1772. During his final years of study in Weyarn he began to teach the violin, piano and organ. He was appointed choral and musical director in 1768, and set out to improve the standard of performance and to introduce works in the new style into the music repertory, contributing his own sacred and secular compositions. He wrote 12 masses, two settings of the Requiem, eight *Litaniae lauretanae*, ten offertories, two *Stabat mater*, a

Te Deum, several psalms for Vespers and many cantilenas for solo voices (mostly boys'), strings and organ as well as some secular works (mostly lost). Stylistically his works lie between earlier and contemporary trends; they are clearly constructed (some in the early classical form of the sonata), with fine melody and discreet ornamentation, but many have a certain superficiality. His fugues are also in the early form, with double canonic repetition of the subject, little expansion in the development, and strong modulations and strettos. His orchestral compositions are fully developed symphonic works. None of his works was published; the manuscripts, including some autographs, are in church archives in Bavaria (particularly *D-WEY*). (*MGG1*, R. Machold; incl. list of works and bibliography)

ROBERT MACHOLD

Halvorsen, Johan (August) (*b* Drammen, 15 March 1864; *d* Oslo, 4 Dec 1935). Norwegian composer, conductor and violinist. At the age of 15 he went to Christiania (now Oslo), where for four years he played the violin in theatre and operetta ensembles. He was to become one of Norway's greatest violin virtuosi, although he received violin instruction only for short periods, his teachers including Jakob Lindberg in Stockholm (1884–5) and Adolph Brodsky in Leipzig (1886–8). Halvorsen worked as a violin teacher and concert master in Bergen (1885–6) and Aberdeen (1888–9) before moving to Helsinki, where he became a professor of violin at the Helsinki Music Institute in 1889 and worked as a chamber musician. Among his colleagues was Busoni, and the large circle of musicians in Helsinki prompted him to begin composing. In 1893 he was offered the positions of conductor at the theatre and of the semi-professional symphony orchestra in Bergen. He rapidly became Norway's leading conductor after Svendsen, and in 1899 he was appointed conductor at the new national theatre in Christiania, a position he held until 1929. As well as stage music, often his own, he regularly conducted symphony concerts at the theatre, and more than 25 operas were staged under his musical direction.

As a composer Halvorsen was mainly self-taught, apart from some lessons in counterpoint from Albert Becker in Berlin (1893). His compositions develop the national Romantic tradition of his friends Grieg and Svendsen, but his was a distinctive style marked by brilliant orchestration inspired by the French Romantic composers.

WORKS
(*selective list*)

Incid music: As You Like It (W. Shakespeare), 1912; Much Ado about Nothing (Shakespeare), 1915; Medea (Euripides), 1918; Macbeth (Shakespeare), 1920; Mascarade (L. Holberg), 1922; Reisen til Julestjernen (S. Brandt), 1924; The Merchant of Venice (Shakespeare), 1926; Der Kreidekreis (Klabund), 1927; Askeladden (O. Frogg and A. Maurstad), 1930

Orch suites (orig. incid music): Vasantasena, 1896; Gurre, 1900; Tordenskjold, 1901; Kongen, 1902; Fossgrimen, 1905; Suite ancienne, 1911; Norske eventyrbilleder [Scenes from Norwegian Fairy Tales], 1922

Other orch: Bojarernes intogsmarsch [Entry March of the Boyars], 1893; Danse visionaire, 1898; Norwegian Festival Ov., 1899; Dance Scene from 'Queen Tamara', 1904; Norway's Greeting to Theodore Roosevelt, 1910; Bjørnstjerne Bjørnson in memoriam, 1910; 2 Norwegian Rhapsodies, 1920; Marche chevaleresque, 1921; 'Bergensiana', Rococo Variations, 1921; Sym., c, 1923; Sym. 'Fatum', d, 1924; Sym., C, 1928

Vn and orch/pf: 6 danses norvégiennes: nos.1–2, 1896, orchd 1910, nos.3–6, 1930, orchd 1931, no.4 lost; Air norvégien, 1896; Veslemøy's Song, 1898; Andante religioso, 1899; The Old Fisherman's Song, 1901, rev. 1913; Vn Conc., 1909, lost; Norwegian Wedding March, 1914

Suites and pieces for vn, pf, for vn, va, incl. Passacaglia, vn, va, 1894; solo and choral songs, cants., arrs. of folk music

ØYVIN DYBSAND

Hamal. Flemish family of musicians. They were active in Liège during the 18th century.

(1) **Henri-Guillaume Hamal** (*b* Liège, 3 Dec 1685; *d* Liège, 3 Dec 1752). Composer. He was a pupil of Lambert Pietkin before being appointed for two years (1711–12) at Notre Dame, Saint-Trond. He then returned to Liège as a musician at the cathedral of St Lambert. His grandchild (3) Henri Hamal had a tendency in his writings to exaggerate his role and the importance of his output. He had the reputation of being an honest, but not a society man. He married Catherine Corbusier in 1709 and they had six children. He is said to have composed masses, motets, cantatas and a *Tantum ergo*, which all seem to be lost.

(2) **Jean-Noël Hamal** (*b* Liège, 23 Dec 1709; *d* Liège, 26 Nov 1778). Composer, son of (1) Henri-Guillaume Hamal. He became a chorister at the cathedral of St Lambert, Liège, at the age of seven and studied with Henri-Denis Dupont, a lover of Italian music. He had already studied with his father, who had transmitted his musical spontaneity, use of the Liège language and Italian style to his son. He probably also studied under Arnold Delhaye, who brought about an intense revival of Italian art in Liège. In March and September of 1726 Dupont mentioned Hamal's good progress, which led him to Rome to study with Giuseppe Amadori at the Liège College from summer 1728 to summer 1731. On 28 July 1731 he was ordained priest there. (3) Henri Hamal wrote that Jean-Noël made so much progress in Rome that Amadori arranged for his compositions to be performed in the Roman churches. In July 1738 he was appointed director of music at Liège Cathedral. In the same year he and his father organized *concerts spirituels* in the town hall. He took the oath of imperial canon in July 1745, and in 1750 he returned to Italy, where he met Jommelli in Rome and Durante in Naples and became immersed in the concertante style that characterized Italian music. He died of the after-effects of a paralytic seizure.

His secular works are more experimental and innovatory than his sacred ones, and his music in general became increasingly symphonic in style. Some is in an Italian late Baroque style, while some is more pre-Classical, with the use of sonata form. The op.3 sonatas, which follow the fast–slow–fast plan, are similar in manner to Alessandro Scarlatti's opera overtures. Hamal's expressive sense is demonstrated in his use of verbal instructions as well as in the implicit, and occasionally explicit, crescendos and

decrescendos. His instrumentation is typical of the Brussels composers (e.g. H.-J. de Croes) of the time.

His operas are notable for their use of folk music from Liège as well as librettos in the local dialect (this was not unusual in comic operas). Based mainly on the Neapolitan *opera buffa*, these works were also inspired by the French theatre of J.-J. Rousseau and Diderot, which strove towards spontaneity and simplicity. In his librettos Hamal also followed the example of Vadé's *genre poissard*, with the exception of *Li liegeoi ègagï*, which combines the comic with the pathetic. In musical terms, emphasis falls on the vocal line, which is often doubled by the strings above a simple bass.

WORKS

complete index in De Smet (1959); MSS in B-Lc unless otherwise stated

OPERAS

all opéras burlesques, first performed in Liège

Li voëgge di Chôfontaine (3, S. de Harlez, de Cartier, J.-J. de Fabry and P.-G. de Vivario), Hôtel de Ville, 23 Jan 1757 (Act 1, concert perf.), 16 Feb (Act 2), 25 Feb (Act 3)
Li liegeoi ègagï (2, Fabry), Hôtel de Ville, 14 April 1757
Li fiess di Hoûte-si-ploû (3, Vivario), Hôtel de Ville, 8 Dec 1757
Les hypocontes (3, Harlez), Ecole des Jésuites, 17 Feb 1758

OTHER VOCAL

3 orats: Davide e Gionata, 1745; Jonas, 1746; Judith triumphans, ?1747–50, rev. 1756

6 sinfonie da camera, 2 vn, va, bc, op.2 (Liège, 1743)
6 sonate, vn, fl, bc, op.3 [?copy of 6 sonates (Paris, 1743), lost, advertised in op.1]
Recueil de pieces de clavecin [? vn, hpd], *c*1750; numerous ovs., various insts

(3) Henri Hamal (*b* Liège, 20 July 1744; *d* Liège, 17 Sept 1820). Composer, nephew of (2) Jean-Noël Hamal. At an early age he was placed under the care of his uncle Jean-Noël, who took charge of his education. He became *duodenus* at the cathedral of St Lambert, Liège, and at the age of 19 received a grant from the Fondation Darchis allowing him to go to Italy, where he remained until 1769. He stayed at the Liège College in Rome and visited Naples to study with Sarti. He returned to Liège, where he succeeded his uncle as director of music at the cathedral. His career there was less eventful than his uncle's, but on 17 February 1793 the revolutionary committee of Liège decided to demolish the cathedral and he lost his job. Though not a revolutionary, Henri was one of the enlightened persons who had founded the Société d'Emulation, which brought him into disfavour under Prince-Bishop Hoensbruck; Hamal wrote cantatas for him and his successor in the Walloon language, but he was absent from the solemn celebration of the last office at the cathedral, which was entrusted to Simon Leclercq.

Hamal, now retired, became a man of letters, and collected art works and scores. He refused the post of director of music at the collegiate church of St Paul, which had become a cathedral in 1804, but accepted membership, under the French regime, of the jury of public education in the Ourthe département. During his last years he wrote *Annales des progrès du théâtre, de l'art musical et de la composition dans l'ancienne principauté de Liège depuis l'année 1738 jusqu'en 1806: essai sur les concerts et le théâtre de Liège* (MS, *B-Lc*, ed. M. Barthélemy, Liège, 1989). He also wrote notes on painters and sculptors from the 16th century to the 18th.

He composed mostly sacred music, some in collaboration with his uncle; however, his talent is best seen in his secular music, in which he made a skilful synthesis of the Italian and French styles, devoting himself to the new requirements of the Classical style.

WORKS

all in B-Lc

VOCAL

Stage: Le triomphe du sentiment (comedy, 3, J. Bernars), Liège, 28 Jan 1775; Pygmalion (opéra lyrique, 1, J.-J. Rousseau), Liège, ?1781
18 masses, incl. 2 requiem settings
Te Deum, chorus, orch, org; Te Deum, 2 choruses; Dies irae, 4vv, orch; Alma Redemptoris, S, orch; Magna vox, chorus, orch, org; In die palmarum, 1782; Domine salvum; Kyrie pour les pâques; Magnificat; various psalms and motets
Hymne civique; *c*15 secular cants., some collab. J.-N. Hamal; numerous ariettes (1 pubd in Recueil d'ariettes d'opéras, Liège, 1777) and songs

INSTRUMENTAL

6 sonatas, hpd
2 syms., D, 1767; Sinfonie a due cori [ouvertures d'église]; conc., ob, orch; minuets and symphonic frags.

PHILIPPE VENDRIX (1, 3), K. LENAERTS, G. VAN AVERMAET (2)

Hamari, Julia (*b* Budapest, 21 Nov 1942). Hungarian mezzo-soprano. She studied in Budapest at the Liszt Academy of Music and in 1964 won a prize that enabled her to continue her studies in Stuttgart. Although her career developed mainly in the concert hall – she became renowned as a contralto soloist, notably in Bach, and a lieder singer – she also sang a successful Carmen at Stuttgart, and was a member of the Deutsche Oper am Rhein in the 1970s; among her other roles have been Fatima (*Oberon*), Cornelia (*Giulio Cesare*) and Gluck's Orpheus, all of which she recorded. Her British operatic début was at Glyndebourne in 1979 as Celia in Haydn's *La fedeltà premiata*, and she first appeared at the Metropolitan Opera as Rosina (*Il barbiere*) in 1984. Hamari's singing was distinguished by a confident technique and smooth, full tone. Her other recordings included Lola (*Cavalleria rusticana*), Olga (*Yevgeny Onegin*), Giovanna (*Ernani*), Magdalene (*Die Meistersinger*) and the Mother (*Hänsel und Gretel*), in addition to Bach cantatas and other choral works.

NOËL GOODWIN

Hambacher, Josefa. *See* DUŠEK, JOSEFA.

Hambarcumian, Ofelia (*b* Yerevan, 9 Jan 1925). Armenian singer. She studied singing with Yelena Musinyan at the Yerevan R. Melikyan School of Music. In 1944 she became a soloist with the Ensemble of Folk Instruments of Radio Armenia; she performed with the ensemble in concerts and radio and television programmes for many years, and there is a large collection of her recordings in the phonographic archive of Armenian Radio. In 1956 she took part in the Festival of Armenian Art and Literature in Moscow, and in 1959 she was named People's Artist of Armenia. In 1963 she won first prize in a competition for her performance of the song *Sayat-Nova*. She was also awarded the Red Labour Medal and the Medal of Honour, the Badge of Honour (1956) and the Order of the Red Banner of Labour (1985).

Her repertory has included *ashugh* and *gusan* songs, songs by Armenian composers, and traditional Russian, Moldavian, Arabic and Persian songs. Her soprano voice has been noted for its flexibility and warmth. She has performed throughout Armenia and has frequently given concerts in Moscow, Tbilisi, Baku, Alma-Ata and Kishinev. She has also toured widely in Europe, the Middle East and the USA; in 1994 she performed in the Armenian arts festival 'Bravo Armenia' held in Los Angeles.

ALINA PAHLEVANIAN

Hambourg [Hamburg]. Russian family of musicians.

(1) Michael [Mikhail] **Hambourg** (*b* Yaroslavl, 12/24 July 1855; *d* Toronto, 18 June 1916). Pianist and teacher. He studied under Nikolay Rubinstein and Taneyev at the St Petersburg and Moscow conservatories, graduating from St Petersburg in 1879 and becoming a professor at Moscow in 1880. He emigrated to London with his family in 1890 and taught at the GSM and privately. In 1910 he again emigrated, this time to Canada, and in 1911 founded the Hambourg Conservatory of Music in Toronto, with his sons (3) Jan and (4) Boris as associates. Gerald Moore was a pupil of his in Toronto.

(2) Mark Hambourg (*b* Boguchar, nr Voronezh, 31 May/12 June 1879; *d* Cambridge, 26 Aug 1960). Pianist and composer, son of (1) Michael Hambourg. First taught by his father, he was a child prodigy who played publicly in Moscow in 1888, made his London début the following year and had given 1000 concerts by 1906. He studied with Leschetizky (1891–5) before his first world tour. He became a British citizen in 1896. With his brothers (3) Jan and (4) Boris he formed a successful trio, and later played piano duets with his daughter Michal. But he was chiefly and internationally known as a solo pianist in the big Romantic tradition. An over-strenuous career possibly contributed to an eventual decline in the quality of his playing. His pupils in London included Gerald Moore. Hambourg wrote two volumes of memoirs, *From Piano to Forte* (London, 1931) and *The Eighth Octave* (London, 1951), as well as *How to Play the Piano* (London, 1923). Among his compositions is a set of Variations on a theme by Paganini (1902).

(3) Jan Hambourg (*b* Voronezh, 27 Aug/8 Sept 1882; *d* Tours, 29 Sept 1947). Violinist, son of (1) Michael Hambourg. His teachers were Sauret, Wilhelmj, Heermann, Ševčík and Ysaÿe. In 1897 he accompanied his brother (2) Mark on a concert tour of Australia, and in 1905 with Mark and (4) Boris he founded the short-lived Hambourg Trio. He helped to found the Hambourg Conservatory at Toronto in 1911. After 1920 he pursued a solo career, and lived in New York and Europe. He was a violinist in the Ysaÿe tradition, taking a special interest in the sonatas and unaccompanied partitas of Bach, an edition of which he published in London in 1934.

(4) Boris Hambourg (*b* Voronezh, 27 Dec 1884/8 Jan 1885; *d* Toronto, 24 Nov 1954). Cellist, son of (1) Michael Hambourg. He studied with his father, with Herbert Walenn in London, and from 1898 to 1903 with Becker at the Hoch Konservatorium, Frankfurt. In 1903 he toured Australia and New Zealand with (2) Mark, and in 1904 made his début as a solo cellist in London, where he gave a notable series of recitals of little-known early works. During 1904 he studied with Ysaÿe, whose bowing technique he adapted for the cello. He subsequently toured widely as a soloist and as cellist in the Hambourg Trio with his two brothers. His American début was at Pittsburgh in 1910. The same year, with his father and brother (3) Jan, he moved to Canada and settled in Toronto where they opened the Hambourg Conservatory, which Boris carried on until 1951. In Toronto he became a notable teacher and performer, especially of chamber music, and also maintained his solo reputation in Europe with occasional visits there until 1950. He was cellist with the Hart House Quartet during its entire existence from 1924 to 1946.

FRANK DAWES/CARL MOREY (1, 3), FRANK DAWES (2), CARL MOREY (4)

Hambraeus, Bengt (*b* Stockholm, 29 Jan 1928). Swedish composer, teacher and broadcaster. He studied the organ with Linder, composition with Raphael (both 1944–8) and organ acoustics with Ernst Karl Rössler (beginning in 1949). In 1947 he began academic studies at the University of Uppsala, graduating in 1950 with a degree in musicology, art history and religious studies. He completed his doctorate in 1956. In 1957 he became a producer for Swedish Radio, being promoted to head of the Chamber Music Department in 1964 and head of Music Production in 1968. In 1972 he was appointed professor of composition at McGill University, Montreal, where he was named Emeritus Professor in 1995.

His compositional output includes operas, orchestral works, chamber music, choral works, electro-acoustic

music and pedagogical pieces. His contributions to contemporary organ music are of particular importance: in *Interferenzen* (1962), for example, he elevated timbre – organ stop registration – to the importance of rhythm and pitch; his *Livre d'orgue* (1981), which features 48 organ pieces of progressive difficulty, was a major pedagogical contribution. His pioneering work in the field of electro-acoustic music, *Doppelrohr II* (Cologne, 1955), also relates to the organ in its simulation of organ sounds by way of additive synthesis of sine-tones.

Hambraeus's works can be divided stylistically into three distinct periods. The works of his early period, the 1940s, are inspired by Raphael, Reger and Hindemith, and include the Organ Sonata in E minor (1946) and the contrapuntal Concerto for Organ and Harpsichord (1947, revised 1951). Hambraeus's second, modernist period, focussing on timbre, was influenced by his experiences at the Darmstadt summer courses during the 1950s; this period includes his earliest serial works, *Spectrogram* (1953) and *Psalm cxxii* (1953). Hambraeus's lifelong interest in music history and ethnomusicology has become a dominant characteristic of his third period, which dates from the end of the 1960s. In his orchestral work *Rencontres* (1971), quotations from the music of Beethoven and Mahler, among others, are blended with traditional Vietnamese music. The large-scale choral trilogy, *Constellations V*, *Symphonia sacra* and *Apocalypsis* (1983–7), setting texts concerning the issues of violence versus freedom and peace, also includes historical and ethnomusicological references and demonstrates Hambraeus's commitment to ethics and humanity. In later works such as *Nocturnals* for chamber ensemble (1990) and the Piano Concerto (1992), Hambraeus experimented with a modal technique deriving pitch material from a single hexachord.

WORKS

(*selective list*)

Stage: Klassiskt spel, ballet, tape, 1965; Experiment X (chbr op, B.V. Wall), 1969; Se människan (Ecce homo), op, 1970; Sagan (radio op, L. Runsten after H. Bergman), 1979; L'Ouï-Dire (chbr op, Hambraeus), 1986; much incid music

Orch: Rota, 3 orchs, tape, 1956–62; Transfiguration, 1963; Rencontres, 1971; Pianissimo in due tempi, 20 str, 1972; Continuo a partire da Pachelbel (Conc. for Org and Orch), 1975; Ricordanza, 1976; Quodlibet re Bach, 1984; Litanies, 1989; Conc. for Pf and Orch, 1992; Concentio, wind ens, perc, 1995; 4 tableaux: un concerto pour 24 musiciens-solistes, 1996; Concerto per corno principle ed orchestra, 1996

Choral: Triptychon, chorus unacc., 1950; Crystal Sequence, S, chorus, 2 tpt, perc, 12 vn, 1954; Responsorier, T, chorus, 2 org, church bells, 1964; Praeludium–Kyrie–Sanctus, T, 2 org, 2 chorus, church bells, 1966; Motetum archangeli Michaelis, chorus, org, 1967; Constellations V, chorus, org, 2 S, 1983; Symphonia sacra in tempore Passionis, chorus, 3 fl, 3 tpt, 3 trbn, tuba, 3 perc, 1986; Apocalipsis cum figuris secundum Dürer 1498 ex narrationem Apocalypsis Joannis (Versio Vulgata), B, chorus, org, 1987; 5 Psalms, chorus unacc., 1987; Echoes of Loneliness, chorus, va, perc, 1988; St Michael's Liturgy – In memoriam Henry Weman (1897–1992), 2 org, 3 trbn, elec bass gui, 1 perc, chorus, liturgist, congregational singing, 1992; Songs of the Mountain, the Moon, and Television, 1993

Solo vocal: Cantigas de Santa Maria, SAT, vn, 2 va 1948; Micrologus, S, vn, 1949; Cantata pro defunctis, Bar, org, 1951; Ps cxxii, S, org, 1953; Spectrogram, S, fl, 2 perc, 1953; Antiphonies en rondes, S, 25 insts, 1953; Gacelas y casidas de Federico Garcia Lorca, T/S, fl, eng hn b cl, cel, perc, 1953; Récit de deux pour 3 exécutants, S, fl, pf, 1973; Inductio, S, Mez, chorus, 3 tpt, 3 trbn, 1979; Loitsu (Incantation), S, pf, 1991

Ens: Conc., org, hpd, 1947, rev. 1951; Music for Ancient Str, 5 va da gamba, hpd, 1948; 2 str qts, 1948, 1949; Recitative and Chorale, pf, vn, 1950; Diptychon, fl, ob, hpd, va, vc, 1952; Giuoco del cambio, fl, eng hn, b cl, hpd, vib, pf, perc, 1954; Composition for Studio 2, 5 perc, pf, hpd, org, 1955; Introduzione–Sequenze–Coda, 3 fl, perc ens, loudspkrs, 1959; Segnali, 7 str, 1960; Notazioni, hpd, chbr orch, 1961; Mikrogram, a fl, va, vib, hp, 1961; Transit II, trbn, hp, elec gui, pf, 1963; Invenzione I (Str Qt no.3), 1964, rev. 1967; Invocation, 2 ob, brass, perc, 1971; Jeu de Cinq, wind qnt, 1976; Constellations IV, org, perc, 1978; Relief-Haut et Bas, 2 pic, 3 hn, trbn, 2 perc, 2 db, 1979; Strata, wind, 1980; Sheng, ob, org, 1983; Trio Sonata, accdn, trbn, pf (prep ad lib), 1985; 3 Dances, accdn, perc, 1986; Mirrors, tape, 1 or more ob, 1987; Night-Music, gui, perc, 1988; 5 studi canonici, 2 fl, 1988; 2 recercadas, gui, vc, 1988; Nocturnals, chbr ens, 1990; Rondeau, gui, 1991; Eco dalla montagna lontana ... Scandinava ..., eng hn, 1993; Sonata per cinque, fl/pic, cl/b cl, vn, vc, pf, 1995; Archipel pour 15 musiciens-solistes, 1997

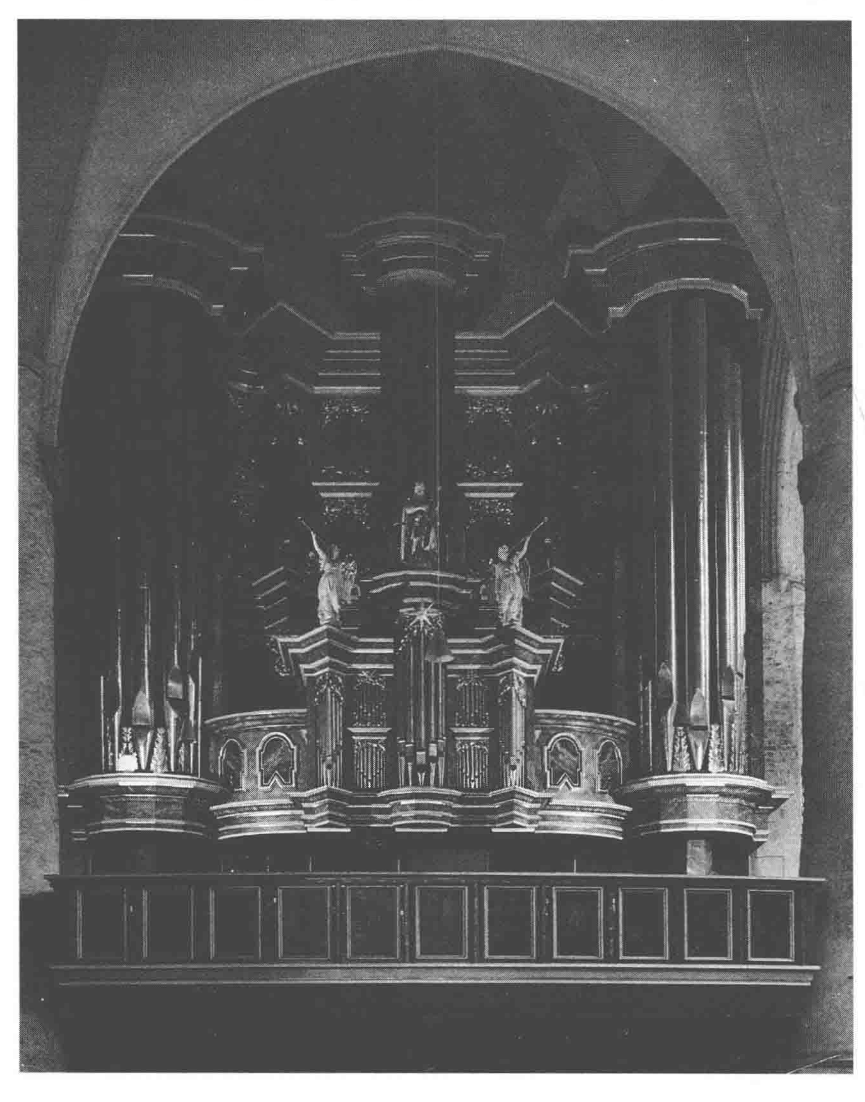
Hamburg. City and port in Germany.

1. Church music. 2. Organ music. 3. Opera. 4. Concert life and instrument makers. 5. Criticism. 6. Broadcasting. 7. Education, musicology.

1. Church music. Hamburg was chosen as the seat of a diocese in 831 and of an archdiocese in 834. A cathedral and a Benedictine monastery with a mission school were established under Archbishop Ansgar. The earliest recorded musical activity was confined to the context of the church and monastic practice; there is reliable evidence of occasional instrumental music. The oldest surviving musical document is an 11th-century cathedral missal (now in *I-Rv*), and other music manuscripts date from the 15th century (Offices of the Mass, one antiphoner, one rhymed Office). Hamburg's adoption of the Lutheran faith resulted in the expulsion of the priests and monks and the destruction of the cathedral and, with it, of important source material of pre-Reformation musical practices. In 1529 Johannes Bugenhagen brought together the secular musical establishments (those of the city and the schools) and the ecclesiastical institutions, to standardize the performance of sacred music. The successor to the old cathedral school, the newly founded Johanneum Lateinschule, continued the cultivation of sacred music. The importance of music in the school is illustrated by the music master's being third in the hierarchy, after the co-rector, until the mid-18th century. The Stadtkantor was responsible for sacred music in the four (later five) parish churches. His singing classes were part of the daily curriculum. The singing in the parish churches (the Petrikirche, Nikolaikirche, St Katharinen, Jacobikirche and later the Michaeliskirche) was under his direction. He had to be an MA and later bore the title Musikdirektor der Hauptkirchen, assisted by the younger teachers from the grammar school. The office was held by Franciscus Ehlers (to 1590), Eberhard Decker (to 1604), Erasmus Sartorius (to 1637), Thomas Selle (to 1663), Christoph Bernhard (to 1674), Joachim Gerstenbüttel (to 1721), Telemann (to 1767), C.P.E. Bach (to 1788) and Christian Friedrich Gottlieb Schwencke (to 1822).

During the 17th century Hamburg prospered as the trading capital of north Germany, and increasing numbers of foreign musicians brought the stimulus of southern European practices: the introduction of the polychoral style in the churches shows the influence of Gabrieli. The first polyphonic Passion was performed in the Gertrudenkirche in 1609 under Sartorius, and the use of instrumentalists is recorded from 1612, before Selle's appointment. Selle's term of office marked the zenith of the development of church music in Hamburg. In 1643 he established a Kantorei which included eight to ten salaried singers, and by about 1657 musical life in the city had expanded to such an extent that 'well-ordered' music could be heard throughout the year. The city deployed the full glory of its musical institutions on special occasions, such as the centenary of the Reformation in 1617, and the celebration of the peace treaty of 1648. Selle's *St John Passion* (1643), the first to include instrumental interludes, was the archetype of the oratorio Passion which subsequently developed as a distinct genre and made Hamburg the chief centre of German oratorio. The artistic authority with which Selle invested the office of Stadtkantor was reflected in the unusual honours accorded to Bernhard, a disciple of Schütz, when he was ceremoniously installed in the post by the city council in 1663.



However, the peak was already past. Bernhard's resignation in 1674 in favour of a vice-Kapellmeister's post at the court of Dresden marked the beginning of a decline in the attractiveness and importance of the Hamburg post which Gerstenbüttel, appointed in 1675, was unable to halt. The indifference towards *musica sacra* of both the public and the administration encouraged others to transform the musical life of the city-state. The council musicians (Ratsmusikanten) did everything to gain control over the music for the great festivals, and so to divorce the office of the Stadtkantor from civic musical life. This process of secularization promoted the foundation of the Oper am Gänsemarkt. Opera was thus immediately cast as the rival of church music, which was the real reason for the clergy's opposition to the changes. Gerstenbüttel was powerless to prevent them and died lonely and embittered. It was at the end of his term of office that J.S. Bach applied, without success, for the post of organist of the Jacobikirche (1720).

Telemann, who was appointed precentor at the Johanneum and Musikdirektor of the five parish churches in 1721, was able to restore some of the dignity and former reputation of the office, but he did not rely exclusively on his activities in the churches to support his artistic authority. In 1722 he took over the direction of the opera, but at the same time retained control over the various annual civic ceremonies, so that the ultimate authority in all sectors of musical life rested in him. Telemann (like Keiser, Handel and Mattheson, among others) set the strongly Pietist Passion text by the poet and senator Barthold Heinrich Brockes, and he took pains to ensure that all four versions were performed in Hamburg during Easter week for many years in succession. C.P.E. Bach (appointed 1768) did not confine the office to ecclesiastical duties; he no longer complied with the requirement that he should compose cantatas for Sundays throughout the year, and the Passion settings he supplied for Easter week were by older composers (J.S. Bach, Telemann) in pastiche versions of his own. His popular oratorio *Die Israeliten in der Wüste* (composed 1768–9) was deliberately constructed in such a form that it could be performed 'in and outside the church'. After Bach's death in 1788 the authorities seriously considered abolishing the post of Musikdirektor; nevertheless, it was filled once more, by C.F.G. Schwencke. The facilities at his disposal were so sharply reduced, however, that he was unable to make any mark.

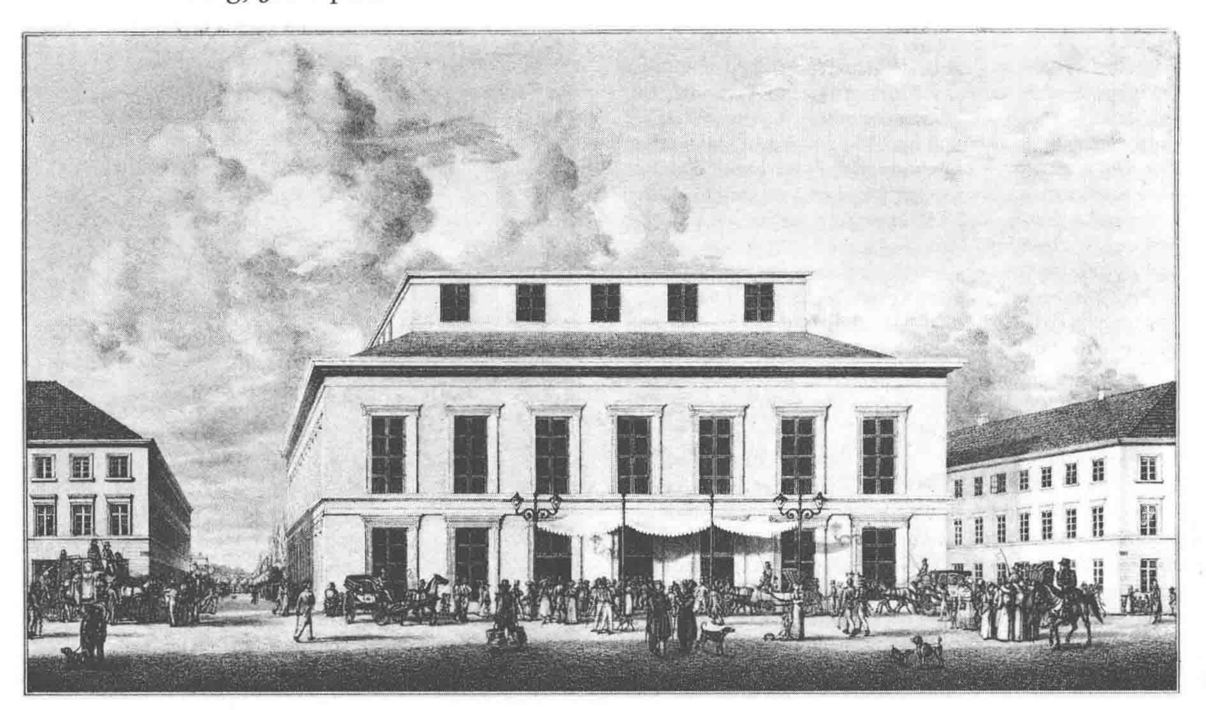
The political confusion of the years after the French Revolution hastened the decline, and with Schwencke's early death in 1822 the office of Stadtkantor was abolished. Thereafter the organization of church music in Hamburg rested with precentors and organists of individual churches, within the framework of the regular services. The performance of larger-scale works was no longer bound up with their liturgical context. With the Gesellschaft der Freunde Religiösen Gesanges, founded in 1819 and reconstituted as the Hamburger Singakademie in 1844, the transition from institutional church music to the modern practice of concert performances was completed. In 1823 the society arranged a large festival in the Michaeliskirche featuring Handel oratorios. The most prominent choirs in Hamburg are the Städtischer Chor (founded 1938 by Adolf Detel), the Monteverdi

Chor (founded in 1955 by Jürgen Jürgens), the Bergedorfer Kammerchor (founded in 1946 by Hellmut Wormsbächer), the Altonaer Singakademie (founded in 1853 by John Böie), the Cappella vocale (founded in 1966 by Martin Behrmann), the choir of the Michaeliskirche, the Bachchor St Petri and the Kantorei St Jacobi.

2. ORGAN MUSIC. The efflorescence of church music in Hamburg in the 17th century made the city the chief centre of north German organ music. There is evidence of organs in the cathedral and the parish churches at least as early as the 15th century. The most important organ builder was Arp Schnitger (1648–1719) of Neuenfelde near Hamburg, who supplied instruments of high quality to churches all over north Germany and the Netherlands; he built more than 20 organs for the Hamburg area alone, the largest being for the Nikolaikirche (1682) and the Jacobikirche (1689–93; fig.1). The latter survives, as do four others near Hamburg (Neuenfelde, Steinkirchen, Cappel, Lüdingworth), and they provided the model for the revival of organ building led by the poet and organ enthusiast Hans Henny Jahnn in the 1920s. In Amsterdam Sweelinck became known as the 'Hamburg organist-maker', with such distinguished pupils as Jacob Praetorius (ii) (Petrikirche), his brother Johannes Praetorius (Nikolaikirche) and Scheidemann (St Katharinen). The foundations of a reputable playing tradition had been laid by Jacob Praetorius (i), a pupil of Agricola, and his son Hieronymus Praetorius (1560–1629), both of whom were organists at the Jacobikirche. Organ playing in Hamburg reached its peak when J.A. Reincken, a pupil of Scheidemann, was at St Katharinen (from 1663), and Vincent Lübeck at the Nikolaikirche (from 1702). Matthias Weckmann, a pupil of Schütz and Jacob Praetorius (ii), gained special distinction while he was organist of the Jacobikirche by founding the great collegium musicum in 1660 and so making the first move towards the organization of concerts in the city. Organ playing yielded some of its importance to other kinds of music in the 18th century. The fact that J.S. Bach withdrew his application for the post of organist at the Jacobikirche in 1720, after acquainting himself with all the local circumstances, is evidence of its declining significance. It was not until the 19th century that public organ recitals became popular, and then most of the performers were visitors to Hamburg. Alfred Sittard was the first local organist for many years to gain a wider reputation; he had studied with Carl

1. Organ built by Arp Schnitger, 1689–93, Jacobikirche, Hamburg

Armbrust, the organist of the Petrikirche, who introduced historical organ recitals in 1886, and succeeded him in the post at the age of 18. In 1912 he drew up the specifications for an organ for the rebuilt Michaeliskirche; constructed by Walcker, it had 163 stops and was at that date the largest organ in the world. Sittard and Walcker were also responsible for the large concert organ in the Musikhalle (1908). In 1925 Hamburg played a dominant part in the Hamburg-Lübeck Organ Conference, organized by Jahnn, whereby north Germany became a centre of the 20th-century organ movement. Heinz Wunderlich, Kirchenmusikdirektor at the Jacobikirche (1958–82) and a noted interpreter of Bach's organ works, directed the reinstallation of the Arp Schnitger organ in the nave (1961) and the building of a new symphonic organ (Kemper) in the aisle (1960, enlarged 1970). The Schnitger organ, which has nearly 4000 pipes and 60 stops, was faithfully restored by Jürgen Ahrend.

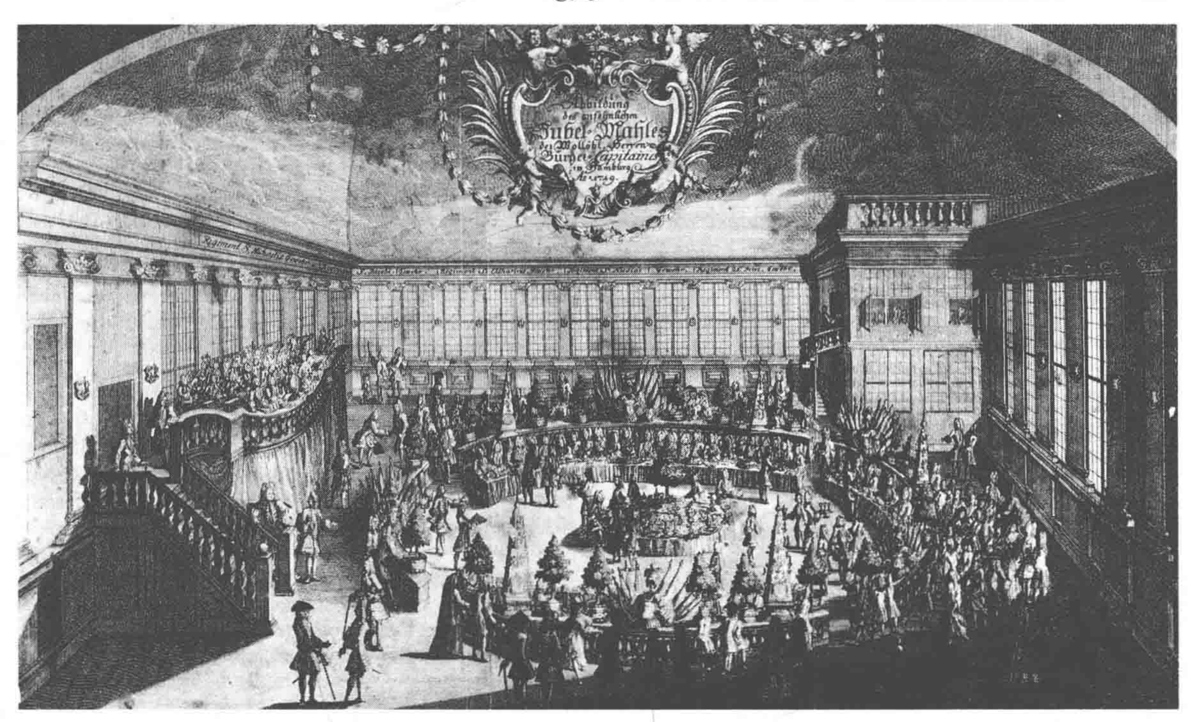


3. Opera. By 1680 the city had a population of about 70,000. Most of its growth and commercial prosperity resulted from the influx of foreigners and a consequent policy of neutrality. A need for public musical entertainment developed, encouraging a group of enlightened citizens to establish the first public opera enterprise. In the face of violent opposition from the church authorities, patrician, lawyer and, later, Senator Gerhard Schott, the musicians N.A. Strungk, J.W. Franck, Johann Theile and J.A. Reincken and the physician and composer Johann Philipp Förtsch founded the first German opera company. In 1677 Schott engaged the Italian architect Sartorio to build an opera house on the Venetian model at the Gänsemarkt (close to the present Staatsoper). The first public opera house in Germany, it opened on 2 January 1678 with Theile's *Der erschaffene, gefallene und auffgerichtete Mensch*. The need to make concessions towards the watchful clergy is shown in the choice of exclusively biblical subjects in the early years (fig.2). By the turn of the century the company risked popular, even sensational, plots like *Störtebecker und Jödge Michaels*, featuring two infamous pirates (1701, music by Keiser). The most notable librettists writing for the Hamburg theatre were the Bürgermeister Lucas von Bostel (1649–1716), the lawyer C.H. Postel (1658–1705), the pastor of St Katharinen Heinrich Elmenhorst, the licentiate Hinsch, the jurist C.F. Hunold (known as Menantes, 1681–1720), the writer Barthold Feind (1678–1721), and Friedrich Christian Bressand and Ulrich König. The first composers at the Gänsemarktoper were leading local musicians (Theile, Strungk, Franck, Förtsch and J.G. Conradi), but Johann Sigismund Kusser who, together with Jacob Kremberg, took over the direction from Senator Schott in 1693, introduced Italian vocal techniques, thus giving the opera the artistic impetus it needed. Its heyday was under Keiser, who moved to Hamburg in 1695. He wrote more than 60 operas for the company and under his direction (1703–7) there was a sharp rise in standards, interrupted by civil unrest and financial difficulties. The fame of the new opera drew Handel to the city (1703–6) to serve his theatrical apprenticeship under Keiser and Johann Mattheson. Handel composed four operas for Hamburg, of which only *Almira* survives. Mattheson was an important figure in Hamburg's musical life: after an early involvement in opera composition he turned increasingly to writing about music and became one of the most important theorists of his time.

2. Scene from J.W. Franck's opera 'Charitine, oder Göttlich-Geliebte', Theater am Gänsemarkt, Hamburg, 1681: engraving from the libretto by Heinrich Elmenhorst

The final flowering of this early phase of Hamburg opera was a series of successful stage works by Telemann, who took over the direction of the opera house in 1722. His 20 or so works written for Hamburg, beginning with *Der geduldige Sokrates* (1721), briefly halted the decline of the enterprise, but from 1738 travelling companies with an overwhelmingly Italian repertory dominated the scene. In 1765 the old opera house, which was probably demolished in 1757, was replaced by a new theatre built by K.E. Ackermann. The German national theatre advocated by Lessing remained unbuilt. Standards rose again while the house was directed by Friedrich Ludwig Schröder (1771–80, 1786–99, 1811–12). Although his interest lay chiefly in non-musical drama, he also gave Hamburg the opportunity to hear operas by Gluck and Mozart. In 1825 a new civic theatre, the Theater am Dammtor (fig.3), was built on the Kalkhof, near the old city gate, for the performance of plays, opera, operetta and ballet. It opened in 1827 with Goethe's *Egmont*. The Thalia-Theater, opened in 1842, was devoted primarily to light entertainment. The economic crisis of the mid-19th century precipitated a general slackening of interest and lowering of standards, but from 1874, in a modernized theatre, Bernhard Pohl (known as Pollini), an Intendant of international stature, brought Hamburg theatre up to date musically and technically. He made Hamburg one of the centres for the performance of Wagner; he had a reliable instinct for singers' potentialities, and the knack of attracting distinguished conductors, including Mahler (1891–7). By the time of Mahler's début Pollini had already had electricity installed. During the Mahler period the Stadttheater achieved a unique reputation in Germany.

After a production of *Tannhäuser*, Arthur Nikisch became permanent guest conductor from 1901. Eugen



3. Theater am Dammtor, Hamburg, designed by Karl Friedrich Schinkel: lithograph by Otto Spookler, 1826–7

d'Albert and Gustave Charpentier also performed their own works, and in 1904 Richard Strauss conducted his *Feuersnot*. The operas of Siegfried Wagner and Strauss (especially *Der Rosenkavalier*) held a special position in Hamburg. The guest appearances of Enrico Caruso between 1906 and 1913 caused a sensation. Hans Loewenfeld, who managed the house from 1912, staged works by Mozart, Verdi and Wagner and even included Schreker's *Der ferne Klang* (1914) and Korngold's *Die tote Stadt* (1920). He engaged the outstanding conductors Klemperer (1910–12) and Egon Pollak (1917–32), the first 'Hanseatischer Musikdirektor'. After Loewenfeld's death in 1921 Leopold Sachse, who was also a stage director, took over the direction of the Stadttheater and continued to present contemporary operas such as Strauss's *Elektra* and *Ariadne auf Naxos*, Janáček's *Jenůfa*, Busoni's *Doktor Faust*, Krenek's *Jonny spielt auf*, Korngold's *Das Wunder der Heliane* and Respighi's *La campana sommersa*. Karl Böhm was appointed Generalmusikdirektor in 1931 and held the post for three years.

Soon after the Nazis came to power the Jewish director Sachse was dismissed without notice. Many fine artists of Jewish origin were obliged to leave the theatre (which was renamed the Hamburgische Staatsoper in 1933). In 1934 Eugen Jochum became music diretor. The stage director Oscar Fritz Schuh and the designer W. Reinking developed a scenic style of 'magic realism' not in keeping with the prevailing political climate. In 1940 Alfred Noller took over as Intendant from Hans Strohm, who had tried to protect Jewish artists as long as possible. In August 1943 the large auditorium was destroyed in an air raid.

Makeshift productions of staged music began again in the summer of 1946 under Günther Rennert, the first postwar director. In 1955 the provisional auditorium was replaced by a new structure with 1675 seats, but incorporating the old stage and machinery that had survived the bombing. The productions of Rennert and Generalmusikdirektor Leopold Ludwig (1950–71) were highly appreciated in the young republic. They mounted works by Britten, Hindemith, Honegger, Krenek, Menotti and Stravinsky, most of which had been suppressed during the Nazi period. Heinz Tietjen was director of the house from 1956 to 1959, later moving to Bayreuth. Rolf Liebermann's tenure as Intendant (1959–73) was marked by a deep commitment to contemporary opera, bringing the Staatsoper international recognition. Notable premières included Henze's *Der Prinz von Homburg* (1960), Stravinsky's *The Flood* (1963), Krenek's *Der goldene Bock* (1964), Bibalo's *The Smile at the Foot of the Ladder* (1965), Schuller's *The Visitation* (1966), Humphrey Searle's *Hamlet* (1968), Menotti's *Help, Help, the Globolinks!* (1968), Penderecki's *The Devils of Loudun* (1969) and Kagel's *Staatstheater* (1971).

Liebermann's successor, August Everding, was director of the theatre from 1973 to 1977, together with Horst Stein as chief conductor (1972–9) and Götz Friedrich as principal stage director (1973–7). John Neumeier became chief choreographer and ballet director in 1973 and developed a style that has become identified with Hamburg. The conductor Christoph von Dohnányi took over from Everding in 1977 and invited a number of influential directors, including Adolf Dresen, Achim Freyer and Herbert Wernicke. The chief Dramaturg Peter Dannenberg directed the experimental theatre Opera Stabile and initiated the first stagings of Wolfgang Rihm's chamber opera *Jakob Lenz* and Udo Zimmermann's *Die weisse Rose*. After the resignation of Kurt Horres, who succeeded Dohnányi in 1984 and left after one season, Liebermann returned as interim Intendant. From 1988 until 1997 the conductor Gerd Albrecht and the composer Peter Ruzicka realized a complete new *Ring* cycle and continued the rediscovery of operas by Zemlinsky, which Dohnányi had initiated. They gave premières of Zemlinsky's *Der König Kandaules* (1996) as well as Rihm's *Die Eroberung von*

4. Celebration banquet of the citizen-captains in the Drillhaus, Hamburg: engraving by Christian Fritzsch, 1719

Mexico (1992) and H.F. Lachenmann's *Das Mädchen mit den Schwefelhölzern* (1997). In 1997 Albin Hänseroth became Intendant of the Hamburgische Staatsoper and Ingo Metzmacher chief conductor of the Philharmonisches Staatsorchester.

4. Concert life and instrument makers. Secular music in Hamburg can be traced back to the references to minstrels, then still known as *histriones*, in treasury accounts of the 14th and 15th centuries. The city employed salaried musicians, *fistulatores et figellatores*, from the mid-14th century, some of them recorded by name; city trumpeters are recorded from the 15th century. In the mid-15th century the minstrels were added to the official establishment of council servants, under the direction of the council pastrycook. The number of council musicians was raised to eight in 1553. By then they were under the chief of police, the Weddeherr, and under them came the Roll-Brüder, who were entered in the roll of the guild and assisted the council musicians when needed. The extra musicians engaged for performances 'im Grünen' (i.e. in the open air) were called the Grün-Fidler, and the official register of their names the Grün-Rolle.

By the beginning of the 17th century the number of Roll-Brüder had grown so large as to endanger their very existence, so the number was restricted to 15, and new appointments were made only to fill vacancies. The posts of council musicians in Hamburg could be bought, on the French model: the retiring musician received a payment from his young successor, which could be regarded as a retirement pension. This usage was abolished in 1695, on the grounds that 'service as a musician involves the practice of an art' and could not be bought and sold like groceries. The more prominent of the directors of the council musicians (known collectively as the Ratsmusik) included William Brade (1608–10 and 1613–15), his pupil Johann Schop (i) (1621), Dietrich Becker (1667), Nicolaus Adam Strungk (1679), Friedrich Nicolaus Bruhns (1682), uncle of the Husum organist, and Hieronymus Oldenburg (1722). The participation of the council musicians in performances of sacred music augmented by the Roll-Brüder in large-scale works is recorded from 1638. The council musicians were less highly regarded than the church musicians at first, but under Brade and Schop standards rose to a level that excited respect even outside Hamburg. Schop was a leading figure of the Hamburg school of lieder writers, which drew on the Baroque poetry of Philipp von Zesen and Johannes Rist and produced both sacred and secular songs. The ambitious and energetic poetry of Rist, in particular, made him the centre of a circle which included Thomas Selle, Jacob Praetorius (ii), Peter Meier and later Matthias Weckmann and Johann Christoph Bernhard. They anticipated the popular, simple kind of melodic writing that was later developed by the Berlin circle round J.A.P. Schulz.

The first public concerts, held in the refectory of the cathedral, were organized by Matthias Weckmann and the collegium musicum he founded in 1660, comprising 50 musicians on occasion. The initiative of private citizens also helped to keep concerts going during the following decades. The imperial ambassador Count von Eckgh arranged concerts every Sunday throughout winter 1700, under the artistic direction of Mattheson or Keiser. The fact that the famous Passion text by B.H. Brockes was considered too modern to be performed in church gave a powerful impetus to public concerts in Hamburg. Outstanding musical occasions in the city included the annual jubilees of the citizen-captains and the events mounted by the College of Admiralty, under the direction of Telemann. Several public halls in the city were used for performances: the Zuchthaussaal, the Baumhaus, the Drillhaus (fig.4), the Hof von Holland, the Kaiserhof, the Klefekersche

Orangerie and, from 1761, the new Konzertsaal auf dem Kamp. The senate granted the first permit to hold subscription concerts in the new Konzertsaal to Friedrich Hartmann Graf, but Hamburg was not able to hold this highly gifted musician, who was later famous in London. From 1768 public concerts were arranged by C.P.E. Bach, who also appeared as a keyboard player, particularly on the clavichord, thus stimulating the building of that instrument by Hieronymus Hasse and his sons. Other instrument builders of note were Joachim Tielke, who made string instruments between 1680 and 1710, including the 'Hamburger Cithrinchen', and Christian Zell, who built excellent harpsichords between 1722 and 1740. From 1770 the regular private concerts promoted by the music seller Johann Christoph Westphal gained importance. The Harmonie Gesellschaft held six concerts a year from 1789 to 1828.

In the 19th century leading musicians were no longer drawn to settle in the city (which had been the principal trading centre of north Germany) but merely visited it in their European tours. Only the cello virtuoso and teacher Bernhard Heinrich Romberg and his cousin, the violinist Andreas Romberg, lived in Hamburg. In 1823 Albert Methfessel founded the Hamburg Liedertafel. The founding of the Philharmonische Konzertgesellschaft (9 November 1828) led to the formation of a professional orchestra, under Friedrich Wilhelm Grund, which provided the basis for a substantial concert life and an inducement for visiting conductors. Beethoven's Fifth Symphony was the first work performed at the first concert on 17 January 1829. Artistic policies were parsimonious, however. Mendelssohn and Brahms were both born in Hamburg, but neither formed any artistic association with his birthplace. Although, in Julius Stockhausen, the city gained a thoroughly competent musician to succeed Grund in 1863, the appointment pales into insignificance beside the failure to keep Brahms in Hamburg. Neither Julius von Bernuth, who took over from Stockhausen in 1867, nor any of the minor musicians working in Hamburg at that time, such as Louis Lee, Karl Schwencke, K.A. Krebs, Eduard Marxsen, Karl Grädener, Ludwig Meinardus, Emil Krause, Cornelius Gurlitt or Felix Woyrsch, had more than local significance. The conversion of the Wörmerscher Konzertsaal (renamed the Conventgarten) in 1871 gave Hamburg a superior concert hall. The Philharmonie was unable to withstand the competition of the subscription concerts started by the Berlin Wolff agency in 1886, under Hans von Bülow, with the orchestra of the Stadttheater, and later with the Berlin Philharmonic. Bernuth was outclassed by the distinguished conductors, such as Richard Strauss, who visited Hamburg for these concerts.

The building of the Musikhalle in 1908 signified a revival of the city's cultural activity and standing. Siegmund von Hausegger (1910–20), the first director of the Philharmonie, and Gerhard von Keussler (1920–22) laid the foundations on which Carl Muck, who took over the conductorship in 1922, was able to raise the orchestra to the best European standards. The talented Eugen Papst worked with him, as conductor of the popular Wednesday concerts and director of the Singakademie. On Muck's retirement in 1933 the Philharmonie was merged with the orchestra of the Stadttheater (1934) to form the Philharmonisches Staatsorchester, which subsequently played both in the theatre and for public concerts, under the joint directorship of Eugen Jochum and Hans Schmidt-Isserstedt. Concerts started again immediately after World War II (1 July 1945). Joseph Keilberth became conductor in 1950 and at once began to appoint younger players. In the same year the Philharmonische Gesellschaft was reconstituted under the chairmanship of the senator for culture, Heinrich Landahl. Wolfgang Sawallisch was appointed principal conductor of the Staatsorchester in 1961. The orchestra began to make foreign tours in 1960. That same year a series of university concerts were inaugurated. The Gustav Mahler Vereinigung was founded in 1988; a Telemann and a Brahms Society had already been established in the 1960s and 70s. Sawallisch was succeeded as Generalmusikdirektor of the Philharmonisches Staatsorchester by Horst Stein (1973), Aldo Ceccato (1975–83), Hans Zender (1984–7), Gerd Albrecht (1988–97) and Ingo Metzmacher (from 1997).

Although Hamburg never again experienced an age like that when musicians of international stature, Mattheson, Keiser, Handel and Telemann, chose to live in the city, it has never been entirely without creative musicians. Composers like Schwencke, Albert Methfessel, Karl Grädener, Eduard Marxsen, Emil Krause and Felix Woyrsch, though relatively minor talents, ensured that music was always a living force in the city. Composers who worked in and around Hamburg after World War II include Ilse Fromm-Michaels (1888–1986), Philipp Jarnach (1892–1982), Ernst Gernot Klussmann (1901–75), Felicitas Kukuck (*b* 1914), Hans Poser (1917–70), György Ligeti (*b* 1923), Diether de la Motte (*b* 1928), Alfred Schnittke (1934–98), Albrecht Gürsching (*b* 1934), Walter Steffens (*b* 1934), Dieter Einfeldt (*b* 1935), Günter Friedrichs (*b* 1935), Victor Suslin (*b* 1942), Jens-Peter Ostendorf (*b* 1944), Ulrich Leyendecker (*b* 1946), Peter Ruzicka (*b* 1948), Wolfgang-Andreas Schultz (*b* 1948), Manfred Trojahn (*b* 1949), Manfred Stahnke (*b* 1949), Wolfgang von Schweinitz (*b* 1953) and Babette Koblenz (*b* 1956).

5. Criticism. The traditions of journalism in Hamburg reach back to the 17th century. The *Hamburgischer Relationscourier* and the *Holsteinischer Correspondent* were published continuously throughout the 18th century and carried regular reports on music in Hamburg, Germany and Europe as a whole. Musical journalism in Germany was founded by Mattheson in 1722 with his *Critica musica*. Regular, professional music criticism did not begin until the 19th century. Arrey von Dommer and Ludwig Meinardus, both of whom wrote for the *Hamburgischer Correspondent* (1863–70; 1874–85), were the 'classic' Hamburg music critics. Later leading figures included Emil Krause (1864–1907) and Carl Armbrust of the *Hamburger Fremdenblatt*, Josef Sittard of the *Hamburgischer Correspondent* (1885–1903), Ferdinand Pfohl (1892–1932) and Paul Mirsch of the *Hamburger Nachrichten*. From 1897 until after World War I the music critic of the *Hamburger Fremdenblatt* was the widely respected Heinrich Chevalley. In the 1930s and during World War II music criticism was the domain of Hermann Roth, Hermann Erdlen and Siegfried Scheffler, and after the war, of Hans Hauptmann (several newspapers), Heinz Joachim (*Die Welt*) and Ludwig Pollner (*Hamburger Echo*). Other well-known critics were Karl Grebe, founder of the Telemann-Gesellschaft, Sabine Tomzig and Carl-Heinz Mann (*Hamburger Abendblatt*), and Peter Dannenberg (*Die Welt*). More recent writers and critics include

Heinz Josef Herbort (*Die Zeit*), Georg Borchardt, Lutz Lesle, Kläre Warnecke, Hans Christoph Worbs (*Die Welt*), Helmut Söring (*Hamburger Abendblatt*), Werner Burkhardt (*Süddeutsche Zeitung*) and Klaus Wagner (*Frankfurter Allgemeine*).

6. BROADCASTING. The establishment of the Hamburg radio station by Hans Bodenstedt in 1924 prompted the founding of the Norag-Orchester, under the direction of A. Secker, to serve the station's internal needs. In 1928 José Eibenschütz became its conductor. From 1933 it had heavy commitments as the Grosses Rundfunkorchester des Reichssenders Hamburg, and in 1945 it was enlarged to a full-scale symphony orchestra, on the model of the London BBC SO, by the British music controller, Jack Bornoff. He engaged Hans Schmidt-Isserstedt, who had been Kapellmeister at the Staatsoper (1935–42), as chief conductor soon after the armistice. Musicians were assembled from all over Germany; some were released from prison camps in Schleswig-Holstein. The new orchestra performed in public, with Yehudi Menuhin, as early as August 1945. When radio services were reorganized (1951) it became known as the Norddeutscher Rundfunk-Sinfonieorchester. Its early foreign tours included England in 1951, the USSR in 1961 and the USA in 1963. Schmidt-Isserstedt's successful tenure ended in 1971. Moshe Atzmon was chief conductor from 1972 to 1976; after an interim he was succeeded by Klaus Tennstedt (1979–81). As principal conductor from 1982 to 1990 and honorary conductor thereafter, Günter Wand raised the North German RSO to a new artistic level. Wand was succeeded by John Eliot Gardiner (1991–94), Herbert Blomstedt (1996–8) and Christoph Eschenbach (from 1998).

The Hamburg Radio Chorus was founded in 1946, under the direction of the chorus master of the Hamburg Opera, Max Thurn, who was succeeded in 1965 by Helmut Franz. In 1951 North German Radio set up 'Das neue Werk' (founded by Herbert Hübner) as a platform for contemporary music with free public performances. The station's directors of music since World War II have been Fred Hamel (1947), Harry Hermann Spitz (1947–56), Rolf Liebermann (1957–9), Winfried Zillig (1959–63), Thomas M. Langner (1963–5), Herbert Sielmann (1965–76), Uwe Röhl (1976–89) and Bernhard Hansen (1990–95), whose responsibilities for the orchestra and chorus were assumed by Rolf Beck.

7. EDUCATION, MUSICOLOGY. Institutions for teaching did not exist in Hamburg until 1873, when the Hamburger Konservatorium was founded on the initiative of Julius von Bernuth, with H. Grädener, Henry Schradieck, Louis Lee and H. Degenhardt. The Krüss-Färber-Konservatorium, founded in Altona in 1884, was directed by Albert Mayer-Reinach from 1924 to 1932. The Vogt'sches Konservatorium (founded 1899) was reorganized as the Schule für Musik und Theater in 1943, and raised to full academic status as the Staatliche Hochschule für Musik in 1950. Its directors since 1943 have been E.G. Klussmann (to 1950), Philipp Jarnach (1949–59), Wilhelm Maler (1959–69), Hajo Hinrichs (1969–78) and Hermann Rauhe (from 1978). The Kirchenmusikschule der Hamburgischen Landeskirche founded in 1938 (director H.F. Micheelsen) was merged with the Staatliche Hochschule für Musik in 1950.

In spite of Hamburg's prosperity and its musical past, the Staatsbibliothek music collection was modest until 1875, when the purchase of part of Friedrich Chrysander's library gave it international status. In 1868 131 Handel manuscripts copied by John Christopher Smith were bought by local music lovers, and in 1875 F. Gültzow donated them to the Staatsbibliothek. Arrey von Dommer, appointed secretary of the library in 1873, began to compile a comprehensive catalogue which is still an invaluable bibliographical tool. The library was almost totally lost during World War II through dispersal and bomb damage; the most serious loss was the virtually unexplored and irreplaceable collection of Johann Mattheson's manuscripts, some of which were returned in 1989–90. Fortunately, the private collection of about 300 printed music editions and 25 theoretical studies which Kantor Selle had given the Stadtbibliothek in 1659 and 1663 survived. In 1956 the library was able to buy the rest of the Chrysander library: about 3800 volumes of printed music and autographs from the 18th and 19th centuries, which Chrysander had acquired between 1875 and 1901. In 1958, on the initiative of Kurt Richter, the library began to build up a Brahms archive, which contains some valuable autographs saved from the prewar collection and new purchases. The music library, part of the Hamburger Öffentliche Bücherhallen, was founded in 1915 as the Öffentliche Musikalien Ausleihe. The Hamburger Musikbibliothek is one of the largest of its kind in Germany.

The first Hamburg musicologist was Johann Mattheson, and modern musicology was first represented in Hamburg by Chrysander and Arrey von Dommer. When the University of Hamburg was founded (1919) there was a musicology department in the Phonetisches Institut, and after 1945 it was enlarged and became independent. Hans Hoffmann and Hans-Joachim Therstappen were connected with the early phase; in 1956 an extraordinary professorial chair was founded for Heinrich Husmann. He was assisted by Fritz Feldmann, who taught principally at the Staatliche Hochschule für Musik. Hans Hickmann joined the department in 1958 as an ethnomusicologist. On the appointment of Georg von Dadelsen in 1960 the chair became a regular one, and the department has included Constantin Floros (1972–95), H.J. Marx (from 1973), Vladimir Karbusicky (1976–90), Wölfgang Dömling (from 1977), Albrecht Schneider (from 1983), Peter Petersen (from 1985) and Helmut Rösing (from 1994).

HEINZ BECKER/LUTZ LESLE

Hamburg, Jeff (*b* Philadelphia, 12 Nov 1956). American composer. He studied acoustics and composition at the University of Illinois (1975–8), continuing his studies at the Royal Conservatory in The Hague with Louis Andriessen (1978–84). Hamburg's music is steeped in Jewish culture but does not follow in the footsteps of his traditional musical education. Its fluent and vigorous idiom, whether lyrical or terse, may be inspired by multifarious Jewish musical 'dialects' from the diaspora, yet it manifests a profoundly personal texture in the way its harmonies move between tonality and modality, and in the use of an abundance of musical gestures with precision and of a lush, colouristic pallette. Voices and language predominate, and melodic lines, particularly those for the solo voice, are often characterized by the inflections of folk music. Yiddish history and poetry inform much of his work. His chamber opera *Esther* is based on the biblical story, and the moving song cycle *Zey ...* traces events in modern Jewish history. Another song cycle, *Wine, Love and Death*, is set to texts by the medieval Jewish poets Samuel Ha-Nagid and Moses Ibn Ezra. Hamburg's translation of *The Apollonian Clockwork: on Stravinsky*, by Elmer Schönberger and Louis Andriessen, was published in 1989.

WORKS
(*selective list*)

Stage: Esther (chbr op, 4, Hamburg, after Bible: *Esther*), 1993
Song cycles: Zey ... [They ...] (Z. Landau, M. Leib, J. Ha-Levy), S, fl, cl, b cl, hp, str, 1994; Wine, Love and Death (S. Ha-Nagid, M. Ibn Ezra), S, accdn, vc, 1997
Orch: Sym., E♭, 1982, rev. 1983; Partus, 1989; Schuykill, str, 1995; Klezmania, str, 1998; David, 5 psalms for wind orch, 1999
Chbr and solo inst: Passacaglia, 3 rec (amp), 1983; Yod, sax, sax/pic, trb, vn, db, pf, perc, 1986; The Golem, 5 sax, 5 tpt, 4 trbn, db, pf, drum kit, 1994; Rapide, 1995

Principal publisher: Donemus

FRANS VAN ROSSUM

Hamburger, Paul (*b* Vienna, 3 Sept 1920). British pianist and musicologist of Austrian birth. He studied at the Vienna Music Academy (1932–8) with Berta Jahn-Bear and at the RCM with Frank Merrick (1941–2), then privately with Franz Osborn. He made his début in Vienna in 1936 playing Beethoven's First Piano Concerto. In 1949 he took part in the Proms première of Malcolm Arnold's Piano Concerto for four hands (with Helen Pyke). He was coach with the English Opera Group (1952–6) and with Glyndebourne (1956–62). For the BBC he was staff accompanist (1962–76) and a music producer (1976–81). At the BBC and in public recitals he regularly partnered, among others, Heather Harper, Janet Baker, Elisabeth Söderström, Thomas Hemsley, Max van Egmond and Yfrah Neaman, displaying acute musical perception and scholarship, and formed two-piano ensembles with Helen Pyke and Liza Fuchsova. Hamburger took part in first performances of works by Robin Holloway, Phyllis Tate, Christopher Headington and others. Latterly he was professor of singing and accompanying at the GSM and conducted regular seminars for singers and accompanists. He frequently gave talks on interpretation on BBC Radio and contributed chapters to symposia on Britten, Chopin and Mozart.

ALAN BLYTH

Hamburger, Povl (*b* Copenhagen, 22 June 1901; *d* Copenhagen, 20 Nov 1972). Danish musicologist. He was taught music by S. Rung-Keller, Anders Rachlew and Thomas Laub (whose biographer he became), took the organ examination at the Royal Danish Conservatory of Music (1921) and studied musicology at Copenhagen University (MA 1928). After serving as choirmaster at Holmens Church in Copenhagen (1925–44), he was organist and choirmaster of Dyssegårds Church (1944–72); he also worked as music critic for the newspaper *Politiken* (1929–42). He taught music at the Royal Institute for the Blind (1940–60) and in 1945 began to teach at the musicology institute of the University of Copenhagen, where he was subsequently appointed lecturer (1951–72) and from where he received the doctorate in 1955 with a dissertation on harmonic theory. He was a dedicated teacher and wrote a number of widely used teaching manuals on music history, harmony and counterpoint. His *Studien zur Vokalpolyphonie* (1956; 1964–5) supplement and revise Jeppesen's exposition of Palestrina's contrapuntal style. He edited a revised second edition (1940) of the *Illustreret musikleksikon* by Panum and Behrend (later superseded by his *Aschehougs musikleksikon*, 1957–8) and various collections of early organ and choral music. He also composed liturgical organ music, songs and choral pieces, of which several have achieved wide popularity and become part of the traditional national song repertory. In 1971 the Festschrift *Elleve kortere musikhistoriske og musikteoretiske bidrag tilegnet Dr. phil. Povl Hamburger* (Copenhagen, 1971) was published to mark his 70th birthday.

JOHN BERGSAGEL

Hamburger Cithrinchen (Ger.). *See* CITHRINCHEN.

Hamdaouia, Hajja (*b* Casablanca, *c*1940). Moroccan singer. She began her career in the tradition of the *shīkhāt* (women performers of song and dance). In the 1950s she was among the first *shīkhāt* to appear on the radio when she joined the radio troop of al-Ḥbīb al-Kedmīr, which included the famous singer Bouchaib al-Bidaoui. Thereafter she performed regularly in cabarets in Morocco, Algeria and Tunisia. She rose to popularity in the late 1960s through performances in cabarets in Casablanca and Rabat as well as broadcasting and recording. Her major innovation was the use of a large, all-male orchestra to accompany the songs of the *'āita* genre. An *'āita* singer is typically accompanied by one male violinist and a small ensemble of women playing the *ta'rīja* (small goblet drum), the *bandīr* (frame drum) and the *nwaqset* (finger cymbals). Hamdaouia's orchestra included the *'ūd* (lute), the *nay* (flute), several *kamanja* (violins), the *ṭār* (tambourine) and the *darbukka* (goblet drum) and played arrangements by the composer Maati el-Bidaoui. It was provocative for a classical orchestra of this type, with its connotations of sophistication, to be fronted by a *shīkha* with a *bandīr*, a virtual icon of low morals. Hamdaouia drew her songs from the compositions of violinist Maréchal Kibbo and from the standard repertory of *'āita*; improvisation of lyrics is valued in this genre and she was noted for the clever way she inserted new texts into existing songs.

TIMOTHY D. FUSON

Hämeenniemi, Eero (*b* Valkeakoski, 29 April 1951). Finnish composer. He studied with Paavo Heininen at the

Sibelius Academy in Helsinki (diploma 1978), Boguslaw Schäffer in Kraków and Donatoni in Siena, before spending a year in the USA at the Eastman School of Music, where he studied with Schwantner. He was, in 1977, one of the founding members of the Ears Open society, but soon distanced himself from their starting-point, which was the mainstream of Central European modernism. In the USA he became acquainted with the pitch class set theory, on which he is the author of a textbook. Since travelling to India, where he now stays yearly for a couple of months, his main interests have been the Karnatik music of South India as well as improvisation (often with Indian musicians and dancers) and jazz. Between 1982 and 1998 he taught music theory and composition at the Sibelius Academy. He now concentrates on composing and performing on the piano with his Nada ensemble, which consists of both classical and jazz musicians.

Hämeenniemi is primarily a composer of orchestral and instrumental chamber music, in a freely chromatic, lyrical style. Motives, melodies and chords, the basic elements of his music, form a network of intertextual references and layered structures, as exemplified in the two symphonies (1983, 1988) and the ballets *Loviisa* (1986) and *Leonardo* (1988). In the 1990s he began to adopt elements from outside Western art music, and they became an organic part of his language without any abrupt change of style. His melodies, embedded in a freely chromatic harmony, are based on stepwise motion, spiced by 7ths and augmented 4ths. Tonal poles are created and maintained by techniques such as sustained bass notes and octave doublings, but functional tonality is seldom used, except in the jazz pieces. The influence of South Indian music is first apparent in works such as *Darshan* for flute and strings (1990); here he employs a kind of *rāga* principle, in so far as there are a number of fixed pitches which in turn involve specific types of melodic movement. In his works based on improvisation (the big band pieces, the Chamber Concerto of 1997, etc.) musicians are given a scale, its tonal hierarchy, and instructions concerning characteristic patterns on which to improvise. The blending of European and South Indian traditions increased in the 1990s and reaches its fulfilment in *Lintu ja tuuli* ('The Bird and the Wind', 1994) for soprano, strings and Indian classical dancers, realized in co-operation with the choreographer Shobana Jeyasingh, as well as in *Layapriya* (1996) for South Indian percussionists and orchestra.

Hamel, Margarete. *See* SCHICK, MARGARETE.

Hamel, Marie-Pierre (*b* Auneuil, Oise, 24 Feb 1786; *d* Beauvais, 25 July 1879). French organ building consultant and writer. An amateur organ builder from his youth (he was by profession a court judge), he oversaw and probably participated actively in the monumental organ project at Beauvais Cathedral (1826–8) by the Belgian builder Cosyn, and gained a reputation for knowledge and integrity in evaluating organ construction and restoration. In Beauvais he participated in the founding of the Société Philharmonique in 1825 and of the Société Académique in 1841 (he was vice-president from 1854 until his death). He was appointed a member of the Commission des Arts et Edifices Religieux and wrote official reports in this capacity, one of which, for Ste Marie-Madeleine in Paris, was published in 1846. His major work, however, was a revised and expanded edition of Bédos de Celles' mid-18th-century treatise, in the form of the much cited *Nouveau manuel complet du facteur d'orgues* (Paris, 1849, 2/1903), consisting of three volumes of text and one of plates.

GUY OLDHAM/KURT LUEDERS

Hamel, Peter Michael (*b* Munich, 15 July 1947). German composer. Between 1965 and 1970 he studied composition with Büchtger and Bialas at the Munich Musikhochschule, as well as musicology (with Georgiades and Dahlhaus), sociology and psychology at Munich University and Berlin Technical University. From 1969 to 1974 he worked with Riedl (on intermedia projects), Morton Feldman, Luc Ferrari and Carl Orff. Between 1984 and 1992 he studied musical phenomenology and orchestration with Celibidache, who conducted the first performance of his symphony *Die Lichtung* (1985–7) in 1988. Hamel taught composition at Graz Hochschule für Musik from 1993 to 1997, before assuming a similar post at the Hochschule für Musik und Theater, Hamburg. He was the recipient of the Munich arts prize in 1988–9 and the Carl Orff prize in 1994–5.

In 1970, with five other musicians, Hamel founded the intercultural and pancultural improvisation group Between, an ensemble devoted to his fundamental concept of music as an expressive medium that tries to override distinctions between different cultures and styles. He has pursued this aim more intensively since 1972, exploring non-European music, especially of East Asia. He has spent several long periods in India studying traditional music, singing and breathing techniques. These experiences, as well as the influence of Jean Gebser's writings, have

enabled Hamel to formulate his ideal of 'integral music', a union of mental, mythical and magical consciousness. Both his book *Durch Musik zum selbst* (Berne, 1976) and his part in founding the Freies Musikzentrum München (1978), where social work, music education, music therapy and ethnic musics are all brought together, illustrate his devotion to broadening Eurocentric musical horizons. Since the early 1980s he has been intensively involved with music theatre and the exploration of microintervals, seeking an amalgam of spirituality and socio-political action within music, which for him is the way to integral consciousness.

STEFAN FRICKE

Hamelin, Marc-André (*b* Montreal, 5 Sept 1961). Canadian pianist and composer. He studied with Yvonne Hubert (a Cortot pupil) in Montreal before further studies in the USA with Harvey Weedon and Russell Sherman. In 1985 he won first prize in the Carnegie Hall International American Music Competition. He made his London recital début, performing Schumann's *Carnaval* and the Alkan Concerto, at St John's, Smith Square, in 1992, gave three Wigmore Hall programmes devoted to Romantic virtuoso music in 1994, and made his Berlin recital début in 1998. Although especially associated with modern music, his repertory is exceptionally extensive. Hamelin has performed and recorded music by Sorabji, Stefan Wolpe, William Bolcom, Rzewski, Sophie-Carmen Eckhardt-Gramatté (the six piano sonatas), Ives, Maurice Wright and Villa-Lobos, as well as Liszt, Godowsky, Alkan, Medtner and Skryabin (the complete sonatas of the two last-named composers). He has also recorded a recital of cabaret songs by Schoenberg, Britten, Bolcom and others with his wife, the American soprano Jody Applebaum. His performances are notable for their mastery of the most outlandish difficulties. A talented composer and arranger, Hamelin has written works which take virtuoso pianism to its limit, for example a series of canonic studies on Liszt's *La campanella* and an arrangement of all three of Chopin's A minor études.

BRYCE MORRISON

Hamelle. French firm of music publishers. It was founded by Julien Hamelle (*d* 1917) in 1877 when he took over the business of J. Maho (founded 1851) in the boulevard Malesherbes, Paris. The firm specializes in 19th-century French repertory, particularly piano, vocal and instrumental music. It published some of the early works of Saint-Saëns, Franck, d'Indy and Debussy as well as many works by Widor and, more especially, Fauré (virtually everything up to op.85); in 1995 it published the 1893 version of Faure's Requiem in an edition by J.-M. Nectoux and Roger Delage. In 1993 the firm was taken over by Alphonse Leduc.

ALAN POPE

Hamerik [Hammerich]. Danish family of musicians.

(1) **Asger Hamerik** [Hammerich] (*b* Frederiksberg, nr Copenhagen, 8 April 1843; *d* Frederiksberg, 13 July 1923). Composer, conductor and teacher. He was the son of the Rev. Frederik Hammerich, professor of church history at the University of Copenhagen, and was related on his mother's side to the Horneman and Hartmann families, hence to most of the leading musicians in Denmark at that time (including Gade and Winding) and his contact with them gave his own musical gifts early encouragement. From 1859 to 1862 he studied music theory with Gottfred Matthison-Hansen and the piano with Haberbier and received help in composition from Gade and Hartmann. Performances of his compositions followed at once – the ballade *Roland* (1859) and an unidentified orchestral work (1860). In 1862, after a brief stay in London, he went to Berlin, where he became a piano and conducting pupil of Bülow. At the outbreak of hostilities between Germany and Denmark in 1864 he left Berlin and, declining Wagner's invitation to Munich, went to Paris, changed the spelling of his name from the Germanic Hammerich to Hamerik and, according to Bülow, became a pupil of Berlioz. (He later claimed to have been Berlioz's only pupil; it appears, at least, that he enjoyed a privileged relationship, being much encouraged and helped by him.) In 1865 excerpts from his first opera *Tovelille* op.12 were performed in concert at the Salle Pleyel, and during a brief stay in Stockholm in the same year he composed a *Frihetshymne* to celebrate the revision of the Swedish constitution. His *Hymne de la paix*, for chorus and a large orchestra (including two organs, 14 harps and four sets of bells), was warmly received at the Paris Exhibition of 1867, at which he sat on the music jury with Rossini and Auber. When Berlioz died in 1869 Hamerik left Paris and went to Italy, where his third opera, *La vendetta* op.20, was composed and produced.

During this time Hamerik's abilities as a conductor also attracted attention, and early in 1871 he was invited to go to the USA as the director of the conservatory of the Peabody Institute in Baltimore. During his 27 years in this capacity he exerted an important influence on American musical life. He became an exponent of Scandinavian

Romanticism and during the next five years wrote his five *Nordische Suiten*, based on Scandinavian folk melodies. These were followed by a series of six symphonies which, like the suites and the Requiem op.34, were first performed in Baltimore. His last significant work was the Choral Symphony op.40 (1898) which, to his own text in three parts dealing with life, death and resurrection, is the culmination of the spiritual development revealed in his large-scale choral music and of his development as a symphonist; it also marked his farewell to the USA. After a conducting tour of Europe he settled in Copenhagen in May 1900; during the latter part of his life he composed little and assumed no leading role in Danish musical life. Hamerik seems never to have been properly appreciated by the Danish public, but despite his association with Berlioz, whose influence is apparent in his orchestral technique and in his adaptation of a kind of idée fixe technique in his symphonies, and despite his long stay in the USA, Hamerik's Danishness remains evident and his symphonies constitute an important chapter in the history of the genre in Denmark between those of Gade and Nielsen.

(2) Angul Hammerich (*b* Copenhagen, 25 Nov 1848; *d* Frederiksberg, nr Copenhagen, 26 April 1931). Music historian, brother of (1) Asger Hamerik. He studied the cello with Rüdinger, later with Neruda, and the piano and theory with C.F.E. Horneman. Despite his interest in music he took a degree in political science at the University of Copenhagen (1872) and worked for some years in a government department. In 1876 he began writing music reviews for a weekly paper *Naer og fjern* and later also for the *Illustreret tidende*. When, in 1880, he became music critic for *Nationaltidende* as well, he gave up his government job and devoted himself entirely to music. After research trips to Germany, France and Italy, he submitted to the University of Copenhagen a thesis on music and musicians at the court of Christian IV, based on pioneering archival studies, for which he was awarded the first doctoral degree in music history from a Danish university (1892). In 1896 he became the first reader in music history at the University of Copenhagen, a post he held until 1922.

Hammerich became interested in the history of instruments and published an essay on Scandinavian Bronze Age horns (1893) and a valuable description of the 1610 Compenius organ in the Frederiksborg Castle (1897). His initiative led to the founding of the Museum of the History of Music in Copenhagen (1897), of which he was director until his death and for which he produced a catalogue in 1909. In 1899 he published his fundamental study of Icelandic music, and in 1912 he revealed the existence of more ancient musical source material in Denmark in *Musikmindesmaerker fra Middelalderen i Danmark*, which contains a valuable collection of facsimiles. His essays on J.P.E. Hartmann include a study of the Danish national song *Kong Christian stod ved højen mast*. His last publication was a monograph on Danish medieval and Renaissance music. Hammerich's investigations and publications of the historical resources in Denmark and his reintroduction of the study of music into the university curriculum provided, together with the research of Thrane, Ravn and Hagen, the foundation for the modern development of musicology in Denmark.

(3) Ebbe Hamerik (*b* Copenhagen, 5 Sept 1898; *d* in the Kattegat, 11 Aug 1951). Composer and conductor, son of (1) Asger Hamerik. He was first taught theory and orchestration by his father, after leaving school in 1916.

During the following years he studied conducting with Frank van der Stucken and, after a remarkable début as a conductor in 1919, was appointed second *kapelmester* at the Royal Theatre in Copenhagen the same year. Dissatisfied with the lack of stimulating work in the theatre, however, he resumed his studies abroad in 1922 and returned to Copenhagen only in 1927 as conductor of the Musikforening. In this capacity he weighted his repertory towards modern music, including works by Bartók, Ravel, Falla, Reger, Kodály and Prokofiev. By this time he had also made a name for himself as a composer. His first opera, *Stepan*, had its première in Mainz in 1924, and the ballet *Dionysia* in Antwerp in 1927. During the years after the dissolution of the Musikforening in 1931, Hamerik continued to conduct in Denmark, notably with the Danish RSO and the Unge Tonekunstneres Orkester, and also in Austria and Germany. In 1939 he volunteered for service in the Finnish Winter War. After his return to Denmark in spring 1940, he had his greatest operatic success to date when he conducted the first performance of *Marie Grubbe* in the Royal Theatre in Copenhagen. From 1939 to 1943 he was guest conductor of the Danish RSO, but concentrated on composition from that time onwards. He frequently found inspiration for his music during solitary sea voyages, a passion which finally resulted in his death by drowning.

Opera and symphony were the two spheres in which Hamerik made his most substantial contribution to Danish music. He was the most important opera composer of his generation, and even though his success in Denmark was limited – two of his operas were given their premières abroad and his last, *Drømmerne*, was not produced until 23 years after his death – he remained preoccupied with the form throughout his life. His work ranged from a Danish national style of simple lyricism, as in *Marie Grubbe*, to the polytonal music drama of *Drømmerne*, where the text is spoken by actors and the orchestra has an illustrative function in preludes and interludes. As a composer of symphonies he found a personal solution for the problem of form created by the daunting example of Nielsen: his are short cantus firmus works, monothematic but in several movements, and cast in a contemporary orchestral polyphony that avoids stylistic pastiche in favour of closely knit orchestral writing of, at times, an almost eruptive power of expression. Hamerik's other works appear less substantial, though his Wind Quintet (1942) is important.

Hamidov, Abdurahim (*b* Tashkent, 10 Aug 1952). Uzbek *dutār* player. From 1972 to 1977 he studied with Fakhriddin Sadyqov at the Tashkent State Conservatory and absorbed the traditions of the Fergana, Tashkent and Khorezm schools of *dutār* playing. He founded the *makom* instrumental ensemble at the Tashkent State Conservatory and developed the practice of ensemble performance of the *makom* repertory on instruments including the *nay*, the *ghidjak*, the *chang*, the *rubāb*, the *dutār*, the *qoshnay*, the *doira* and the *ṭanbūr*. His *dutār* playing displays mastery of several techniques of ornamentation including *kochirim* (melisma), *tolkinlatish* (vibrato), *molish* (long glissando from one tone to the next) and *kashish* (short glissando of a half-tone or a tone). He has written two books about Uzbek music.

RAZIA SULTANOVA

Hamilton [née Barlow], Lady **Catherine** (*b* Colby, Pembrokeshire, *c*1738; *d* Portici, 27 Aug 1782). Welsh or English keyboard player. In 1758 she married the Hon. William Hamilton, later (1772) Sir William, British Envoy Extraordinary at Naples from 1764 to 1800, better known through his second wife, Emma. Catherine became an accomplished and much admired player on the spinet, harpsichord and piano. Leopold Mozart, at Naples in 1770, testified to her 'unusual feeling' as performer and mentioned her Shudi harpsichord. 'She trembled', however, 'at having to play before Wolfgang'. A few months later Burney declared her the best harpsichord performer at Naples, better even than Paolo Orgitano, distinguished by 'great neatness, and more expression and meaning in her playing, than is often found among lady-players'. A portrait of Sir William and Lady Hamilton by David Allan shows her at an English square piano in their *casino* near Portici. When Michael Kelly visited them in 1779 he found her to be 'considered the finest piano-forte player in Italy'.

William Beckford, the future author of *Vathek*, went there in 1780 and 1782, and in 1781 tried at Augsburg the hammerklavier ordered by her from Johann Andreas Stein. Beckford's correspondence tells much of the angelic spirit of Lady Hamilton and her art, even of her compositions, though one solitary minuet in C.F. Weideman's *Entradas and Minuets for the Balls at Court* (*GB-Lbl*) is all we know of her own work. Among her musical friends were John Burton, an eminent keyboard player, and Johann Franz Xaver Sterkel, who played piano duets with her on two instruments at the Naples court. She was

buried at Milford Haven, where Sir William was laid beside her in 1803.

OTTO ERICH DEUTSCH/SIMON McVEIGH

Hamilton, David (Blair) (*b* Napier, 21 Dec 1955). New Zealand composer. He studied composition with Douglas Mews and John Rimmer at Auckland University. After graduating in 1979, he trained as a teacher and joined the staff of Epsom Girls' Grammar School, where he has been head of music since 1986.

Hamilton gained early recognition as a composer by winning three national competitions in 1978 and 1979. This led to numerous commissions, including one from New Zealand's National Youth Choir, of which he was a founder member. Two of his works were included in the choir's programmes when they toured internationally in 1982. He has since developed a special affinity with choral music, which forms a major part of his output. Early in his career he was influenced by Crumb, but around 1984 he became more interested in minimalism. He believes that music should appeal directly to the emotions and his works are notable for their effective sonorities, frequently changing asymmetrical rhythms and easy accessibility. This has made them popular with New Zealand audiences and has led, from the late 1980s, to an increasing number of overseas performances.

ADRIENNE SIMPSON

Hamilton, David (Peter) (*b* New York, 18 Jan 1935). American music journalist and critic. He took the BA (1956) and the MFA (1960) at Princeton University and the MA at Harvard (1960) . While at Princeton he worked with Babbitt, Cone, Strunk and Mendel; at Harvard his teachers included Piston and Reese. He was music and record librarian at Princeton from 1960 to 1965. From 1968 to 1974 he was music editor at W.W. Norton & Co. and he was named music critic of *The Nation* from 1968 to 1994. In 1981 he was elected vice-president of the Music Critics Association and became co-producer of the Metropolitan Opera Historic Broadcast Recording series; he was also a contributing editor to *Opera Quarterly* (from 1983). He taught at the Manhattan School of Music (1989–92) and was appointed to teach at the Julliard School in 1994. His writings have appeared in *Opus*, *Opera News*, the *New Yorker*, *High Fidelity*, the *New York Times* and the *Financial Times*, and he was the editor of *The Metropolitan Opera Encyclopedia*. As a critic and writer Hamilton is particularly concerned with 19th- and 20th-century music, and his broad knowledge of the recorded literature has led to a special interest in discography.

PAULA MORGAN

Hamilton, Iain (Ellis) (*b* Glasgow, 6 June 1922; *d* London, 21 July 2000). Scottish composer. He worked as an engineer for seven years before studying composition with Alwyn and piano with Craxton at the RAM in London (1947–51), concurrently with musical studies at the University of London (BMus 1950). He was awarded the Dove Prize at the RAM and in 1951 won several prizes for his compositions, including the Koussevitsky Foundation Award for the Symphony no.2 and the Royal Philharmonic Society Prize for the Clarinet Concerto. He was a lecturer at Morley College, London (1951–60) and at the University of London (1952–60), before taking a post in America as Mary Duke Biddle Professor at Duke University, North Carolina (1961–81). He was resident composer at Tanglewood in 1962, and held the Cramb lectureship at the University of Glasgow in 1971. He was elected a fellow of the RAM in 1958 and received an honorary DMus from the University of Glasgow in 1970.

The works of Hamilton's early period, from the Variations (1948) for string orchestra to the Symphonic Variations (1953), were conceived on a large scale and are Romantic in tone, making use of a highly chromatic, tonal harmonic language. Such works as the First Quartet and the Symphony no.2 demonstrate an imaginative use of conventional form and a propulsive rhythmic energy recalling Bartók. In the First Violin Concerto the intensity of expression and the characteristic lyric lines of wide compass suggest the influence of Berg. Between 1953 and 1956 two new elements emerged: an interest in vocal writing, seen in the *Border Songs* and the Burns cantata, and the simpler, more diatonic harmony that is particularly evident in the chamber music of the period. At the same time Hamilton composed works, including the Three Piano Pieces op.30 (1955) which, although

Iain Hamilton, 1982

remaining fundamentally tonal, began to make use of serial techniques. These he adopted fully in the Cello Sonata (1958–9) and the Sinfonia for two orchestras (1959). The form of the latter – a sequence of short, related sections separated by cadenza-like 'tessituras' – was developed in other works of this period, which frequently make virtuoso demands on the performer (e.g. Sonata for Flautist, 1966).

After several visits to the West Indies in the mid-1960s, a certain exoticism began to emerge in the Second Quartet and the *Dialogues* for soprano and ensemble, stimulating a movement from intricately wrought serial pieces to a more spacious style. This development coincided with Hamilton's work on two operas to his own adapted texts, *Agamemnon* and *The Royal Hunt of the Sun* (1968 and 1987), and a number of the instrumental works that came after these operas, though not conventionally programmatic, draw on literary sources: the score of *Voyage* quotes lines from Baudelaire and Rimbaud, while *Circus* and *Commedia* have strong ties to *The Divine Comedy*. These works also incorporate a number of quotations from music of the 19th century, serving as focal points in the structure; on the other hand, there is a reaching towards new techniques in the use of microtones and aleatory techniques in *Voyage*. The opera *The Catiline Conspiracy*, first performed by Scottish Opera in 1974, and the *Te Deum* display new absorptions of tonality, continued in such works as the Third and Fourth Symphonies (both 1981). A number of his later works have their genesis in responses to nature and to landscape, as with *A Field of Butterflies* (1990) for piano and the orchestral work *Bulgaria* (1999).

RUTH C. FRIEDBERG/FRANCIS J. MORRIS

Hamilton, Newburgh (*fl* 1712–59). English author and librettist. For many years (1725–54 and perhaps longer) he was steward to the 3rd Earl of Strafford, his widow and their son the 4th Earl. His farce *The Petticoat Plotter*, produced at Drury Lane in June 1712 (published 1720), was revived in 1715, 1718 and 1728. A more ambitious five-act comedy, *The Doating Lovers or The Libertine Tam'd*, managed only two performances at Lincoln's Inn Fields in June 1715. He was a friend and enthusiastic admirer of Handel, as is shown by the correspondence of the Strafford family. He provided the librettos for Handel's *Alexander's Feast* (1736), *Samson* (1743) and the *Occasional Oratorio* (1746). His prefaces to the first two, buoyantly celebrating Handel's genius for setting great English poetry to sublime music, imply that he chose

the subjects; he added a verse dedication to the composer in the 1739 wordbook of *Alexander's Feast*. He showed greater respect for distinguished verse than previous arrangers of *Alexander's Feast*, and his transformation of Milton's closely argued epic into a pathetic tragedy was dextrously achieved by intertwining *Samson Agonistes* with 13 other poems by Milton. He used the same mosaic method with the Bible, Spenser and Milton for the *Occasional Oratorio*, and it is also a hallmark of the libretto for Handel's *Semele* (1744), which may also be his work (compiled from Congreve's opera text for Eccles and other poems by him). Lines from Hamilton's St Cecilia Ode *The Power of Musick* (1720, set by Robert Woodcock) were incorporated in Handel's *Alexander's Feast*, his cantata *Look down, Harmonious Saint* and his 1759 revival of *Solomon*. The composer bequeathed him £100. The political identities of Hamilton's patrons and dedicatees are markedly oppositionist.

WINTON DEAN/RUTH SMITH

Hamlisch, Marvin (Frederick) (*b* New York, 2 June 1944). American composer. After demonstrating precocious talent, he became the youngest student to attend the Juilliard School of Music, where he studied piano reluctantly from 1950 to 1965; while still there, he worked as a rehearsal pianist for *Funny Girl* (1964). In 1965 he attained early success as a popular songwriter when two songs he composed with a high school friend, Howard Liebling, *Sunshine, Lollipops, and Rainbows* and *California Nights*, were recorded by Lesley Gore; one other song he composed as a teenager, *Travelin' Man*, was recorded years later by Liza Minnelli, another high school friend, on her first album. Concurrently with his studies in music at Queens College, from which he graduated in 1967, Hamlisch was employed for two seasons as a vocal arranger and rehearsal pianist for a wide variety of acclaimed performers on 'The Bell Telephone Hour'. An engagement as a pianist at a private party for the producer Sam Spiegel led to *The Swimmer* (1968), the first of more than three dozen film scores over the next 30 years. A prominent early film success was an Academy Award nomination for *Life is What You Make It* (lyrics by Johnny Mercer) from *Kotch* (1971). Three years later Hamlisch gained national celebrity when he became the first film composer to win three Oscars in one year, for both the score and title tune from *The Way We Were*, and for the adaptation of Scott Joplin's music in *The Sting* (the year's Best Picture). Among Hamlisch's later film scores several received nominations for Best Song. These included two songs with the lyricist Carol Bayer Sager, *Nobody Does It Better* from *The Spy Who Loved Me* (1977) and *Through the Eyes of Love* from *Ice Castles* (1979), two songs with Alan and Marilyn Bergman, *The Last Time I Felt Like This* from *Same Time, Next Year* (1979) and *The Girl Who Used to Be Me* from *Shirley Valentine* (1989), and *Surprise, Surprise* with the lyricist Edward Kleban, newly composed for the 1985 film version of *A Chorus Line*. He also received another Best Score nomination for *Sophie's Choice* (1982).

Hamlisch's first Broadway musical, *A Chorus Line* (1975), a show about the inner lives, dreams and fears of 17 dancers desperately auditioning for eight spots on a chorus line, was a triumph for the director and choreographer Michael Bennett and a major hit, running for over 6000 performances. In addition to winning the Tony and New York Drama Critics' Circle Awards for best musical and Tony Awards for Hamlisch's music and Kleban's lyrics, *Chorus Line* was also the first musical in 15 years to be awarded a Pulitzer Prize for Drama. A second international success followed four years later, *They're Playing Our Song*, with a book by Neil Simon and a pervasive disco score. The show, which featured only two stars, each however frequently backed by a trio of alter egos, was loosely based on a real-life romance between Hamlisch and Sager. Future musicals achieved neither commercial nor, with isolated exceptions, critical success. *Jean Seberg* (1983), which depicted the stormy and politically sensitive life of the actress, quickly opened and closed in London. The next musical, *Smile* (1986), an adaptation of a cult movie about a teenage beauty pageant, with the lyricist Howard Ashman also serving as both the librettist and the director, was quickly deemed a failure and closed after 48 Broadway performances, although it was later praised as 'perhaps the most underappreciated musical of the eighties' by Mandelbaum (1991). Hamlisch's second collaboration with Neil Simon, an adaptation of Simon's successful film *The Goodbye Girl* (1977), also closed after a short Broadway run in 1993 and, after extensive revisions and new lyrics by Don Black, fared even less well in London.

In a style with pronounced, albeit generally scaled-down, rock features, Hamlisch has produced both memorable lyrical ballads (*The Way We Were*, *What I Did for Love*) as well as rhythmically driving numbers (*I Hope I Get it*, *They're Playing Our Song*). *Chorus Line* in particular demonstrates Hamlisch's ability to evoke a wide variety of dance styles ranging from soft shoe (*I can do That*) to the waltz (*At the Ballet*), with musical numbers that present formally complex musical biographical stories and dramas in a varied mixture of song, recitative, speech and intricate ensembles.

GEOFFREY BLOCK

Hamm, Charles (Edward) (*b* Charlottesville, VA, 21 April 1925). American musicologist. He graduated from the University of Virginia with the BA in music in 1947. In 1950 he received the MFA and in 1960 the PhD in musicology from Princeton University. His teachers included Oliver Strunk, Arthur Mendel, Stephen Tuttle and Randall Thompson. He taught at Princeton (1948–50; 1958) and at the Cincinnati Conservatory of Music (1950–57). From 1959 to 1963 he was an associate professor at Tulane University. In 1963 he became professor of musicology at the University of Illinois at Urbana-Champaign and in 1976 professor of music at Dartmouth College, Hanover, New Hampshire. He was president of the AMS from 1972 to 1974. He retired in 1989.

Hamm's main areas of study have been the music of the Renaissance and the 20th century, the media and popular music, American music and opera. His book *A Chronology of the Works of Guillaume Dufay* was an important contribution to musicological literature, arguing for the chronological ordering of works to be based on notational features. Hamm also suggested that this method could be applied to the works of other 15th-century composers, and could aid in the attribution of anonymous or dubious compositions. He later turned his attention to English music of the same period, editing the complete works of Leonel Power (CMM, l, 1969) and discussing English stylistic traits of anonymous pieces in continental sources.

Hamm's work in other fields has included the book *Opera* (1960), an edition of Stravinsky's *Petrushka* (1967) and *Music in the New World* (1983). *Opera* discusses the basic structures and techniques of its subject rather than its history and aesthetics; the edition of *Petrushka* includes the first English translation of the original Russian stage directions and an analysis of the work with references to the stage action. *Music in the New World* (1983) is a history of American music, in which Hamm maintains that the mixture of different cultural backgounds in the USA has generated its 'most characteristic and dynamic music'. Hamm's later writings focus on the growing use of mass media in late 20th-century musical styles and rituals, and the intercultural reception of music. He has also composed several short operas, mainly to his own librettos, including *The Secret Life of Walter Mitty* (after James Thurber, given in Athens, Ohio, in 1953) and *The Box* (performed in New Orleans in 1961).

PAULA MORGAN/R

Hamman, Johann [Hertzog] (*b* Landau; *d* ?Speyer, after October 1509). German printer. Between 1482 and 1509 he printed 85 books, all in Venice except the last, printed in his native Speyer diocese. Most were liturgical books for dioceses from England to Hungary; 16 contain printed notes and staves, or staves. Large, medium and small roman plainchant types appear in missals of corresponding formats – five folio, one quarto and five octavo. In addition he introduced a medium gothic plainchant type for an agenda for Passau. Together with his former partner Johann Emerich of Speyer, Hamman issued a third of the music books printed in 15th-century Italy.

M.K. DUGGAN

Hammer-Orgelbau. German firm of organ builders. Philipp Furtwängler (*b* Gütenbach, Baden-Württemberg, 6 April 1800; *d* Elze, Hanover, 5 July 1867), a clockmaker in Elze, taught himself to build organs, completing his first instrument in 1838. He took his son Wilhelm (*b* Elze, 5 June 1829; *d* Elze, 3 Sept 1883) into the firm in 1854, and his son Pius (*b* Elze, 14 July 1841; *d* Hanover, 16 Jan 1910) in 1862, when the firm's name was altered to Ph. Furtwängler & Söhne, Elze. Adolf Hammer (*b* Herzberg im Harz, 6 April 1854; *d* Hanover, 5 March 1921) entered the firm in 1883, in which year it moved to Hanover and changed its name to P. Furtwängler & Hammer, Hanover. Adolf Hammer's nephew Emil Hammer (*b* Wesermünde, 22 Feb 1878; *d* Hanover, 3 Dec 1958) became managing director in 1921 and sole proprietor in 1937. After the war the business had to be rebuilt, and there were several changes of premises in the vicinity of Hanover: Empelde in 1949, Hemmingen-Westerfeld in 1958 and Arnum in 1965. In 1961 Emil Hammer's grandson Christian Eickhoff (*b* Shanghai, 23 Dec 1935) became managing director; he trained with Emil Hammer, Theodor Kuhn AG (Männedorf), and Axel Starup (Copenhagen), and at the Technical Institute in Ludwigsburg.

Philipp Furtwängler had built slider-chests with tracker action and followed J.G. Töpfer's 'normal scaling'; the firm built its first *Kegellade* chests in 1875 and its last slider-chest for many years in 1889; it produced its first organs with tubular-pneumatic action in 1893, and its first with electro-pneumatic action in 1901; the first wind-chest with exhaust-pneumatic action was built in 1907. The firm's first organ built in accordance with the principles of the *Orgelbewegung* was that for the Marienkirche in Göttingen, 1925–6 (instigated by Christhard Mahrenholz), and the first instrument for a generation to have a slider-chest and tracker action, in Hamburg-Langenhorn, 1931 (H.H. Jahnn). (These features are characteristic of most modern Hammer organs.) Their largest organ was built in 1914 for the Stadthalle in Hanover (four manuals, 124 stops). Recent instruments include those for the Stadtkirche in Bückeburg, 1966, the Jesus-Christuskirche in Berlin-Dahlem, 1970, St Martini in Stadthagen, 1974, and the monastery church of St Nicholas in Gdańsk, 1977.

Hammerich, Angul. *See* HAMERIK family.

Hammerich, Asger. *See* HAMERIK family.

Hammerschlag, János (*b* Prague, 10 Dec 1885; *d* Budapest, 21 May 1954). Hungarian music critic and composer. After studying composition with Koessler and the organ with Dezső Antalffy-Zsiross at the Budapest Academy of Music he was a music critic of the leading German newspaper in Hungary, *Pester Lloyd* (1914–20), and later of *Nyugat* (1923–8). From 1919 he taught composition, music history and the organ at the Budapest Conservatory. In 1920 he founded a chamber music ensemble for early music (from 1923 the Motett és Madrigáltásulat), which he conducted in the first Hungarian performances of works by such composers as Schütz, Purcell and the English madrigalists; with the conservatory choir and orchestra he initiated a series of historical concerts. After the war he gave several extended lecture series on Hungarian radio. Hammerschlag's main interest was early music: he was an uncontested authority, pioneering its study in Hungary and doing much to promote its performance. He made a particular study of Bach and of his organ works, and was himself a noted organ teacher. His compositions include organ and piano pieces as well as *Zsoltárkantáta* ('Psalm Cantata', 1945) for soloists and chorus, *Énekek éneke* ('Song of Songs', 1947) for mixed choir, and *Hősi induló* ('Heroic March', 1950) for orchestra (for full list of writings and compositions, see *MGG1*).

ZOLTÁN FALVY

Hammerschmidt [Hammerschmid, Hammerschmied], **Andreas** (*b* Brüx [now Most], Bohemia, 1611/12; *d* Zittau, 29 Oct 1675). German composer and organist of Bohemian birth. He is the most representative composer of mid-17th-century German church music, of which he was a prolific and extremely popular exponent.

1. LIFE. It is impossible to establish Hammerschmidt's exact date of birth since the church registers of the independent Protestant community at Brüx (which lasted only from 1609 to 1622) have been lost; the available information derives from his tombstone and from portraits of him. His father, Hans Hammerschmidt (*b* Carthause, nr Zwickau, 1581; *d* Freiberg, Saxony, 1636), was of Saxon descent and was a saddler in Bohemia, first at Saaz and from 1610 at Brüx, and his mother probably came from Bohemia; they were married by 1609. Because Bohemia again became Catholic during the Thirty Years War, the Hammerschmidt family had to leave Brüx in 1626. In 1629 Hans Hammerschmidt became a freeman of Freiberg, Saxony. Nothing is known about Andreas Hammerschmidt's early education: by this date there was no Gymnasium at Brüx, and his name does not appear in the registers of the Gymnasium at Freiberg. Christoph Demantius, Kantor and leading musical personality at Freiberg from 1604 to 1643, was probably not his actual teacher (though they probably knew each other), and he may have served some kind of apprenticeship with one of the other Freiberg musicians. No connection with the organist Balthasar Springer is known, and the assumption that he was taught by Christoph Schreiber is based solely on the fact that he later succeeded Schreiber in two of his posts. It is unlikely that he was a pupil of Stephan Otto, since Otto returned to Freiberg only in 1631, but there was a long-lasting friendship between them, as Hammerschmidt's commendatory poem in Otto's *Kronen-Krönlein* (1648) indicates. From July 1633 to 1634

Hammerschmidt was organist in the service of Count Rudolf von Bünau at the castle at Weesenstein, Saxony, where Otto was Kantor. After Schreiber's departure for Zittau, he applied on 9 October 1634 for the post of organist at the Petrikirche, Freiberg, and was elected on 8 December. He may have taken up his duties in the New Year, though he was formally appointed only in July 1635. The Petrikirche was the leading organist's post at Freiberg, though the salary was barely a living wage. Hammerschmidt's first printed work, *Erster Fleiss*, dedicated to the mayor and councillors of Freiberg, appeared there in 1636. He may well have composed the first part of the *Musicalische Andachten* (1639) for use in services at the Petrikirche. On 22 August 1637 he married there Ursula Teuffel, the daughter of a Prague businessman; of their six children, three died in infancy.

After Christoph Schreiber's death Hammerschmidt was appointed his successor as organist of the Johanniskirche, Zittau; on 18 November 1639 he parted from the Freiberg council with a letter of thanks; this was to be the last and most important position of his career. It was at Zittau that he produced the greater part of his music and became genuinely popular (the 'world-celebrated Herr Hammerschmied', Johann Rist called him in 1655). An appointment to Denmark, alluded to in M.T. Petermann's laudatory poem in the *Ander Theil geistlicher Gespräche über die Evangelia* (1656), cannot be confirmed. Nothing is known of his applying for any other position or of his being away from Zittau except on journeys to such places as Bautzen, Dresden, Freiberg, Görlitz and Leipzig. (Archival records at Zittau covering his 36 years there were destroyed by fire in 1757.) Until 1662 he was the only organist at Zittau. The Johanniskirche, the principal church there, contained three organs opposite each other and thus provided ideal possibilities for the realization of the concerted style. Throughout Hammerschmidt's stay at Zittau the Kantor at the Johanniskirche and at the Johanneum (the local Gymnasium) was Simon Crusius. The early work of both men coincides with the Thirty Years War, during which the school and the choir were decimated. Conditions slowly improved after the war, but it was only after they were dead that musical life really began to flourish again. Nevertheless, during their partnership the position of organist became one of real importance. The organist was required to compose and perform vocal music to the organ. He directed the soloists from the school choir and the instrumental ensemble from the town musicians, while the Kantor was responsible for the choral liturgical music. Hammerschmidt consequently became a very prolific composer. The many laudatory poems prefacing his publications, among them verses by such prominent men as Schütz and Rist, bear witness to the high esteem in which he was held. He also had a large number of pupils and was the only person in Zittau entitled to give keyboard tuition. He was often called upon as an organ expert (for example at Bautzen in 1642 and at Freiberg in 1659 and 1672). The Zittau council appointed him village and forest superintendent for Waltersdorf an der Lauscha. All these activities enabled him to live in considerable affluence. In 1656 he bought a house in Webergasse, directly opposite the Johanniskirche, and added to it by the purchase of a garden; in 1659 he bought a plot of land outside the town and built a summerhouse on it. His dedications and prefaces and his personal correspondence reveal a notably cultured and educated man. Christian Keimann, vice-Rektor (1634) and Rektor (from 1638) of the Johanneum, whose poems he set to music, and Theophil Lehmann, the leading ecclesiastic, were among his closest friends; Keimann was almost certainly to blame for the later souring of their relationship. The two surviving portraits of him, in the fourth part of the *Musicalische Andachten* (1646) and in the *Missae* (1663; see illustration), reveal individual and passionate features, probably not incompatible with sudden outbursts of rage. The stories of fights with Johann Rosenmüller at Leipzig and with an innkeeper at Zittau are not well documented. In his last publication, in 1671, he wrote of his 'now wearisome life' and expressed the wish that his 'diligence shown up to now might be concluded'; he was apparently already suffering from senile decay. He died on 29 October 1675; his funeral (3 November) was well attended; and his tombstone describes him as the 'Orpheus of Zittau'.

2. WORKS. Most of Hammerschmidt's output consists of sacred vocal works: he published more than 400 of them in 14 collections, all more or less adhering to the concertato principle. According to his own classification they comprise works in the forms of the motet, concerto and aria. He himself said that in his motets he felt bound by tradition, whereas he saw the concerto as a truly up-to-date form. He did not always escape the dangers of mechanical, stereotyped writing. His arias, however, in their melodic lines, treatment of text and formal plan, prefigure subsequent developments in the German cantata. The second and fifth parts (1641, 1652–3) of the *Musicalische Andachten* include motets that are madrigalian in their emphasis on the text. The second part contains 34 'sacred madrigals' to German words for four to six voices; 12 pieces for five voices and four for six may be reinforced here and there by a small chorus ('Capella'). The fifth part, containing 29 German and two Latin works for five and six voices, also contains 'choral music

Andreas Hammerschmidt: title-page from his 'Missae' (Dresden: C. Bergen, 1663)

in the madrigal style'. In his preface Hammerschmidt indicated the similarity of this music to Schütz's *Geistliche Chor-Musik* (1648) and added a commendatory poem by Schütz. He returned to this motet style in his last collection, the six-part *Fest- und Zeit-Andachten* (1671), which contains 38 German works. Whereas previously the emphasis had been on the exposition of the imagery and affective elements in the text, these late pieces are in a clearer, more polished style alternating between imitative and homophonic sections. The fourth part of the *Musicalische Andachten* (1646) contains 40 pieces, four with Latin and 36 with German words; they are described as 'sacred motets and concertos' and are for five to 12 voices. 21 of them are recognizably motets; those for fewer than eight voices can also be sung without continuo, and the two choirs can combine to sing those for eight voices. Twelve works are concertos with definite solo parts, and the remaining seven are in transitional forms. The concertos scored for a large number of parts include the two sets of *Gespräche über die Evangelia* (1655–6), which contain a total of 59 works for Sundays and feast days scored for two to five solo voices and two to five obbligato instruments, usually violins but sometimes flutes, trumpets and trombones. The form of these works anticipates the later development of the German church cantata. The text, usually taken from the Gospels, is presented in the form of a musical conversation; where the biblical text does not provide a conversation, it is extended by the inclusion of meditative or edifying elements or by the insertion of chorale and aria sections so that certain passages begin to assume the character of independent movements. The *Kirchen- und Tafel-Music* (1662) includes a further 12 concertos for two to five voices with two to five obbligato instruments and also contains ten monodies. This collection makes the most frequent use of chorales, with nine chorale texts altogether.

Sacred concertos for few voices are contained in the first part of the *Musicalische Andachten* (1639), which consists of 21 pieces for one to four – usually two – solo voices; the words are German biblical or hymn texts. The concertato principle is dominant, and Hammerschmidt only occasionally cultivated true monody. The first book of dialogues (1645) is made up of similar music. *Gespräche zwischen Gott und einer gläubigen Seelen* ('Conversations between God and a believer') is the alternative title of this set of 22 concertos for two to four voices, in which, through 'dogmatic simultaneous dialogue' or 'allegorical didactic dialogue', as Blume called them, Hammerschmidt achieved a really personal style. The motets for one and two voices (1649) inherited their misleading designation from their Italian models. These 20 works are in fact concertos, 18 with Latin and two with German words, and are Italian in taste, with much more ornamented vocal lines than are usual in Hammerschmidt's German monodies. In the third part of the *Musicalische Andachten* (1642), concertos for few voices are enlarged by the addition of instruments; the 31 compositions, with German words, for one and two voices and with two instrumental parts, usually violins, are subtitled *Geistliche Symphonien*. Finally, the *Missae* (1663), consisting of 16 Latin *missae breves* (Kyrie and Gloria, together with a Sanctus in no.15) for five to 12 and more voices, can for the most part be classified as concertos. 12 masses are marked 'pro organo' in the original and are concerted works for solo voices and tutti; the remaining four, marked 'pro choro', are more motet-like in style. Hammerschmidt ventured into new territory both stylistically and melodically with those works that may be classified as arias. The second set of dialogues (1645) contains 15 song-like arias, 14 for one and two solo voices and two instruments and one for three solo voices; the texts of 12 of them are from Martin Opitz's paraphrase of the *Song of Solomon*. The *Fest-, Buss- und Danklieder* (1658–9) is in the same up-to-date song style; its 32 songs to words by poets of the time are mostly scored for five voices with instruments and are in various forms of the aria for several voices.

Although Hammerschmidt was an organist all his life, no organ works by him have survived. His instrumental music is confined to the three collections of pieces that appeared in 1636, 1639 and 1650. With their fashionable dances of the time, continuo part, scoring for viols and their dynamic and tempo markings, the first two collections especially are in the tradition of the English-influenced suites cultivated in north and central Germany, while the third includes free forms such as the canzona, sonata and quodlibet, some of the pieces being scored for the typical brass ensemble (cornetts and trombones) of German town musicians. Finally, mention should be made of Hammerschmidt's importance as a composer of secular songs through the three parts of his *Weltliche Oden* (1642, 1643 and 1649). They contain a total of 68 solo songs, duets and trios with violin obbligato that are all settings of poems of the time. In their popular tone, finished workmanship and lyrical feeling they resemble the work of the Hamburg school of songwriters.

WORKS

Edition: *Andreas Hammerschmidt: Ausgewählte Werke*, ed. H. Leichtentritt, DDT, xl (1910/*R*) [incl. 18 pieces from Musicalische Andachten, i-iv]

SACRED VOCAL

Musicalischer Andacht, erster Theil, das ist, Geistliche Concerten, 1–4vv, bc (Freiberg, 1639)
Musicalischer Andachten, ander Theil, das ist, Geistliche Madrigalien, 4–6vv, chorus 5vv (ad lib), bc (Freiberg, 1641)
Musicalischer Andachten, dritter Theil, das ist, Geistliche Symphonien, 1, 2vv, 2 vn, vc, bc (Freiberg, 1642)
Dialogi, oder Gespräche zwischen Gott und einer gläubigen Seelen, erster Theil, 2–4vv, bc (Dresden, 1645); ed. in DTÖ, xvi, Jg.viii/1 (1901/*R*)
Geistlicher Dialogen ander Theil, darinnen Herrn Opitzens Hohes Lied Salomonis, 1, 2vv, 2 vn, vc, bc (Dresden, 1645)
Vierter Theil, Musicalischer Andachten, geistlicher Moteten und Concerten, 5–10, 12 and more vv, bc (Freiberg, 1646)
Motettae, 1, 2vv, bc (Dresden, 1649)
Chormusic auff Madrigal Manier: fünfter Theil Musicalischer Andachten, 5–6vv, bc (Freiberg and Leipzig, 1652–3)
Musicalische Gespräche über die Evangelia, 4–7vv, bc (Dresden, 1655)
Ander Theil geistlicher Gespräche über die Evangelia, 5–8vv, bc (Dresden, 1656)
Fest-, Buss- und Danklieder, 5vv, 5 insts (ad lib) (Zittau and Dresden, 1658–9)
Kirchen- und Tafel-Music, 1–3vv, 4–6 insts, bc (Zittau, 1662)
Missae, tam vivae voci, quam instrumentis variis accommodatae, 5–12 and more vv (Dresden, 1663)
Fest- und Zeit-Andachten, 6vv, bc (Dresden, 1671)

2 pieces in C. Keimann: Samuel, school play (Freiberg, 1646)
5 hymn melodies in C. Keimann: Mnemosyne sacra (Leipzig, 1646)
10 hymn melodies, 1v, bc, in J. Rist: Neue himmlische Lieder (Lüneburg, 1651)
38 hymn melodies, 1v, bc, in J. Rist: Neue musikalische Katechismus Andachten (Lüneburg, 1656)
7 hymn melodies, 3, 4vv, in G. Vopelius: Neu Leipziger Gesangbuch (Leipzig, 1682)

OCCASIONAL

Hertzliche Aufmerkung und heiligen Weihnachtsgruss zu Ehren Matthiä Albert und Jacob Rüdiger, 4vv (Freiberg, 1639), lost
Stölichen Schiessen bei der Hochzeit Herrn Rothens zu Zittau und Christine Stoll, 29 Oct 1640 (Görlitz, 1640), lost
Der auff den ... seligen Hintritt des ... Herrn M. Michaelis Theophili Lehmanns ... erwehlte Leichen-Text: Ich bin gewiss, dass weder Tod noch Leben, 5vv (Freiberg, 1650)
Lob- und Danck Lied aus dem 84. Psalm ... auff die rümliche Einweihung der wieder erbauten Kirche S Elisabeth in Breslau, 9vv, 5 tpt, 3 trbn, 5 va, bc (Freiberg, 1652)
Bussfertiges Friedens-Seuffzerlein ... Ihr Jungen und ihr Alten hört (M. Francke), 3vv (Coburg, 1658)

Sirachs Lob- und Dankspruch ... Concert, darein ... die Engel zu St Petri mit zu gebrauchen, 8vv, 1634, Freiberg, Ratsbibliothek
Hochzeitsgesang für Daniel Sartorius: Es ist nicht gut, dass der Mensch allein sei, 5vv, 2 vn, 2 trbn, bn, bc, transcr. C. von Winterfeld, *D-Bsb*

SECULAR VOCAL

Erster Theil weltlicher Oden oder Liebesgesänge, 1, 2vv, vn obbl, va da gamba/theorbo (Freiberg, 1642); ed. in EDM, 1st ser., xliii (1962)
Ander Theil weltlicher Oden oder Liebesgesänge, 1–3vv, vn obbl, va da gamba/theorbo (Freiberg, 1643); ed. in EDM, 1st ser., xliii (1962)
Dritter Theil geist- und weltlicher Oden und Madrigalien, 1–5vv, bc (Leipzig, 1649) [also incl. sacred works]; ed. in EDM, 1st ser., xliii (1962)

INSTRUMENTAL

Erster Fleiss allerhand neuer Paduanen, Galliarden, Balletten, Mascharaden, françoischen Arien, Courenten und Sarabanden, 5 viols, bc (Freiberg, 1636); ed. in EDM, 1st ser., xlix (1957)
Ander Theil neuer Paduanen, Canzonen, Galliarden, Balletten, Mascharaden, 3, 5 viols, bc (Freiberg, 1639); ed. in EDM, 1st ser., xlix (1957)
Dritter Theil neuer Paduanen, 3–5 insts, bc (Leipzig and Freiberg, 1650)

MSS in various libraries, almost exclusively copies of printed works

JOHANNES GÜNTHER KRANER (with STEFFEN VOSS)

Hammerstein, Oscar, I (*b* Stettin [now Szczecin, Poland], 8 May 1846; *d* New York, 1 Aug 1919). American impresario. He studied harmony and counterpoint, and also learnt to play the piano, flute and violin. While still in his teens he ran away to Hamburg, and later to New York, where he worked in a cigar factory. He began to speculate in real estate and, as his fortunes increased, built theatres in which he presented a variety of productions. He composed intermezzos, a ballet and the operettas *The Kohinoor* (1893) and *Santa Maria* (1896), none of which achieved any success. In 1906 he founded the Manhattan Opera Company, which opened with Bellini's *I puritani* on 3 December in the newly built Manhattan Opera House. The company challenged the entrenched Metropolitan Opera in presenting the standard Italian repertory as well as contemporary works, and gave the American premières of four operas by Massenet, Giordano's *Siberia*, Charpentier's *Louise*, and *Elektra* and *Pelléas et Mélisande*. Singers who performed with the company included Melba, Bonci, Nordica, Tetrazzini, Garden, Calvé, McCormack, Zenatello and Renaud. In April 1910 Hammerstein sold his interests in the company to the Metropolitan for $1,200,000, and promised not to produce opera in New York, Boston, Philadelphia or Chicago for the next decade. Two seasons at the newly built London Opera House (later the Stoll Theatre) in 1911–12 were financial failures.

JOHN FREDERICK CONE

Hammerstein, Oscar (Greeley Clendenning), II (*b* New York, 12 July 1895; *d* Doylestown, PA, 23 Aug 1960). American lyricist, librettist, producer and publisher. Born into a notable theatrical family, his grandfather and namesake was the flamboyant opera impresario Oscar Hammerstein (1847–1919), who created and lost a handful of opera houses and companies around the turn of the century. Oscar studied law at Columbia where he became involved in the Varsity shows and, after graduation, continued to write songs. By 1919 Hammerstein had left the legal profession and begun to write plays and lyrics full time. His first Broadway musical was *Always You* (1920) with composer Herbert Stothart and, as would be the pattern throughout his career, Hammerstein wrote both the libretto and lyrics. During the 1920s he contributed to a handful of operettas, most notably *Rose-Marie* (1924) with composer Rudolf Friml and *The Desert Song* (1926) with Sigmund Romberg. After some experimenting, he and composer Jerome Kern created the landmark *Show Boat* (1927), the first musical play of the American theatre. With the demise of operetta and the emphasis on frivolous musical comedies and revues during the Depression, Hammerstein's career faltered and his Hollywood efforts were failures except for his song *The Last Time I Saw Paris* with Kern, which won the Academy Award for Best Song in 1941.

Hammerstein's second and equally productive career began with his collaboration with composer Richard Rodgers. The team presented the finest musical plays of the 1940s and 50s, including *Oklahoma!* (1943), *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951) and *The Sound of Music* (1959). The team also produced Broadway shows by others, most memorably Irving Berlin's *Annie Get Your Gun* (1946); wrote scores for Hollywood, such as *State Fair* (1945 and 1962); and for television they provided *Cinderella* (1957). Hammerstein had a solo hit with *Carmen Jones* (1943), his updating of *Carmen* using Bizet's music.

Hammerstein's heartfelt lyrics are distinguished by their simplicity and sincerity, often eschewing the clever rhymes and dazzling wordplay that was characteristic of his contemporaries. He brought an honesty to libretto and lyric writing that influenced all the major theatre songwriters of the postwar American theatre, and his works, particularly *Show Boat* and those with Rodgers, remain in the popular musical theatre repertory.

WORKS
(*selective list*)

composers in parentheses; dates those of the first New York performance unless otherwise stated

STAGE

Wildflower (V. Youmans, H. Stothart), Casino, 7 Feb 1923
Rose-Marie (R. Friml), Imperial, 2 Sept 1924 [incl. Indian Love Call, Rose-Marie; films, 1936, 1954]
Sunny (J. Kern), New Amsterdam, 22 Sept 1925 [incl. Sunny, Who?; films, 1930, 1940]
The Desert Song (S. Romberg), Casino, 30 Nov 1926 [incl. The Desert Song, One Alone, The Riff Song; films, 1929, 1943, 1953]
Show Boat (Kern), Ziegfeld, 27 Dec 1927 [incl. Can't help lovin' dat man, Make Believe, Ol' Man River, Why do I love you?, You are love; films, 1929, 1936, 1951]
The New Moon (Romberg), Imperial, 19 Sept 1928 [incl. Lover, come back to me, One Kiss, Softly as in a Morning Sunrise, Stouthearted Men; film, 1940]
Sweet Adeline (Kern), Hammerstein's, 3 Sept 1929 [incl. Don't ever leave me, Why was I born?; film, 1935]
Music in the Air (Kern), Alvin, 8 Nov 1932 [incl. I've told ev'ry little star, There's a hill beyond a hill; film, 1934]
Very Warm for May (Kern), Alvin, 17 Nov 1939 [incl. All the Things You Are]
Oklahoma! (R. Rodgers), St James, 31 March 1943 [incl. Oh, what a beautiful mornin', Oklahoma, People will say we're in love, The Surrey with the Fringe on Top; film, 1955]
Carmen Jones (G. Bizet), Broadway, 2 Dec 1943 [film, 1954]
Carousel (Rodgers), Majestic, 19 April 1945 [incl. If I Loved You, June is bustin' out all over, Soliloquy, You'll never walk alone; film, 1956]
Allegro (Rodgers), Majestic, 10 Oct 1947 [incl. The gentleman is a dope]
South Pacific (Rodgers), Majestic 7 April 1949 [incl. Bali Ha'i, Some Enchanted Evening, There is nothin' like a dame, This nearly was mine, Younger than Springtime; film, 1958]
The King and I (Rodgers), St James, 29 March 1951 [incl. Getting to Know You, Hello, young lovers, I whistle a happy tune, Shall we dance?; film, 1956]
Me and Juliet (Rodgers), Majestic, 28 May 1953 [incl. No Other Love]
Flower Drum Song (Rodgers), St James, 1 Dec 1958 [incl. I enjoy being a girl, You are beautiful; film, 1961]
The Sound of Music (Rodgers), Lunt-Fontanne, 16 Nov 1959 [incl. Climb ev'ry mountain, Do-Re-Mi, My Favourite Things, The Sound of Music; film, 1965]
State Fair (Rodgers), St Louis, Municipal Opera, 2 June 1969
A Grand Night for Singing (Rodgers), Criterion Center, 17 Nov 1993
State Fair (Rodgers), Music Box, 27 March 1996 [rev. of film]

FILMS
those not already mentioned above

High, Wide and Handsome (J. Kern), 1937 [incl. The Folks who Live on the Hill]
The Great Waltz (J. Strauss jr), 1938
Lady Be Good! (Kern), 1941 [The Last Time I Saw Paris]
State Fair (R. Rodgers), 1945, 1962 [incl. It might as well be spring, It's a grand night for singing, That's for me]
Centennial Summer (Kern), 1946 [incl. All Through the Day]

THOMAS S. HISCHAK

Hammerstein, Reinhold (*b* Lämmerspiel, nr Offenbach, 9 April 1915). German musicologist. From 1934 he studied musicology at the University of Freiburg under Gurlitt, and at Munich University under Ursprung. He took the doctorate at Freiburg in 1940 with a dissertation on C.F.D. Schubart. During the years 1938–50 (with interruptions for military service) he was assistant lecturer in the department of musicology of Freiburg University and then (1946–58) lecturer in music history at the Staatliche Hochschule für Musik, Freiburg. He completed the *Habilitation* in musicology at Freiburg in 1954 with a work on the medieval conception of music. He was a visiting lecturer at Basle (1955–6), and was deputy professor of musicology (1959–61) and a supernumerary professor (1962) at Freiburg. He was appointed professor at Heidelberg University in 1963 and was a visiting professor at Basle in 1964. He was editor of the Neue Heidelberger Studien zur Musikwissenschaft (from 1969) and co-editor of Beiträge zur Musikforschung (from 1975). He retired in 1980 and was honoured on his 70th birthday with the Festschrift *Claudio Monteverdi: Festschrift Reinhold Hammerstein* (ed. L. Finscher, Laaber, 1986). Hammerstein is recognized as a leading specialist on the representation of instruments and music-making in literature and the visual arts from classical antiquity to the Baroque era. His writings explore diverse readings of the emblems, allegories and symbols referred to in musical iconography. He also investigates how music recreates the visual images with which it is associated, and describes the relationship between developments in music history and the history of painting and literature.

HANS HEINRICH EGGEBRECHT/R

Hammond, Frederick (Fisher) (*b* Binghamton, NY, 7 Aug 1937). American musicologist. He studied musicology with William G. Waite and Richard Crocker and the harpsichord with Ralph Kirkpatrick at Yale University (BA 1958), taking the doctorate there in 1965 with a dissertation on Odington's *Summa de speculatione musice*. He was an instructor at the University of Chicago (1962–5), and taught at Queens College, CUNY (1966–8), and UCLA (1968–91). Since 1989 he has been Irma Brandeis Professor of Romance Culture and Music History at Bard College, New York. Hammond's research has concentrated on 17th-century Italian keyboard music, especially the life and works of Frescobaldi; he is also interested in musical and artistic patronage in 17th-century Italy. As a professional harpsichordist and organist he has performed in the United States, Canada and Europe and has made a number of recordings. He was founder of and has continued to direct the E. Nakamichi Festival of Baroque Music in Los Angeles.

PAULA MORGAN

Hammond, Dame Joan (Hood) (*b* Christchurch, 24 May 1912; *d* Bowral, NSW, 26 Nov 1996). Australian soprano of New Zealand birth. She studied in Sydney where in 1928 she made her début as Giovanna (*Rigoletto*), then sang Venus and Helmwige (1935). After further study in Vienna, London and Florence, she was engaged at the Vienna Volksoper in 1938 to sing Nedda, Martha and Konstanze; in 1939 she sang Mimì and Violetta at the Staatsoper. Engaged by the Carl Rosa company (1942–5), she sang Butterfly, Tosca, Violetta, Marguerite (*Faust*) and the Marschallin. In 1947 she returned to Vienna, then made her Covent Garden début in 1948 as Leonora (*Il trovatore*), returning as Mimì, Beethoven's Leonore and Aida. She made her American début with the New York City Center Opera in 1949, and sang Elisabeth de Valois (1951) and Rusalka (1959) at Sadler's Wells, Tatyana and Fevroniya (*The Invisible City of Kitezh*) in Russian in Barcelona, Aida and Tatyana in Leningrad and Moscow (1957), and Desdemona and Tosca (1957) and Salome (1960) in Australia for the Elizabethan Theatre Trust. Hammond's other roles included Pamina, Donna Anna and Elvira, Agathe, Elisabeth, Elsa, Norma and Turandot. Her record of 'O my beloved father' from *Gianni Schicchi* sold over a million copies and won a golden disc in 1969. She had a strong, vibrant voice, which she used intelligently to project the meaning of what she sang. Her warm personality allied to her expressive manner made her an instantly communicative, if not specially subtle, artist. An operation in 1964 left her partially deaf, and she announced her retirement the following year. *A Voice, a Life*, her autobiography, was published in 1970. She was made a DBE in 1974.

ALAN BLYTH

Hammond, John (Henry, jr) (*b* New York, 15 Dec 1910; *d* New York, 10 July 1987). American jazz and popular record producer and critic. He was born into a wealthy family, and attended Yale University. As a teenager, he became fascinated by black music and was drawn to the clubs and theatres of Harlem. He produced his first records in the early 1930s, and in 1933 recorded an important series of sessions for English Columbia featuring Fletcher Henderson, Benny Carter and Benny Goodman, whose orchestra he helped to form in 1934; from 1935 to 1937 he supervised many of Teddy Wilson's sessions for Brunswick with Billie Holiday as soloist. Hammond was also an early advocate of Count Basie, and was influential in bringing his orchestra to national prominence in 1936. In 1938 and 1939 he organized the two historic 'Spirituals to Swing' concerts in Carnegie Hall. A tireless talent scout and champion of racial equality, he later furthered the careers of artists as varied

as Charlie Christian (whom he teamed with Goodman in 1939), George Benson, Aretha Franklin, Bob Dylan and Bruce Springsteen. Although best known for his association with Columbia (1937, 1939–43, 1959–75), Hammond also served in executive positions with Brunswick/ Vocalion, Keynote, Majestic, Mercury and Vanguard. From 1931 he wrote widely on jazz and popular music for music periodicals and the general press; he also published an autobiography, *John Hammond on Record* (New York, 1977/*R*).

EDWARD BERGER

Hammond, Philip (Alexander) (*b* Belfast, 5 May 1951). Northern Ireland composer, pianist and critic. At Queen's University, Belfast (BMus 1973, MA 1974), he studied composition with Raymond Warren and Adrian Thomas. He also studied the piano with Rhona Marshall at the Royal Irish Academy of Music, Dublin. In 1988, after a period of school and university teaching he became Music Director and subsequently Performing Arts Director of the Arts Council of Northern Ireland.

Hammond has written for a wide range of media and performers from school children to professionals. His music is direct in expression and tends to eschew excessive complexity. He describes himself as a romantic; the dark side of this comes through in *Thanatos* (1977), a pioneering work by a Northern Ireland composer in the field of electro-acoustic composition, and the introspective *Narcissus* (1981). Echoes of Schoenberg and Berg may be felt in his works of the early and mid-1980s, and Hammond's usually strong contact with tonality is here at its most tenuous. German poetry, particularly that of Hesse, has been an important influence. *Die ersten Blumen* (1996) is, in his words, a 'nostalgic and romantically melancholic' response to a poem by Hesse. Resonances from Messiaen and sometimes Poulenc can also be heard in Hammond's work; but it is the poetry, mysticism and visual images of Ireland that play a more crucial role. Hammond does not utilize Irish folksong, yet works such as *Wavespace* for solo flute have an unmistakably Irish feel.

MICHAEL RUSS

Hammond, Richard (*b* Kent, England, 26 Aug 1896). American composer. He was educated in the USA, graduating from the Yale University school of music. After serving in the navy during World War I, he continued musical studies with Whithorne, Mortimer Wilson and Boulanger. Together with Whithorne he founded the Composers' Music Corporation, a publishing house for contemporary music, and he has been on the executive boards of the League of Composers, the Franco-American Music Society and the Hollywood Bowl Association. He has also written extensively on new music for *Modern Music* and other journals. His compositions are essentially neo-romantic in style; they have received most performances from societies for modern music, and all remain unpublished.

Other works: Sonata, ob, pf, 1928; ballets, choral music, pf pieces

PEGGY GLANVILLE-HICKS/BARBARA A. RENTON

Hammond organ. An electronic organ. The Hammond Clock Co. was founded in Chicago in 1928 by the engineer Laurens Hammond (*b* Evanston, IL, 11 Jan 1895; *d* Cornwall, CT, 1 July 1973). From 1933 he developed the Hammond organ with the engineer John Marshall Hanert and patented it in 1934; the company began manufacture of the instrument in 1935. It was an immediate success – Henry Ford and George Gershwin were early purchasers – and by the late 1930s the company was producing about 200 instruments a month. The company, which became the Hammond Instrument Co. in 1937 and the Hammond Organ Co. in 1953, also produced the Novachord (1939–42), an unusual electronic organ, and the Solovox, a monophonic three-octave piano attachment (1940–50). About two million Hammond organs in many different models had been built by the 1980s, the firm having retained its leading position in the market; since the early 1970s the emphasis has been on home organs, although models designed for use in church, theatres and concert halls are also produced. In 1980 Hammond bought the Electro Music Co. (manufacturer of the LESLIE loudspeakers) from CBS Musical Instruments; both were sold to the Australian Noel Crabbe in 1985, who sold Hammond to Suzuki in 1988. The company, renamed Hammond Suzuki USA, was based in Lombard, near Chicago, and later in nearby Addison. In 1992 it repurchased Electro Music.

Although its sound quality differed in some respects from that of a pipe organ (the chief difference is that its overtone series is not the natural one), the Hammond organ was purchased by some 1750 churches in the first three years of its manufacture (a third of all sales). From 1936 until 1938 the company fought a legal battle with

Hammond electronic organ (model B-3000), early 1970s

the Federal Trade Commission for the right to call the instrument an organ; somewhat exaggerated claims made in early publicity were also involved. Although the case was decided against the company, the Hammond firm was allowed to continue to call its instrument an 'organ' and soon afterwards a blind test was held in Chicago in which experts failed to distinguish between a Hammond and a pipe organ in a third of the examples played to them.

In early models of the Hammond organ the sounds were generated by an electromagnetic system in which 91 (later 96) rotating metal tone-wheels were driven by a stable synchronous motor. The original Hammond organ Model A has two five-octave manuals and a two-octave pedalboard, variation and precise control of timbre being effected by a system of drawbars – two for the pedals and two sets of nine each for the manuals. During this period the company pioneered several other features of electronic organ design that are still common, including a 'spinet' organ in 1949 and a one-manual 'chord organ' around 1952. A feature of most Hammond organs is the external Leslie loudspeaker, which affects the sound like a tremulant stop on a pipe organ.

From the mid-1960s to 1974 the electromagnetic tone-wheels were gradually superseded by electronic oscillators, which were developed while electronic organs were manufactured for the Everett Piano Co. (South Haven, Michigan), after Hammond bought the company from Wurlitzer in 1962 (it was sold to Yamaha in 1971). Advances in electronic technology around 1970 made possible several new features that are now widespread: rhythm and 'walking bass' units, arpeggiators, memories, and a choice of chord systems. Larger models (as well as some made by other companies) electronically mimic the 'key click' that forms a distinctive element of the sound of the original Hammond tone-wheel organ. In the early 1980s Hammond introduced microcomputer organs; current models, like Hammond Suzuki's digital pianos (produced since 1992), are based on sampled timbres. Most models (including sound modules without keyboards) continue to feature Hammond's unique system of drawbars, which are also found on similar instruments from other manufacturers.

The first Hammond organs were popularized by such musicians as Fats Waller and JIMMY SMITH, and a distinctive Hammond style of 'swinging' staccato playing (due to a lack of control over attack in the early models) soon became known. Since the 1960s the instrument has been included in many concert works, notably Kagel's *Tremens* (1963–5) and Stockhausen's *Momente* (1962–72). At about the same time it was also adopted by rock musicians, including Keith Emerson. A recent jazz soloist is Barbara Dennerlein.

HUGH DAVIES

Hampel [Hampl, Hampla, Humple], **Anton Joseph** (*b* Bohemia, 1710/11; *d* Dresden, 30 March 1771). Bohemian horn player, teacher, inventor and composer. He was appointed second horn of the Dresden Hofkapelle in 1737 and continued in that capacity until about 1768, being paired initially with J.G. Knechtel, later with CARL HAUDEK. Hampel contributed to the development of both the instrument and its technique, and his innovations were widely imitated. He extended the horn's range downwards by developing the middle and low registers. During his tenure at Dresden, second horn parts became more independent of first parts and a new idiomatic second horn style appeared, the latter characterized by rapid arpeggios and wide leaps, sometimes extending down to the second harmonic, with occasional factitious tones in the low register (e.g. *e*, *f* and *f♯*). This new style

was soon imitated elsewhere, and from it developed a species of second horn player (*cor basse*) whose style complemented that of the first horn (*cor alto*) and was in no way considered inferior.

Hampel worked with the Dresden instrument maker Johann Georg Werner to develop the *Inventionshorn* (*c*1753), on which crooks of varying lengths were inserted into the middle of the body of the instrument rather than the mouthpipe end, thus allowing the distance between horn and player to remain constant regardless of the crook used. The concept was soon adopted throughout Europe. Hampel also developed an early non-transposing mute. His experiments with mutes, related by Heinrich Domnich in his *Méthode* of 1807, apparently led Hampel to develop and codify hand-stopping (probably together with Haudek) in order to increase the note possibilities of the horn. According to Domnich, Hampel's application of hand-stopping occurred mainly in slow movements, and he was past his prime when he developed the technique; however specific dates for this development have not been determined. With the introduction of the hand into the bell on a regular basis the horn's tone became generally more mellow, and stopped notes, with their more nasal timbre, allowed the horn to be used effectively in dramatic spots for expressive ends. Though Hampel's exercises and compositions include passages that would require hand-stopping (e.g. including notes *d′*, *f′* and *a′*, among others), no discussion of the technique appears in his pedagogical works, which included an autograph volume of exercises entitled *Lection pro Cornui* (*c*1762), formerly in *D-Dl*, now lost.

Hampel's innovations were disseminated and developed further by his students, the most famous of whom was Giovanni Punto, who is reported to have studied with Hampel about 1733/4. Punto published Hampel's method as the *Seule et vraie méthode pour apprendre facilement les élémens des premier et second cors . . . composée par Hampl et perfectionée par Punto, son élève* (Paris, *c*1794, 3/1798). Among Hampel's other students was the Bohemian J.A. Mareš, who developed the Russian horn band.

Hampel composed a number of works for his instrument, including a set of trios for horns (*F-Pn*) and at least two concertos for two horns in D (lost; listed in the Breitkopf catalogue of 1769, p.361). He may have composed the duets and trios by 'Mr. Humple' in *A Collection of Duets for French Horns* (London, *c*1762), and an anonymous concerto in D (*S-L*) has been attributed to him (Rasmussen).

Hampel's son, Johann Michael (1732–93), sometimes listed as Joseph junior, was also a horn player. He reportedly played for a time at the Thurn und Taxis court at Regensburg, and was eventually engaged by the Dresden Hofkapelle as a supernumerary in 1768, becoming a permanent member in 1771.

THOMAS HIEBERT

Hampel, Hans [Jean, Giovanni, Jan] (*b* Prague, 5 Oct 1822; *d* Prague, 30 March 1884). Czech composer and pianist. He was a distinguished piano pupil of Tomášek and later a bank official by profession. Although no written reports about his public performances have survived, his Romantic character-pieces, strongly influenced by Schumann and Chopin, are evidence of his keyboard mastery. In such stylized dance pieces as *Aufforderung zur Polka* op.17 his work typifies Czech music of the period immediately preceding his contemporary Smetana. Procházka (1890) considered his *Lieb Ännchen* op.10 to be one of the most original and deeply felt pieces written for the piano since Schumann, and he praised Hampel's harmonic invention as combining a theoretical mastery of music with a deep understanding of higher mathematics. A catalogue of his works which was published in the musical periodical *Dalibor* in 1890 has remained the fullest account of his output, although it does not exactly correspond to the body of his printed and manuscript compositions in the National Museum in Prague.

WORKS

unless otherwise stated, works are for piano 2 hands and printed works were published in Prague

Romance, op.1 (1864); Valse brillante, op.2 (?1864); 3 mazurkas, op.3 (1864); Trauermarsch 'dem Gedenken Tomascheks', op.4 (?1864); 2 Polonaisen, op.5 (?1864); Improvisation, op.6 (?1864); 2 polonaises, op.7 (1864); 3 Phantasiestücke, op.8 (?1864); 2 Rhapsodien, op.9 (?1864); Lieb Ännchen: eine Erzählung in 4 Bildern, op.10 (Leipzig, ?1864); Allerseelennacht, op.11 (?1864); Trauermarsch, b♭, op.12 (1864); Zerstreute Gedanken, 9 pieces, op.13 (*c*1865); Thema mit Variationen, op.14 (*c*1865); Valse brillante no.2, op.15 (*c*1865); Rhapsodie no.3, op.16 (*c*1865); Aufforderung zur Polka, op.17 (*c*1865); Valse brillante no.3, op.18 (*c*1865); 5 Lieder ohne Worte, op.19 (*c*1865)

Cadenza to Beethoven's Pf Conc. no.3, op.20 (*c*1870); Vorspiel und Fuge, op.21 (*c*1870); Nocturno, op.22 (c1870), also arr. str qt; Thème varié, op.23 (*c*1870); Thema mit Variationen no.3, op.24 (*c*1870); Valse brillante no.4, op.25 (*c*1870); Variationen, D♭, pf left hand, op.26 (1870); An Laura: Miniaturbild, op.27 (*c*1870); Menuetto, op.28 (*c*1870); Valse brillante no.5, op.29 (*c*1870); 3 Idyllen, op.30 (*c*1870); Mazurka brillante, op.31 (*c*1870); Schlichte Gedanken, op.32 (*c*1870); 4es varierte Thema, op.33 (*c*1870); Valse brillante no.6, op.34 (*c*1870); Trauermarsch, b, op.35 (*c*1870)

Humoreske, op.36 (*c*1870); Pièce énigmatique en forme de valse, op.40 (1875); Spiegelbilder, incl. no.5, c♯ (1881)

Ave Maria, SATB, op.39 (*c*1875)

JIŘÍ VYSLOUŽIL

Hampshire [Hamshere], **Richard** (*b* *c*1465; *d* before 1515). English musician. He became a chorister at St George's Chapel, Windsor, in 1474, and was a scholar at Eton College (1479–83). In 1483 he became a clerk at King's College, Cambridge, and later a scholar there. In 1487 he was again a clerk at King's, and by 30 September 1489 was back at St George's Chapel, Windsor, as a clerk. In 1493 he was appointed Master of the Choristers there, and he retained both offices until at least 29 September 1499. He is probably the composer of the incomplete two-part piece that begins *Lett serch your myndis*, ascribed to 'Hamshere' in the Fayrfax manuscript (*GB-Lbl* Add.5465; ed. in MB, xxxvi, 1975), an important collection of early Tudor songs. It is possible that this piece was written in honour of one of Henry VII's sons, either Arthur or, less likely, Henry (see Stevens).

DAVID GREER

Hampson, Denis. *See* HEMPSON, DENIS.

Hampson, (Walter) Thomas (*b* Elkhart, IN, 28 June 1955). American baritone. He studied in Spokane and Los Angeles, making his début in 1978 at Spokane in *Hänsel und Gretel*. In 1981 he won first prize at the Metropolitan Opera Auditions. Engaged at Düsseldorf (1981–4), he sang the Herald (*Lohengrin*), Harlequin (*Ariadne auf Naxos*), Belcore, and Nanni (Haydn's *L'infedeltà delusa*). He sang Henze's Prince of Homburg at Darmstadt, Guglielmo at St Louis (1982), Malatesta at Santa Fe (1983) and Count Almaviva at Aix-en-Provence (1985). In 1984 he was engaged at Zürich, where over the next decade his roles included Massenet's Lescaut, Handel's Julius Caesar, Marcello, Don Giovanni, Rossini's Figaro (also the role of his Covent Garden début in 1993), Posa (*Don Carlos*) and the Prince of Homburg. In 1986 he made his Vienna Staatsoper début as Guglielmo, and his Metropolitan début as Count Almaviva, which he also sang at his Salzburg début (1988). Other roles at the Metropolitan have included Billy Budd and Coroebus (*Les Troyens*). At San Francisco he has sung Monteverdi's Ulysses (1990) and created Valmont in Conrad Susa's *Dangerous Liaisons* (1994). A charismatic actor, Hampson has a grainy, flexible voice perfectly suited to Mozart's three Da Ponte operas, all of which he has recorded to acclaim. His other operatic recordings include Rossini's Figaro, Yevgeny Onegin, Marcello and Thomas' Hamlet. He is also an outstanding recitalist with an enterprisingly wide repertory: he has performed and recorded little known songs by American composers, including Ives, Griffes and MacDowell, and created *Night Speech*, a song cycle by Stephen Paulus, at Spokane (1989). He has been particularly closely associated with the songs of Mahler, and has co-edited the *Knaben Wunderhorn* songs for the critical edition of the Gustav Mahler Gesellschaft (Universal Edition, Vienna).

ELIZABETH FORBES

Hampton, John (*b* *c*1455; *d* after 1520). English church musician and composer. In 1474 there was a clerk of that name in the choir of the collegiate church of Westbury-on-Trym, near Bristol. In June 1484 Hampton became master and organist of the Lady Chapel choir at Worcester Cathedral, retaining this position until September 1521. In the 1470s John Alcock, Bishop of Worcester, had reorganized this choir, adding a permanent team of eight boys and rebuilding the chapel in which it sang. By his indenture of appointment Hampton undertook (among other things) to teach the boys plainsong and polyphony, and to direct the singing of the daily Lady Mass in the chapel, and of the Marian antiphon *Salve regina* each evening during Lent. A five-part setting of *Salve regina* by Hampton is in the Eton Choirbook (MB, xi, 1958, no.22). Among Hampton's other activities was the singing of carols with his boys on Twelfth Night. In 1495 King Henry VII paid 20s. to 'Hampton of Wourecester for making of balades', though none of these is known to survive.

ROGER BOWERS

Hampton, Lionel [Hamp] (*b* Louisville, KY, 20 April 1908). American jazz vibraphonist, drummer and bandleader. Around 1919 he moved with his family to Chicago, where he began his career playing drums in various bands, including that of Les Hite. From the late 1920s he was based in the Los Angeles area. As a member of Hite's band he worked at the Cotton Club in Culver City, CA, initially accompanying Louis Armstrong (1930–31), with whom he recorded, and who encouraged him to take up the vibraphone. Hampton soon became the leading jazz performer on this instrument, and achieved wide recognition through his many film appearances with Hite. After playing informally with Benny Goodman in 1936, he began to work in Goodman's small ensembles, with which he performed and recorded regularly until 1940; as a result he became one of the most celebrated figures of the swing period, and his resounding success allowed him to form his own big band in 1940. This group, which at times included musicians of the stature of Cat Anderson, Illinois Jacquet, Clifford Brown and Quincy Jones, was one of the most long-lived and consistently popular large ensembles in jazz. From the 1950s Hampton undertook numerous 'goodwill' tours to Europe, Japan, Australia, Africa, the Middle East and elsewhere, and made a large number of television appearances, attracting a huge and enthusiastic international following. He played at the White House for President Carter in 1978; during the same year he formed his own record label, Who's Who in Jazz, to issue mainstream recordings. In the 1980s and 1990s his band continued to draw capacity crowds throughout the world, although in the mid-1990s he suffered a number of strokes which disrupted his usually energetic routine.

Hampton was not the first black jazz musician to take up the vibraphone (Red Norvo had preceded him in the late 1920s), but it was he who gave the instrument an identity in jazz, applying a wide range of attacks and generating remarkable swing on an instrument otherwise known for its bland, disembodied sound. Undoubtedly his best work was done with the Goodman Quartet from 1936 to 1940, for instance on *Moonglow* (1936, Vic.), when he revealed a fine ear for small-ensemble improvisation and an unrestrained, ebullient manner as a soloist. The big-band format was probably better suited to the

display of his flamboyant personality and flair for showmanship, but after a few early successes, especially the riff tunes *Down Home Jump* (1938, Vic.), *Flying Home* (1942, Decca) and *Hey Ba-ba-rebop* (1945, Decca), the group was too often content to repeat former triumphs for its many admirers. Hampton at times also appeared as a singer, played drums with enormous vitality, and performed with curious success as a pianist, using only two fingers in the manner of vibraphone mallets.

J. BRADFORD ROBINSON

Hamshere, Richard. Composer, probably identifiable with RICHARD HAMPSHIRE.

Hamuli, 'Abdu al-. Egyptian composer and singer. *See* EGYPT, §II, 2(vii).

Han [Hahn], **Ulrich** [Gallus, Udalricus] (*b* Ingolstadt; *d* Rome, *c*1478). German printer, active in Italy. He claimed in colophons to have been a citizen of Vienna (see Borsa). Colophons also tell us that Han was a priest (*venerabile vir*), attended a university (*magister*) and was a man of some social standing (*dominus*). He is probably the Ulrich Han from Ingolstadt who matriculated at the University of Leipzig in the winter of 1443–4 and the Udalricus of Ingolstadt registered for the winter term of 1438. He has been proposed (see Donati; reviewed by Wehmer) as the possible printer of the first book in Italy, an undated *Passio Christi* in Italian; the engraved illustrations are indicative of the work of Johann Numeister.

Between 1467 and 1478 Han published about 80 books in Rome. Early production focussed on classical works, many edited by Giovanni Andrea Campano. Between 1471 and 1474 Han was in partnership with Simone Cardella of Lucca, a Roman publisher of legal works. He was succeeded by Stephan Planck, probably a printer in his shop, who inherited his printing equipment and re-used his music type for eight more books (Duggan, 1992). Of great importance to music is Han's *Missale romanum* (1476; Hain no.11366), the first dated use of music printed from movable type and the first appearance of roman plainchant in type. Missals without music had already appeared (*c*1472, see Duggan, 1992, no.38; 1474, Milan, Antonio Zarotto, Duggan, 1992, no.39; 1475, Han, Duggan, 1992, no.40). Music printed from movable type had already appeared in the *Graduale* (*c*1470, see *Gesamtkatalog*, no.10977), using a gothic or *Hufnagelschrift* plainchant type. Han's music type, printed in black in a second impression over red staff lines, surpasses many later examples in clarity and careful alignment of red and black printing.

M.K. DUGGAN

Hanart [Anart, Henart], **Martin** (*d* Rome, 16 Nov 1482). Franco-Flemish composer. He was a cleric of the diocese of Cambrai and canon of Cambrai Cathedral. From December 1468 until his death he sang in the papal chapel; and Tinctoris dedicated his *Tractatus de notis et pausis* (*c*1474–5) 'to the illustrious Martin Hanart, canon of Cambrai and apostolic singer'. A florid two-voice *Le serviteur* (based on the discantus of Dufay's song) is ascribed 'Hanart' in Petrucci's *Canti C* (Venice, 1504[3]; it appears anonymously in *I-Bc* Q16, copied by 1487); given that it is one of the earliest known examples of this florid style, it can hardly have been composed long before Hanart's death. He is to be distinguished from JEAN HEMART.

DAVID FALLOWS

Hanboys [Hauboys], **John** (*fl* ?*c*1370). English theorist. He was the author of a 14th-century treatise on mensural notation, the *Summa*, that survives in a single copy from the first half of the 15th century (*GB-Lbl* Add.8866, ff.64*v*–86*v*). The treatise may once have been part of a larger compendium that also dealt with plainchant and related issues, since a brief definition of *sinemmenon* (at the bottom of f.64*r*) concludes with reference to an otherwise unknown multi-volume work by Hanboys ('ut dicit hanboys libro primo capitulo sexto'). Furthermore, there appear to be traces within the *Summa* of earlier formulations by the author of some of its material.

Nothing certain is known of Hanboys's biography. The secondary literature, following the 16th-century English antiquary John Bale, formerly placed Hanboys and his *Summa* around 1470. Bale credited him with the one-volume *Summa* and also a volume of songs. Brian

Trowell, however, compellingly identified Hanboys with the music theorist J. de Alto Bosco named in the famed English 'musicians motet' by Johannes Alanus, *Sub arturo plebs*, which some scholars now date to the very early 1370s. The name appears among those of musicians with documented careers in the Chapel Royal or in service to the Black Prince from the 1340s to the 1380s. This timescale accords well with both the contents of the *Summa* and the age of its one surviving manuscript.

Hanboys's principal goal in the *Summa* is the elucidation of an eight-level mensural hierarchy that expands a six-level system (such as those advocated by the Englishmen Johannes Torkesey and Robertus de Brunham) by the inclusion of one additional higher and lower degree. The primary contents of the *Summa* are mechanical, repetitive descriptions of the properties of the eight notes of this system – *larga*, *duplex longa*, *longa*, *brevis*, *semibrevis*, *minor*, *semiminor* and *minima*. Each was given its own form and range of values, and was subject in varying degrees to perfection and imperfection, alteration and diminishment. Most of this was original, but about half of Robert de Handlo's *Regule* (1326) is incorporated into the chapters on the *longa*, *brevis* and *semibrevis*. The main body of the book is framed by introductory matter primarily drawn verbatim from Franco's *Ars cantus mensurabilis* and by closing chapters on ligatures, rests and the rhythmic modes that derive mainly from Handlo.

In digressions from or expansions upon his main exposition Hanboys introduced fascinating if sometimes obscure formulations about the naming and renaming of notes, uses of the dot and circle, mensuration signs, certain mixtures of note values, various systems of rests, syncopation, binary mensuration and the diminishment of altered values by extensive chains of ever-smaller notes. These were all essentially French Ars Nova concerns. He also documented particular English notational and mensural practices of the period after Franco and Petrus de Cruce, many of which appear in insular musical sources. These include the *longa* and *brevis erecta* and the doctrines of Johannes de Garlandia that had been reported by Handlo; the extension of Garlandia's concepts by W. de Doncastre and Robertus Trowell; the innovative rest shapes of Robertus de Brunham and Brunham's use of ligatures and the *cauda yrundinis* to indicate the alteration of semibreves; and various mensurations of the *brevis* and *semibrevis* by unidentified *antiqui* including binary subdivisions of the imperfect *semibrevis* called *curta* and *longa mensura*. In this valuable tracing of developments in 14th-century mensuration and notation, Hanboys carefully distinguished between the practices of the *antiqui*, that of the *moderni* and the practices that he himself advocated.

PETER M. LEFFERTS

Hancke, Karl. *See* HANKE, KARL.

Hancke [Hanke], **Martin** (*b* Moravia, *fl* 1617). German poet and composer. He referred to himself as 'Moravus'. In about 1617 he is known to have been a citizen of Brieg (now Brzeg) in Silesia, where he worked as a copyist. His only extant work is the *Evangelia: auff alle Sontag, Hohe Fest und Feyertag durchs gantze Jahr; auff die ausserlesensten anmutigsten Frantzösischen Melodeyen der Lobwasserischen Psalmen*, printed in Leipzig and Breslau in 1617 (RISM, B/VIII 1617[04]). The words and the four-part settings are Hancke's own, and they belong to the tradition of biblical paraphrases established about the mid-16th century by Martin Agricola and Nicolaus Herman. Hancke's publication is musically interesting in that it provides evidence of the spread of the Huguenot Psalter in Lutheran areas. This was probably not so much as a result of Lobwasser's German edition of the Genevan Psalter, which had appeared in many editions since 1573, but rather through personal contacts established by many German noblemen with the Huguenots during the troubles in France. Musically, the homophonic settings with tenor cantus firmus are not distinguished by any particular individuality.

The *Fünfzehn geistliche Lieder* (1685) by an author of the same name, as well as *Martini Hankii Sechzehn Lieder von der Ewigkeit* (Frankfurt an der Oder, 1690), are certainly not posthumous publications of M. Hancke, but could perhaps be by a relative.

WALTER BLANKENBURG

Hancock, Gerre (*b* Lubbock, TX, 21 Feb 1934). American organist. He took a BMus in the organ at the University of Texas at Austin in 1955 and subsequently studied at the Sorbonne and the Union Theological Seminary, New York. His organ teachers included E. William Doty, Jean Langlais and Robert Baker, and he studied composition and improvisation with Nadia Boulanger, Kent Kennan and M. Searle Wright. He has held church appointments at St Bartholomew's, New York (1960), Christ Church Cathedral, Cincinnati (1962), and St Thomas's, Fifth Avenue, New York, where as organist and master of choristers from 1971 he has achieved international acclaim. Here the English cathedral tradition of all-male choirs is continued at a high level of excellence. In 1971 he also joined the faculty at the Juilliard School, and in 1974 he became a member of the faculty of Yale University. Since 1963 he has given recitals throughout the world, performed at many national conventions of the American Guild of Organists (AGO) and at the centenary celebrations of the Royal College of Organists in London (1963), and has made many appearances with the St Thomas Choir in concert and on television. Hancock is also active as guest conductor with Concert Royal and the Orchestra of St Luke's in New York. He is a fellow of the AGO, the Royal School of Church Music and the Royal College of Organists, and in 1985 received an

honorary MusD from Nashotah House Episcopal Seminary. His compositions include a cantata, *The Plumb Line and the City*, the anthems *Missa Resurrectionis and Christus Vincit*, and *A Festival Alleluia*. His textbook, *Improvising: How to Master the Art*, was published in Oxford in 1994.

CHARLES KRIGBAUM

Hancock, Herbie [Herbert Jeffrey] (*b* Chicago, 12 April 1940). American jazz pianist, electric keyboard player and composer. He was born into a musical family, and began studying the piano at the age of seven. Four years later he performed the first movement of a Mozart concerto with the Chicago SO in a young people's concert. By the time he graduated from Grinnell College in 1960, he was already working in Chicago jazz clubs with Coleman Hawkins and the trumpeter Donald Byrd invited him to join his quintet and move to New York, where, during Hancock's first recording session with the group, Blue Note was sufficiently impressed to offer him his first date as a leader, in May 1962. The resulting album, *Takin' off*, drew considerable public attention through an original tune with a strong gospel influence: *Watermelon Man*.

In May 1963 Hancock joined Miles Davis's quintet. His piano style had by that time evolved into a highly personal blend of blues and bop with colourful harmony and exquisite tone. While working with Ron Carter and Tony Williams, Hancock helped revolutionize traditional jazz concepts of the rhythm section and its relation to the soloists, and established a musical rapport with an extraordinary degree of freedom and interaction. During his five years with the quintet Hancock also led his own groups, composed several tunes which have become jazz standards, including *Maiden Voyage* and *Dolphin Dance*, and composed the music for Antonioni's film *Blow-Up* (1966). Although he officially left Davis's group in 1968, Hancock continued to record with him until 1970 and played electric piano and organ on many of Davis's important jazz-rock albums including *In a Silent Way*, *Bitches Brew* (both 1969, Col.) and *A Tribute to Jack Johnson* (1970, Col.).

From 1970 to 1973 Hancock led a sextet which combined elements of jazz, rock and African and Indian music with electronic devices and instruments. (He also used the name Mwandishi during this period.) Influenced by Davis's fusion recordings, the sextet was notable for its colourful doubling of instruments, tasteful blend of acoustic and electronic sounds and mastery of compound metres (*Mwandishi*, 1973, Warner Bros.; *Sextant*, 1973, Col.). Thereafter Hancock began to use electric and electronic instruments more extensively, including the Fender-Rhodes piano, which he played through a variety of signal processors such as wah-wah and fuzz pedals. Later he turned to the Mellotron and the Hohner Clavinet, and, finally, to various synthesizers, sequencers and electronic percussion units.

The album *Headhunters* (1973, Col.) marked the beginning of a commitment to more commercial types of music, particularly rock, funk and disco, and contained the hit single *Chameleon*. Although Hancock returned occasionally to jazz projects from the late 1970s, particularly with his band V.S.O.P and his piano duos with Chick Corea, some critics felt that his inventiveness and clarity of development had suffered as a result of his extended absence from the jazz scene. During this period he enjoyed considerable commercial success; in 1983 the single *Rockit* reached no.1 on the pop charts, and the promotional video for this recording received widespread critical acclaim. *Rockit* demonstrated Hancock's ability to use the most complex innovations in electronic technology to produce fascinating music. After this success he turned his attention almost exclusively to jazz for the next two years. He acted and played in the film *Round Midnight* (1986) and won an Oscar for his score. From 1987 he has recorded and toured internationally with all-star groups that included Ron Carter, Tony Williams, Mike Brecker, Jack DeJohnette, Dave Holland, Pat Metheny, Vernon Reid (formerly of Living Colour) and Wayne Shorter; Hancock's album *Dis is da drum* (1994, Verve) included material in a hip-hop style, while on *The New Standard* (1996, Verve) he recorded versions of pop songs by the Beatles, Prince, Simon and Garfunkel, and Steely Dan among others.

WORKS

(*selective list*)

Inst: Watermelon Man, Driftin' (from Takin' Off; 1962, BN); Cantaloupe Island, One Finger Snap (from Empyrean Isles; 1964, BN); Dolphin Dance, Little One, Maiden Voyage (from Maiden Voyage; 1965, BN); Riot, Speak Like a Child, The Sorcerer (from Speak Like a Child; 1968, BN); Chameleon, Watermelon Man (from Headhunters; 1973, Col.); I thought it was you (from Sunlight; 1978, Col.); Rockit (from Future Shock; 1983, Col.)

Film scores: Blow-Up (1966); Death Wish (1974); A Soldier's Story (1984); Round Midnight (dir. B. Tavernier, 1985); Colors (1988); Harlem Nights (1989)

BILL DOBBINS

Handbell (Fr. *clochette*, *sonnette*; Ger. *Tischglocke*, *Handglocke*; It. *campanello a mano*; Sp. *campanilla*, *esquila*). A bell with a handle (shaft or loop), held in the hand for ringing. Usually it has a clapper inside and is swung to produce a sound, although it may also be held stationary and tapped with a hammer. Single handbells are used in music to provide an element of pitch, rhythm and tone-colour; from ancient times they have been used frequently in religious music because of the esoteric properties ascribed to bell sound. Handbells are mostly used in sets, which may contain about six to over 80 bells covering a range from a short melodic scale to seven chromatic octaves. There may be a slight increase in loudness towards the upper end of the range (the reverse of the pattern for carillon bells).

Western handbell music is usually performed by a 'team' or 'choir' of four to 15 'ringers' (fig.1). Each ringer either holds one or two handbells in each hand or lifts the appropriate bells from a table as the notes are required. Handbell music contains both harmonic and melodic elements and reflects the fact that handbells are about the only bells that can be damped. The repertory includes both original compositions and arrangements, solo works and combinations with voices and other instruments; there is also music for two handbell choirs. Several systems of scoring handbell music exist, some influenced by the use of numbers in English CHANGE RINGING, others by the letters of tonic sol-fa notation; staff notation is most common, with the notes written an octave below sounding pitch.

1. History. 2. English handbell ringing.

1. HISTORY. The oldest extant handbells are from China, dating from about 1600 BCE. Chinese writings refer to still earlier handbells, and ascribe transcendental powers to their sound. Early Chinese handbells are oval in horizontal section and usually have a concave or 'fish-mouth' rim (fig.2*a*). Around the 6th century BCE the Chinese began to tune their handbells and attach them to a frame for striking (*see* CHIMES).

In ancient India the handbell was venerated for both its sound and its appearance; for the Hindus it symbolized the 'world lotus', out of which issued the hosts of the created world, as sounds issue from a bell. The lotus determined its form, circular in horizontal section with sides flaring towards the rim in vertical profile (fig.2*b*); this proved also to be the best shape acoustically, and has been adopted for most modern handbells. The oldest extant examples are of the 5th or 6th century.

Buddhism inherited this shape of handbell, and spread its use across East Asia, and in the 6th century CE introduced it into Japan. In the 9th century handbells came to be used for accompaniment in the singing of Japanese *goeika* hymns. In *goeika* performance each singer alternately rings a *rei* (small handbell) and strikes a small metal disc. Both instruments have a high, indefinite pitch and add a sparkle to the vocal tone comparable to that which the Western triangle and cymbals give to Coptic plainchant. The *rei* is difficult to manipulate; it has a particularly long handle and is only about 5 cm in diameter (fig.2*c*), whereas the diameter of the average Buddhist handbell is closer to 10 cm (fig.2*d*). *Goeika* has always retained its religious nature, both in regard to repertory and to the sanctity of the bell; there are several thousand *goeika* societies in Japan, which hold annual conventions.

Handbells are indigenous to many parts of Africa as instruments for religious rites, signalling and musical performance. Africans use both cast and forged handbells, the latter having been more prevalent until the 20th century. The bells range in size from 10 cm to 40 cm, handle to rim, and are mostly of a flattened shape, recalling some early Chinese bell forms. In certain areas clusters of two to six or more bells are attached to a handle, and are played by tapping (*see* BELL (i), fig.10); these are used in ensemble music and to accompany songs and dances.

In ancient Egypt handbells were used in temple rites from the 8th century BCE. Egyptian bells are datable chiefly on circumstantial evidence: on the early bells the gods are symbolized by animals (fig.2*f*); then under new religious influences animals gave way to flowers, the flowers to lines, and eventually, in the case of Coptic altar bells, to the Christian cross. Although small, extant examples show good castings, mostly of an ovoid shape said to be derived from the top of the canopic or funerary urn.

Christian missionaries carried handbells on their journeys from Mediterranean Africa, and made others along the way, although the latter were mostly forged and so lacked resonance. Like orchestral cowbells, they had loop rather than shaft handles and were intended to be joggled rather than swung. Their tone was suitable for funeral processions and wakes, an ancient and universal use based on the belief that the sound of blessed bells protects the souls of the dead. Cast handbells, with their more resonant tone, were made in Italy for church use from the 6th century, but did not become widespread until the 8th century or later. In general the handbell preceded the tower bell as a means of calling to divine services.

In western Europe handbells are first shown in a musical use in manuscripts of the 13th century (fig.3), about the time that small bells were first tuned in diatonic series (*see* CHIMES). Handbells may have been used in some late

1. Sound in Brass handbell team, Chelmsford, Essex; the set of 79 bells, by the Whitechapel Bell Foundry, covers four and a half octaves

2. *Handbells: (a) Chinese, with fish-mouth, Shang dynasty, c1766–1028* BCE; *(b) Hindu, with handle depicting the god Hanuman; (c) rei, used in Japanese goeika music; (d) Tibetan, 19th century; (e) wooden, from Nigeria; (f) Egyptian, with handle depicting the god Bes, c1000* BCE

medieval and early Renaissance music for singers, other instrumentalists, or both, but without notation calling for them. The were apparently played in jubilant processions, where they would have been effective because of their brilliant tone-colour; their almost permanent retention of pitch caused them to be used for retaining standards of pitch and intonation. In the 20th century the use of handbells – usually mounted on a frame and played by one person with a mallet – became quite common. (Peter Maxwell Davies's *Worldes Blis*, 1966–9, employs seven pitches and Henze's *Cinque piccoli concerti*, from his opera *The English Cat*, 1983, uses four different pitches for each of three players.)

2. ENGLISH HANDBELL RINGING. The modern tuned English handbell was developed in the 17th century, cast of bronze with a fixed, directional clapper and leather strap handle. In some English towns it was conceived for use as a practice instrument for tower bell ringers, to rehearse the CHANGE-RINGING sequences then coming into fashion; thus, small sets were made to correspond to the bells in a specific tower. Wooden pegs, later changed to leather, were attached to the striking surface of the ball of the clapper, and springs attached to the clapper shaft kept the clapper from resting against the casting. As ringers began to realize the musical potential of handbells, semitones were added to form fully chromatic sets, enabling performers to play familiar melodies. Some extant sets were cast towards the end of the 17th century by the Cor Brothers of Aldbourne and the WHITECHAPEL BELL FOUNDRY.

By the middle of the 18th century, group tune ringing was a favourite diversion in England, and soon nearly every village had its band of bell ringers. Some bands, particularly in the northern counties of Lancashire and Yorkshire, rang with as many as 200 bells, many of them duplicated, and took part in annual contests. The Lancashire Ringers were some of the best, and when the American impresario P.T. Barnum heard them in the late

3. *Woman dressed as a hobby-horse and ringing two handbells, accompanied by musican with pipe and tabor: marginal illustration from a French psalter, before 1302 (GB-Ob Douce 118, f.34r)*

1840s, he arranged for them to perform in the USA. Apparently to make them appear more exotic, Barnum dubbed them Swiss Bell Ringers and dressed them in appropriate costumes; as such they became popular performers on American Chautauqua and vaudeville circuits. In 1863 these same Lancashire Ringers began an eight-year tour of Australia, with an additional tour to India.

English handbells became a permanent part of the American scene in 1902 through the auspices of Margaret Nichols of Boston. She introduced from England eight Whitechapel handbells, a set which she continued to enlarge. Within a few years, as Mrs Arthur Shurcliff, she was introducing Boston to the joys of handbell ringing with the Beacon Hill Ringers, consisting of five of her six children and several friends. They became well known for their annual Christmas carolling on Beacon Hill. The popularity of handbells spread rapidly through New England in the early 20th century, although nearly all bells had to be brought from England and were owned by families. Notable among the few early American bell makers was Rowland Mayland of Brooklyn who used the unique system of nickel-plating his bells rather than shaving metal from a casting, which is the commonly accepted tuning method.

Merle Kelly, an American who went to Japan as a Presbyterian missionary in 1957, introduced English handbells into his Kinjo University music classes. Handbell ringing spread throughout Japan primarily through Christian schools and the Japanese developed a mesmerizing combination of choreography and musical ringing which is as beautiful to watch as it is to hear.

By the beginning of the 21st century, handbell ringing outside England barely resembled that of a century ago. Sets of three to five octaves are now commonplace, and complete seven-octave sets are occasionally found. Community, church and school bell choirs often reach a highly professional degree of musical and technical proficiency. There is no single 'correct' way to do anything in handbell ringing. Numerous techniques have been developed to add variety of sound to straight ringing: various staccato methods, 'wow' effects, and so on, and ringers can become adept at controlling dynamics. Many English bell teams ring 'off the table', as do solo ringers primarily, while most other countries favour ringing 'off the shoulder'.

Since the 1970s a new industry has sprung up in the USA featuring a large array of handbell equipment and music. Until 1955, the majority of handbells were produced in England by the Whitechapel Bell Foundry. In 1955, Petit & Fritsen, Dutch bellfounders from 1660, began manufacturing handbells. Schulmerich Carillons, Inc., began mass producing handbells in the USA in 1963, and Jacob Malta, who completed the design of the Schulmerich handbell, opened his own business, Malmark, Inc., in 1974. While bell makers in England number their bells from the highest bell down, English handbells manufactured in the USA are numbered from the lowest bell upwards. Because of the extreme weight of large bronze bells, Malta patented a design for aluminium bass handbells in 1990. These bells, in the range *C–f♯*, give a strong fundamental with very few high partials, and weigh much less than bronze.

The first International Handbell Symposium was held in Arcata, California, in 1984. Participants in these biennial symposia include the American Guild of English Handbell Ringers, founded in 1954 by the New England Guild of English Handbell Ringers (1937); the Handbell Ringers of Great Britain, founded in 1967; the Handbell Ringers of Japan (1976); Handbell Society of Australasia (1983); Korean Handbell Association (1985); and several Canadian Guilds: Alberta (1983), Ontario (1985), Saskatchewan (1986), British Columbia (1993) and Manitoba (1995).

PERCIVAL PRICE (1), JOAN SHULL (2)

Handel [Händel, Hendel], **George Frideric** [Georg Friederich] (*b* Halle, 23 Feb 1685; *d* London, 14 April 1759). English composer of German birth. Though consistently acknowledged as one of the greatest composers of his age, his reputation from his death to the early 20th century rested largely on the knowledge of a small number of orchestral works and oratorios, *Messiah* in particular. In fact, he contributed to every musical genre current in his time, both vocal and instrumental. The composition of operas, mainly on Italian librettos, dominated the earlier part of his career, and are the finest (though not the most typical) of their kind. In his later years his commitment to large-scale vocal works, usually with a strong dramatic element, found a more individual outlet in English oratorio, a genre that he invented and established.

1. HALLE. He was the son of Georg Händel (1622–97), a barber-surgeon in the service of the Duke of Saxe-Weissenfels, and his second wife Dorothea Taust (1651–1730), daughter of a pastor. Though some documentation of Handel's life in Halle survives, the only substantial account of his early years appears in John Mainwaring's anonymously published *Memoirs* (1760)

which seems to derive its information from Handel himself, perhaps recorded near the end of his life through intermediaries. Though its chronology is unreliable – Mainwaring's dates, when checkable, are usually found to make Handel about four years younger than he actually was – it is probably as accurate as reminiscence allows. The boy's early interest in music was at first frowned upon by his father; he was denied access to musical instruments and encouraged to study for the law. According to Mainwaring, he practised secretly on a clavichord in the attic. The Duke of Saxe-Weissenfels, having heard him playing the organ when he was about nine, persuaded his father to give him a musical education under Friedrich Zachow, organist at the Liebfrauenkirche at Halle, who gave him excellent tuition both on organ and harpsichord as well as in composition.

The death of his father on 14 February 1697, when the boy was not quite 12, perhaps removed a source of opposition to musical studies, but as the only surviving son of the marriage Handel also gained new responsibility for the maintenance of his family. He presumably kept open the possibility of a legal career, as is implied by his enrolment at the University of Halle in February 1702. A month later, however, he was appointed organist at the Calvinist Domkirche (Cathedral Church). The appointment was not renewed after the initial probationary year, by which time Handel had almost certainly become clear that he should devote himself to music, and that he needed to seek wider horizons. A taste for opera may first have been stimulated on a visit to Berlin; opera there 'was in a flourishing condition' and Handel is said to have met both Giovanni Bononcini and Attilio Ariosti. Such a visit is assigned by Mainwaring to 1698, but probably belongs to 1702, when both Italian composers were producing operas for the Prussian court. The fact that one of Handel's earliest musical works (the trio sonata op.2 no.2) appears to contain borrowings from Bononcini's operas of this period (*Cefalo* and *Polifemo*) suggests that the visit did indeed take place and was an important stimulant to the young composer. In summer 1703 Handel left Halle, to return only as an occasional visitor. His new life was to be spent in the great opera centres of Europe, beginning with Hamburg.

2. HAMBURG. The advantage of Hamburg to an aspiring and independent-minded theatre composer was that it contained the only regular opera company in Germany operating outside the courts. Since 1696 it had been dominated by the energetic and influential figure of Reinhard Keiser. Handel went to the opera house in 1703 as a second violinist, later playing continuo harpsichord. He also took the opportunity to gain additional income by giving private lessons. He soon became friends with the composer, singer and theorist Johann Mattheson, and Mattheson's later writings (his *Grundlage einer Ehren-Pforte*, 1740, and his annotated translation of Mainwaring) provide much information on this period of Handel's life.

Opportunities for Handel arose in 1704 at the opera house. Keiser, being (in Mainwaring's words) 'a main of gaiety and expence, involved himself in debts, which forced him to abscond'. In fact he moved temporarily to Weissenfels, leaving the management of the opera house to his partner Drüsicke; this allowed the younger composers a chance to display their talents, and occasioned some rivalry. At a performance of Mattheson's *Cleopatra* on 5 December 1704 Handel refused to give up his place at the harpsichord to Mattheson after the latter had finished singing the role of Antony, and the two men fought an ineffectual duel, Handel's life being spared only because Mattheson's sword broke on a coat-button. After this, according to Mattheson, the pair became better friends than before.

Handel got the chance to compose his first opera because (again according to Mainwaring) 'Keiser, from his unhappy situation, could no longer supply the Manager, who therefore applied to Handel, and furnished him with a drama to set'. The drama was F.C. Feustking's *Der in Krohnen erlangte Glücks-Wechsel, oder Almira, Königin von Castilien* (usually known as *Almira*) – a challenging choice, since the libretto had been prepared for Keiser himself, who had already set it to music; only his enforced move prevented its performance in Hamburg. (He produced a revised version at Weissenfels on 30 July 1704; his original setting was never performed.) Handel's version, opening on 8 January, proved very successful, with about 20 performances, and was followed immediately (on 25 February) by the less successful *Nero* (again on a Feustking libretto), the music of which is lost. Handel remained in Hamburg until summer 1706, but his activities as a composer seem to have been cut off with Keiser's return in August 1705. He did however compose a pair of operas, *Der beglückte Florindo* and *Die verwandelte Daphne*, designed to be performed on successive nights, which were produced in Hamburg in January 1708 (both are lost except for some dances and other fragments). Since Handel is assumed to have been in Italy at that time, it has generally been thought that these works were composed shortly after *Nero* and were performed in the composer's absence after news of his successes in Italy had reached Hamburg. However, it is unlikely that so unusual a project would be mounted without the composer, and newly-found evidence (Roberts, C1995) makes it more plausible to suggest that these operas were composed in Italy and that Handel returned to Hamburg late in 1707 to direct them.

Keiser's influence on *Almira* and the whole of Handel's subsequent operatic output can hardly be exaggerated. Not only did Handel incorporate fragments of musical material from several of Keiser's operas in his own works almost throughout his life, but he also absorbed from Keiser the eclectic mix of national styles apparent in so much of his music. Though he was soon to refine and consolidate the specifically Italian elements in his music in Italy itself, he never relinquished French forms for overtures and dance music, and his use of orchestral colour, particularly the occasional instrumental doubling of the voice *colla parte*, was derived from German models. Less happy was his adoption in *Almira* of Keiser's tendency to write for voice in quasi-instrumental style, but this was a fault that the next stage of his career was quick to remove.

3. ITALY. Mainwaring relates that 'the Prince of Tuscany', while visiting Hamburg, sought Handel out and met him several times, showing him examples of the latest Italian music and assuring him 'that there needed nothing but a journey to Italy to reconcile him to the style and taste which prevailed there'. The reference seems to be to Gian' Gastone de Medici, younger brother of Ferdinando de Medici, who travelled in Germany (Ferdinando, heir to Grand Duke Cosimo III, died in 1713,

leaving Gian' Gastone to succeed in 1723). Handel is said to have refused an invitation to return with the prince to Italy, but instead resolved 'to go to Italy on his own bottom, as soon as he could make a purse for that occasion'. The journey seems to have been undertaken in the second half of 1706, and Handel may well have taken the advantage of Gian' Gastone's interest to present himself to Ferdinando at Florence, but his movements in this year are uncertain. By the beginning of 1707 he had reached Rome. His earliest patrons there were the cardinals Carlo Colonna and Benedetto Pamphili, and probably also Cardinal Pietro Ottoboni at whose concerts, says Mainwaring, Handel 'was desired to furnish his quota' of compositions; the latter remark must however be taken generally, as there is no confirmation that Handel wrote anything for Ottoboni. The most important compositions of the early months in Rome were for the church – perhaps surprisingly in view of Handel's Lutheran faith, but signifying a determination to display the full range of his compositional skills. It was probably Colonna who commissioned the large-scale setting of the psalm *Dixit Dominus*, completed early in April 1707, as well as settings of two other Vesper psalms (*Laudate pueri* and *Nisi Dominus*) in July. The latter (if not the *Dixit*) were performed with a motet and two short antiphon settings in services for the Feast of Our Lady of Mount Carmel on 15–16 July 1707. The Italian sacred cantata *Donna che in ciel*, commemorating the anniversary of the delivery of Rome from an earthquake on 2 February, also probably belongs to 1707, though the year is not certain.

Early in 1707 Handel composed a substantial solo cantata, *Da quel giorno fatale* (*Delirio amoroso*) on a text by Pamphili, and by May that year he had received from Pamphili his first major Italian libretto to set. It was not an opera, because a papal ban forbade public operatic performances in Rome, but an allegorical oratorio, *Il trionfo del Tempo e del Disinganno*. In the same month he joined the household of his most important secular patron in Rome, the Marquess (later Prince) Francesco Maria Ruspoli, working partly at the Bonelli Palace in Rome and partly on Ruspoli's country estate at Vignanello, and collaborating with such excellent musicians as the soprano Margherita Durastanti. Among his earliest assignments for Ruspoli were two motets and a setting of the *Salve regina* for the church at Vignanello, and the little hunting cantata *Diana cacciatrice*. Otherwise Handel provided chamber cantatas for Ruspoli's weekly assemblies in Rome and larger cantatas for special occasions. A sequence of French songs and a cantata in Spanish were no doubt responses to special challenges. The lengthy cantata *Clori, Tirsi e Fileno*, performed in the early autumn, closed this period with Ruspoli. Meanwhile, Handel must already have drafted the score of his first all-Italian opera, almost certainly commissioned by Ferdinando de' Medici. It was produced at the Cocomero theatre in Florence, probably in October 1707, under the title *Vincer se stesso è il maggior vittoria*, but known to Mainwaring and posterity as *Rodrigo*. The opera shows the benefits of his Italian studies, showing touches of new elegance in several arias and confident handling of the language in the recitatives.

It is in connection with *Rodrigo* that Mainwaring brings in the name of a singer, Vittoria, coyly hinting at an affair with the composer that began in Florence and was later resumed in Venice. The reference seems to be to the soprano Vittoria Tarquini, who, Mainwaring implies, turned her attention to Handel after a liaison with the bisexual Ferdinando. The fact that she is not listed in the cast of *Rodrigo* casts doubt on Mainwaring's story, but in 1710 the Electress Sophia, discussing Handel's appointment to the Hanover court, mentions gossip that Handel had been the lover of Vittoria ('amant de la Victoria'). No other evidence of a sexual attachment is known for the rest of his life, though an early annotator of Mainwaring hints at occasional discreet affairs with women, adding that 'his amours were rather of short duration, always with[in] the pale of his own profession'.

In the absence of any report of Handel's movements in winter 1707–8, it is likely that he returned to Hamburg to direct the productions of *Florindo* and *Daphne*. The documentary record resumes in Rome, where, working once more for Ruspoli, Handel composed the dazzling score of his second oratorio *La resurrezione* in time for performance at the Bonelli palace on Easter Sunday (8 April) 1708. A specially designed set was prepared for the performance, with a backdrop illustrating scenes from the story, and the massive orchestra (at least 45 players) was led by Arcangelo Corelli. This unacted work illustrates Handel's dramatic flair more strikingly than any previous composition, not only in its characterizations (the blustering Lucifer, the grief-stricken yet resolute Mary Magdalene) but also in such effects as the Angel's interruption of the overture with a trumpet aria of great brilliance. His next major work was the dramatic cantata *Aci, Galatea e Polifemo*, written on a visit to Naples in June 1708, and almost certainly commissioned by the Duchess of Laurenzano for the wedding of her niece to the Duke of Alvito; she is the mysterious princess named as 'Donna Laura' in Mainwaring's account. Details of the actual performance are unfortunately not known, but the work must have created astonishment with its writing for the bass voice of Polyphemus, demanding a range of two-and-a-half octaves.

After the Naples interlude Handel's movements are uncertain, though further excursions to Florence and Venice are likely. He was in Venice at the end of 1709, when his second Italian opera, the satirical comedy *Agrippina*, opened the carnival season at the S Giovanni Grisostomo theatre on 26 December with enormous success. This was the season most popular with visitors, and Handel's triumph before the international audience at once established a worldwide reputation and provided him with influential contacts. Among the latter were probably Prince Ernst Georg of Hanover, brother of the elector (the future George I of England), and the Duke of Manchester (the English ambassador), both of whom may have issued invitations for Handel to visit their respective countries. Much of the music of *Agrippina* was drawn from works Handel had composed earlier in Italy (with a little admixture of material from Keiser) and shows an assured mastery of the Italian idiom, the music more certainly reflecting character and dramatic context than in *Rodrigo*.

4. Hanover, Düsseldorf and London. It is likely that Handel had several options open to him when the run of *Agrippina* closed near the end of February 1710. He journeyed north, passing through Innsbruck in March, where he was received by Prince Carl von Neuburg, Governor of the Tyrol, to whom he had been commended, but he did not take up an offer of assistance and continued

to Hanover where he was appointed Kapellmeister to the electoral court on 16 June at a salary of 1000 thaler. The Electress Sophia reported that the electoral prince and princess (the future King George II of England and Queen Caroline) were delighted with his harpsichord playing. The Hanoverian appointment made generous allowance for travel, and by July Handel had moved on to Düsseldorf where he was received for several weeks by the Elector Palatine and the Electress Anna Maria de' Medici (Ferdinando's sister) before travelling to London in the early autumn. A few compositions can be assigned to this period, the most important being the splendid dramatic cantata *Apollo e Dafne*, apparently begun in Italy but not completed until 1710 (it may have been a substitute for the opera that the Electress Sophia believed Handel had been asked to write for Düsseldorf).

Italian-style opera had been introduced to London in 1705 and had gained popularity with the production (in English) of Nicola Haym's arrangement of Giovanni Bononcini's *Camilla* at Drury Lane on 30 March 1706. There followed three seasons of experiment and controversy among London theatre managers, in which attempts to establish a new genre of all-sung opera in English were swiftly suppressed by the more urgent public demand for real Italian music sung by Italian singers, especially the castratos. The Queen's (later King's) Theatre in the Haymarket, built by John Vanbrugh, became the London opera house. However, up to the time of Handel's arrival in autumn 1710, the Italian operas produced in London had all been arrangements of earlier works or pasticcios. It fell to Handel to compose the first specifically designed for London, using the all-Italian company engaged by the manager Aaron Hill for the 1710–11 season. (A little of Handel's music had reached London before him: most of the overture to *Rodrigo* had been used as act tunes in a revival of Jonson's *The Alchemist* in January 1710.) The new opera, *Rinaldo*, opened on 24 February 1711, by which time Handel had already made a mark with 'a Dialogue in Italian, in Her Majesty's praise' (apparently no longer extant) performed at St James's Palace on Queen Anne's birthday, 6 February.

Giacomo Rossi wrote the libretto of *Rinaldo*, but the scenario had been designed by Hill himself to 'afford the Musick scope to vary and display its Excellence and fill the Eye with more delightful Prospects' than had been the case with earlier Italian operas in London. The combination of an elaborate series of scenic effects with music of great passion and brilliance made *Rinaldo* the sensation of the season, with 15 performances, despite mockery from Addison and Steele in the *Spectator*. The harpsichord improvisations provided for in Armida's aria 'Vo' far guerra' gave Handel opportunity to display his prowess as performer as well as composer. After the end of the season (2 June), he returned to Hanover, stopping at Düsseldorf on the way, and visited his family in Halle in November. He was not in England for the 1711–12 London season (though *Rinaldo* was revived in January 1712), but a reference to his study of English in a letter of July 1711 makes it clear that he intended to return. Mainwaring assigns to this period at Hanover the set of 12 chamber duets found collected in several manuscript copies, but some are earlier in origin. 'Towards the end of the year 1712, he obtained leave of the Elector to make a second visit to England, on condition that he engaged to return within a reasonable time' (Mainwaring).

On his return to London Handel (according to Hawkins) stayed at the town house of 'Mr Andrews, of Barn Elms', but he soon moved to the more luxurious and stimulating environment of Burlington House in Piccadilly, where the young Earl of Burlington exercised a wide range of artistic patronage. Handel seems to have lived there for about three or four years (1713–16). His next opera, *Il pastor fido*, opened on 22 November 1712, but its unsensational pastoral style proved disappointing after *Rinaldo* and Handel swiftly returned to heroic gesture and magical effects with the more successful *Teseo* (10 January 1713) and a revival of *Rinaldo* (6 May). A further opera, *Silla*, was apparently written for private performance in June before the newly appointed French ambassador, but despite the existence of a printed wordbook it is not clear whether it was actually given. There were no Handel operas in the season of 1713–14, and he composed only one more for the rest of the decade, *Amadigi* (25 May 1715). This, like *Teseo*, was based on a French libretto and was again of magical heroic character. However, Handel was not absent from the opera house in the 1715–16 and 1716–17 seasons (the last in London before 1720); additional arias for revivals of *Rinaldo* and *Amadigi* belong to this period, and Handel also provided three new arias for the castrato Bernacchi in the 1716 revival of *Pirro e Demetrio*, which he may have directed.

As in Italy, Handel was anxious to prove himself as a composer of choral music. In England that meant compositions for the church and to a lesser extent the setting of court odes, the latter being provided regularly for the New Year and the birthday of the monarch as well as for special celebrations. However, such work was largely the prerogative of the musicians of the Chapel Royal and the court establishment. Handel was able to circumvent the difficulty by obtaining commissions directly from the monarch for ceremonial occasions, which also had the advantage of making available the substantial choral and orchestral forces he used with such great effect. What is probably his first English anthem, *As Pants the Hart* (HWV251a, dating from 1711–12) is however exceptional, being scored for voices and continuo only (Handel seems to have held the piece in particular regard, making several later versions). His first public church compositions were the *Te Deum* and *Jubilate*, given their official first performance on 7 July 1713 at the thanksgiving service celebrating the Peace of Utrecht, though they had been publicly rehearsed in March. His one attempt at a court ode, *Eternal Source of Light Divine*, also dates from this time, being almost certainly composed for the birthday of Queen Anne on 6 February 1713, though the queen's ill-health may have prevented performance in that year and the next. It takes up several features of earlier English odes, including a ground bass movement, but with an expansiveness that is wholly individual.

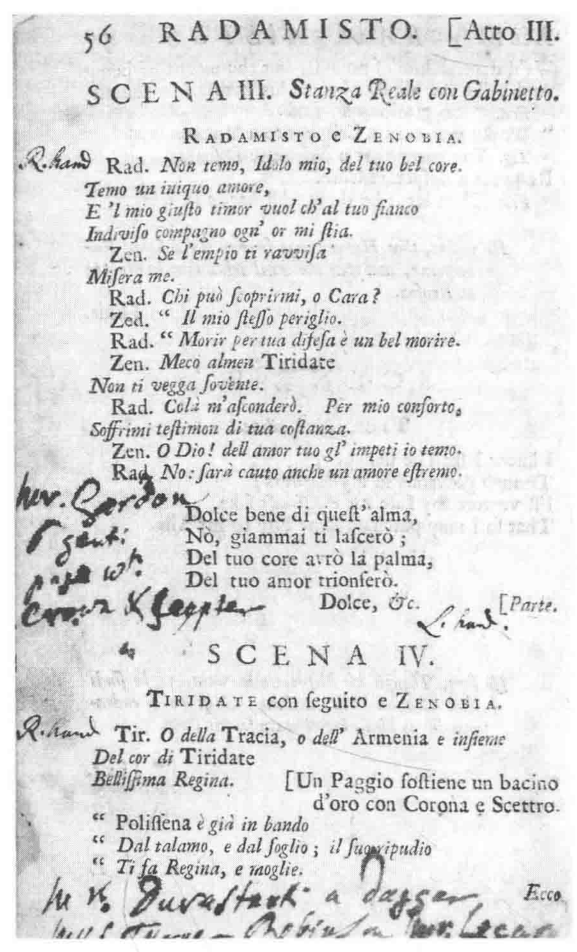
At the beginning of June 1713 Handel was summarily dismissed from his Hanover post. The reasons probably relate to his involvement in the celebration of the Treaty of Utrecht (which was against Hanoverian interests); Handel may also have indiscreetly dropped a hint that he would prefer to remain in England. The Hanoverian representative in London, C.F. Kreienberg, expressed anxiety at the breach for the surprising reason that Handel had been useful in supplying reports on Queen Anne's failing health obtained through his friendship with John Arbuthnot, her physician. But matters were smoothed

over and he was assured that he could enter Queen Anne's service and continue to serve when the elector became king. On 28 December 1713 the queen granted him an annual pension of £200, and when George succeeded to the crown on 1 August 1714 he kept his word: Handel's arrears of salary from Hanover were paid and his new *Te Deum* was sung in the king's presence on 26 September 1714.

Other musical activities in the period 1711–17 include the composition of Italian cantatas, some of them revisions of works written in Italy and perhaps given at private musical gatherings at Burlington House. A large cantata referring to the Spanish Succession, of which a substantial fragment (*Echeggiate, festeggiate*) survives, was apparently composed (again using earlier material) in 1711–12, but its purpose is unclear; it may not have been intended for performance in London. Handel also wrote and revised keyboard music. The threat of a pirated publication of a collection of his keyboard pieces, under the imprint of Roger of Amsterdam but probably prepared by London publisher John Walsh, prompted him to publish an authoritative collection of his own in 1720, under the title *Suites de pieces*, through the agency of Christopher Smith (originally Johann Christoph Schmidt of Ansbach), who became his chief copyist and business manager (Handel may have met him on a visit to Germany in 1716, but this journey cannot be confirmed). Handel checked the printing himself – there are indications of authorial proof changes on the plates – but this was to be the only time he ever directly supervised the publication of his music.

The most extensive non-operatic vocal work of this time was a setting of B.H. Brockes's Passion oratorio, of uncertain date (no later than early 1717, possibly three years earlier); its first known performance was in Hamburg Cathedral on 23 March 1719, with settings of the same text by Keiser, Telemann and Mattheson. According to Mattheson it was composed in England and sent to Hamburg in 'an uncommonly close-written score'. By far the best-known work of the period is the Water Music, an orchestral suite first played on 17 July 1717 to accompany a trip on the River Thames made by King George I and his entourage. Mainwaring's story that it helped to heal Handel's relations with the king in 1714 cannot be true, but Mainwaring may have confused the 1714 affair with a second period of difficulty in 1717, when a rift developed between the king and his son the Prince of Wales; the water trip (avoided by the Prince and Princess Caroline) was a political event, the first of a series arranged to allow the king to be more visible to his subjects. Handel's provision of music may have indicated that, despite his good standing with the younger members of the royal family, his first loyalty was to the king.

5. Cannons. In summer 1717 Handel began a brief but fruitful period in the service of James Brydges, Earl of Carnarvon and later Duke of Chandos, based mainly at Cannons, Brydges's newly built mansion near Edgware. His presence at dinner there is recorded in August 1717; by the following summer he had completed 11 anthems and a large-scale *Te Deum*, all performed in the local parish church of St Lawrence, Whitchurch, which then served as Brydges' private chapel. The form and scoring of the 'Chandos' anthems (as they became known) is unique to English church music and reflects Brydges' maintenance of a substantial establishment of musicians at Cannons under the supervision of J.C. Pepusch. (Two of them were based on earlier anthems for the Chapel Royal, while a third was a revision of the Utrecht *Jubilate*.) Of greater significance for later activities were two dramatic works, the masque *Acis and Galatea*, composed in spring 1718, and the oratorio *Esther*, probably shortly afterwards. The first, unconnected with the Naples cantata, was modelled on the English masques by Pepusch and others produced at Drury Lane and Lincoln's Inn Fields in 1715–18 as a modest (and moderately successful) counterblast to the Italian opera; but it comprehensively transcends them with its profound evocation of tragedy in a pastoral setting, leavened by touches of grotesque humour in the characterization of the giant Polyphemus. *Esther*, based on Racine's biblical drama, is a less polished work, recycling portions of music from the Brockes Passion, but with several moments of high emotion. Given its importance as the first English oratorio, it is regrettable that nothing is known about how it came to be written; even the authorship of the libretto (variously attributed to Pope and John Arbuthnot, and drawing upon Thomas Brereton's translation of the Racine play) is uncertain. The revivals of both *Esther* and *Acis* in 1732 inspired the series of English oratorios and secular musical dramas that were to crown Handel's achievement.



6. The Royal Academy of Music. On 20 February 1719 Handel wrote to his brother-in-law Michael Michaëlsen to apologize for not having visited the family at Halle since the death of Michaëlsen's wife (Handel's sister) the previous summer; he had been detained, he said, 'par des affaires indispensables, et d'ou, j'ose dire, ma fortune depend'. These urgent affairs were the establishment of the Royal Academy of Music, an organization designed to put Italian opera in London on a secure footing. It was founded as a joint stock company, financed by subscription and incorporated by Letters Patent. The directors were elected by the subscribers, who were entitled to one vote per £200 subscribed, and, like the subscribers themselves, were drawn from the nobility and landed gentry, many of whom had been on the Grand Tour and had personal knowledge of opera in Italy; some were also good amateur musicians. Their interest in the venture was therefore not merely formal, nor specifically financial. Though the original proposal for the founding of the Academy offered the optimistic forecast that 'the Undertakers will be Gainers at least five and twenty percent upon Twenty percent of the Stock', the subscribers (who received only one dividend payment in the nine seasons of the Academy's operation) cannot have harboured such illusions after the first couple of seasons. They subscribed partly from a genuine desire to see first-class opera in London and partly because subscribing was an appropriate way of exercising the artistic patronage expected from persons of their rank in society.

In May 1719 the king authorized an annual bounty of £1000 to the Academy and ordered its legal incorporation. On 14 May Handel was commissioned by the Lord Chamberlain to visit the Continent and contract 'with such Singer or Singers . . . fit to perform on the English Stage', Senesino being particularly required. Handel seems not to have returned to Italy, however, but instead went to Dresden, probably taking in Düsseldorf and Halle on the way. He was there by July and stayed on until September, when an illustrious opera company (including Senesino and Handel's old colleague Durastanti) was

assembled for a lavish production of Lotti's *Teofane* to celebrate a royal marriage. Four of the singers (Senesino, Durastanti, Berselli and Boschi) were later engaged for the Academy, though only Durastanti came for the short first season. On 30 November the directors recommended that Handel (apparently still abroad) be appointed as 'Master of the Orchester with a Sallary'; the duties and the salary are not known. At the same meeting it was agreed to approach Bononcini 'to know his Terms for composing & performing in the Orchester'.

The first season of the Academy opened belatedly at the King's Theatre on 2 April 1720 with Giovanni Porta's *Numitore*. This seems to have been a stop-gap: Handel's *Radamisto*, produced on 27 April, made a much greater impression and the première was marked by the first public appearance together of King George I and the Prince of Wales since their reconciliation earlier in the month. Handel's dedication of the opera to the king acknowledged this indication of royal favour. An arrangement by Thomas Roseingrave of Domenico Scarlatti's *Narciso* was the only other opera of the season. By the autumn the Academy was in full operation. Bononcini had been engaged, and the Academy's first full-length season opened with his *Astarto* on 19 November 1720, with Senesino making his London début in the title role. For the rest of the decade Handel's activities were closely bound to the fortunes of the Academy, which gave seven more seasons, the last closing in June 1728. As a composer, however, especially in the early years, he did not have the wholly dominant position that posterity accords him, and some of the directors and singers (who ranked in importance above composers) seem always to have been hostile to him. In the 1720–21 season he provided no complete new opera, though he wrote new music for the extensively revised version of *Radamisto* produced on 28 December 1720 and for the third act of *Muzio Scevola* (15 April 1721, the other acts being by the Academy's cellist Filippo Amadei and Bononcini). *Floridante* (9 December 1721) was his only new opera of the following season, the main successes of which were Bononcini's *Crispo* and *Griselda*.

Political events gave Handel the opportunity to take a more prominent role in subsequent seasons. The exposure in May and June 1722 of the Jacobite conspiracies involving Francis Atterbury, Dean of Westminster, put all Catholics under suspicion and made it more difficult for the directors to support Bononcini. His close friend Paolo Rolli, who had provided most of the librettos for the Academy operas and acted as its secretary, also lost his position. As a result Handel gained more opportunity for composition as well as a more congenial librettist in Nicola Haym. His position was not affected by the arrival in the autumn of 1723 of a third composer, Attilio Ariosti, who made some impact with *Coriolano*, produced on 19 February 1723, but always remained a secondary figure. The most important event of the 1722–3 season as far as the public were concerned was the arrival of the soprano Francesca Cuzzoni, a worthy match to Senesino, and it was Handel's new opera *Ottone* in which she made her début on 12 January 1723. Handel was then sufficiently confident of his status to take her to task in rehearsals for refusing to sing her first aria ('Falsa immagine'), though he had composed the opera before her arrival and must soon have become aware that he had not done justice to her capabilities. The three new arias added to *Ottone* for

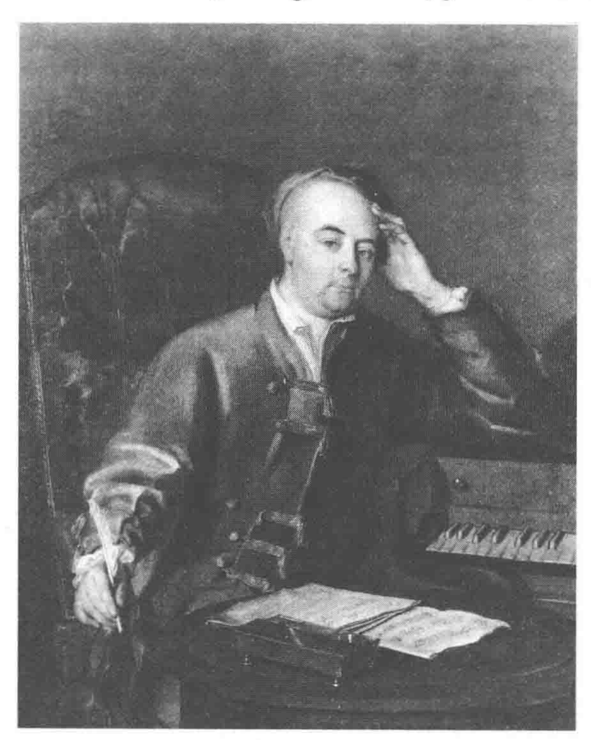
1. Page from a copy of the libretto for Handel's 'Radamisto', partly marked up, probably in draft, as a prompt-book for the original production, King's Theatre, London, 27 April 1720; one annotator indicates the sides of the stage for entrances and exits; another gives warnings for the entries of specific singers, noting the props they will need and the number of supernumeraries who will attend them (thus 'Tiridate con seguito' in the printed text has the marginal note 'Mr. Gordon 6 gent:')

Cuzzoni's benefit performance on 26 March could well have been a peace offering. There is no reason to suppose that Handel was always imperious with his singers: the role of Matilda in *Ottone* gave trouble to the contralto Anastasia Robinson, and was substantially reworked before performance in response to her requests (which however she diplomatically expressed through an intermediary). The season ended with a second new Handel opera, *Flavio* (14 May 1723), its lighter, satirical tone making a contrast to preceding Academy operas and perhaps reflecting a particular preference of the composer.

In the 1723–4 season Bononcini was again allowed two new operas (*Farnace* and *Calfurnia*); they were the last before *Astianatte* (6 May 1727), his final contribution to the London stage. They were quite outshone, however, by Handel's *Giulio Cesare in Egitto* (20 February 1724). This deservedly made a sensational effect with its sumptuous scoring and melodic richness, and gave Senesino and Cuzzoni (as Caesar and Cleopatra) roles that fully stretched their vocal and dramatic talents. Two comparably great though very different masterpieces

dominated the next season. *Tamerlano*, which opened the season (31 October 1724), and *Rodelinda* (13 February 1725) are comparatively restrained in instrumentation, but possess a taut dramatic power to which it is hard to find a parallel in opera of this period; and *Rodelinda* is as well endowed with melody as *Giulio Cesare*. These three operas marked the artistic peak of the Academy's operations. By spring 1725 the directors, ever anxious for new sensations, had determined to obtain the services of a second great soprano, Faustina Bordoni, and thereby sowed the seeds of dissension which were ultimately to prove disastrous to the Academy. The loss of Haym as librettist and the return of Rolli was an additional hindrance to Handel. The 1725–6 season hung fire until Faustina finally appeared in Handel's *Alessandro* on 5 May 1726, the time meanwhile having been filled in by a pasticcio (*Elisa*), revivals and Handel's hastily prepared *Scipione* (12 March 1726). The choice of subject for *Alessandro* (Alexander the Great's simultaneous wooing of the princesses Roxana and Lisaura), and Handel's ingenious equalization of Cuzzoni's and Faustina's music, amusingly but perhaps unwisely pointed up the rivalry between the two prima donnas.



The 1726–7 season began late because of the absence of Senesino and opened with Ariosti's *Lucio Vero* on 7 January 1727. Handel's only new work was *Admeto* (31 January 1727); it proved the finest of the Cuzzoni-Faustina operas, the contrasting styles of the two singers being made a significant element of the characterization. The sopranos themselves, no doubt egged on by their supporters, nevertheless became increasingly hostile and finally came to blows on the stage during a performance of Bononcini's *Astianatte* on 6 June. The incident caused great offence to the Princess of Wales, who was present, and brought the season to an abrupt end.

There were some directors who were prepared to resolve the matter by not renewing Cuzzoni's contract for the following season, but eventually the same company (apart from the contralto Anna Dotti) was re-engaged, perhaps to make sure there was an opera season to celebrate the accession of the new king, George II (George I had died on 11 June). The first of Handel's three new operas, *Riccardo primo* (11 November 1727), had been intended for the previous season, but its British subject proved particularly apt for the celebration of the new king's coronation. All the operas in the rest of the season were Handel's, including two new works: *Siroe* (17 February 1728), the first opera with a libretto by Metastasio to be heard in London, and *Tolomeo* (30 April 1728). By this time the directors and subscribers, riven by dissension and annoyed by the frequent calls for extra cash to meet the financial demands of the singers, were wearying of the whole venture. The production of John Gay's *Beggar's Opera* at Lincoln's Inn Fields on 29 January 1728, which included the Academy's troubles among its objects of satire, helped to devalue opera as a fit object for aristocratic support. Some subscribers indicated to the opera house manager J.J. Heidegger a willingness to carry on, but they were not enough to secure a season, and Heidegger fell back on masquerades to keep the theatre in use during winter 1728–9. At an ill-attended meeting on 18 January 1729 the directors effectively wound up the Academy as an active body and resolved (as the Earl of Egmont noted) 'to permit Hydeger and Hendle to carry on operas without disturbance for 5 years'. Within ten days Handel set off for Italy to engage new singers for the following season.

Despite his extensive involvement with opera, Handel found time for other musical activities during the 1720s. On 25 February 1723 he was made Composer of Music for His Majesty's Chapel Royal – an honorary appointment because, as an alien, he could not hold an office of profit under the Crown. The title seems simply to have given official recognition to his role in supplying occasional music for the Chapel Royal, which in the mid-1720s included three orchestrally accompanied anthems and the *Te Deum* in A, all based to some extent on works written for Cannons. An exceptional opportunity for ceremonial church music arose after the unexpected death of George I in June 1727. For the coronation of his successor George II and his consort Queen Caroline at Westminster Abbey on 11 October Handel provided four new anthems of great splendour, showing how much he welcomed the chance to use the massed forces not available to him in the opera house. They included *Zadok the Priest*, which has been sung at every subsequent coronation of a British monarch. According to Burney (*Sketch*, p.34) Handel 'took offence' at being provided with the words of the anthems 'by the bishops', murmuring 'I have read my Bible very well, and shall chuse for myself'. In fact the anthem texts had long been traditional in English coronations, and it seems rather to have been the case that Handel took them from Sandford's description of the coronation of James II in 1685 (Burrows, G1977); but the anecdote may plausibly imply that Handel started composing the anthems before receiving a commission to do so. Notes made by William Wake, who as Archbishop of Canterbury presided at the service, indicate that the performances of the anthems were wretchedly confused, but Handel was later able to provide contexts in which they could be heard satisfactorily.

This decade also saw Handel settling into the London social scene. In August 1723 he took a lease on a house in Brook Street (now no.25) which was to be his home for the rest of his life. It was part of the new development of what became Mayfair, designed for upper-and middle-rank gentry, reflecting how Handel perceived his new status in society. He became music master to the royal princesses (the daughters of George II) and established an especially fond relationship with Anne, the Princess Royal; it was probably for her that he prepared a set of exercises in figured bass and counterpoint. Many of the solo sonatas and trio sonatas later published as his op.1 and op.2 were written at this period. They may well have been heard at private concerts given for the royal family, but nothing certain is known about their original purpose. In February 1727 Handel's application to become a naturalized British subject was effected in the usual way by Act of Parliament; it was a clear demonstration of his permanent commitment to his country of adoption.

7. The Second Academy. Between February and July 1729 Handel was in continental Europe in search of new singers. After visiting Venice, Bologna and Rome he went on to Germany to see his mother at Halle for the last time (she died in December 1730) and took in Hamburg on his way back. He succeeded in engaging a full company of seven singers, all but one (the aging castrato Bernacchi) new to London; they included the soprano Anna Strada del Pò, to remain his leading female singer for the next eight years. The first season under the new arrangements,

2. George Frideric Handel: portrait by Philip Mercier, 1730 (private collection)

much dependent on the support of the king, opened with *Lotario* (2 December 1729), newly composed but in the heroic style typical of the Academy period. This was followed (after a revival of *Giulio Cesare*) by the attractively satirical *Partenope*, suggesting a departure from tradition. But neither opera was well liked. The pasticcio *Ormisda* was more successful: it was the first of a number of such works compiled or arranged from the works of other composers (usually those of the new 'Neapolitan' school) that Handel was to offer over the next seven years in addition to his own compositions. For the ensuing season Handel had little choice but to re-engage Senesino, Bernacchi having proved a poor substitute. He opened with a revival of *Scipione* (3 November 1730). *Poro* (2 February 1731) was the only new opera and was well received. Handel strengthened his company for the following season with two newcomers to London, the tenor Pinacci and the excellent bass Antonio Montagnana, but his first new opera, *Ezio* (Handel's last on a Metastasio text), was taken off after only five performances. *Sosarme*, the second new work, fared better.

On 23 February 1732, during the run of *Sosarme*, Bernard Gates, Master of the Children of the Chapel Royal, celebrated the composer's birthday with the first of three private performances of the Cannons oratorio *Esther* at the Crown and Anchor Tavern in the Strand, beginning a long series of related events that eventually led Handel away from operatic composition and established English oratorio and unstaged musical drama as his main form of composition. The *Esther* revival stimulated the first public performance of the piece in London, by an unnamed group, on 20 April. This was without Handel's authority, and he responded by producing a newly enlarged version of the work at the King's Theatre on 2 May 1732, sung in English but using most of his Italian singers with English reinforcements. The many additions included new music and music taken from other works (Samuel Humphreys supplied new words where required) and the leading male role of Ahasuerus was adapted for Senesino. Two of the coronation anthems were among the additions, and were thus heard by a general audience for the first time in respectable performances. Though Gates's production of *Esther* (technically a private performance) had been staged, Handel's new version, presented in a public theatre, had to be given without action. (Burney's account of these events implies that the Bishop of London personally banned stage presentation, but the public staging of biblical drama had long been forbidden in Britain and the bishop would merely have confirmed the position.) On 15 May an unauthorized performance of Handel's other dramatic work for Cannons, *Acis and Galatea*, took place at the Little Theatre in the Haymarket. Handel again responded on 10 June with a new version of the same work – a combination of the Naples cantata *Aci, Galatea e Polifemo* with the Cannons masque and other music, sung in a mixture of English and Italian and presented as a serenata. In the space of six weeks two musical forms new to London, oratorio and serenata, had found a place in the city's theatrical entertainment, but only as an occasional alternative to opera.

The season of 1732–3 led to further developments and a crisis. The new works were the remarkable *Orlando* (27 January 1733) and a second English oratorio, *Deborah* (17 March 1733). The latter was partly new and partly adapted from earlier works, including the Brockes Passion, and took in the two coronation anthems that had not been used in *Esther*. Unfortunately, Handel's attempt to charge double prices for *Deborah* was resented. His relationship with Senesino deteriorated – the singer may have been unhappy with the unusually difficult and irregular role of Orlando, and with having to sing in English again in *Deborah* – and Handel dismissed him. Meanwhile a group of the nobility and gentry, headed by Frederick, Prince of Wales, were moving to undermine Handel's position as the sole provider of Italian opera in London. Their motives are not easy to determine but were undoubtedly wider than personal hostility to the composer. Handel's position as the effective controller of opera performances, with no body of aristocratic directors to govern him, appeared presumptuous in an age when musicians were regarded as servants; and the fact that he owed this position primarily to the king allowed him to be seen as a symbol of the corrupt Whig government, making him a natural focus of hostility for the new opposition groups cultivating Frederick as a future 'patriot king'. In June a subscription was begun to form a new opera company (the so-called Opera of the Nobility), the directors of which immediately engaged Senesino and other members of Handel's company (Strada excepted) to sing for them the following season under the direction of Nicola Porpora.

The attacks on Handel had the beneficial effect of galvanizing his supporters and generating (especially after the performances of *Acis and Galatea* and the English oratorios) a wider recognition of his stature as a musician. He was invited to receive the honorary degree of Doctor of Music at the revival of the 'Publick Act', the degree ceremony, at Oxford in summer 1733 and to provide music for the occasion. He did not in the event accept the

degree but gave a series of concerts of mainly English works including the first performance of a new oratorio, *Athalia*, on 10 July 1733. Following the precedent of *Esther*, Humpreys provided a libretto based on Racine's second biblical drama. Handel set it with newly composed music thoughout, creating a powerful study of the apostate queen of the Israelites.

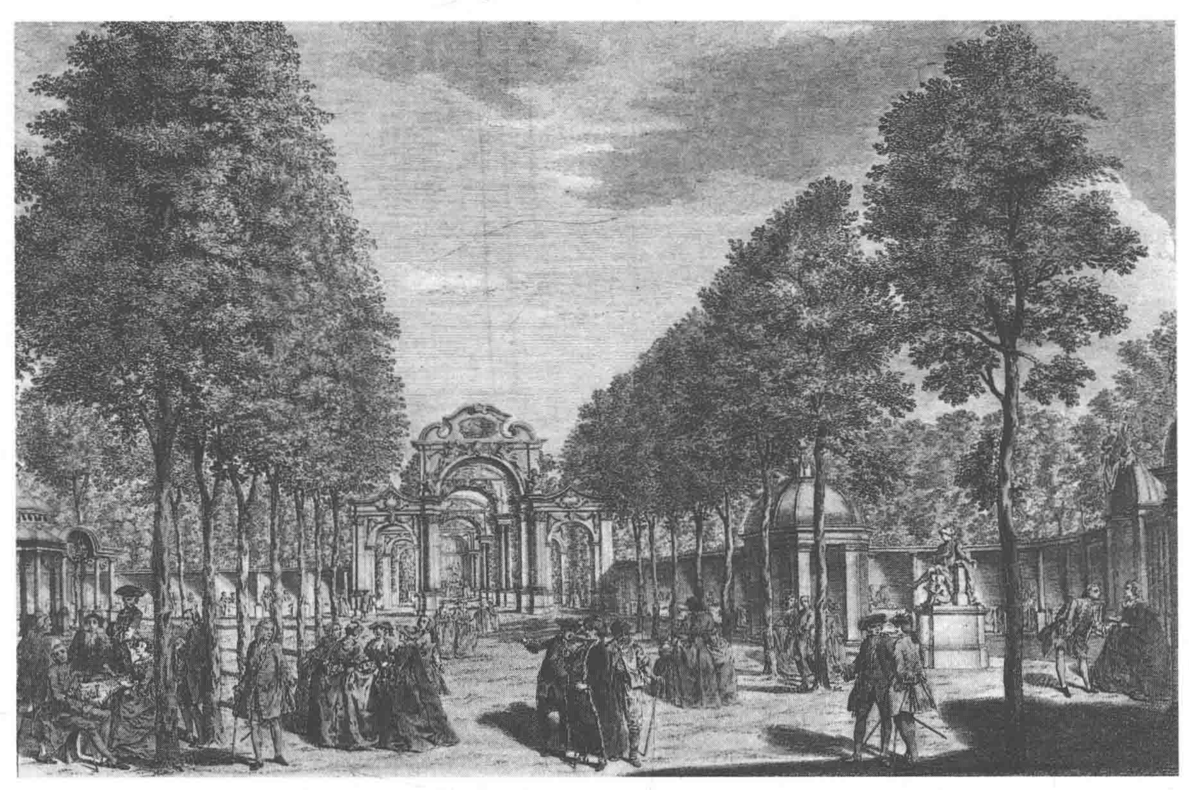
By the autumn, Handel had managed to assemble a new opera company – Heidegger may have done the negotiations – which included his old colleague Margherita Durastanti and a fine new castrato, Giovanni Carestini. He opened on 30 October 1733 with the pasticcio *Semiramide* and continued with a revival of *Ottone* and two other pasticcios; but his audiences were thin, and four opera nights in December passed without a performance. The rival opera company opened its operations with Porpora's *Arianna in Naxo* at Lincoln's Inn Fields on 29 December, beginning four years of operatic warfare. Handel seems to have held his own in this first season. Carestini swiftly gained admirers, and Handel's new opera *Arianna in Creta*, which opened on 26 January 1734, showed off his talents to the full. For the marriage of the Princess of Wales to the Prince of Orange in March Handel produced *Parnasso in festa*, his only full-scale Italian serenata, the music of which was partly new and partly adapted from *Athalia*. (The same oratorio also provided most of the music for the wedding anthem *This is the Day*, sung at the ceremony at the German Chapel of St James's Palace on 14 March.) Some of the new music for *Parnasso* was in Handel's best pastoral style and found appropriate inclusion in a much-altered revival of *Il pastor fido* that opened on 18 May 1734 and had a very successful run, extending the season into July.

8. Opera at Covent Garden. Handel's five-year agreement with Heidegger ended in 1734 and the Nobility Opera took over at the King's Theatre. Fortunately another venue had become available: John Rich had opened his new theatre at Covent Garden on 7 December 1732 and saw advantage in offering Handel two opera nights a week as an alternative to the repertory of spoken plays. In the season of 1734–5 both opera companies gave of their best. The Nobility had managed to engage Farinelli, the greatest castrato of the age, as their leading singer and opened their season at the King's Theatre with *Artaserse* (a pasticcio using some of Hasse's setting) on 29 October 1734, following with a much-mangled version of Handel's own *Ottone*. Handel could also offer an extra attraction at Covent Garden, the French dancer Marie Sallé and her company, for whom he provided newly written ballets in all the operas of the season. He opened on 9 November with a further revival of *Il pastor fido*, to which a new prologue featuring Sallé as the muse Terpsichore was added. *Arianna* was revived, and was followed on 18 December by *Oreste*, a pasticcio assembled by Handel himself from his own previous works, with new recitatives and dances.

The wholly new compositions were *Ariodante* (8 January 1735) and *Alcina* (16 April 1735) – two of his greatest operas, fully comparable with those of the Academy's mid-1720s period. Their productions were separated by a Lenten season in which Handel gave the first London performances of *Athalia* and revivals of his two earlier oratorios, adding the further attraction of organ concertos – a new form of composition – in the intervals. Thus, in this one season, Handel displayed all aspects of his musical genius, both as performer (in the organ concertos) and as composer. These musical riches were not enough, however, to secure adequate financial returns, and Handel declined to attempt a further challenge to the Nobility Opera (again with Farinelli) in the following season. Instead he produced a brilliant setting of Dryden's ode *Alexander's Feast* at Covent Garden on 19 February 1736, filling out the evening with new concertos and an Italian cantata. The suggestion for this setting came from Handel's friend Newburgh Hamilton, who also provided the words for extra numbers at the end of the ode, but it was of course Handel's own introduction of major choral works to his public repertory that prompted the suggestion in the first place. Revivals of *Acis and Galatea* and *Esther* followed. The wedding of the Prince of Wales on 27 April gave Handel an excuse for a short celebratory opera season consisting of a revival of *Ariodante* (in which Gioacchino Conti, a new castrato, was allowed to include non-Handelian arias from his previous continental repertory) and eight performances of the newly composed *Atalanta* (12 May 1736) – light in mood, as befitted the occasion, but not at all shallow; Frederick ostentatiously refused to attend the first night. Handel again supplied a wedding anthem (*Sing unto God*) for the ceremony itself, most of the music being new but with the final solo and chorus from *Parnasso in festa* re-used to make an exhilarating conclusion.

By the autumn some sort of rapprochement between the opera factions seems to have taken place. The Nobility Opera remained at the King's Theatre, for what was to be their last season, but Handel was able also to offer a full season of opera and other works at Covent Garden, with Frederick and his wife making a point of attending the opening production (a revival of *Alcina* on 6 November 1736). Handel produced three new operas – *Arminio* (12 January 1737), *Giustino* (16 February) and *Berenice* (18 May) – as well as a substantially rewritten version of his first Italian oratorio, renamed *Il trionfo del Tempo e della Verità* (23 March 1737) and an adaptation of Leonardo Vinci's *Didone abbandonata* (13 April). The operas, all based on old-fashioned librettos with recitatives ruthlessly cut, display a level of musical invention lower than that in *Alexander's Feast*, despite individual numbers of high quality. Opera seemed no longer to be Handel's prime interest, though he was wary of abandoning it altogether. A crisis of confidence is suggested by a sudden deterioration in his health in April 1737, marked by the temporary paralysis of his right hand. In September he visited Aix-la-Chapelle (Aachen) where the vapour baths effected a complete cure.

9. From opera to oratorio. By November 1737 Handel was back in London composing a new opera, *Faramondo*. The demise of the Nobility Opera enabled him to return to the King's Theatre, where he shared musical activities with the composers Pescetti and Veracini in a season organized by Heidegger. Both operatic parties were apparently satisfied by this arrangement, and it was agreed that Handel was to receive £1000 for two new operas. The season opened with a pasticcio on 29 October 1737 but the death of Queen Caroline on 20 November closed the theatre until the new year. It reopened with *Faramondo* on 3 January 1738, Handel's reappearance after his illness receiving acclaim along with the London début of the castrato Caffarelli. (In the closed period



Handel had composed an expansive anthem for the queen's funeral, *The Ways of Zion do Mourn*, properly sombre in tone, and drawing on chorale melodies from the Lutheran tradition in which both he and the queen had been raised.) Handel next prepared *Alessandro Severo* (25 February), a pasticcio drawing mainly on the operas of the previous season, and composed *Serse* (15 April), based on a largely comic Venetian libretto. The latter, the finest of his late operas (and one over which he took much trouble), received only five performances. Any financial difficulties that Handel might have met during the season were cleared by a benefit concert at the King's on 28 March, when he presented what was effectively a pasticcio assembled from church music and oratorio under the title 'An Oratorio'. The concert reportedly earned him about £1000. He was now on the way to becoming a revered public figure, though perhaps on account more of his recent English choral works than of his operas. In May 1738 a marble statue of him by Louis Roubiliac was commissioned for the pleasure gardens at Vauxhall, showing the composer informally posed and playing the lyre to suggest an identification with the god Apollo – a unique honour for a living composer (see figs.3 and 4). Two months earlier the full score of *Alexander's Feast* (shown in the statue) was published: seven members of the royal family headed the lengthy subscription list. This was also the time when Handel first became involved in charitable work with his contribution to the establishment of the Fund for the Support of Decay'd Musicians (now the Royal Society of Musicians).

3. George Frideric Handel: statue by Louis-François Roubiliac, marble, 1738 (Victoria and Albert Museum, London), commissioned for Vauxhall Gardens by Jonathan Tyers, the proprietor; for its original setting see fig.4

Heidegger attempted to arrange a further opera season at the King's, but on 25 July announced that he had failed to obtain the requisite number of subscribers and 'could not agree with the Singers th'I offer'd One Thousand Guineas to One of them'. Handel turned resolutely to oratorio, beginning *Saul* the following day; he immediately went on to compose the biblical oratorio *Israel in Egypt*, but before finishing *Saul* he hastily drafted *Imeneo* (a 'wedding opera', like *Atalanta*), perhaps on hearing of the betrothal of Princess Mary to Prince Frederick of Hesse. (The opera was not performed until November 1740, no connection being made with the princess's marriage in May that year.) The libretto of *Saul* was the work of Charles Jennens, heir to rich estates in the Midlands. Scholar, man of letters and amateur musician, Jennens was one of the first of the composer's supporters to understand the dramatic potential of oratorio. (He had supplied Handel with a libretto in 1735, but whether this was an early version of *Saul* or something entirely different is not known.) Jennens took as his basis the biblical account of the last days of King Saul, consumed by jealousy at the success of young David in the war against the Philistines, and eventually driven to necromancy (the encounter with the Witch of Endor) and death in battle. To this he added elements derived from Abraham Cowley's unfinished epic *Davideis*, giving scope for female voices in the contrasting characters of Saul's daughters, Michal and Merab. The chorus, not mere commentators, played a role as the people of Israel, directly affected by the downfall of their king. On this framework Handel created a musical drama of remarkable power, drawing the listener with sympathy into the growing disturbance of Saul's mind while evoking vivid images of such scenes as the victory parade for David and the visit to the Witch. The expression of blended love and loss in the final elegy for Saul and Jonathan is one of the most moving moments in all Handel's output.

Saul opened a season of oratorio and ode at the King's on 16 January 1739, concluding on 19 April. Handel may have intended to perform *Imeneo* in a short post-Easter season, but instead he produced the semi-pasticcio *Giove in Argo* (generally called *Jupiter in Argos*, though the text was Italian) on 1 and 5 May; it used some music written for *Imeneo* and was described as a 'Dramatical Composition', presumably indicating that it was not fully staged. The new oratorios created a good impression, but audiences who hankered after Italian opera were not appeased by their massive choruses and rich orchestration; the mainly choral *Israel in Egypt* proved particularly difficult to swallow and its second performance was advertised as 'shortened and Intermix'd with Songs' (i.e. Italian arias).

Hints of a new move to revive Italian opera, and of a new rival for Handel, occurred at Covent Garden in April and May 1739, when Pescetti's serenata *Angelica e Medoro* was performed four times by a company almost certainly financed by Charles Sackville, Earl of Middlesex and heir to the Duke of Dorset (his mistress, known as La Muscovita, was one of the singers). He had just returned from an extended stay in Italy and became the leading light of a new 'opera party'. By May he had obtained a modest subscription for operas the following season. However, both he and Handel seem to have been anxious

4. 'Vauxhall Gardens showing the Grand Walk': coloured engraving by Johann Sebastien Müller after Samuel Wale, c1751; Roubiliac's statue of Handel (fig.3) can be seen on the right

not to begin another operatic war. The King's Theatre remained dark; Handel moved to Rich's old theatre at Lincoln's Inn Fields, giving English works at the end of 1739 and in Lent 1740. There were new works, a setting of Dryden's *A Song for St Cecilia's Day* (22 November 1739, the appropriate day) and *L'Allegro, il Penseroso ed il Moderato* (27 February 1740). Meanwhile, Middlesex offered a season of Italian works, mainly in a light pastoral vein, at the Little Theatre in the Haymarket, opening on 1 December. The music for *L'Allegro* is a perfect expression of the moods suggested by the imagery of the two short poems by Milton from which the words are mostly taken. The first draft of a libretto, drawn solely from Milton, had been provided by the philosopher and amateur musician James Harris, now part of a circle of friends including Jennens and the 4th Earl of Shaftesbury who had taken an intense interest in Handel's English works and were anxious to supply ideas for new ones. Handel wanted the contrasting attitudes of Milton's Allegro and Penseroso to be encompassed in 'one moral design', and it was Jennens who undertook the revision of Harris's text and who added a final part of his own praising the virtues of moderation – possibly in response to Handel's wish for a 'moral design' to the whole. For the concerts at Lincoln's Inn Fields and also (unusually) with publication in mind, Handel composed a set of concerti grossi or 'Grand Concertos' in a single burst of creative energy between the end of September and the end of October 1739. They were performed in the intervals of the concerts and in April 1740 were published by Walsh with an impressive subscription list led by six members of the royal family (fig.5). Their designation as Handel's op.6, though perhaps fortuitous as merely following the issue of a second set of trio sonatas as op.5, was nevertheless a significant echo of Corelli's much admired set of concertos with the same opus number.

Middlesex was not active the following season, a circumstance that led Handel to present himself once more as the nation's operatic provider. He made a continental journey in summer 1740 (the only known detail of which is his playing of the organ in Haarlem on 9 September), when he presumably engaged the two Italians who joined his company for the winter season, the castrato G.B. Andreoni and the soprano Maria Monza. *Imeneo* was finally completed for performance but given only twice, apparently because of the illness of Francesina, the soprano (Elisabeth Duparc). Handel's last opera, *Deidamia*, in which Monza appeared for the first time, opened on 10 January 1741, but after its second performance Handel continued his season with *L'Allegro*, with several new numbers sung in Italian by Andreoni. After the third and last performance of *Deidamia*, on 10 February, Handel returned to English works sung partly in Italian. The wide gaps between performances hint at a boycott of Handel, but the reference in a published letter of 4 April 1741 to 'a *faux pas* made but not meant' suggests that the gaffe was a social one, perhaps connected with Handel's renewed (and to some, arrogant) return to operatic promotion.

10. ORATORIOS AND MUSICAL DRAMAS. Whether Handel decided to forsake Italian opera at this moment is unclear; but such a decision had almost certainly been taken by the time he had completed his next venture – a series of oratorios and other concert works given in Dublin between December 1741 and June 1742. Before leaving

5. List of subscribers to the 12 Grand Concertos op.6 (London: Walsh, 1740)

London he composed the oratorio *Messiah* and drafted *Samson*. Just before his departure Handel also saw the first production (the pasticcio *Alessandro in Persia*) of a new, full, season promoted by Middlesex at the King's; he later reported to Charles Jennens (a shade patronizingly) that it made him 'very merry all along my journey'. He arrived in Dublin on 18 November (after a delay due to bad weather at Chester, where he was observed by the young Charles Burney) and soon announced a subscription series of six 'Musical Entertainments' to be held at Neale's new music hall in Fishamble Street. All tickets were sold, and a second series of six concerts was equally successful. The repertory consisted mainly of English choral works from his recent London seasons, including *Saul* and *L'Allegro*. Among the singers was Susanna Cibber; she made a great impression, allowing her to recover a career that had previously been ruined by an adulterous affair. A concert version of *Imeneo* given as a serenata on 24 March 1742 was Handel's last farewell to Italian opera.

Messiah was the climax of the Dublin season, receiving a public rehearsal (9 April) and two performances (13 April, 3 June) for the benefit of three charities after the subscription concerts had been completed. The libretto, selected from Scripture, had been prepared by Jennens at the end of 1739, but this was when James Harris was also proposing *L'Allegro*, and the latter seemed more congenial to Handel at the time. Jennens's highly original conception has a didactic purpose, namely to justify the doctrine that Jesus Christ was truly the Messiah promised by the Hebrew prophets, but the message is conveyed subtly by telling the story of Jesus's mission through the Old Testament texts that were held to predict it; the story itself is therefore the foreground, yet is neither directly narrated (except in the description of the Nativity) nor dramatized. In the final part, the promise of redemption obtained through Christ is contemplated and celebrated. It was Jennens's intention that Handel should perform the oratorio in London in Passion Week, when staged entertainments were closed and the season was appropriate to the subject, but Handel saw its value for his Dublin visit and subdued possible controversy over the use of scriptural texts by performing it for charitable purposes.

The success of the Dublin season gave Handel the confidence to return to London with a clear view that the production of English concert works in oratorio form was enough for him to maintain his position as England's leading composer. With choruses added to the operatic forms of recitative and aria, all the vocal forms in which he excelled were brought together, and concertos and other orchestral music could also be included, either in the course of a work or in intervals. There was the added practical advantage that performances were under his sole control, free from the complications and expenses involved with stage presentation. Back in London in the autumn of 1742 Handel revised and completed the score of *Samson*. This was a realization of a project which had been in his mind since an evening with Lord Shaftesbury in November 1739, when James Noel, the earl's brother-in-law, read aloud the whole of Milton's *Samson Agonistes*. Shaftesbury reported that whenever Noel paused for breath 'Mr Handel (who was highly delighted with the piece) played I think better than ever, & his harmony was perfectly adapted to the sublimity of the poem'. Newburgh Hamilton converted the poem into an oratorio libretto with some skill, using verses from Milton's minor

poems for the arias and choruses. He explained in a preface that 'as Mr *Handel* had so happily introduc'd here *Oratorios*, a musical Drama, whose Subject must be Scriptural, and in which the Solemnity of Church-Musick is agreeably united with the most pleasing Airs of the Stage: It would have been an irretrievable Loss to have neglected the Opportunity of that great Master's doing Justice to this Work'.

Handel gave the first performance of *Samson* (18 February 1743) and introduced *Messiah* to London (23 March) in a Lenten season of concerts at Covent Garden Theatre, setting a pattern that, except for the 1744–5 season, he was to follow for the rest of his life. He invited subscriptions to six concerts, with an option for further performances, and achieved a total of 12. In *Samson* the combination of 'Church-Musick' and 'Airs of the Stage' was well exemplified in two styles of choral writing (exuberant and homophonic for the Philistines, solemn and polyphonic for the Israelites) and solo arias of many moods, encompassing the bleak despair of the blinded Samson's 'Total eclipse' and Dalila's seductive 'With plaintive notes'. A largely English cast brought their theatrical experience to the performances: they included the tenor John Beard as Samson, Mrs Cibber in the advisory role of Micah, and the leading comic actress Catherine ('Kitty') Clive as Dalila. *Samson* was well received: Horace Walpole, a supporter of the Italian opera, grudgingly admitted that 'Handel has set up an Oratorio against the Operas, and succeeds'. *Messiah*, however, had a mixed reception, drawing objections to the singing of Scripture in a theatre. A correspondent in the *Universal Spectator* asked whether or not an oratorio 'is an Act of Religion . . .; if it is, I ask if the Playhouse is a fit Temple to perform it in'. On the other hand, if it is 'for Diversion and Amusement only . . . what a Prophanation of God's Name and Word it is, to make so light Use of them?' This seems to have been an extreme view, but was enough to cause Handel to advertise the work only as 'A New Sacred Oratorio' (though the wordbook retained the title *Messiah*; fig.6) and make him wary of reviving it during the rest of the decade.

In April 1743 Handel suffered what Jennens described as 'a return of his Paralytic Disorder, which affects his head and speech'. By July he had recovered, but the illness may have played a part in negotiations with Lord Middlesex, as the latter attempted to revive the flagging fortunes of his opera company. Christopher Smith reported to Lord Shaftesbury that Handel had promised Middlesex two new operas for 1000 guineas, but had then said 'that he could – or would do nothing for the Opera Directors, altho' the Prince of Wales desired him several times to accept of their offers, and compose for them, and said that by doing so he would only oblige the King and all the Royal Family but likewise all the Quality'. Instead Handel immersed himself in setting an English opera libretto – Congreve's *Semele* – for concert performance, causing Smith to wonder 'how the Quality will take it that he can compose for himself and not for them when they offered him more than ever he had in his life'. Handel did however allow Middlesex's company to revive his *Alessandro* under the title *Rossane* (as markings in the conducting score confirm) but the adaptation was presumably left to G.B. Lampugnani, the new musical director of the opera company. (A surprising interpolation was the aria 'Return, O God of hosts' from *Samson*, with new

Italian words.) After completing *Semele* Handel went on to compose a large-scale *Te Deum* and an anthem (*The King shall Rejoice*) to celebrate the king's triumphant return from Germany after the Battle of Dettingen, keeping the composition 'a great secret' (according to Smith) and almost certainly on his own initiative. The scoring of the music with three trumpets and timpani suggests that Handel was expecting a grand thanksgiving service at (following precedent) St Paul's, but the service was eventually held on 27 November in the small Chapel Royal at St James's Palace, into which the orchestra must have fitted with difficulty.

In August and September Handel composed his second work for the next year's season, the oratorio *Joseph and his Brethren*. The libretto was provided by a new collaborator, the Rev. James Miller, and was partly derived from an Italian libretto by Apostolo Zeno. In January 1744 he invited subscriptions for 12 Lenten concerts – twice the number first advertised for the previous season – and on 10 February opened with *Semele*. *Joseph* was given on 2 March, and there were revivals of *Samson* and *Saul*. Mary Delany, a long-standing friend and supporter of Handel, recognized the merits of *Semele*, but reported to her sister that it had 'a strong party against it, viz. the fine ladies and *ignoramus's*. All the opera people are enraged at Handel'. Clearly there was lingering resentment of Handel's earlier snub to Lord Middlesex, but *Semele* itself – a secular drama presented 'after the manner of an oratorio' and dubbed 'a baudy opera' by Jennens – was also a problem to some. The 'opera party' felt that Handel was encroaching on their territory, while others who (on the strength of *Samson* and *Messiah*) were now looking to oratorio to offer

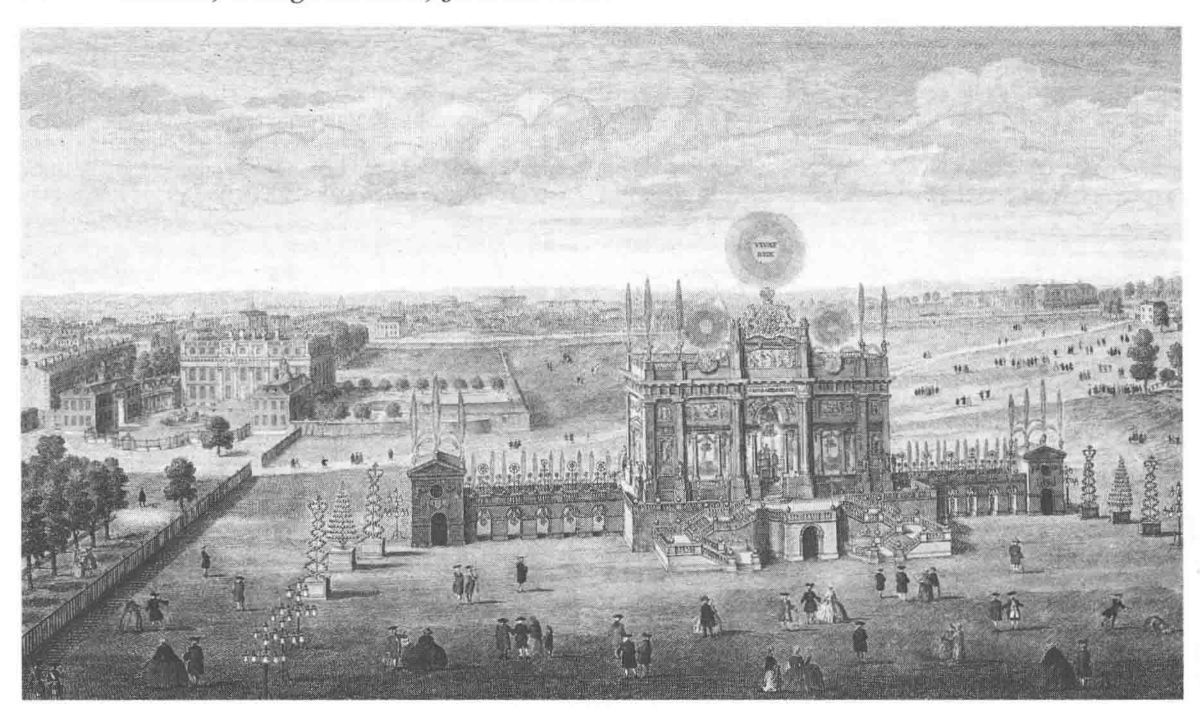
spiritual uplift were not prepared for the unabashed sensuousness of a score depicting both wittily and tragically the fate of one of Jupiter's paramours. (Mrs Delany noted that her husband, the Rev. Patrick Delany, did not 'think it proper' to go to *Semele*, 'it being a profane story'). The sentimental *Joseph* proved more acceptable.

Handel ignored the implications of his 1744 season. He had previously presented works with classical subjects alongside oratorio proper, and the quality of *Acis and Galatea* and *Alexander's Feast* confirms that the genre was important to him. *Semele* was a superb continuation of that line. Accordingly, he composed another classical drama that year, *Hercules*, as well as a new oratorio, *Belshazzar*. The Rev. Thomas Broughton's libretto for *Hercules* was based on the story of Hercules's death by the inadvertent action of his wife Dejanira, mainly as related in Sophocles' *Trachiniae* but with additions from Ovid's *Metamorphoses* and other classical sources. Handel set it to music of great seriousness and power, completing the draft score on 17 August. The libretto of *Belshazzar* was by Jennens, a remarkable treatment of the downfall of the Babylonian king based on the Bible but much expanded with details taken from Herodotus and Xenophon's *Cyropaedia*. The progress of work on *Belshazzar* is recorded in four of Handel's letters to Jennens. He acknowledged receipt of Jennens's first act on 19 July. On 21 August he wrote to say he was 'greatly pleased' by the second act and was anxious for the third. Two days later he began composition, finishing the draft of Act 2 on 10 September. On 13 September he wrote again to Jennens, urging him to send the third act and assuring him that the libretto was 'a Noble Piece, very grand and uncommon: it has furnished me with Expressions, and has given me Opportunity to some very particular Ideas, besides so many great Choru's'. By 2 October Jennens had completed the third act, and Handel wrote to say that the piece was 'a very fine and sublime Oratorio, only it is realy too long, if I should extend the Musick it would last 4 hours and more . . .' (fig.7). (As a result several passages in the libretto were not set to music, but they were printed, with an indication they would not be sung, in the wordbook of the first performance.) The score was completed on 23 October.

Meanwhile, Handel had taken advantage of the fact that the opera company, racked by financial difficulties and legal actions, was not able to present a season in 1744–5. He therefore returned to the King's Theatre and offered an extended subscription series of 24 oratorio-style concerts on Saturdays throughout the winter. This venture once again annoyed the opera party, or a faction of them, and a section of society led by Lady Brown, the wife of the British resident in Venice, boycotted the performances. A dignified newspaper announcement by Handel, offering subscribers their money back, had the effect of rallying his supporters and 16 of the promised 24 concerts were eventually given. *Hercules*, which opened on 5 January 1745, was seen by some as 'an English Opera', therefore meriting the same objections as *Semele*, and Jennens observed that 'for want of the top Italian voices, Action, Dresses, Scenes & Dances . . . [it] had scarce half a house the first night, much less than half the second'; it received only two performances. *Belshazzar* had to be altered at the last minute because Mrs Cibber was ill and could not sing the part of Daniel, with the

7. Autograph letter (2 Oct 1744) from Handel to Charles Jennens concerning the oratorio 'Belshazzar' (US-SPma)

result that the solo roles had to be redistributed unsatisfactorily among the other singers. *Messiah* was revived on 9 April, apparently without fuss. After this difficult season, Handel was no doubt pleased to be able to join the Earl of Gainsborough and his family at their country seat in Exton, Rutland, where a 'Theatrical Entertainment' based on Milton's *Comus* was arranged, the music being supplied from Handel's operas and oratorios. James Noel (the earl's brother) reported that though Handel had come 'for Quiet and Retirement', he was ready to comply with a request to add new music to the entertainment. The addition took the form of three charming songs, linked by a repeated chorus, the words being adapted from the final scene of Milton's masque. Handel went on to Scarborough, where he could take the spa waters. By August he was back in London, but complaining (according to Thomas Harris, brother of James) of 'his precarious state of health' and not composing a major new work.



National events may themselves have made Handel uncertain about the prospects of another oratorio season. On 21 July 1745 Prince Charles Edward Stuart, the Young Pretender, landed in Scotland to lead the second Jacobite rebellion, the last attempt to overturn the Hanoverian Succession. His rapid progress in Scotland and, in November, into England, caused consternation in London. The theatres vied with each other to express support for the Hanoverian cause, and Handel made a modest contribution with *A Song for the Gentleman Volunteers of the City of London* ('Stand round, my brave boys'), first sung by Thomas Lowe at Drury Lane on 14 November. Charles's retreat north after reaching Derby on 4 December removed the immediate threat to London, and attention turned to the government's determination to crush the rebellion with troops led by Prince William, Duke of Cumberland (the king's younger son). At the

beginning of 1746 Handel put together his *Occasional Oratorio*, partly new and partly reusing earlier material, especially from *Israel in Egypt*. Newburgh Hamilton compiled the libretto from Milton's paraphrases of the psalms and an eccentric selection of verses by Edmund Spenser, designed (as William Harris noted) to be 'expressive of the rebels' flight and our pursuit of them'. On 31 January a press announcement stated that Handel would once again offer 'Musical Entertainments on Wednesdays and Fridays the ensuing Lent, with Intent to make good to the Subscribers (that favoured him last Season) the Number of Performances he was not then able to complete'. However, Handel merely gave three performances of the *Occasional Oratorio* at Covent Garden, the first on 14 February, though eight concerts were outstanding from the previous season. It is reasonably certain that Handel was already planning another oratorio to mark Cumberland's anticipated victory, but the season for oratorios had passed by the time that was achieved at Culloden on 16 April. A second song for Lowe 'on the Victory obtained over the Rebels' ('From scourging rebellion') had to serve as Handel's immediate tribute to Cumberland's success.

Handel composed *Judas Maccabaeus*, the planned victory oratorio, in July and August 1746. The libretto was the work of the Rev. Thomas Morell, who was to provide the words for three more oratorios and in later life left a fascinating account of his collaboration with the composer. On 6 March 1747 Handel began a new season of oratorios at Covent Garden similar to those of 1743 and 1744, but no longer on a subscription basis. Revivals of the *Occasional Oratorio* and *Joseph* had to be rescheduled to avoid clashing with the sensational trial of the Jacobite Lord Lovat for high treason. *Judas Maccabaeus* opened on 1 April, the printed wordbook carrying Morell's dedication of the work to the Duke of Cumberland as a 'Faint Portraiture of a Truly Wise, Valiant and Virtuous Commander'. It was highly successful and proved to be one of the most enduringly popular of the oratorios, though the alterations made for later revivals tended to emphasize its jubilant and military elements rather than the pleas for reconciliation and peace which Morell had thoughtfully incorporated and Handel had carefully set. The early performances also included a concerto for orchestra with two wind groups, the first of three such works partly but very effectively arranged from earlier music (especially choruses). The season seemed to mark the end of all opposition to Handel. Lord Middlesex's company returned to the King's Theatre and opened their season on 14 November 1747 with *Lucio Vero*, an all-Handel pasticcio, now more in tribute to the composer than in rivalry.

11. The later oratorios. The pattern of Handel's activities – composition in summer for performance the following year in Lent – became more settled for four years, although opportunities for other work were taken when they arose. Handel spent most of June 1747 setting a second libretto by Morell, *Alexander Balus*, and composed *Joshua* (on an anonymous text) in July and August. They were first performed in reverse order, *Joshua* on 9 March 1748, and *Alexander Balus* on 23 March. The subject of the former is the Israelites' conquest of Canaan, the 'promised land', under the leadership of Joshua, the bloodthirsty aspects of which are tempered by a decorous love affair between the young warrior Othniel and Joshua's daughter Achsah, and a sympathetic portrait of Othniel's old father Caleb. It is possible that the oratorio, like *Judas Maccabaeus*, was originally intended as a tribute to Cumberland, and that its most famous number, the chorus 'See, the conquering hero comes', was written with him in mind, but no such association was ever made explicit; only a few numbers show Handel at his best. *Alexander Balus* is a more interesting if awkwardly constructed attempt to deal with an operatic subject in oratorio form, sympathetically relating the doomed love of the Egyptian queen Cleopatra for the Syrian king Alexander, with choral interpolations for the merry Syrians and the solemn Israelites colourfully characterized in the music. The librettos of the next pair of oratorios are again anonymous, but an examination of their literary style of *Solomon* and *Susanna* leaves no doubt that they are the work of the same writer. It is a pity he cannot be identified, as he had a real gift for polished lyric verse using clear images drawn from nature. He must have some credit for the new richness of style and depth of feeling that appears in the music, and which Handel subsequently sustained in all his late works. *Solomon* was composed between 5 May and 13 June 1748, *Susanna* between 11 July and 24 August; they were first performed (again in reverse order) on 17 March and 10 February 1749. *Solomon* presents three views of an ideal monarch ruling an ideal kingdom, all linked by the religious fervour attendant upon the building of the new temple in Jerusalem. In the first act Solomon and his queen appear as the young lovers of the *Song of Songs*, sensuously celebrating their mutual happiness. The second act shows Solomon's wisdom in resolving a dispute between two harlots, each claiming a baby as her own. In the third act Solomon is visited by the Queen of Sheba, and uses a musical masque to demonstrate the artistic achievements of his kingdom. The use of full brass and an extra body of *ripieno* strings in the orchestra, coupled with writing for double chorus, gives the music special power and colour. *Susanna*, based on the Apocryphal story of the wife falsely accused of adultery by two lustful elders, is less exotically scored, but displays a more subtle richness in its melodic radiance and in its vivid characterization. Susanna herself has both charm and spiritual strength, while the two elders (tenor and bass) are almost caricatures, yet possessing real menace. Lady Shaftesbury thought that *Susanna* 'will not insinuate itself so much into my approbation as most of Handel's performances do, as it is in the light operatic style'; but that is only one happy aspect of a complex and highly serious work.

The 1749 oratorio season ended on 23 March with *Messiah* (not revived since 1745 but from now on to become an annual fixture), by which time preparations were well under way for a national celebration of the Peace of Aix-la-Chapelle, the treaty ending the War of the Austrian Succession. The main public event was to be a fireworks display in Green Park, presented on an elaborate triumphal arch built by the stage designer Giovanni Servandoni (fig.8). Handel produced an anthem (*How Beautiful are the Feet*, or 'The Anthem on the Peace') for the official service of thanksgiving at the Chapel Royal, St James's Palace, on 25 April, mainly based on music from *Messiah* and other works. His more significant contribution was 'The Music for the Royal Fireworks', to be played outdoors at the display. It took the form of an orchestral suite, beginning with an especially splendid

8. Triumphal arch built by Giovanni Servandoni in Green Park, London, for the firework display to celebrate the Peace of Aix-la-Chapelle, 1749: coloured engraving printed for Robert Wilkinson

overture. Handel's original intention (as confirmed by the indications in his autograph score) was that it should be performed by a massive wind band of 24 oboes, 9 horns, 9 trumpets, 12 bassoons and three sets of timpani, but before completing the score he decided to reduce the numbers and to double the woodwind with strings. This caused annoyance, as (according to letters written by the Duke of Montagu to Charles Frederick, 'Comptrollor of His Majesty's Fireworks') it was the king's wish that there should be 'martial musick' only, without 'fidles'. It seems, however, that Handel had his way. To satisfy the enormous public interest in the music an open rehearsal was held in Vauxhall Gardens on 21 April. Despite a charge of half-a-crown per person, the event attracted a huge crowd, reported to be 'above 12,000 persons' and causing 'such a stoppage on London Bridge, that no carriage could pass for three hours'. At the display itself on 27 April, the music was played at the start of the proceedings, the fireworks following immediately. Shortly afterwards Handel found an occasion at which the Fireworks Music could be played with normal orchestral forces. On 7 May he attended a meeting of the general committee of the Foundling Hospital, founded nine years earlier by Thomas Coram 'for the Maintenance and Education of Exposed and Deserted Young Children'. His proposal for a concert in the newly-built chapel of the hospital, for the benefit of the charity, was accepted, and he was elected a governor. The concert took place on 27 May, with a programme consisting of the Fireworks Music, the Anthem on the Peace, extracts from *Solomon*, and a new anthem, *Blessed are they That Considereth the Poor*, which became known as the Foundling Hospital Anthem. It was the start of an important relationship with the hospital which lasted for the rest of Handel's life.

Between 28 June and 31 July 1749 Handel composed his next oratorio, *Theodora*, with Morell acting once more as librettist. The subject was not taken from the Bible but from a story of two early Christian martyrs as related in Robert Boyle's novel *The Matryrdom of Theodora and of Didymus* (1687). It was Morell's best work for Handel, inspiring the composer to music of great profundity and tenderness in its portrayal of the doomed lovers, and vividly representing in its choruses the characters of the arrogant Romans and the persecuted Christians. It was Handel's only composition of that summer. In August he visited Bath, and in September advised Jennens on the specification of an organ the latter intended to install at Gopsall, his country seat in Leicestershire. On 1 December Handel voted for the Whig candidate, Viscount Trentham, in the Parliamentary election. In the same month he became involved in a new venture, the only occasion when he was to compose a substantial amount of music for an English spoken drama. The Scottish writer Tobias Smollett had persuaded John Rich to stage his play *Alceste* at Covent Garden, and Handel (in settlement of a debt to Rich, according to Hawkins) agreed to supply the music. It was composed between 27 December 1749 and 8 January 1750, and almost certainly reached rehearsal, since Handel made new settings of two of the songs intended for Cecilia Arne in the role of Calliope. However, for reasons unknown the play was never performed, and its text is lost, leaving Handel's music – a splendidly fresh, French-influenced sequence of movements lasting about an hour – as its only record. *Theodora* was first performed (with a new organ concerto, op.7 no.5 in G minor) in the 1750 oratorio season on 16 March. It was not well received. Its unusual subject and tragic ending no doubt told against it, and Handel, who (according to Morell) valued the work 'more than any Performance of the kind' was deeply disappointed. On hearing that one of his supporters was prepared to book all the boxes for a further performance,

Handel replied: 'He is a fool; the Jews will not come to it (as to Judas [Maccabaeus]) because it is a Christian story; and the Ladies will not come because it is a virtuous one'. And indeed *Judas Maccabaeus* was given four times in the season, *Theodora* only three. *Samson* was also revived, as in 1749, and with *Messiah* concluding the season a pattern was emerging in which these three oratorios were to become the mainstay of oratorio seasons both in Handel's lifetime and long afterwards. The special position of *Messiah* was confirmed by a repeat performance in May at the Foundling Hospital Chapel, an addition to the season regularly repeated in future years.

Now 65 years old, Handel made his will, dated 1 June 1750; it was later amended by four codicils. He left the residue of his estate to his niece Johanna Friedericke Flörcke (daughter of his sister Dorothea Sophia) and remembered other German relatives. Among specific bequests was one to his loyal copyist and manager Christopher Smith of 'my little House Organ, my Musick Books, and five hundred Pounds sterl.' He spent a week (28 June to 5 July) converting the music for *Alceste* into a 'Musical Interlude', *The Choice of Hercules*, using a libretto adapted (probably by Morell) from a poem by Robert Lowth. This 'interlude' was in effect a dramatic cantata in which the youthful Hercules, presented with a choice of following Pleasure or Virtue, resists the temptations of the former and opts for the ultimately more glorious future promised by the latter. In August it was reported that Handel had decided to visit Germany to see his relatives and friends again, a decision likely to have been connected with the making of his will. The journey was temporarily upset when Handel had an accident on the way from The Hague to Haarlem in the Netherlands (it was reported on 21 August that he 'had the misfortune to be overturned, by which he was terribly hurt, [but] is now out of danger'). He spent time in the Netherlands both in August and September, and in December, playing the organ at Deventer and at The Hague in the presence of his former pupil Princess Anne and her husband, and members of the Dutch nobility. On his return to London he took the trouble to send a crate of rare plants to Telemann in Hamburg, writing a lively letter which suggests a recent renewal of acquaintance.

12. Last years. The continental visit had probably prevented Handel from keeping to his usual course of writing an oratorio in the summer of 1750, and he returned to composition at the start of 1751. Between 1 and 4 January he wrote his last orchestral work, the organ concerto in B flat (op.7 no.3), and on 21 January he began the oratorio *Jephtha*, again to a libretto by Morell. Whether he planned to include it in the forthcoming Lent season – only a month away – is not clear, but the possibility was soon ruled out, for a distressing reason. On 13 February, as he was setting the final chorus of Act 2, 'How dark, O Lord, are thy decrees', he noticed that his eyesight was failing. On the autograph score he noted, in German, that the sight in his left eye had become 'so relaxt' that he could not continue. The deterioration – presumably a cataract – was, however, slow, so that he was able to open a new oratorio season with *Belshazzar* on 22 February (with some new music setting words previously omitted, probably at Jennens's insistence). The next day – his 66th birthday – he resumed work on *Jephtha*, completing the second act four days later. On 1 March he directed a revised version of *Alexander's Feast*, with the new organ concerto and with *The Choice of Hercules* appended as 'an Additional New Act'. (In later revivals it was placed between the two parts of the ode.) Handel's personal misfortune soon became widely known: on 14 March Sir Edward Turner noted that 'Noble Handel hath lost an eye, but I have the Rapture to say that St Cecilia makes no complaint of any defect in his Fingers'. The season ended prematurely, after only eight performances had been given, because of the death of the Prince of Wales on 20 March. In June Handel paid visits to Bath and Cheltenham, returning to London on 13 June. He resumed work on Act 3 of *Jephtha* on 18 June, working at a slower pace than usual. He paused in mid-July, and finished the act on 30 August.

Handel retained sufficient sight to direct a normal Lent season of 12 concerts in 1752, *Jephtha* (opening on 26 February) being the sole new work. Morell's libretto is based on the biblical account of Jephtha's vow of a sacrifice if he is successful in battle, with the terrible consequence that his own daughter has to be the victim. It has parallels with *Theodora* in having a heroine (Iphis) displaying exemplary spiritual strength in the face of death and an ardent lover (Hamor, a character invented by Morell) ready to die in her place. A tragic ending is however avoided by the appearance of an angel who explains that it would be contrary to divine law for Iphis to be sacrificed; she must instead be dedicated to God in perpetual virginity. Morell could claim some theological justification for the avoidance of the sacrifice, if not for the implausible implication that Jephtha had misunderstood his own vow, and for a heavy emphasis on the supposed happiness of the outcome. In this final scene (later revised, with the addition of a quintet) the music loses the intensity of feeling it has previously sustained, whether depicting the initial radiant innocence of Iphis, or the anguish of Jephtha when he finds he is the victim of a divinely engineered fate. No doubt the music would have been of the same general quality if Handel had remained in perfect health when writing it, but the power of its darker moments must surely reflect something of the composer's own thoughts at the time. His sight continued to deteriorate, with the inevitable outcome. In August a newspaper announcement declared that he had been 'seized . . . with a paralytick disorder in the Head, which has deprived him of sight'. An attempt at an operation was made in November by the royal surgeon William Blomfield, but any relief it produced was temporary. In January 1753 he was reported to have 'quite lost his sight'.

Blindness was a severe blow to Handel's activity as a composer, since his method of producing large-scale works by a process of drafting and revision was no longer available to him. Nor could he read scores of his earlier music and of other composers, a stimulant that seems always to have been important to him. He was nevertheless able to continue supervising his oratorio seasons, with help, and to play organ concertos by improvising the solo passages. He still relied on Christopher Smith as manager and copyist, but for musical preparation and direction he turned to Smith's son, John Christopher, who returned from residence in France for the purpose. *Judas Maccabaeus* and *Messiah* were performed every year, and the lack of new works prompted the revival of oratorios unheard for several years, including (in 1756) *Athalia* and *Israel in Egypt*, often with substantial revisions, though

9. Autograph MS of the air 'Take the heart you fondly gave' from Handel's oratorio 'Jephtha', composed 1751 (GB-Lbl R.M.20.e.9, f.22r)

no secular dramatic works were revived. Handel was also able to introduce nominally 'new' numbers from time to time, produced in collaboration with the younger Smith. Such additions became frequent from 1757 onwards, bearing out Lord Shaftesbury's comment (in a letter of 8 February 1757) that Handel 'is better than he has been for some years and finds he can compose Chorus's as well as other music to his own (and consequently to the hearers) satisfaction'. One particularly fine duet and chorus, 'Sion now her head shall raise', did appear that year in *Esther* (it was subsequently moved to *Judas Maccabaeus*), and according to Burney was 'dictated to Mr Smith by Handel, after total privation of sight'. Unfortunately nothing more is known of Smith's work as an amanuensis, but the style of most of the late additions suggests that they were mainly composed by Smith on themes provided by Handel. In 1757 Handel and Smith were even able to produce a 'new' English oratorio, *The Triumph of Time and Truth* (11 March), but it was mainly an English version (with text by Morell) of *Il trionfo del Tempo e della Verità* of 1737, incorporating several pieces from other works. Nine new arias appeared in the 1758 season, almost all based on music from Handel's Italian period: five in *The Triumph of Time and Truth*, two in *Judas Maccabaeus* and two in *Belshazzar*. In August that year Handel visited Tunbridge Wells with Morell, where it seems that he was operated on by the oculist John Taylor. A poem celebrated the 'recovery' of his sight, but probably not truthfully.

The last oratorio season Handel was able to supervise began on 2 March 1759 with a heavily revised *Solomon*, including six newly introduced songs. The composer was in poor health, however, and found it difficult to attend the performances. After the final concert (*Messiah* on 6 April) he became confined to his bed and had to cancel a proposed trip to Bath. On 11 April he dictated and signed the last codicil to his will, making several personal bequests as well as one of £1000 to the Society for the Support of Decay'd Musicians, the charity he had helped to found in 1738. He added a wish to be buried 'in a private manner' in Westminster Abbey, making provision for a 'sum not Exceeding Six Hundred Pounds' for the erection of a monument. He died at 'a little before Eight o'clock' on 14 April. His friend James Smyth reported that 'he died as he lived – a good *Christian*, with a true sense of his duty to God and man, and in perfect charity with all the world'. His request for burial at the Abbey was granted, and took place in the evening of 20 April; '3000 persons' were reported to have attended the service. Roubiliac's monument, showing the composer with the

open score of 'I know that my Redeemer liveth' from *Messiah* (fig.10), was unveiled on 10 July 1762.

13. PERSONALITY. The image of Handel that has come down to posterity is largely based on the reminiscences of those who knew him personally, especially during his later years in England. Hawkins describes him as 'a large and very portly man, sauntering in his gait as distinguishes those whose legs are bowed'. His features 'were finely marked . . . his countenance placid'; they were probably best captured in the sculptures of Roubiliac (see figs.3 and 10) rather than in the blander features of the portraits by Thomas Hudson (fig.11), though the latter convey the dignity of the man. Burney, who played in Handel's concerts in the 1740s and was better placed to observe him more closely, gives a more vivid and rounded description:

> He was impetuous, rough and peremptory in his manners and conversation, but totally devoid of ill-nature or malevolence; indeed, there was an original humour and pleasantry in his most lively sallies of anger or impatience, which, with his broken English, were extremely risible. His natural propensity to wit and humour, and happy method of relating common occurrences, in an uncommon way, enabled him to throw persons and things into very ridiculous attitudes. . . . Handel's general look was somewhat heavy and sour; but when he *did* smile, it was his sire the sun, bursting out of a black cloud. There was a sudden flash of intelligence, wit and good humour, beaming in his countenance, which I hardly ever saw in any other.

The combination of irascibility with humour and good-heartedness is consistent with what can be gleaned from the comments and reactions of earlier contemporaries, as well as from the regrettably few surviving letters of Handel himself that are other than purely formal communications.

11. *George Frideric Handel: portrait by Thomas Hudson, 1756 (National Portrait Gallery, London)*

Mattheson noted that as a young man in Hamburg Handel behaved 'as if he did not know how many beans made five, for he was inclinded by nature to dry jokes', and, despite the quarrel that led to their duel, clearly found him a congenial companion. The good reception he received from both ecclesiastical and temporal princes in Italy, and from the nobility in England, attests an ability to operate diplomatically while avoiding servility. At the same time there are signs of a fierce ambition, born of an awareness of his superiority as a musician, and a determination to maintain his independence. His early break from what would surely have been a safe living as a church musician in Germany attests as much, and in the two short periods when he was attached to a noble household, with Ruspoli in Rome and Brydges at Cannons, he was not a salaried employee, but a guest who honoured his host with compositions in return for the honour of association. His decision to settle in England, rather than in one of the many continental courts with substantial musical establishments, allowed him to remain independent. Though Italian opera in London depended on royal and noble patronage, it was managed as a public entertainment, and its personnel were not the servants of an individual patron. With oratorio, Handel was the promoter of his own performances, and he alone was responsible for their success or failure.

In personal relationships with professional colleagues he exercised absolute honesty and reliability in financial matters, and expected devotion to artistic ideals while taking account of the proper concern of performers to show themselves at their best. The two anecdotes that tell of Handel's rage when singers objected to arias composed for them (Cuzzoni's rejection of 'Falsa immagine' in *Ottone*, Carestini's of 'Verdi prati' in *Alcina*) have to be set against his compliance with Anastasia Robinson's plea for reconsideration of her arias in *Ottone* and the numerous alterations or replacements of arias in many other operas and oratorios (both before performance and for revivals) precisely to accommodate the needs of singers. His attitudes to his fellow composers were ambivalent. He clearly took keen interest in the work of others, as is evident from his use of the musical material he borrowed from them, but his expressed opinions as recorded by Hawkins and others, seem to have been polarized between esteem for unquestionable masters such as Purcell and Rameau (the latter always spoken of 'in terms of great respect') and scorn for the second-rate. Burney comments on his long-standing dislike of Maurice Greene ('as a partizan for Bononcini, and confederate with his enemies'), adding that 'he had had a thorough contempt for all our [English] composers at this time, from Dr Green down to Harry Burgess'. Handel nevertheless subscribed to 15 scores or sets of published music (listed in Simon, B1985, p.288), all except Telemann's *Musique de Table* by composers working in England, including two by Greene's pupil William Boyce, whose superiority to his master Handel no doubt recognized.

Handel's role as a teacher is poorly documented and may be underestimated. After his early years in Hamburg, he had no need to give regular music lessons to supplement his income, and rarely did so except in the case of the younger John Christopher Smith and, more importantly, the daughters of George II. It is probable that all the royal princesses received tuition on the harpsichord from him (two harpsichord suites were written for the teenage Princess Louisa in 1739) but his chief pupil was Anne, the Princess Royal, until her marriage in 1734. It was almost certainly for her that he wrote out graded examples of figured basses and exercises in counterpoint in the mid-1720s, and through her he was able to maintain a personal connection with the court which was valuable to him during the operatic conflicts of the 1730s. He also played a role in helping the younger and less experienced singers with whom he worked, though in most cases (Strada, Francesina, Beard and Guadagni among them) this is visible only in the music he wrote for them and in the subsequent development of their careers. A more personal benefit is apparent in his employment of Susanna Cibber in the 1740s, enabling her to re-enter public life after being unjustly stigmatized by scandal.

Outside the world of professional music-making, and especially after he had established his own home in Brook Street in 1723, Handel generally confined his social life to cordial relationships within a private circle of friends, making contact with public affairs only in his support of charities. His presence at evening gatherings (such as that described by Mrs Delany in a letter of 12 April 1734) was always appreciated, though with a sense that it was a special privilege rather than part of the ordinary social round. He appears also to have been welcome in the country residences of his supporters when they moved out of London for the summer (as with the Earl of Gainsborough at Exton in 1745) though details of these visits are regrettably sparse. Elements of coarseness in his behaviour – a propensity to swearing in several languages and an excessive appetite for food and drink – were presumably excused as the faults of genius, and are in any case difficult to distinguish from the general manners of the age. A vicious caricature of him as 'The Charming Brute', with imposed porcine features and the motto 'I am Myself Alone' (dated 1754 and questionably attributed to Goupy) does however suggest some notoriety for gluttony and aloofness. In his later years, according to Hawkins, he 'gradually withdrew into a state of privacy and retirement', but remained a regular and fervent worshipper at his parish church of St George's, Hanover Square.

14. Style and technique. Handel's music consolidates the characteristics of the main European styles of his day. A solid foundation in harmony and counterpoint, derived from his early training in Lutheran church music, always underpins the daring melodic invention and mercurial brilliance associated with the best Italian composers, while the French influence is apparent not only in the overtures and dances that follow French models but also whenever a special stateliness of utterance comes to the fore. A specifically English influence is more elusive, but echoes of Purcell, perhaps mediated though his immediate successors, are present in the setting of anthems and canticles, and in the occasional harmonic inflections heard in the English choral dramas, notably *Acis and Galatea* and *Semele*. The greatness of the music lies in the assurance with which Handel unites these styles and often quite disparate thematic elements under the control of well-directed harmonic progressions, and fashions melodic lines that are themselves shapely and memorable.

The Handelian synthesis as a whole did not undergo radical transformation during the composer's career, so that his earliest music superbly exemplifies the then current styles (particularly Italian), while by the 1750s it was increasingly heard as possessing the virtues of an earlier age, especially in comparison with the harmonically simpler and melodically florid *galant* manner spreading through Europe and apparent in England in the work of Arne and John Christopher Smith. Handel was nevertheless alert to changing trends. The first stirrings of the *galant* in the music of Vinci and Pergolesi are absorbed into several arias in the 1730s, though Handel's repeated-note basses invariably have more harmonic movement than those of the younger Italians, and he still prefers the Corellian walking bass for most movements. His move to oratorio awakened an interest in the choral compositions of earlier generations, producing a mix of older and newer styles which he is sometimes able to exploit for purposes of characterization: archaic for Israelites, modern for heathens. An explicitly *galant* movement finally appears in his last oratorio *Jephtha* (the duet 'These labours past', with sprightly violin lines and dainty appoggiaturas). The music has that character because it was borrowed from a Galuppi serenata written less than a year earlier, perhaps hinting that Handel would have absorbed more of the latest mannerisms had he been able to continue composing. Indeed there are further touches of the *galant* in the arias added to the oratorios after 1754, though these may be the result of the creative collaboration with Smith.

Handel's gift for melody is displayed most boldly in arias from his Italian period which are simply unharmonized melodic lines, apart from cadential ritornellos. 'Ho un non so che nel cor' (*La resurrezione* and *Agrippina*) and 'Bel piacere' (*Agrippina* and *Rinaldo*) are examples, the latter given extra fascination by its inconstant time signatures. The strength of the melody is such that the absence of harmony is not noticed, or perhaps the melody implies the harmony so clearly it does not need to be realized. Mostly, however, Handel's harmony is explicit, and can support an eloquent major-key melody with simple purity ('Lascia ch'io pianga' in *Rinaldo*, 'Verdi prati' in *Alcina*) or grip the listener with minor-key chromaticism and suspensions in a great lament or heartfelt plea ('Voi ch'udite' in *Agrippina*, 'Soll mein Kind' in the Brockes Passion, re-used in *Esther*).

In choral and orchestral movements Handel was freed from the structural constraints of the formal aria and could make the sheer sonority of massed forces an essential element of the music, sometimes (in choruses) marking key points in the verbal text. Supremely typical of 'Handelian' style are the choruses in which elemental thematic tags are developed into extended structures through an innate confidence in the power of plain diatonic harmony. 'Sing ye to the Lord' in *Israel in Egypt* and the Hallelujah chorus in *Messiah* are deservedly well-known examples, as is the fabulous opening of the coronation anthem *Zadok the Priest*, in which the underlying harmony of the orchestral introduction is temporarily subverted to give maximum impact to the return of the tonic at the entry of the chorus. But minor-key and chromatic harmony in choruses are also just as congenial to Handel as in arias ('Ye sons of Israel mourn' in *Esther* is a fine early example of a choral lament) and can take unsettling forms, such as the quasi-recitative style and uncertain tonality of 'He sent a thick darkness' in *Israel in Egypt*, or the unexpected tonal shifts in the final section of 'Tyrants now' in *Hercules*, bringing out the sense of hopelessness in the words 'The world's avenger is no more'. Handel's formal fugal choruses are most effective when they are related to a dramatic context (as in 'He trusted in God' in *Messiah*, or 'And ev'ry step he takes' in *Belshazzar*) but otherwise may display only worthy competence. The fact that several such movements are based on material by other composers suggest that exercises in abstract counterpoint did not hold the same interest for Handel as for his great contemporary. (He is not known to have written a formal canon: the coda to the G major Chaconne, HWV442/2, comes nearest, and like the occasional canonic points in the Italian cantatas, is only in two parts.) He did however make good use of ground basses, both for jubilation ('The many rend the skies' in *Alexander's Feast* and 'To song and dance' in *Samson*) and lamentation ('Ah, wretched Israel' in *Judas Maccabaeus*, 'How long O Lord' in *Susanna* – the latter

12. Autograph MS of the close of Act 1 scene ii, and opening of scene iii, of Handel's opera 'Agrippina', composed 1709 (GB-Lbl R.M.20.a.3, f.48r)

using a chromatic bass similar to that of Dido's lament in Purcell's *Dido and Aeneas*).

Handel's technique in writing down his compositions can be studied in his autograph scores, the vast majority of which from about 1707 onwards are still happily extant. His practice in the case of large-scale vocal works, already set by the time he came to Italy, was to draft whole acts quickly and fluently, but entering only the words of the recitatives. He would then return to fill in the orchestration and set the recitatives. (This process of composition is recorded explicitly for later works in the dated notes made by Handel himself to record the progress of composition.) His writing is generally clear, but often untidy, and the process of preparing material for the performers to work from therefore always began with a fair copy of the autograph being made by a professional copyist, who would also (perhaps with assistance) prepare the vocal and instrumental partbooks. Before performance any of this material could be subjected to cuts, insertions, transpositions or other substantial alterations, which was not necessarily entered in the original autograph. Changes for revivals might be on a similar scale, but whereas these can usually be attributed to the requirements of new singers or other practical considerations, Handel's pre-performance alterations seem often to have been made for purely artistic reasons. There are cases of Handel developing sketches to produce a polished result (an example in *Susanna* is set out in Dean, G1959, pp.552–3) but in others the first draft may itself be radically amended, with new material being incorporated (Roberts, D1987, analyses a case in *Serse*). Several scores (including *Tamerlano*, *Scipione*, *Saul* and *Solomon*) show massive restructuring before performance. This kind of compositional upheaval sets Handel apart from his contemporaries (autographs of operas and oratorios by other composers, insofar as they are available for study, usually exhibit only minor *pentimenti*) and show a self-critical composer striving for ideals in overall form as well as in matters of detail. In alterations for revivals, when the enthusiasm of creation had abated, these ideals often seem compromised, perhaps in pragmatic recognition that performances and audiences did not always share them.

15. Borrowing. The question of 'borrowing' – the convenient term for Handel's re-use of musical material both from his own works and, especially, those of other composers – looms large in any consideration of his compositional technique. He re-used his own music in several ways, not all of great interest, and in this respect he may not have been untypical of composers of the period, especially those working in the theatre. (Comparison is difficult because the output of his lesser contemporaries is much less studied and in many cases much of it is lost.) The simple transfer of a movement from one work to another, either because the earlier work was unlikely to be revived or simply because the movement was more useful in another place (such as a revived opera or pasticcio) is usually only a matter to be noted. In such cases Handel rarely wrote the piece out again, but left a scribe to copy a new score on which he would mark any necessary changes (e.g. to the words). Of more interest is Handel's reworking of material in an essentially new composition which may vary from a fresh continuation of an opening point, or the transformation of a complete movement with addition of further material (as in the case of the choruses in *Messiah* and *Belshazzar* based on Italian duets, notably the conversion of 'No, di voi non vuo fidarmi' into 'For unto us a child is born'). Composers of all periods have adopted such practices with their own music.

Handel's use of the music of other composers, however, seems to be unique to him, and, despite much literature on the subject, has yet to receive the comprehensive study it deserves. This is partly because it is only recently that that the extraordinary extent and the varied nature of the borrowings has become apparent (particularly through the studies of John Roberts), and partly because many of the sources remain comparatively unknown and in some cases are still unpublished. It is clear that Handel borrowed musical material from others throughout his life. Notions that borrowing only occurred at certain periods, or could be specifically related to times of stress or illness, cannot be sustained. The impression that the practice reached a peak in the late 1730s still remains, however; possibly that is because important source works for other periods have yet to be found, but Handel's change from opera to the broader canvas of oratorio may have prompted him to scan a wider range of potential sources and use them more intensely.

The fact that Handel borrowed was recognized in his lifetime. Mattheson refers in 1722 to a specific instance, Prévost in 1733 speaks of (as yet unconfirmed) indebtedness to French composers, and Scheibe in 1745 makes special mention of Handel's use of the ideas of Keiser. Prévost took the view that such reworking honoured the original composers, whereas the German writers are more equivocal, though clearly not regarding the practice as heinous especially when the reworking was itself creative. It was however only in the mid-19th century that the major borrowings in the oratorios became generally known, in particular the indebtedness of *Israel in Egypt* to a *Magnificat* by Dionigi Erba and to a lesser extent a serenata by Stradella and a *Te Deum* by Francesco Urio. (The Stradella and Urio works were drawn upon more extensively elsewhere, the former in *Joseph* and the *Occasional Oratorio*, the latter in *Saul* and especially the Dettingen *Te Deum*.) The oddest case is the chorus 'Egypt was glad' in *Israel in Egypt*, which is no more than a shortened transcript of a canzona by J.K. Kerll. It also became known that Handel made copies of themes and occasionally large extracts from other compositions (including works of C.H. Graun, Gottlieb Muffat and Habermann) which he subsequently used. (Most of these copies are found in the autograph fragments now in the Fitzwilliam Museum.) The presentation of the relevant passages of Handel in parallel with their models by Sedley Taylor (D1906) usefully brought the subject to wide attention. Subsequent studies (sometimes anticipated by notes made by William Crotch in his keyboard arrangements of Handel choruses, published between 1810 and 1825) exposed major indebtedness to Telemann's *Musique de Table* and *Harmonische Gottes-Dienst*, to Bononcini's opera *Xerse* (especially, but by no means exclusively, in Handel's own setting of the same libretto) and (in the op.6 concertos) to Domenico Scarlatti's *Essercizi*. Handel's use of Keiser's music has been shown to extend far beyond previously noted relationships with the latter's *Octavia*. Six volumes of Handel's sources were published by Chrysander between 1888 and 1902 as a supplement to the Händel-Gesellschaft edition; Roberts, *Handel Sources*, adds nine more.

Handel's borrowing does not affect his status as a composer, since his reputation is not built on any work or part of a work that is substantially the creation of another. His practice nevertheless needs to be recognized as peculiar, and cannot be regarded as common to the age; the same propensity to borrow has not been demonstrated in others (though a few instances in Vivaldi have been found). It is also distinct from the established traditions of reworking material in such compositions as parody masses, or in the 'imitation' of classical models in art and poetry, where the model is acknowledged and familiarity with it may be expected for full appreciation of the imitation. Handel did not expect his audiences to recognize his borrowings (though he presumably knew that a few colleagues or connoisseurs could be aware of them) and he never acknowledged them. Whatever may be thought of the morality of the practice – and it surely involves a trace of guile – it was obviously essential to Handel's composition process, helping him to maintain a flow of ideas and opening new paths in his music. For the listener the existence of the borrowings is a bonus, allowing instructive comparisons between different ways of working the same musical material. Handel's reshuffling of the rhythmic patterns of the pedestrian opening of the Urio *Te Deum* to create the enchanting tune of the Carillon Symphony in *Saul*, or his witty transformation of an already exuberant movement by Telemann (*Musique de Table*, ii, Air) in the organ concerto op.7 no.4 testify to his genius more eloquently than any verbal commendation.

16. Keyboard music. The collections of keyboard music published in Handel's lifetime are only a partial representation of a larger corpus of such works (the remainder being preserved in early manuscript copies and a few autographs) and their dates of issue have little correspondence with dates of composition. Study of stylistic traits (notably the appearance of certain cadential formulae found in the opera *Almira* of 1704–5) indicates that 11 suites and several single movements can be assigned to Handel's Hamburg period or earlier (i.e. before 1706). The suites incorporate the traditional group of dance movements (Allemande–Courante–Sarabande–Gigue) but other movements, such as an opening Prelude, may be added. The Allemande–Courante pairs are invariably linked thematically in a manner adopted from French examples, a rhythmic transformation of the Allemande forming the basis of the Courante. Models for many movements may be found among the keyboard music of German composers of the previous generation. There are, however, no obvious precedents for the sarabandes, written in 3/2 and characterized by solemn two-bar phrases in the rhythm best known from the aria 'Lascia ch'io pianga' in *Rinaldo*, which is itself derived from an instrumental sarabande in *Almira*. The music of these early pieces has much lively invention, but several movements are thin in texture and tend to sprawl. Handel wrote little if any keyboard music in Italy – the Sonata in G for two-manual harpsichord HWV579 is possibly an instance – but returned to it in the 1710s and especially, it seems, around 1717 when he became attached to Cannons. A keener sense of structure becomes apparent, coupled with greater stylistic diversity. To this period belong 11 extended fugues, contrapuntally elaborate but preferring brilliance of effect to ingenuity. After 1720 Handel rarely composed for solo keyboard (the organ concertos from 1735 onwards partly filled the gap), but he wrote a fine suite in D minor HWV436 in the mid-1720s, and in 1739 two suites for the Princess Louisa, HWV447 and 452, reverting to the traditional four-movement form but otherwise displaying mature craftsmanship.

The most important volume among the early printed collections of keyboard music is Handel's own issue of *Suites de Pieces pour le Clavecin . . . Première Volume*, which appeared in November 1720. In a preface Handel explained that he had been 'obliged to publish some of the following Lessons because surrepticious and incorrect copies of them had got abroad' – apparently a reference to a pirated edition of keyboard pieces prepared by Walsh and issued under the imprint of Jeanne Roger of Amsterdam about the same time. (It is not clear whether the Roger volume actually appeared before Handel's own.) The eight suites of the 1720 set draw upon the keyboard works of both the Hamburg and English periods, but many movements were revised, five of the fugues were included in the suites and seven new movements were added. Handel supervised the publication: emendations made to the plates at proof stage and visible in some copies can only have been the composer's. The varied origins of the music make the collection a microcosm of Handel's stylistic eclecticism.

Allemande–Courante pairs are at the core of five suites, but no.2 in F has the slow–fast–slow–fast form of the *sonata da chiesa*, no.6 includes a Largo in the French-style dotted rhythms, and no.7 begins with a complete French overture (in fact a keyboard transcript of the overture to the cantata *Clori, Tirsi e Fileno* of 1707). The theme and variations that ends the E major suite (no.5) has nothing to do with the 'Harmonious Blacksmith' attached to it by a 19th-century legend, but is a splendid revision of an earlier set of variations in G.

Subsequent publications give a misleading impression. A few copies of a second volume of *Suites de Pieces* were issued by Walsh around 1730 and a revised version, regarded as standard, came out in 1733. This includes the post-1720 suite in D minor HWV436 but otherwise gathers up movements printed in the unauthorized Roger volume which Handel had not included in his 1720 set and adds a G major suite of questionable authorship, HWV441, and a long, presumably early, Chaconne in G HWV442/2. Texts are unreliable, and the fact that the movements are not explicitly grouped into suites has led to the incorrect assumption that the suite in B flat HWV434 ends with a Minuet in G minor; the latter is in fact a single isolated movement. (The air of the B♭ suite is that used by Brahms for his Variations on a Theme of Handel.) The contents of the 1733 set need to be regarded critically, and texts are best determined from manuscript sources. Further publications are also scrappy: in 1734 Walsh printed four keyboard pieces said to be from Handel's 'early youth', and in 1735 *Six Fugues or Voluntarys*, picking up the fugues of 1712–17 not used in the 1720 suites; these were well worth publishing, however, the fugues in A minor and C minor being particularly impressive. A further group of miscellaneous pieces, including the two suites of 1739 and sometimes called the 'Fourth Collection', appeared in Arnold's edition around 1793. It has been left to recent editors (notably Terence Best in the Hallische Händel-Ausgabe) to bring all of Handel's keyboard music to publication and establish a reliable chronology, show-

13. Autograph MS of the Adagio, and opening of the Allegro, from Handel's Organ Concerto op.4 no.2, composed 1735–6 (GB-Lbl King's 317, f.7v)

ing it to have an important place in the work of his youth and early maturity.

17. INSTRUMENTAL CHAMBER MUSIC. Handel's chamber music consists almost entirely of solo sonatas and trio sonatas, but defining the exact canon is difficult because of the odd circumstances of the earliest publications; there are also problems of attribution. (The six trios once cited as among Handel's earliest works, HWV380–85, are certainly spurious.) A set of 12 solo sonatas and a set of six trio sonatas (the latter designated 'Deuxième Ouvrage' or op.2, implying that the solos were op.1) were published about 1730 with the false imprint of Jeanne Roger, but the issue was in fact the work of Walsh, who shortly afterwards published revised versions under his own imprint. The purpose of this deceit remains unexplained, though it may have been designed to force Handel into allowing the music to appear. Another puzzle is that two of the violin sonatas in the Roger issue unlikely to be by Handel were replaced in the revised edition with two different sonatas which appear equally spurious. The ten remaining sonatas, designated for oboe, flute, recorder or violin, are certainly genuine, and most are extant in autographs datable from about 1712 (in the case of no.8, the C minor oboe sonata) to the mid-1720s, though manuscript versions are not always in the keys or for the instruments indicated by Walsh. Other solo sonatas are found in manuscript sources, including one for flute in D (HWV378), apparently dating from Handel's Italian period, the opening of which Handel took up again around 1750 for his last chamber work, the very fine sonata for violin in D (HWV371). The form of all the sonatas is invariably based on the four movements of the *sonata da chiesa*, though extra movements in dance style are often added. These solos remain among the basic repertory of the relevant instrumentalists.

The trio sonatas also follow the *sonata da chiesa* form. Autographs of the op.2 set are lacking, and so their dates have to be guessed from their style and relationship to other works. According to a note made by Charles Jennens, no.2 in G minor was 'compos'd at the age of 14', and certainly appears to be a very early work, but if the age cited (presumably from a comment by Handel himself) has the same degree of error as the ages mentioned in Mainwaring's *Memoirs*, a date of about 1703 is more likely, especially as the music is indebted to Bononcini's *Cefalo* of 1702. The other op.2 sonatas have relationships with works of the Cannons period (1717–18) and were probably composed or reworked shortly afterwards.

Manuscript sources supply other trios, notably three from a collection in Dresden. One, in F (HWV392) has the characteristics of Handel's Italian period, but the others are hard to place and (despite the quality and popularity of the G minor trio HWV393) are of questionable authenticity.

The publication of a second set of seven trio sonatas as op.5 in 1739 seems to have been authorized by Handel, since nos.5 and 6, so numbered, are extant in autograph. The other sonatas are mostly compilations of movements originally written for orchestra, partly from the overtures to the Chandos anthems of 1717–18 and partly from the dances written for the operas of 1734–5. Nos.1, 2 and 3 appear to have new movements, presumably added by Handel for the publication. Inevitably the op.5 trios do not give the impression of being as well-wrought as those of op.2, but they usefully made some attractive music available for concert use, a function they still fulfil.

18. Orchestral music. The presence of overtures, sinfonias and dances in operas and other major vocal works meant that Handel wrote purely orchestral music throughout his composing career, and there is not a sharp distinction between such pieces and the category of independent orchestral works. The overtures to the operas *Rodrigo* (1707) and *Il pastor fido* (1712), for example, are substantial orchestral suites unlikely to have been written specifically for the operas to which they were attached, and there are also instances of Handel incorporating movements from overtures in unassociated concertos. His first known independent orchestral work, probably written in Italy in 1707, is the three-movement *Sonata a cinque* with solo violin (HWV288), opening with a lovely melody Handel took up later in other works but otherwise disappointing. Two oboe concertos (HWV301 and 287) probably belonging to the early 1710s have more refinement (though the first cannot be firmly authenticated), and complete mastery is shown in four concertos from this decade which later formed part of the set published by Walsh in 1734 as Handel's op.3 (though almost certainly without the composer's approval or permission). In no.2 in B♭ and no.5 in D minor (HWV313 and 316), movements from earlier contexts are mixed with new material to create fully-formed concertos, no.2 being distinguished by delightful interplay between woodwind and strings and a ravishing oboe solo over arpeggios for two solo cellos. No.4 in F (HWV315) is another fine work, written for a benefit performance of *Amadigi* in 1716. No.1 (HWV312), consisting of a movement in B♭ followed by two in G minor, is presumably a fragment of a larger work; the music seems to cohere in performance. The major orchestral work of this period is the Water Music, a large-scale suite specially written to accompany a royal water party of June 1717, in which George I and his entourage were conveyed by barge along the Thames from Whitehall to Chelsea and back. The suite is remarkable for being the first orchestral work composed in England to include horns, crooked in both F and D; in movements in D major they are joined, sometimes in dialogue, by trumpets. The jovial opulence of such moments is balanced by lightly scored movements in both major and minor keys, mostly having G as their tonic. Though some of the music may have been written earlier for other contexts, the recent notion that the music was conceived or considered to exist as 'three suites' is questionable, since the earliest sources (keyboard transcripts from the early 1720s) show the movements in D and G in mixed order (as in the editions of Arnold and Chrysander). Ordering the movements by key had however become a practice by the 1730s, and is reflected in the keyboard arrangement published by Walsh in 1743.

The only movement in the op.3 concertos dating from the 1730s is the conclusion of no.6, a version for organ and orchestra of the last movement of the overture to *Il pastor fido* which also exists in several other forms. It is not known which is its original context, but it clearly presages the appearance of Handel's first organ concertos in 1735. (It had been anticipated much earlier by the Sonata for solo organ and orchestra in *Il trionfo del Tempo e del Disinganno* of 1707, a score that Handel had certainly perused when composing *Deborah* in 1733.) The organ concerto was effectively Handel's own invention, allowing him to display his abilities in both performance and composition simultaneously, and most of his oratorio concerts included one or more from 1735 onwards. Six (one originally a harp concerto, delicately scored for muted strings and recorders) were collected and published by Walsh in 1738 as Handel's op.4. No.2 in B♭ and no.3 in G minor, the earliest to be composed, draw on the op.2 trio sonatas for their material, and no.5 is simply an arrangement of a recorder sonata, but nos.1 in G minor and 4 in F are more expansive and original pieces. The Andante second movement of the latter imaginatively blends an organ registration of 'Open Diapason, Stopt Diapason & Flute' with *pianissimo* strings. In his next two organ concertos (HWV295 and 296*a*, called the 'Second Set' concertos because keyboard arrangements of them and four of the op.6 concertos were published under that title in 1740), Handel indicates for the first time that improvised solo organ movements are to be inserted 'ad libitum'. The same requirement also appears in the later organ concertos composed between 1740 and 1751, and published posthumously as op.7. There are several striking movements in this set, none more so than the opening of no.1 in B♭, a magnificent chaconne (though not so called) in two sections with a part for pedal organ, though whether Handel was ever able to play it on such an instrument is not known.

The 12 concerti grossi or 'Grand Concertos' written in a burst of creative energy in September and October 1739 were consciously conceived as an integral set, clearly in emulation (though not imitation) of Corelli's famous set with the same opus number and the same scoring for a concertino of two violins and cello with four-part ripieno strings and continuo. (Handel later added oboe parts to nos.1, 2, 5 and 6, mostly doubling the ripieno violins.) Each concerto has an individual form. Many movements blend inextricably the majesty of the French manner with italianate fluency, and a prodigious stream of invention coupled with intensity of feeling is maintained thoughout the set. The fact that earlier material is sometimes drawn upon (three of the concertos are based on the overture to the Ode for St Cecilia's Day and the two 'Second Set' organ concertos) does not diminish the achievement, since the adapations are fascinating and often radical in themselves, and the recognition that several thematic elements are derived from Scarlatti's *Essercizi* simply leads to admiration of the way Handel transforms them and uses them to build larger structures. The Polonaise in no.3 and the grave Musette of no.6 are haunting amplifications of standard dance forms. The set is an

apothesosis of the Baroque concerto, to be set alongside the Brandenburg Concertos of Bach, as well as an epitome of Handel's art, drawing on many sources and influences and uniting them in a style uniquely his own.

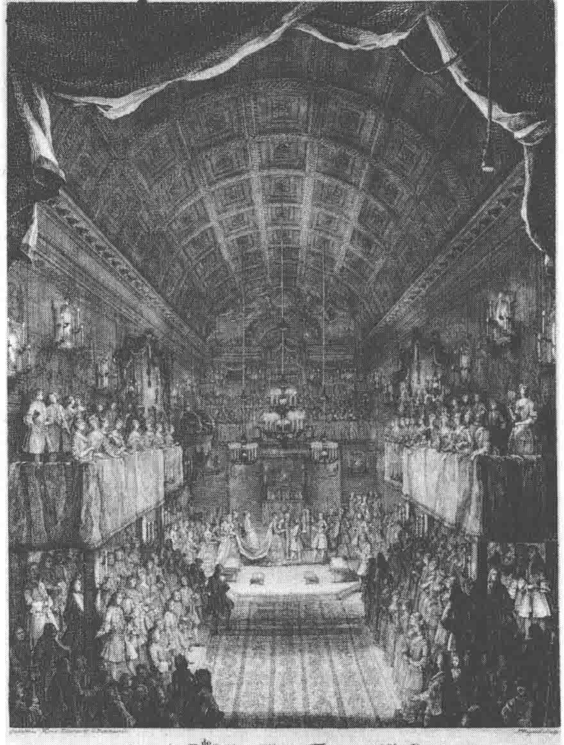
In 1747 and 1748 Handel produced three examples of a new type of orchestral concerto, later to be designated 'concerti a due cori' since they are all scored for two wind groups (called 'cori' by Handel himself, and apparently intended to be placed antiphonally) with the usual strings. The first to be composed, HWV334, was performed with *Judas Maccabaeus* and set a pattern of a French-style opening followed by faster movements with a wistful Adagio at their centre. All rework earlier material, but the first is mostly original, and the arrangements of oratorio choruses in the other two (HWV332, 333) are well conceived for the new medium. The concertos with horns (333 and 334), both in F, contain some splendid orchestral writing. The first of them contains the last working of a ground bass first found in the Queen Anne Birthday Ode and then adapted for the 1732 *Esther*: the unexpected appearance of new thematic material before the final statement of the bass gives extra lift to an already exhilarating movement.

Handel's most massive orchestral project was his Music for the Royal Fireworks of 1748. In both its original conception for a large wind-band with parts heavily doubled, or the later version with strings and reduced winds, the sound is exciting, because Handel's scoring for three horns and three trumpets is always calculated for maximum sonority, the high notes of the horns in D being dovetailed with the trumpets. The huge overture is the glory of the work, another ingenious modification of the French form in which the opening dotted rhythms are accommodated into a hymn-like melody, and the following Allegro is a kind of battle symphony dominated by fanfares exchanged between horns and trumpets. A pair of stately minuets, minor and major, concludes. As in other instances, Handel's music transcends the event it celebrates and has elevated the spirits of many generations since.

19. MINOR VOCAL WORKS. Handel's contribution to the repertory of the Italian secular cantata is substantial and various. Most of it, as would be expected, dates from the three years (mid-1706 to mid-1709) he spent in Italy, and most of the rest from the following decade. About 60 cantatas for voice and continuo alone (the voice being usually soprano, sometimes alto and, in two examples, bass) come from the Italian period, and many of them are probably the product of meetings of the Arcadian Academy held by Ruspoli and other patrons, in which a poet, a composer and a singer could be challenged to write, set and perform a new cantata in the course of an evening. (*Hendel, non può mia musa*, the little cantata in praise of the composer himself, with text by Pamphili, has particular signs of being such a piece.) Another ten or so cantatas – numbers have to be approximate because of the complexity of multiple versions – may have been produced on similar occasions in England, perhaps at Burlington House or Cannons, though probably under gentler pressure; some are reworkings of earlier pieces composed in Italy, while at least three have new texts supplied by Paolo Rolli, later revised and published in the poet's *Di canzonette e di cantate libri due* (London, 1727). The continuo cantatas usually have two or three arias with introductory or linking recitatives, but otherwise have no fixed form. An exceptionally striking example is *O numi eterni* (*La Lucrezia*), probably composed in Rome in 1707, which is in effect a dramatic *scena* in which the singer impersonates the Roman heroine Lucretia, intent on suicide after being raped. It contains only two formal arias, one of grim resolution and one hectic, but several arioso sections amid the recitative also depict the rapid shifts in the character's emotional state. At the other end of the scale is *Zeffiretto, arresta il volo*, with a much more typical text of amorous anxiety: again two arias, but with just one linking recitative and amounting to no more than a charming trifle. The rest cover virtually all possibilities between these two extremes. Where comparison can be made between Handel's setting of a text and a setting of the same text by a native Italian composer, Handel's version tends to have greater emotional intensity. He is able, especially in minor keys, to suggest considerable harmonic density in the two-part writing for voice and bass.

The cantatas with instrumental or orchestral accompaniment range from quasi-operatic works of an hour or more in length to shorter pieces very similar to the continuo cantatas except for the presence of violins or an obbligato wind instrument in the arias. Again, most were composed in Italy, including two *cantate a tre*: *Clori, Tirsi e Fileno* (1707, for Ruspoli in Rome) and *Aci, Galatea e Polifemo* (1708, for a ducal wedding in Naples). The former has perhaps the more exquisite music, while the latter gains dramatic force from the classical myth which Handel was to treat even more potently in English ten years later as well as providing the fascination of a bass role covering a vocal range of two-and-a-half octaves. The finest of the longer works is surely *Apollo e Dafne* (apparently started in Italy and finished later: the date is problematic), another treatment of classical myth but making more impact than *Aci* with its delectable characterization of the nymph, especially in her opening aria, and the final, touching farewell of the frustrated god at the close.

The chamber duets and trios for voices and continuo form a genre distinct from the monodic chamber cantata, since the singers do not impersonate characters and the music is conceived as formal counterpoint, expressing the emotion of the text in a general way; they are, in fact, madrigals with continuo accompaniment. Mainwaring's indication that 12 of the duets were written in Hanover to texts by Ortensio Mauro cannot be fully sustained: only six or seven come from that period (1711–12), the others being earlier. (The two trios also belong to the Italian period.) Another nine duets were written later in London, two around 1722 and the rest between 1741 and 1746. The latter group provided several ideas reworked in the English oratorios, including *Messiah* and *Belshazzar*. Some influence of Steffani is apparent in the fluidly melodious vocal lines, woven together with great care and with the musical points shared equally between the voices.



Handel wrote one English cantata (*Venus and Adonis*, with a text by John Hughes, unfortunately only partly extant) and, unlike most native British composers of the time, showed only slight interest in the English strophic song. (Several of the English songs attributed to him in contemporary song sheets are either spurious, or adaptations of Italian arias, or instrumental pieces with added words.) He did, however, provide three songs for plays,

the third ('Love's but the frailty of the mind' for a revival of Congreve's *The Way of the World* in 1740) being particularly happy, and, as a gift, made a modest but apt setting of a Hunting Song ('The morning is charming') with words by his friend Charles Legh of Adlington Hall. His disinclination to make a wider contribution to the genre has the compensation that in the Attendant's song in *Susanna* ('Ask if yon damask rose be sweet') he produced one of its finest exemplars.

20. CHURCH MUSIC. Handel was never, after Halle, a regular composer for the church, but he nevertheless produced a substantial body of anthems and liturgical settings over the course of his career, largely devised for particular ceremonies and all with orchestral or instrumental accompaniment. In Italy in 1707 he set Latin texts, including the three Vesper psalms *Dixit Dominus*, *Laudate pueri Dominum* and *Nisi Dominus* (all with chorus), together with motets and antiphons for solo voice. *Dixit* is an astonishing testimony to Handel's compositional technique near the start of his Italian period, notably in his grasp of large-scale form. Vigorous and vivid word-painting (such as the percussive setting of the word 'conquassabit') abounds, but even when the text is not emotionally expressive Handel devises memorable effects with it, as in the combination of cantus firmus and chattering counterpoint of 'Tu es sacerdos' or the intertwined solo lines, strange harmonies and mystical chanting of the lower voices in 'De torrente'. The other psalms, composed for a celebration of the Feast of Our Lady of Mount Carmel in July 1707 also mix brilliance and gravity, but on a lesser scale. For the same occasion Handel also wrote two short antiphon settings and a motet (*Saeviat tellus inter rigores*) requiring accomplished vocal virtuosity. More subtle are the two motets and *Salve regina* composed for the Marchese Ruspoli's private chapel at Vignanello in May 1707, the daring harmonies of the *Salve* creating a peculiarly intense atmosphere.

Echoes of the Latin works, especially the psalms, are found in the earlier English church music, though what is probably Handel's first exercise in the genre, *As Pants the Hart* in the earlier (1711–12) of two versions for voices and continuo only (HWV251*a*), loosely imitates the verse anthems of the standard English repertory. For the *Te Deum* and *Jubilate* of 1713 the ceremonial settings of Purcell and Croft are Handel's formal models, but realized more fluently with richer musical material. The Chandos anthems and Chandos *Te Deum* of 1717–18 are set apart from other church works by their scoring (no normal alto parts and no violas) and a style combining expansiveness with a sense of intimacy, apt for the circumstances of their composition for the private delectation of James Brydges, Duke of Chandos. They were presumably performed in services held in the small church of St Lawrence, Whitchurch (still preserved), which then served as Brydges' private chapel. The comparatively small forces involved do not inhibit Handel from creating music of considerable power, as the choruses 'At thy rebuke, o God' and 'Though an host of men' (respectively in *Let God Arise* and *The Lord is my Light*). Several movements from the Chandos settings were re-worked in compositions for the Chapel Royal in the mid-1720s, the conversion of *Let God Arise* and the *Te Deum* into a linked pair of Chapel Royal settings in A (HWV256*b*, 282) being particularly happy (especially in the advantageous shortening of the *Te Deum*). The outstanding church music of this decade is however found in the four coronation anthems of 1727, where the promise of the occasion at Westminster Abbey and the opportunity to write for large forces spurred Handel to music of new and sublime opulence. His concern for contrast is not abandoned: alongside the sustained majesty of *Zadok the Priest* (repeated at all subsequent English coronations) is found the tenderness of 'Upon thy right hand did stand the queen' in *My heart is Inditing*, and the curious anxiety of 'Let justice and judgement' in *Let thy Hand be Strengthened*.

From the 1730s onwards Handel's church music becomes rarer and specifically related to public ceremonies. The first of the two royal wedding anthems, *This is the day* of 1734, is an oddly awkward pasticcio of movements, mostly from *Athalia*, given that it was prepared for the marriage of Handel's favourite pupil, the Princess Royal (fig.14). Handel provided a finer and more original anthem, *Sing unto God*, for her brother the Prince of Wales in 1736, though in the final movement the adaptation for tenor of a solo line originally conceived for the castrato Carestini in *Parnasso in festa* is unduly demanding. In 1737 Handel marked the death of Queen Caroline with his funeral anthem *The ways of Zion do Mourn*, where a real sense of personal grief is reinforced in the music by Lutheran Chorale fragments and other

14. *Marriage of the Princess Royal to the Prince of Orange in the 'French Royal Chapel' (now Queen's Chapel), London, 14 March 1734: engraving by Jacques Rigaud after William Kent; Handel composed his wedding anthem 'This is the day' for this occasion*

15. Vignette (with the text 'Si caro, caro si') from Handel's opera 'Admeto', showing by implication the final scene where the lovers Admetus and Alcestis (played by Senesino and Faustina Bordoni) are united: from the title-page of a satirical pamphlet 'An Epistle from S[igno]r S[enesin]o to S[ignor]a F[austin]a', published on 8 March 1727 (a few weeks after the première of 'Admeto') at the height of the rivalry between Faustina and Francesca Cuzzoni

quotations from German masters (including Jacobus Handl's funeral motet *Ecce quomodo moritur justus*), surely in reference to the common heritage of the composer and the queen. With the extensive Dettingen *Te Deum* of 1743, and its more succinct partner, the Dettingen Anthem, Handel returns to grand ceremonial mode, but the *Te Deum* is weakened by its heavy indebtedness to sections of Urio's *Te Deum* that Handel had previously (and with justice) not used; it does however have a fine central section, beginning at 'We believe that thou shall come', uninfluenced by Urio. This was Handel's last major work for the church. The Anthem for the Peace of 1747 (*How Beautiful are the Feet*) and the Foundling Hospital Anthem of 1749 (*Blessed are they that Considereth the Poor*) are as much compiled as newly composed, both using choruses from *Messiah*, though the expansion of the latter (in 1751) with new solos and a duet gives it greater substance.

21. Operas. Throughout the 36 years in which Italian opera was his major preoccupation, Handel adhered closely to the standard form of the period, determined by the priority given to solo singing and to stage presentation in which sets were changed in view of the audience and the curtain not lowered until the end of the evening. Solo arias, invariably in da capo form (though often with a shortened return to the main section), therefore dominate the operas, and scenes are generally constructed to begin with a number of characters on stage, each of whom sings an aria and leaves. The final scene usually ends with a *coro* sung by the soloists; ensembles are otherwise rare and largely confined to scenes of public rejoicing; only 'Dall'orror' in Act 3 of *Alcina* touches the profundity of the choruses in the English choral works.

Handel's operas thus appear at a first glance very like those of his contemporaries; what sets them apart is the excellence of the music and its ability to express with immediate conviction the emotional states of the characters in the context of the drama. The latter quality, though already apparent in the prison scene of *Almira* (1705), is only intermittently present in the earlier operas (before 1720), in which the arias often hold the attention by musical interest alone. Much of the music of this period is worked out from ideas first found in the cantatas and other works of Handel's Italian period, and in *Agrippina* the characteristic harmonic quirks of this period are often attractively retained. The harmony of the first London operas is smoother, but the orchestration is richer, with its new use of bassoon tone colour; the extravagance of four trumpets in *Rinaldo* was not repeated.

The operas of the Academy period are generally more serious in tone (the enjoyable exception is *Flavio* (1723), though *Giulio Cesare* (1724) is not without touches of wit), arias are more expansive and musical expression is more consistently allied to drama. *Giulio Cesare* is all-encompassing; the deft characterization of Cleopatra's 'infinite variety', the sumptuous orchestration and the emotional power of so much of the music have rightly earned it a high reputation, though its odd structure with secondary characters commanding the final scenes of the first two acts (a circumstance dictated by the status of the original singers), presents problems in a modern context. *Tamerlano* (1724) and *Rodelinda* (1725) have less highly coloured scores but maintain dramatic force throughout, the tenor roles for Borosini (Bajazet and Grimoaldo respectively) being especially striking. The later Academy operas, with the exception of the subtle and tender *Admeto* (1727), are slightly lesser achievements; the rivalry between the leading sopranos Cuzzoni and Faustina and the need to balance their parts proved more an inhibition than a stimulant to Handel's inspiration.

In the 1730s, when Handel was free to choose a wider range of librettos, a comic and fantastic note returns in *Partenope* (1730), *Orlando* (1733) and *Alcina* (1735), and the influence of the newer pre-classical manner developed by Vinci and Leo is often present. The mid-1730s operas attain a greatness comparable with the peak of the previous decade, with the *scena*, a potent element in many Handel operas, reaching new heights in the mad scene of *Orlando* and the end of Act 2 of *Alcina*. (For their full impact these works require the orchestral forces known to have been employed by Handel at the time: they include a band of over 30 strings – divided approximately 12.8.6.4.2 – with four bassoons and two harpsichords in addition to the stipulated winds.) Hints

of new directions in opera are suggested in the later 1730s, but none, sadly, was followed up. A move to a synthesis with the French operatic style adumbrated in the sequences of dances and choruses in the operas of 1734–5 did not extend beyond that season. The romantic *Ariodante* (1735) also pointed to a more intimate, less artificial style, as did *Atalanta* (1736), but Handel turned back to older heroic librettos in 1737 and 1738 with what seems to be diminished musical inspiration (especially in comparison with the English choral works to which he was then giving attention); *Giustino* (1737) nevertheless has much to commend it. *Serse* (1738), a wholly successful comic opera deepened by moments of real anguish, indicated yet another line of development (also touched on in *Imeneo*), but by then external circumstances were drawing Handel away from opera, and his final effort in the genre, *Deidamia*, is uncertain in tone.

22. Oratorio forms. The two oratorios Handel wrote in Italy in 1707 and 1708 are in the well-established form of the Italian vernacular oratorio, very similar in style to the aria-dominated opera of the period, and, in Rome, forming a useful substitute for it at a time when public performance of opera was prohibited. Each, however, has an innovative moment exploiting the composer's special strengths. In *Il trionfo del Tempo e del Disinganno*, Cardinal Pamphili, the librettist and patron of the work, introduced 'un leggiadro giovinetto' making wondrous sounds as one of the delights offered by the allegorical character of Piacere (Pleasure). Handel could thus play a role in his own oratorio as the soloist in a short Sonata for organ and orchestra, the earliest known example of such a movement. In *La resurrezione* Handel made a last-minute change to the opening, allowing the overture to lead directly into the Angel's first aria, thus enhancing the sense of drama suggested by the Marchese Ruspoli's provision of painted backdrops for the performance, although the work was not actually staged. Both of these features were prophetic of elements in Handel's later English oratorios: the Sonata foreshadowed the introduction of organ concertos, and the opening of *La resurrezione*, though not imitated in later oratorios, stressed Handel's interest in dramatic effect.

In England, Handel did not use his Italian works as direct models for oratorio, since his prime concern was to introduce the choral music which they lacked, but he was aware of the precedent of Latin oratorios with choral sections, such as Carissimi's *Jephte*. The first version of *Esther*, produced privately in 1718, is clearly something of an experiment, drawing first on Racine's declared intention (in the play on which the libretto is based) 'to unite the singing with the action and to use for singing the praises of the true God that section of the chorus which the pagans [i.e. classical Greek playwrights] used for singing the praises of their false divinities'. Other influences were the German passion oratorio, an example of which (the Brockes Passion) Handel had just composed and from which he took some of the music for *Esther*, and, for the choruses themselves, the English anthem. For arias, the da capo form of opera was a model, but vocal solos could in general be treated much more flexibly: they could lead into choruses or be episodes within them. All these precedents are reflected in the first *Esther*, and there is also a hint of the choral representation of different peoples which Handel was to exploit with great brilliance in later works: the chorus first appear as a group of bloodthirsty Persian officers, though for the most part they impersonate the persecuted Israelites. *Esther* may not be entirely satisfactory as a whole because of its clumsy structure, but it contained all the formal ingredients that Handel was to mix in many different ways in future oratorios and in secular works that took oratorio form.

English oratorio as a public entertainment began with Handel's production of a much revised version of *Esther* in London on 2 May 1732 (the circumstances are mentioned above, §7). The 1732 *Esther* included two of the coronation anthems of 1727, and its immediate successor, *Deborah*, included the other two as well as more music from the Brockes Passion, as if Handel was using his first English oratorios as a means of rehabilitating past work. *Athalia*, though still drawing a little on the Passion, moves decisively towards the conception of oratorio as an original and all-encompassing genre, especially with the addition of organ concertos in the 1735 London version as in other oratorio revivals that year. Parallel to this development runs Handel's introduction of secular works presented in concert, beginning with the revised version of *Acis and Galatea* in 1732 and continuing with the serenata *Parnasso in festa* in 1734 (partly re-using music from *Athalia* but also with newly composed choral music) and the setting of Dryden's *Alexander's Feast* in 1736.

With *Saul* (1738–9), Handel continued the line of dramatic oratorio from the precedent of *Athalia*, adding an extra measure of vividness by the inclusion of orchestral interludes implying action or marking the passage of time, and by the presence of the exotic sounds of trombones and a carillon in the orchestra. Its pair for the same season, *Israel in Egypt*, takes a new path, however, being the first non-dramatic English oratorio, with a libretto compiled from purely scriptural texts. It also has a substantial and unprecedented number of choral movements. *Israel in Egypt* achieved a commendatory notice in the *London Daily Post* – the only such appraisal for any oratorio in Handel's lifetime – but this was because its strong choral element had proved difficult for the London audience, for whom the contribution of solo singers was always of importance, however elevated the musical entertainment. The only successor in the same line was *Messiah*, which not only provided a better balance of solo and choral music but achieved its eventual status as the most famous of all oratorios by articulating its statement of faith with music absolutely direct in its appeal, and in which the sense of progress from hope through despair to triumph is meaningful even for those who do not share Christian belief.

Between *Israel in Egypt* and *Messiah* Handel returned to secular works, with a setting of Dryden's shorter Cecilian ode, *A Song for St Cecilia's Day*, first presented as a pair with *Alexander's Feast*, and with *L'Allegro, il Penseroso ed il Moderato* (1740, revised 1741). This last is surely the most personal of the secular works. James Harris's perception in suggesting selections from Milton's two poems acutely recognized the presence of both 'Allegro' and 'Penseroso' aspects in Handel's make-up, and rightly expected that both would find equal expression in the music and would weave into a well-balanced whole. The fact that the contrasted moods are created through contemplation of images from an idealized English

landscape also allowed Handel to reflect a serene appreciation of the country in which he had chosen to settle.

In the 1740s, with opera abandoned, Handel seems to have been determined to explore the possibilities of oratorio form just as widely as he had in the 1730s, but he was not always able to carry his audiences with him. Oratorio proper, on sacred subjects, gained interest from a new middle-class public suspicious of theatrical entertainments, but happy to find a format in which musical virtuosity could be enjoyed within an aura of respectable piety. The sacred nature of the subjects provided the reason why, even if written in dramatic form, an oratorio was not to be acted. *Semele* and *Hercules*, however, were secular dramas; there was no obvious reason why they should be presented in Lent 'after the manner of an oratorio' and only Handel's keenest supporters were prepared to accept them. Handel therefore refrained from new secular works in oratorio form after 1745 (other than for *The Choice of Hercules*, reworked from the abandoned music for *Alceste* as an addition to *Alexander's Feast*) but, with some credit to his librettists, still managed to find the variety that was important to him. In his last four oratorios – *Solomon*, *Susanna*, *Theodora* and *Jephtha* – he composed leading soprano parts, all for Giulia Frasi, combining loving warmth and spiritual strength (divided between three roles in the case of *Solomon*), but each within works of very different atmospheres: the public splendour of *Solomon*, the intimacy of *Susanna*, the contest of faith and oppression in *Theodora* and the heroic acceptance of divine fate in *Jephtha*.

It does not appear that the special quality of these late works was widely recognized by their first audiences. (In the case of *Theodora* it clearly was not.) After their initial performances they were seldom revived, with the partial exception of *Jephtha*, and when they were, it was in substantially cut or altered form. It may be that the clash between dramatic form and concert presentation that caused difficulty with the secular works also affected appreciation of sacred works seeming to demand visualisation of their action. According to Hawkins, Handel himself 'used to say, that, to an English audience, music joined to poetry was not an entertainment for an evening, and that something that had the appearance of a plot or fable was necessary to keep their attention awake'. But the liveliness with which Handel told his 'fables' in music was inevitably dissipated in concert performance, especially for audiences not used to continuous concentration on theatrical presentations. Even in Handel's last years the standard oratorio repertory began to be reduced to *Messiah*, *Samson* and *Judas Maccabaeus*, where action is mainly absent or narrated. Only in the late 20th century, when recordings, radio broadcasts and concert performances of opera have made the concept of unseen musical drama familiar, has Handel's wide vision of what oratorio form could embrace become fully appreciated.

23. Handel and posterity. Handel's classic status as a composer, established by the end of the 1730s and symbolized by the presence of his statue in Vauxhall Gardens along with one of John Milton, was at first based on his choral music in general but became particularly associated with his oratorios. It was there that the union of musical excellence and sacred subject matter reached the sublimity to which, according to the philosophy of the time, the best of art should aspire. In 1753 William Hayes wrote of *L'Allegro* that 'there is not a Scene which Milton describes, were Claude Lorraine or Poussin to paint, could possibly appear in more lively Colours, or give a truer Idea of it, than our Great Musician has by his *picturesque* Arrangement of musical Sounds', but goes on to give greater praise to *Israel in Egypt*, in which 'sublime Composition' Handel has 'exerted every Power human Nature is capable of'. Mainwaring's *Memoirs* of 1760, the first separately published biography of any composer, has a section (attributed to Robert Price) appraising Handel's music in similar terms, noting the 'sublime strokes' that abound in the oratorio choruses, especially those of *Messiah*. In the 'three concluding choruses' of that work (i.e. from 'Worthy is the Lamb' onwards), 'each ... surpasses the preceeding, till in the winding up of the Amen, the ear is fill'd with such a glow of harmony, as leaves the mind in a kind of heavenly extasy'.

Messiah and its two regular companions, *Samson* and *Judas Maccabaeus*, epitomized this sublimity, and they remained dominant in the London oratorio seasons continued after Handel's death at Covent Garden and elsewhere, though *Alexander's Feast* also retained some popularity. An attempt was made to continue the master's legacy by the production of pasticcio oratorios based on Handel opera arias and choruses from the anthems and Latin psalms. In collaboration with Morell as librettist John Christopher Smith created *Nabal* (1764), *Gideon* (1769) and *Tobit* (apparently unperformed) in this way, while Samuel Arnold produced *Omnipotence* (1774) and *Redemption* (1786). Neither these nor entirely new works in the Handelian manner had much success, however, audiences preferring to stick with what were becoming ritual performances of their favourites.

The sense of ritual in Handelian performance was consolidated by the great Handel Commemoration of 1784 (the centenary of his birth as erroneously recorded by Mainwaring). With encouragement from George III (a keen Handelian, to the annoyance of Burney and other progressive musicians of the period), it turned into a national celebration held mainly in Westminster Abbey, with huge choral and orchestral forces collected from all over Britain. The three planned performances (sacred music on 26 May, opera and oratorio extracts at the Pantheon on 27 May and *Messiah* on 29 May) were extended to five with repeats of the two Abbey concerts. More Commemorations followed in London up to 1791, and were continued in spirit in festivals in other English cities. One important guest at the 1791 Commemoration was Joseph Haydn, who (according to William Shield) found that it confirmed 'that deep reverence for the mighty genius of Handel, which . . . he was even prone to avow'. The experience of this and his subsequent London visit of 1795 gave Haydn the impetus to compose *The Creation* on a libretto said to have been originally intended for Handel.

The Commemoration festivals stimulated a general interest in Handel's oratorios in continental Europe, but that had already begun through the efforts of individual enthusiasts. Earl Cowper, who had left England to settle in Florence in 1759, promoted performances of *Alexander's Feast* and *Messiah* there in 1768. Michael Arne, while touring in Germany, introduced *Messiah* to Hamburg in 1772, and C.P.E. Bach directed the work there again in 1775. Johann Adam Hiller brought *Messiah* to Berlin in 1786 and was one of the first to 'update' Handel's scoring with additional wind parts and other

alterations to make it conform to current taste. Mozart continued this trend in Vienna between 1786 and 1790, when he arranged four of the choral works (*Acis and Galatea*, *Messiah*, *Alexander's Feast* and the *Ode for St Cecilia's Day*) for Baron von Swieten's concerts at the Imperial Library.

In Britain in the 19th century the development of amateur societies devoted to choral singing extended the veneration of *Messiah* and its regular companions, now including *Israel in Egypt*. Cheap vocal scores first produced by the publishing firm founded by Vincent Novello made the music conveniently available to amateurs. The idea of celebrating the centenary of Handel's death on the grandest of scales took root with the transfer of the Crystal Palace (erected for the Great Exhibition of 1851) to Sydenham, providing a concert venue of unparalleled size. A preliminary 'rehearsal' was held in June 1857 and the Centenary Festival in June 1859. The latter involved 2765 singers and 460 instrumentalists under the direction of Sir Michael Costa and consisted of three concerts: *Messiah*, a miscellaneous 'Selection', and *Israel in Egypt*. It set the pattern for a series of triennial Crystal Palace Festivals on a similar (in fact, generally larger) scale well into the next century, the last being in 1926. Several voices, including those of Sir George Grove and George Bernard Shaw, were raised against the musical distortions involved, but the festivals were as much expressions of national pride as celebrations of Handel's genius, and it was only after the deprivations of war and the advent of a less certain age that a firm reaction against massiveness set in.

The first signs of a fresher and broader view of Handel's oratorios appeared in England in the 1920s, ushered in by partly amateur stage performances of *Semele* (1925, Cambridge) and *Samson* (1929, Falmouth), and continued in the next decade with *Athalia*, *Saul*, *Susanna* and *Hercules*. The performances involved drastic cuts and other compromises, but nevertheless revealed the works to be dramatic rather than devotional, and thus exposed an aspect of Handel that had become obscured by his status as master of the religious sublime. There was also similar activity in Germany, beginning with a staged *Hercules* at Münster in 1925. This, however, was an offshoot of a more significant effort in Germany to revive Handel's operas, begun by Oskar Hagen in Göttingen in 1920, and soon extending to Halle and other centres. The productions were characterized by even heavier alteration of the music, with high voice male roles allocated to tenors and basses, and revised orchestration. In Britain, revival of the operas was slower off the mark, but began in earnest in the 1950s, again with a mix of professional and amateur involvement. The Handel Opera Society, which at first staged both operas and oratorios, was founded under the directorship of Charles Farncombe in 1955, and its work was supplemented by revivals of operas under Anthony Lewis at the University of Birmingham and by Unicorn Opera (directed by Alan Kitching) at Abingdon. BBC broadcasts of the operas, including a *Rodelinda* as early as 1928, but especially a series under Arnold Goldsborough from 1948 to 1964, also helped reveal their musical riches.

In the 1970s the movement towards historically aware performances of early music, using period instruments, coupled with new scholarly understanding of the aesthetic validity of Baroque opera, suppressed the inclination to alter the form and scoring of Handel's operas and cleared the way to their acceptance on the modern stage. By 2000 all the operas had been given stage revivals of some sort, and productions of the best known works (especially *Giulio Cesare* and *Alcina*) were common on the stages of Europe and the USA. The rise of a new generation of countertenors and some fine mezzo-sopranos prepared to play male heroes helped remove the prejudice against high voices in male roles – and in any case octave transposition became ridiculous in performances attempting to re-create the sounds of Handel's own time. From the 1980s onwards the lesser-known oratorios as well as the rarer operas also became available to a wide public for the first time through recordings, partly thanks to the invention of the compact disc, which proved more suitable than its vinyl predecessor to accommodating the playing times of the works concerned. Not all the first recordings have been satisfactory textually or as performances, but it is nevertheless a matter for rejoicing that in the first years of a new century virtually all of Handel's music in its many diverse forms has become accessible through recordings and a range of stage and concert performances far broader than at any other time. *Messiah* retains the iconic status it had acquired by 1750 and has never relinquished, and will no doubt continue to do so while the great Christian festivals are celebrated, but it now takes its place alongside many other peaks of Handel's achievement which a happy combination of scholarly advocacy and the enthusiasm of practical musicians has, after much struggle, revealed.

24. Sources and editions. Something has already been said (§14) of Handel's compositional technique as exhibited in his autograph scores and, in the case of large-scale vocal works, his working copies or 'conducting scores'. The survival of most of these documents from the period of his Italian visit to his final years is partly the result of the composer's own care in preserving them and partly good fortune. Both sets of manuscripts were presumably included among the 'Musick Books' bequeathed to the elder Smith by the terms of Handel's will, and both passed on Smith's death in 1763 to his son John Christopher Smith. The latter presented most of the autographs to George III in the 1770s, apparently in gratitude for the continuance of his pension after the death of the Dowager Princess of Wales. These remained in the possession of the British royal family and are now in the British Library with the rest of the former royal music collection. Seven volumes of material, mostly autograph, were acquired separately by the 7th Viscount Fitzwilliam in 1778 and 1779, under unknown circumstances, and (rebound in 15 volumes) now form part of the Founder's Bequest in the Fitzwilliam Museum in Cambridge. The conducting scores were presumably retained by Smith and passed on his death in 1795 to his stepdaughter Lady Rivers. Their fate became precarious after she died in 1835, but in the 1850s the book dealer Thomas Kerslake acquired them (so he said) 'from the waste-paper market' and sold them to Victor Schoelcher, then engaged on his biography of Handel. In 1868 they were purchased for the Hamburg State Library at the behest of Friedrich Chrysander, who had just begun to issue his collected edition of Handel. (The conducting score of *Messiah* had however become detached from this group after 1835 and, having passed though other hands into the collection of Sir Frederick Ouseley, is now in the Bodleian Library, Oxford.) The

autographs and conducting scores have been comprehensively catalogued. All Handel's musical autographs, comprising some 8700 sheets, are described with analysis of their continuity, watermarks and rastra (patterns of staff rulings) by Burrows and Ronish (B1994); their work supplements the earlier descriptions of the British Library autographs by Squire (B1927) and of the Fitzwilliam autographs by Fuller Mailand and Mann (B1893). The conducting scores are catalogued by Clausen (B1972).

A few autographs and several manuscript copies from Handel's Italian period (including conducting scores of the two Italian oratorios) were left behind in the collections of his patrons, particularly Ruspoli. These were acquired early in the 19th century by Fortunato Santini, whose vast collection was subsequently purchased by the Roman Catholic diocese of Münster and is now housed in the Episcopal Seminary there. Other supplementary manuscript collections were formed in England during Handel's lifetime by several of his major supporters, including Charles Jennens (whose collection was incorporated into what became known as the Aylesford Collection), Elizabeth Legh of Adlington Hall in Cheshire (whose collection passed to the Earls of Malmesbury) and the 4th Earl of Shaftesbury. Information on these and other collections is given in *Handel Collections* (A1990), and detailed references to manuscript and other sources for all Handel's works are cited in the thematic catalogue (*Händel Werke-Verzeichnis* – HWV) prepared by Bernd Baselt, which forms part of the *Händel-Handbuch*.

The quantity and diversity of the sources – which include early printed editions, though the production of these was rarely supervised by Handel himself – often present complex problems to editors. Both autographs and conducting scores make visible the changes made by Handel during composition and subsequently, presenting difficult decisions about how the variant versions should be taken into account in preparing a score for publication or practical use. In the case of the operas and oratorios it is usually possible to define distinct versions performed by Handel at different times (though not all will seem equally valid for modern revival), and in this task the printed wordbooks produced to accompany the original performances are a vital additional source of information. Careful analysis of all source material needs to be undertaken for a full scholarly edition, and even the task of producing a working text for performance of a large-scale vocal work should involve cross-checking of autographs, the working copy and librettos if the relationship between the modern text and Handel's own performances is to be properly understood.

The earliest editors of Handel were conscious of the problem of variant versions, but saw their task as one of producing the 'best' version of a work, often that hallowed by performing tradition. The first attempt at a collected edition of Handel's works – the first such project for any composer – was made by Samuel Arnold in the immediate wake of the 1784 Handel Commemoration. Between 1787 and 1797 Arnold issued 180 fascicles of music text (amounting to about 60 volumes when bound) covering most of the oratorios together with the instrumental and orchestral music. A loss of interest on the part of subscribers caused the project to close prematurely, leaving only five operas covered and a small selection of the vocal chamber works. The edition nevertheless contributed significantly to the dissemination of Handel's music, especially outside Britain, and has some continuing value in its preservation of readings derived from manuscripts available to Arnold but no longer extant. Arnold dealt with variants only casually, sometimes including alternative settings or interpolations in appendices, but without information about their origins. A new attempt at an edition taking account of Handel's autographs (which Arnold seems not to have consulted) was begun by the English Handel Society in 1843, but only 16 volumes (in inconveniently massive large folio) were issued to 1858, including 12 of the large choral works. Only George Macfarren's *Belshazzar* made a serious attempt to face the textual problems involved.

The Händel-Gesellschaft edition prepared almost single-handedly by Chrysander was the first to cover virtually the whole of Handel's output, including the Italian operas. All but one of the planned 94 volumes were issued between 1858 and 1902. (The exception was vol.xlix, covering miscellaneous vocal works, for which some plates were however prepared; offprints from them were issued by Moeck in 1960.) Some volumes (notably xxxii, lviii and part of xlviii) were reissued in revised form when access to new sources had been acquired. In addition Chrysander and Max Seiffert edited six supplementary volumes of works by composers whose music was significantly used by Handel, and facsimilies of the autographs of *Jephtha* and *Messiah*. For its time the edition was an astonishing achievement. It was finely printed and remains very useful, especially in the form of reduced size facsimile reprints (the first of which was published by Gregg Press in 1965). Nevertheless its deficiencies are serious, especially for major works with complicated textual histories. Chrysander had access to the autographs and (more conveniently placed for him) the conducting scores at Hamburg, but his choice of readings from these and other sources is often arbitrary and incomplete. In several cases he was unaware of sources that would have filled lacunae in his scores.

In 1955 a new project was inaugurated in Halle, Handel's birthplace. The Hallische Händel-Ausgabe (Halle Handel Edition) was originally intended only to supplement Chrysander by issue of performing material based on his edition, but adverse comment on the first six volumes led to a change of policy, and in 1958 it was announced that a full critical edition would be produced. However, the editorial standards of the volumes that followed were extremely variable, partly as a result of the position of Halle in what was then communist East Germany and the consequent problems for scholars based there of travel restrictions and general communication with the West. In the 1980s the editorial directors responded to growing criticism, and new arrangements were made with the co-operation of organizations in Britain, West Germany and the USA. An active editorial board of German, British and American scholars was set up, new guidelines for the edition were prepared and procedures were established for monitoring the work of volume editors. The unification of Germany in 1990 removed communication problems, and the volumes issued since then have, with few reservations, shown a marked improvement in standards. Coverage of instrumental and orchestral music was broadly complete by 2000, with the deficiencies of the earliest volumes being remedied by issue of revised versions with appropriate critical reports.

WORKS

Editions: *George Friedrich Händels Werke: Ausgabe der Deutschen Händelgesellschaft*, ed. F.W. Chrysander, i–xlviii, l–xcvi, suppls.i–vi (Leipzig and Bergedorf bei Hamburg, 1858–94, 1902/*R*) [HG]

Hallische Händel-Ausgabe im Auftrage der Georg Friedrich Händel-Gesellschaft, ed. M. Schneider, R. Steglich and others (Kassel, 1955–) [vols. in progress are given in square brackets] [HHA]

HWV [Händel Werke Verzeichnis] refers to the numeration of works in the *Händel-Handbuch*, i–iii, which includes details of MS and printed sources. For further MS sources see Baselt, *Verzeichnis* (B1986) and *Handel Collections* (A 1990); for early printed editions (to 1800) see Smith (B1960).

			LKH, 16 Feb 1716 (6)	5th perf. (20 June) incl. 2 new syms.		
			LKH, 16 Feb 1717 (5)	3rd perf. incl. unidentified 'new scene'		
12a, 12b	Radamisto	adapted from D. Lalli: *L'amor tirannico, o Zenobia*, as rev. for Florence, 1712, after G. de Scudéry: *L'amour tyrannique*	LKH, 27 April 1720 (10)†		lxiii	ii/9.1, 9.2
			LKH, 28 Dec 1720 (7)†	rev., 13 new items		
			LKH, 25 Nov 1721			
			LKH, Jan–Feb 1728 (*c*5)†	further revs., 1 aria added		
13	Muzio Scevola	P.A. Rolli, after Livy, as rev. for Vienna, 1710	LKH, 15 April 1721 (10)†	only Act 3 by Handel; Act 1, F. Amadei; Act 2, G. Bononcini; end date 23 March 1721	lxiv	[ii/10]
			LKH, 7 Nov 1722 (3)	rev. and shortened		
14	Floridante	Rolli, adapted from Silvani: *La costanza in trionfo*, ? as rev. for Livorno, 1706	LKH, 9 Dec 1721 (15)†	end date 28 Nov 1721	lxv	[ii/11]
			LKH, 4 Dec 1722 (7)	5 arias added, 2 new		
			LKH, 29 April 1727 (2)	shortened, 2 new arias (MS lib amendments *Lbl*)		
			LKH, 3 March 1733 (7)†	1727 version rev. and shortened		
15	Ottone, re di Germania	Haym, adapted from S.B. Pallavicino: *Teofane*	LKH, 12 Jan 1723 (14)†	end date 10 Aug 1722; last 3 perfs. with 4 new arias	lxvi	[ii/12]
			LKH, 11 Dec 1723 (6)			
			LKH, 8 Feb 1726 (9)†	rev., 5 new arias		
			LKH, 11 April 1727 (2)			
			LKH, 13 Nov 1733 (4)†	rev., 3 arias and new duet added		
16	Flavio, re di Longobardi	Haym, adapted from M. Noris: *Flavio Cuniberto*, as rev. for Rome, 1696	LKH, 14 May 1723 (8)†	end date 7 May 1723	lxvii	ii/13
			LKH, 18 April 1732 (4)†	much rev.		
17	Giulio Cesare in Egitto	Haym, adapted from G.F. Bussani	LKH, 20 Feb 1724 (13)†		lxviii	[ii/14]
			LKH, 2 Jan 1725 (10)†	rev., 4 new arias; 2 more added during run		
			LKH, 17 Jan 1730 (11)†	further revs., 2 new arias added during run (MS lib amendments *Lbl*, King's 442)		
			LKH, 1 Feb 1732 (4)†			
18	Tamerlano	Haym, adapted from A. Piovene and rev. version: Il Bajazete, 1719, after J.N. Pradon: *Tamerlan*	LKH, 31 Oct 1724 (12)†	first draft composed 3–23 July 1724	lxix	ii/15
			LKH, 13 Nov 1731 (3)†	shortened, but 1 new aria		

HWV	Title	Libretto	Première (perfs. under composer)	Remarks	HG	HHA
19	Rodelinda, regina de' Longobardi	Haym, adapted from A. Salvi, after P. Corneille: *Pertharite, roi des Lombards*	LKH, 13 Feb 1725 (14)†	end date 20 Jan 1725	lxx	[ii/16]
			LKH, 18 Dec 1725 (8)	4 new arias and new duet (MS lib amendments *Lbl*)		
			LKH, 4 May 1731 (8)	2 arias and duet added from other operas		
20	Scipione	Rolli, adapted from Salvi: *Publio Cornelio Scipione*	LKH, 12 March 1726 (13)†	end date 2 March 1726	lxxi	[ii/17]
			LKH, 3 Nov 1730 (6)†	rev. with 14 added items incl. 2 new arias		
21	Alessandro	Rolli, adapted from O. Mauro: *La superbia d'Alessandro*	LKH, 5 May 1726 (13)†	end date 11 April 1726; new aria added during run	lxxii	[ii/18]
			LKH, 26 Dec 1727 (over 3)			
			LKH, 25 Nov 1732 (6)†	shortened		
				revived as Rossane, LKH, 1743†, 1744, 1747, 1748†, probably with Handel's co-operation		
22	Admeto, re di Tessaglia	adapted from A. Aureli: *Antigona delusa da Alceste*, as rev. Mauro for Hanover, 1681	LKH, 31 Jan 1727 (19)†	end date 10 Nov 1726; main autograph and perf. scores lost; new aria added during run	lxxiii	[ii/19]
			LKH, 30 Sept 1727 (6)			
			LKH, 25 May 1728 (3)†	new aria		
			LKH, 7 Dec 1731 (6)†	rev., 6 arias added, 3 new		
23	Riccardo primo, re d'Inghilterra	Rolli, adapted from F. Briani: *Isacio tiranno*	LKH, 11 Nov 1727 (11)†	end date 16 May 1727	lxxiv	[ii/20]
A[2]	Genserico [Olibrio]	after N. Beregan: *Genserico*, as rev. for Hamburg, 1693		only pt of Act 1 drafted early 1728; music mostly used in Siroe and Tolomeo		
24	Siroe, re di Persia	Haym, adapted from P. Metastasio, as rev. for Naples, 1727	LKH, 17 Feb 1728 (18)†	end date 5 Feb 1728	lxxv	[ii/21]
25	Tolomeo, re di Egitto	Haym, adapted from C.S. Capece: *Tolomeo e Alessandro*	LKH, 30 April 1728 (7)†	end date 19 April 1728	lxxvi	[ii/22]
			LKH, 19 May 1730 (7)†	much rev. with 12 addl items		
			LKH, 2 Jan 1733 (4)†	6 further addns		
26	Lotario	adapted from Salvi: *Adelaide*, as rev. for Venice, 1729	LKH, 2 Dec 1729 (10)†	end date 16 Nov 1729	lxxvii	[ii/23]
27	Partenope	adapted from Stampiglia, as rev. for Venice, 1707	LKH, 24 Feb 1730 (7)†	end date 12 Feb 1730	lxxviii	[ii/24]
			LKH, 12 Dec 1730 (7)†	rev., new aria		
			LCG, 29 Jan 1737 (4)†	shortened and rearranged		
28	Poro, re dell'Indie	adapted from Metastasio: *Alessandro nell'Indie*	LKH, 2 Feb 1731 (16)†	end date 16 Jan 1731	lxxix	[ii/25]
			LKH, 23 Nov 1731 (4)†	rev., 3 arias added		
			LCG, 8 Dec 1736 (4)†	rev., 6 arias added (1 by L. Vinci, 2 by G.A. Ristori)		

HWV	Title	Libretto	Première (perfs. under composer)	Remarks	HG	HHA
A[5]	[Tito]	after J. Racine: *Bérénice*		only Act 1 scenes i–iii composed, late 1731, entitled Titus l'Empereur; music partly used in Ezio		
29	Ezio	adapted from Metastasio	LKH, 15 Jan 1732 (5)†		lxxx	[ii/26]
30	Sosarme, re di Media	adapted from Salvi: *Dionisio rè di Portogallo*	LKH, 15 Feb 1732 (11)†	end date 4 Feb 1732	lxxxi	[ii/27]
			LKH, 27 April 1734 (3)	shortened, but 4 arias added		
31	Orlando	adapted from Capece, after L. Ariosto: *Orlando furioso*	LKH, 27 Jan 1733 (10)†	end date 20 Nov 1732	lxxxii	ii/28
32	Arianna in Creta	adapted from P. Pariati: *Teseo in Creta*, as rev. for Naples, 1721, and Rome, 1729	LKH, 26 Jan 1734 (16)†	end date 5 Oct 1733	lxxxiii	[ii/29]
			LCG, 27 Nov 1734 (5)†	rev., with 2 arias, 1 new, and ballet		
A[11]	Oreste	adapted from G. Barlocci	LCG, 18 Dec 1734 (3)†	pasticcio, music by Handel incl. new recits. and ballet	xlviii, 102 (ov.)	ii/suppl.1
33	Ariodante	adapted from Salvi: *Ginevra, principessa di Scozia*, after Ariosto: *Orlando furioso*	LCG, 8 Jan 1735 (11)†	incl. ballet music; composed 12 Aug–24 Oct 1734	lxxxv	[ii/32]
			LCG, 5 May 1736 (2)†	dances omitted; 7 arias added (none by Handel)		
34	Alcina	adapted from *L'isola di Alcina*, 1728, after Ariosto: *Orlando furioso*	LCG, 16 April 1735 (18)†	incl. ballet music; end date 8 April 1735	lxxxvi	[ii/33]
			LCG, 6 Nov 1736 (3)†	dances omitted		
			LCG, 10 June 1737 (2)			
35	Atalanta	adapted from B. Valeriano: *La caccia in Etolia*	LCG, 12 May 1736 (8)†	end date 22 April 1735	lxxxvii	[ii/34]
			LCG, 20 Nov 1736 (2)			
36	Arminio	adapted from Salvi	LCG, 12 Jan 1737 (6)†	end date 14 Oct 1736	lxxxviii	[ii/35]
37	Giustino	adapted from Beregan, as rev. Pariati for Rome, 1724	LCG, 16 Feb 1737 (9)†	composed 14 Aug–20 Oct 1736	lxxxix	[ii/36]
38	Berenice	adapted from Salvi: *Berenice, regina d'Egitto*	LCG, 18 May 1737 (4)†	composed 18 Dec 1736–27 Jan 1737	xc	[ii/37]
39	Faramondo	adapted from A. Zeno, as rev. for Rome, 1720	LKH, 3 Jan 1738 (8)†	composed 15 Nov–24 Dec 1737	xci	[ii/38]
A[13]	Alessandro Severo	adapted from Zeno, as rev. for Milan, 1723	LKH, 25 Feb 1738 (6)†	pasticcio, music by Handel, incl. new ov. and recits.	xlviii, 104 (ov.)	
40	Serse	adapted from N. Minato, as rev. Stampiglia for Rome, 1694	LKH, 15 April 1738 (5)†	composed 26 Dec 1737–14 Feb 1738	xcii	ii/39
A[14]	Giove in Argo [Jupiter in Argos]	adapted from A.M. Lucchini	LKH, 1 May 1739 (2)†	pasticcio semi-staged; new recits., 5 arias and final chorus		
41	Imeneo	adapted from Stampiglia	LLF, 22 Nov 1740 (2)†	drafted Sept 1738, rev. for perf. Oct 1740	xciii	[ii/40]
			Dublin, New Music Hall, 24 March 1742 (2)†	concert perf.; cuts, but 2 arias and 2 duets added

230	Ah, che troppo ineguali	S, str, bc	? Rome, c1708–9, cantata for BVM; ?frag.	liiB, 148	

hmv	*Title/first words, Key*	*Scoring*	*Remarks*	*HG*	*HHA*
233	Donna che in ciel	S, SSATB, str, bc	for anniversary of deliverance of Rome from earthquake; ? perf. Rome, *c*2 Feb 1707; ed. R. Ewerhart (Cologne, 1959)	—	

Giunta l'ora fatal (Il pianto di Maria), HWV234, for 4 vn, va, bc, is by G. Ferrandini, though attrib. Handel in several MSS; see Riepe and others, C1992

German sacred music

German church cantatas, presumably composed at Halle before 1704, are no longer extant; see W. Serauky: *Musikgeschichte der Stadt Halle*, ii/1, music suppl and notes (Halle and Berlin, 1940/*R*), 70ff, for text incipits of 7 lost cantatas attrib. Handel (HWV229[1]–229[7]). The St John Passion (HG ix, HHA i/2), the cantata Ach Herr, mich armer Sünder (ed. M. Seiffert, Leipzig, 1928) and other unpublished works are almost certainly spurious; see Chrysander, C1858–67, i, 64–70, W. Braun, *HJb* 1959, and *Händel-Ehrung*, G1959. For Brockes Passion, see 'Oratorios'.

SECULAR CANTATAS

unless otherwise stated, composed in Italy, 1707–9

Dramatic cantatas

Unidentified cantatas

Burney (*BurneyH*, iv, 261; ii, 702) states that the aria Sposo ingrata in Radamisto was conceived 'for one of [Handel's] juvenile cantatas at Hamburg, "Casti amori"'. 'Casti amori, su volate' is however a single aria, perhaps written for Hamburg early in 1708; see Roberts, 'A New Handel Aria', C1995. Burney also mentioned (1785, 'Sketch', p.[*7], fn (a)) MS of 2 cants. 'which, C1967, 165, document 24; it probably refers to the March beginning, the cantata Alla caccia (HWV 79).

On 6 Feb 1711 (Queen Anne's birthday) 'a Dialogue in Italian, in Her Majesty's Praise, set ... by ... Mr. Hendel' was perf. at St James's Palace, London; reported in *The Political State of Great Britain*, i (1711), 227.

SONGS AND HYMNS

unless otherwise indicated all for high voice and continuo; none in HG or HHA

Edition: *Songs and Cantatas for Soprano Voice*, ed. D. Burrows (Oxford, 1988) [B]

English songs

published in contemporary songsheets and anthologies; few reliable MS sources known; details of printed sources in Smith, B1960, 160–204

HWV	First words (title)	Text	Remarks
228[1]	As Celia's fatal arrows (The Unhappy Lovers)		probably authentic; ed. in B
	As near Portobello lying (Hosier's Ghost)	R. Glover	spurious; see Come and listen
228[3]	As on a sunshine summer's day	B. Griffin	words added to authentic inst minuet (HWV506); as 'Monsr Denoyer's Minuet' (Air XLIX) in C. Johnson: *The Village Opera*, Feb 1729, but as 'Handell's Minuet' (Air XX) in version of same work entitled *The Chambermaid*, Feb 1730
	Ask not the cause (Charming Chloris)	J. Dryden	words adapted to probably authentic music for another text; see The sun was sunk
228[4]	Bacchus one day gaily striding (Bacchus' Speech in Praise of Wine)	T. Phillips	words added to authentic inst minuet (HWV530); tune is Air XVII in C. Coffey: *The Devil to Pay*, Aug 1731
228[5]	Charming is your shape and air (The Polish Minuet, or Miss Kitty [The Reproof])		authentic; tune is Air V in G. Lillo: *Sylvia*, Nov 1730
	Cloe proves false (The Slighted Swain)	A. Bradley	see Faithless, ungrateful
228[6]	Come and listen (The Sailor's Complaint)		spurious; for origins of tune see W. Chappell: *Old English Popular Music* (London, 1893), ii, 165; music not attrib. Handel until pubd as As near Portobello lying (see above)
228[8]	Faithless, ungrateful (The Forsaken Maid's Complaint)		words added to authentic inst minuet (HWV A 15[7]) derived from No non piangete (Floridante); in anthologies with adjusted vocal line as Cloe proves false (see above); ed. in B
229[9]	From scourging rebellion (A Song on the Victory obtained over the Rebels)	J. Lockman	inst acc. indicated in the chorus
228[10]	Guardian angels now protect me (The Forsaken Nymph [Leander])		probably spurious; not attrib. Handel until 1746 pubn; ed. in B
228[11]	I like the amorous youth that's free	J. Miller: *The Universal Passion*	probably for 1st perf. of Miller's comedy, Drury Lane, 28 Feb 1737; with tr inst; ed. in B

HWV	*First words (title)*	*Text*	*Remarks*
218	Love's but the frailty of the mind	W. Congreve: *The Way of the World*	perf. in revival of Congreve's play, Drury Lane, 17 March 1740; ed. A.H. Mann, *Early English Musical Magazine*, i/6 (June, 1891); ed. in B
228[12]	My fair, ye swains, is gone astray (Phillis)		spurious, by T.A. Arne (Lyric Harmony, ii; London, 1746)
228[13]	Not Cloe that I better am		?authentic
228[14]	Oh! cruel tyrant love (Strephon's Complaint of Love)		probably authentic; tune is Air XXV in J. Ralph: *The Fashionable Lady*, April 1730
	Oh my dearest, my lovely creature		words adapted to probably authentic music for another text; see Di godere ha speranza ('Italian songs')
	On the shore of a low-ebbing sea (The Satyr's Advice to a Stock Jobber)		words adapted to probably authentic music for another text; see Says my uncle
228[16]	Phillis be kind	Parratt	words added to probably authentic inst minuet (HWV545)
228[17]	Phyllis the lovely, turn to your Swain (Phillis Advised)		probably spurious; anonymous in A Pocket Companion (1724), 111; not the same as Phillis the lovely, the charming and fair (to a minuet from the Water Music)
228[15]	Says my uncle, I pray you discover (Molly Mog, or The Fair Maid of the Inn)	[J. Gay] Mist's Weekly Journal (27 Aug 1726)	probably authentic; in anthologies as On the shore of a low-ebbing sea (see above); tune also used for The Muses quite jaded with rhyming (Molly Lepell)
228[18]	Stand round my brave boys (A Song made for the Gentleman Volunteers of the City of London)		perf. Drury Lane, 14 Nov 1745
226	The morning is charming (Hunting Song)	C. Legh	*c*1747; facs. of fair-copy autograph (Adlington Hall, Cheshire) in Streatfeild (1909), 304
228[2]	The sun was sunk beneath the hill (The Poor [Despairing] Shepherd)	J. Gay	probably authentic; in anthologies as Ask not the cause (see above); ed. in B
228[19]	'Twas when the seas were roaring (The Melancholy Nymph [The Faithful Maid])	Gay: *The What d'ye call it* (1715)	probably authentic; ?orig. setting; tune is Air XXVIII in Gay: The Beggar's Opera, Jan 1728; ed. in B
	Venus now leaves her Paphian dwelling		words added to probably authentic inst minuet; without attrib. as one of 3 'Songs … on the Approaching Nuptial of the Prince of Orange', March 1734; music = When I survey
228[20]	When I survey Clarinda's charms (Matchless Clarinda [The Rapture])	'Mr. B'	words added to ?authentic inst minuet (HWV543); attrib. Geminiani as kbd minuet in The Lady's Banquet, ii (May 1733), and as That which her slender waist confined, in Amaryllis, ii (1746); see Venus now leaves
228[21]	When Phoebus the tops of the hills does adorn (A Hunting Song [The Death of the Stag])		?spurious; for S, A
228[22]	Who to win a woman's favour	*Cupid and Psyche, or Columbine Courtezan* (1734)	words added to authentic inst minuet (HWV540[a], related to minuet in Almira)
—	Why will Florella when I gaze (Florella)	anon. in R. Steele: *Poetical Miscellanies* (London, 1714), 211	?authentic; similar setting, in Amaryllis, ii (1746), attrib. W. Turner
228[23]	Ye winds to whom Collin complains (An Answer to Collin's Complaint)		probably authentic; ed. in B
228[24]	Yes, I'm in love (The 'Je ne sçai quoi')	W. Whitehead	?authentic; *c*1746; with tr inst

Many other Eng. songs using pre-existing music by Handel pubd in 18th century; extensive cross-index in Smith, B1960, 205ff, which should incl.: Let's be merry and banish thinking (Poro); Love's a dear deceitful jewel (Water Music, minuet); Love thou great ruler (Siroe); The birds no more shall sing (Acis and Galatea); Wine's a mistress gay and easy (Ottone).

English hymns

HWV	*First words (title)*	*Remarks*
285	O love divine, how sweet thou art (Desiring to Love)	for S, bc; words C. Wesley; tunes known respectively as Fitzwilliam, Gopsall and Cannons; all ed. S. Wesley (London, 1826); ed. D. Burrows, *The Complete Hymns and Chorales* (London, 1988)
286	Rejoice, the Lord is King (On the Resurrection)	
284	Sinners obey the Gospel word (The Invitation)	

Italian songs

for Italian arias intended for inclusion in operas, see above under OPERAS

HWV	*First words*	*Voice*	*Remarks*
214	Dell'onda in stabile	A	with tr inst; *c*1748–9
228[7]	Di godere ha speranza il mio core	high	?authentic; songsheet (*c*1719) with alternative Eng. words (see Oh, my dearest, my lovely creature in 'English songs'); also in The Monthly Mask of Vocal Music (Dec 1719)
—	È troppo bella, troppo amorosa	A	from Ho fuggito amore, see 'Solo cantatas with continuo'
216	Impari del mio core	S	*c*1748–9
219	Non so se avrai mai bene	S	*c*1710–18
220	Per dar pace al mio tormento (frag.)	S	*c*1748–9
221	Quant'invidio tua fortuna	S	*c*1748–9

For Italian arias intended for inclusion in operas see 'Stage-operas'

French songs

155	7 items:	S	copyist's bill for 'una cantata francese', 22 Sept 1707; autograph indicates the last 6 items grouped as a 'Cantate françoise'; ed. in Raugel, G1959; ed. P. Young (Kassel, 1972)
	Sans y penser, chanson		
	S'il ne fallait [recit]		
	Petite fleur brunette, air		
	Vous, qui m'aviez procuré [recit]		
	Nos plaisirs seront peu durables [air]		
	Vous ne sauriez flatter [recit]		
	Non, je ne puis plus souffrir, air		
—	2 songs:	S	Geneva, Bibliotheca Bodmeriana (autograph)
	Sans y penser, chanson		
	Quand on suit l'amoureuse loi, chanson		ed. in B
	Lorsque deux coeurs d'un tendre feu	[S]	listed in Smith, B1960, 181, as by Handel; melody resembles Air and Variations from kbd suite in E (see 'Keyboard', 148); probably spurious
	Par les charmes d'un doux mensonge	[S]	'Air d'Hindil' in Ballard: Les parodies nouvelles et les vaudevilles inconnus, vii (Paris, 1737), 77, spurious

German songs

	9 arias (B.H. Brockes):	S	with [vn], bc; 1724–7; *GB-Lbl**; texts from *Irdisches Vergnügen in Gott*, i (Hamburg, 1721 and 2/1724); ed. H. Roth (Munich, 1921) and W. Siegmund-Schultze (Leipzig, 1981)
202	Künft'ger Zeiten eitler Kummer		
203	Das zitternde Glänzen der spielenden Wellen		
204	Süsser Blumen Ambraflocken		
205	Süsse Stille, sanfter Quelle		
206	Singe, Seele, Gott zum Preise		
207	Meine Seele hört im Sehen		
208	Die ihr aus dunklen Grüften		
209	In der angenehmen Büschen		
210	Flammende Rose, Zierde der Erden		
	Der Mund spricht zwar gezwungen Nein (Air en langue allemande)	S	version of aria from Almira with same text; ed. in B
	Dank sei dir, Herr	unspecified	spurious; pubd (London, 1906) as from unspecified cantata; ? intended as insertion in Ger. version of Israel in Egypt; ? by Siegfried Ochs

Spanish songs

	Dícente mis ojos (Air en langue espagnole)	S	version of last aria in cantata No se emendará jamás (see 'Solo cantatas with instruments'); ed. in B

ORCHESTRAL

Orchestral concertos

scoring given as 'concertino; ripieno' where appropriate

[6] Concerti grossi, op.3 (London, 1734; rev. 2/*c*1734; 3/1741) [compiled from existing material composed 1712–33; no known autographs of movts not otherwise identifiable]

Twelve Grand Concertos in 7 Parts, op.6 (London, 1740)

279	480	g	Prelude on Jesu meine Freude		pr. in Mann, 1964–5	—	iv/19, 131

doubtful and spurious
probably spurious, unless otherwise stated; only published works listed

Title, key	Remarks
Suite, a	*GB-BENcoke* Aylesford MS, without attrib.; minuet anon. in Minuets, Rigadons or French Dances For the Year 1722 (London, 1722), 19; attrib. Handel in Pièces de clavecin de Mr Handel (Paris, ?1739) and Recueil de pièces … accomodé pour les flûtes travers, i (Paris, *c*1738), and attrib. Loeillet, *Lbl* Add.31577, ff.18*v*–19*R*; minuet, transposed to g, pubd as theme of Pastorale et thème avec variations, harp/pf (Vienna, 1799), attrib. Handel; see 'Harp music'
Ten Select Voluntaries for the Organ or Harpsichord … by Mr Handel, Dr Green etc., ii (London, ?1771)	not individually attrib.; almost certainly none by Handel
Twelve Voluntaries and Fugues for the Organ or Harpsichord with Rules for Tuning by … Mr Handel, iv (London, *c*1780)	not individually attrib.; incl. 6 'little' fugues, ed. in HG xlviii, 183–90 no.2 of which is by J. Sheeles, Suites of Lessons … Second Work (London, *c*1730), 16–17
'Microcosm' Concerto, B♭	attrib. Handel in Musical Remains … selected … Edward Jones (London, 1796); adapted from tunes written by John James for Henry Bridges's clock 'The Microcosm'
Grand March, G	(London, 1848), arr. M.R. Lacy
Partita, A	?partly authentic; pubd as Partita … d'apres le manuscrit de J. Chr. Smith (Leipzig, 1864); MS, now lost, sold London, June 1860; see Chrysander (1858–67), iii, 200, and preface to HG xlviii; ed. in HG xlviii, 176, HHA, iv/6, 70; see *AMZ*, new ser., i (1863), no.38, col.652; no.39, cols.665–6
Sonatina, d; Allemande, g	attrib. Handel, *D-HVs* 146, ff.6*r*, 45*v*, with Allemande attached to Suite, g (see 'Keyboard', 250–55); ed. T.W. Werner, *Deutsche Klaviermusik aus dem Beginne des 18. Jahrhunderts* (Hanover, 1927)
'Schicksalfuge', f	ed. K. Anton (Halle, 1940); repr. in W. Serauky: 'Karl Loewe als Händel-Verehrer', *Händel-Festspiele* (Halle, 1958), 38
12 fantasias, 4 pieces	*CH-Zz*; ed. G. Walter, *Zwölf Fantasien und vier Stücke für Cembalo* (Leipzig and Zürich, 1942); incl. Sonata, C (see 'Keyboard', 59), other items probably spurious
2 preludes and fugues, C	kbd, 4 hands; ed. H. Schüngeler, *Zwei Fugen* (Magdeburg and Leipzig, 1944); by J. Marsh
Concerto, F; Preludes, Capriccios, Introduzione, Allemande, Badinage, Canzone	*H-Bn*, ed. F. Brodszky, *Cembalodarabok* (Budapest, 1964); incipit of Badinage, HG xlviii, p.VII
Air, c	*GB-Lbl* Add.31467, f.10*v*; ed. in HHA iv/17, 133

HARP MUSIC

For harp conc. see 'Orchestral: organ, harp and harpsichord concertos'. The only authentic music for unacc. harp is a solo in Saul, based on the air 'O Lord whose mercies numberless'. The Pastorale et Thême avec Variations pour harpe ou pianoforte (Vienna, 1799) consists of an adapted version of the Pastorella from Sonata V of P. Meyer's Sei sonate a solo per l'harpa … opera terza (Paris, 1768) and variations on a transposed version of the minuet from the Suite in a, described above under 'Keyboard: doubtful and spurious'.

CLOCK MUSIC

c1735–45, all single movements; edited in W.B. Squire (1919)

HWV	*Title, Key*	*Remarks*	*HHA*
473	Allegro, C	dated 25 Aug 1738; incipit in Chrysander, C1858–67, iii, 200	iv/19, 139
578	Sonata, C	original version of Sonata, C ('Keyboard' 56–8) in 2-octave compass	iv/19, 150
587–597	Set I: F, C, C, C, F, C, C, G, C, C, C	'Tunes for Clay's Musical Clock; no.2 = variant of Set II no.3; no.4 = arr. of Vola l'augello (Sosarme); no.5 = arr. of Lungo pensar (Muzio Scevola); no.6 = arr. of Alla fama (Ottone); no.7 = arr. of Deh lascia un tal desio (Arianna); no.8 = arr. of last movt of Scipione ov.; no.9 = arr. of Del onda ai fieri moti (Ottone); no.10 = arr. of In mille dolci modi (Sosarme); no.11 = arr. of In mar tempestoso (Arianna)	iv/19, 140

Handelius, Jacobus. *See* HANDL, JACOBUS.

Handel societies. Two kinds of societies have been founded under such a title as 'Handel Society' (or its equivalent in another language), some with the object of publishing Handel's works, others to perform his music. The first publishing society was the Handel Society founded in London 'for the production of a superior and standard edition of the works of Handel' (according to its prospectus, issued on 16 June 1843); its council for the first year included G.A. Macfarren (secretary), William Sterndale Bennett, Sir Henry Bishop, William Crotch, Ignaz Moscheles, E.F. Rimbault and Sir George Smart. By January 1848 the society had dissolved for lack of subscribers, but its publishers, Cramer, Beale & Co., sustained the production of editions until 1858, by which time 12 major works (mostly oratorios) and two collections had appeared. Mendelssohn was among the editors (*Israel in Egypt*, 1846). The next Handel Society devoted to publication was the Deutsche Händel-Gesellschaft, founded in Leipzig in 1856 for the publication of a critical and uniform edition of the whole of Handel's works. The prime movers were Friedrich Chrysander and the literary historian Gottfried Gervinus. Chrysander himself was the sole active editor, and when the society collapsed in 1860 he took over the production of the editions himself, though retaining the society's name; from 1866 he also took over the printing and distribution of the edition. A Neue Händel-Gesellschaft was founded on Arnold Schering's initiative in Leipzig in 1925; it published a *Händel-Jahrbuch* (1925–33, ed. R. Steglich) and performing editions of Handel's works, and organized a number of festivals. The Georg-Friedrich-Händel-Gesellschaft was founded in Halle in 1955 for the publication of a new collected edition, known as the Hallische Händel-Ausgabe. It also supports the annual Handel festivals that have been mounted in Halle since 1952, and from 1955 has published a *Händel-Jahrbuch* (*see* HALLE).

Among performing societies, the earliest was the Handel and Haydn Society of Boston, founded in 1815 (*see* BOSTON (i)). An amateur choral and orchestral Handel Society was founded in London in 1882 to revive his less well-known oratorios, as well as other choral music; it ceased its activities in 1939 (*see* LONDON, §VI, 3). In Germany the Göttinger Händel-Gesellschaft was formed in 1931 to run Göttingen's Handel Festival, already well known for its Handel revivals (*see* GÖTTINGEN); since 1984 it has published the *Göttingen Händel-Beiträge*. The Deal and Walmer Handelian Society was founded by the Handel scholar James S. Hall (1899–1975) in 1946, principally to give performances of the choral works, and the Handel Opera Society (renamed Handel Opera in 1977) was founded in London in 1955, primarily to give stage performances of dramatic works. In all, 28 works were staged; its last production was of *Rodrigo* in 1985 (*see* LONDON, §IV, 2; HANDEL, GEORGE FRIDERIC, §24; EDITIONS, HISTORICAL).

ANTHONY HICKS

Handford, George (*b* 1582–5; *d* London, bur. 14 Aug 1647). English composer. A connection with Cambridge, from which place Handford himself wrote the preface to his collection of songs (1609), suggests the possibility that he may have been the 'George Holdford' who was admitted pensioner at Emmanuel College in 1604. There can be little doubt that he is identical with the George Handford twice married in the church of St Dunstan-in-the-West. The marriage documents, in which his status is given as 'gent', show that on the first occasion, in 1636, he gave his age as 51, but on the second, in September 1641, as 58. He seems to have lived in the same parish until his death. His will, dated 10 June 1647, gives no indication of any musical connections and it seems likely that as a young man he was a talented amateur but later failed to develop his art.

His manuscript collection, *Ayres to be sunge to the Lute and Base Vyole* (*GB-Ctc*; facs., Menston, Yorks., 1970; ed. A. Rooley, London, 1988), was compiled in 1609 and probably intended for presentation to Prince Henry, to whom it is dedicated, rather than for publication. There is evidence that through Prince Henry it passed via his tutor, Adam Newton, to Henry Newton, Adam's son. Henry Newton presented the manuscript to Trinity College, Cambridge. The verse is anonymous except for one poem by Samuel Daniel. The songs, with the chordal

accompaniment favoured by Campion and Rosseter, are not particularly distinguished. The collection originally contained 18 solo songs (one leaf is now missing). An anthem by Handford, *Long have I lifted up my voice*, is in two sources (both in *GB-Lbl*).

Handl [Gallus, Händl, Handelius], **Jacobus** [Jacob, Jakob] (*b* probably at Ribnica, between 15 April and 31 July 1550; *d* Prague, 18 July 1591). Slovenian composer resident in Austria, Moravia and Bohemia. He was one of the most skilful contrapuntists of his time and a notable composer of polychoral works whose music presents a fusion of the styles and techniques of his time.

1. LIFE. Handl may originally have been called Petelin, meaning 'rooster', of which 'Handl' is the German diminutive and 'Gallus' the Latin equivalent. He probably received his early formal education at the Cistercian monastery at Stična in Lower Carniola. Between 1564 and 1566 he left his homeland for Austria. He stayed first at the Benedictine abbey at Melk where he was encouraged to compose by the canon Johannes Rueff to whom he dedicated his fourth book of masses (1580). The statement, repeatedly quoted in the literature on Handl, that in 1574 he was a *Sängerknabe* at the imperial chapel in Vienna, is doubtful. It is difficult to believe that at the age of 24 Handl was still a boy singer. The Jacob Han documented in the imperial registers as *Sängerknabe* in 1575 must have been another, evidently younger, person. He left Austria in about 1575 and spent the next few years travelling in Moravia, Bohemia and Silesia, living in monasteries and taking the opportunity, as he put it, 'to understand the muse and meditate on the shepherd's pipe'. Among the places he visited were Breslau (now Wrocław), Olomouc, Prague and the Premonstratensian monastery at Zábrdovice near Brno. Handl dedicated several works to Caspar Schönauer, the monastery's abbot.

In 1579 or early in 1580 Handl was appointed choirmaster to the Bishop of Olomouc, Stanislaus Pavlovský, whom he served until 26 July 1585 and who had a high regard for him. He celebrated Pavlovský's election as bishop with a seven-part hymn of praise, *Undique flammatis Olomucum sedibus arsit* (1579), his first printed work. Shortly after leaving Olomouc and no later than mid-1586 he became cantor of St Jan na Brzehu, Prague, where he remained until his untimely death. He undoubtedly became acquainted with the members of the literary society at St Jan as well as with members of the imperial court of Rudolf II; he dedicated a six-part ode to the court chaplain, Jacob Chimarrhaeus. Handl never married; his brother Georg was his sole heir. After his death several poets contributed elegies in his honour to an anthology that also contained his woodcut portrait (see illustration). His reputation from that time on has remained consistently high. During his lifetime, however, his music was the subject of some criticism, largely, it would seem, on account of its complexity, and in the third book of his *Opus musicum* (1587) he felt obliged to defend the number of voices he used in his polychoral works.

2. WORKS. Despite his relatively short life, Handl's output is of monumental dimensions comprising about 500, mostly sacred, works. His greatest achievement, the *Opus musicum*, contains four volumes of motets for festivals of the liturgical year with, in total, 374 works for four to 24 voices. The first three volumes contain music for the Proper of the Time, among them Handl's most famous composition *Ecce quomodo moritur iustus*. The fourth volume provides music for Marian festivals, the Common of Saints and various festivals from the Proper of Saints. Most of the texts are found in the Roman breviary, but a few are taken from pre-Tridentine sources. The collection ends with four 'triumphant' psalms for All Saints' Day, two of which are settings for 24 voices disposed in four choirs; in the 18th century they attracted the attention of Walther and Burney. There are also three settings of the Passion, all based on a single text compiled from the four gospels in the tradition of the Longaval Passion. Handl also wrote 20 masses. Many of these are parodies of his own motets, but some are based on motets by Clemens non Papa, Hollander, Vaet and Verdelot and on secular songs by Crecquillon and Lassus. Towards the end of his life, Handl composed 100 secular works called *Moralia*. Many of these works set didactic texts including morals on human vices and virtues. There are settings of Latin words, taken from Ovid, Virgil, Catullus, Horace and Martial and from the *Carmina proverbialia* (Basle, 1576), a collection of epigrams and aphorisms. Some texts were probably also written by his friends and Handl himself.

Jacobus Handl: woodcut, 1590, from 'In tumulum Jacobi Handelii Carnioli' (Prague, 1591)

Handl's music displays a distinctly Netherlandish imprint. For instance, many of the sacred works – not only the parody masses but motets too, with their reliance on chant – are developed from borrowed material, which he treated with great skill and imagination. Canons abound, many of considerable complexity, and many subtleties arise from his handling of rhythmic notation: Michael Praetorius singled out the motet *Subsannatores subsannabit Deus* (*Opus musicum*, iii, no.70) as a notable example of the use of proportional signs. Handl's polychoral compositions, though undoubtedly inspired in part by Willaert, also demonstrate Netherlandish influences, particularly that of Lassus. He exploited the possibilities of *a cappella* polychoral idioms as fully as any Venetian, and he clearly had a particularly good ear for unusual choral sonorities while always avoiding dense, word-obscuring textures. He managed the rhythmic relationships between words and notes with great sensitivity, particularly in his secular pieces, which move with the lightness and ease of madrigals and are full of the most remarkable syncopations. His music shows a preponderance of full triadic harmony and numerous chromatic progressions, many of which arise from the juxtaposition of chords whose roots lie a 3rd apart. Affective texts call forth rich, occasionally chromatic harmonies, as in the justly famed *Mirabile mysterium* (*Opus musicum*, i, no.53). The association between text and melody is particularly sympathetic, and there is a good deal of word-painting. Handl organized much of his music in abstract formal patterns, demonstrating an unusually firm grasp of the principles of formal balance and contrast that were so conspicuously to inform 17th-century music. Much of his music seems remarkably tonal; at the very least it attests to his awareness of the implications of major–minor polarity.

At the same time progressive and conservative, italianate and Netherlandish-influenced, Handl's music offers a fascinating blend of the styles and techniques of the day. Yet however progressive some of it may have been, it exerted little influence on the coming age; instead of pointing the way to the future it represents a summation of an era.

ALLEN B. SKEI/DANILO POKORN

Handley, Vernon (*b* Enfield, Middlesex, 11 Nov 1930). English conductor. After taking a degree in philology at Oxford, he studied at the GSM in London. His conducting début was with the Bournemouth SO, shortly before he became, in 1962, music director of the Guildford PO, an occasional orchestra which he then developed on a professional basis. From 1966 to 1972 he taught at the RCM. He worked frequently as assistant to Boult, on whose restrained gestures he consciously modelled his own conducting technique, believing economy of means to be 'a moral necessity'.

Handley came to wider attention in 1970 when the LSO engaged him as a last-minute replacement for the opening concert of the Swansea Festival, and subsequently for some of the LSO's regular concerts. During the 1980s he had regular associations with the LPO and the BBC Scottish SO, and from 1985 to 1989 was artistic director and principal conductor of the Ulster Orchestra. He has

broadcast frequently, and has consistently championed works by British composers. Handley's numerous recordings with various orchestras include acclaimed cycles of symphonies by Vaughan Williams and Robert Simpson, music by Bax, Bliss and Delius, and Elgar's symphonies and Violin Concerto (with Nigel Kennedy), which have been much praised for their warmth and eloquence of spirit, sensitively balanced textures and masterly control of pacing and rubato.

Handschin, Jacques (Samuel) (*b* Moscow, 5 April 1886; *d* Basle, 25 Nov 1955). Swiss musicologist and organist of Russian birth. He received his early education and organ lessons in Moscow. Despite his promise, he was sent by his father to a school of commerce at Neuchâtel; by completing the three-year course in 18 months he managed to return to Moscow for further study. He entered Basle University in 1905 to study history and mathematics, and in the same year went to Munich to study not only history, mathematics, philology and national economics, but also theory and the organ with Reger, which led to a final breach with his parents. When Reger moved to Leipzig, Handschin followed him on foot. A few lectures there by Riemann and a short spell with von Hornbostel in Berlin were the only musicological instruction he ever received. He was also an organ student of Karl Straube (1906–7), returning to Moscow with glowing testimonials from him. To broaden his outlook as an organist as he became active as a soloist he travelled to Widor in Paris, where he became familiar with the Cavaillé-Coll organs.

Between 1909 and 1920 Handschin taught the organ at St Petersburg Conservatory, being appointed professor in 1916. From 1909 to 1914 he gave on the organ of the Assembly Hall of the Imperial Institute of Obstetrics a series of concerts that were significant in the development of secular solo organ music in St Petersburg and from 1914 was organist at the Lutheran Church of St Peter. This established a flourishing career as a virtuoso organist and accompanist to prominent performers. He inspired a number of Russian composers, including Glazunov, Lyapunov, Taneyev and Kryzhanovsky, to compose for the organ and during this decade performed their work in a programme of Russian organ music. He was also important in the Bach movement in Russia and was involved from 1916 to 1918 in the performance of Bach's complete organ and keyboard works at the conservatory, planned by Alexander Siloti in collaboration with Taneyev and Ossovsky. In 1920 he set up an acoustics laboratory with Kovalenkov.

After the Revolution the fuel shortage compelled Handschin to return destitute to Switzerland (1920); he was a minor government official in Basle and then organist of the Linsebühl Church, St Gallen (1921–4), but these posts failed to extricate him from dire financial straits, and it was not until his appointment in 1924 as organist at St Peter, Zürich, that he was able to concentrate on musicology. A manuscript on the musical history of the 14th century, which would have qualified him for the *Habilitation*, had been stolen on his journey from Russia. He immediately began a dissertation on 13th-century polyphonic music, and took the doctorate with Karl Nef in Basle in 1921. He was subsequently an external lecturer (1924–30), reader (1930–35) and professor of musicology (1935–55) at Basle University, where he compiled comprehensive microfilm archives of about 70,000 examples of medieval manuscripts. He remained organist at St Martin, Basle, until shortly before his death, making rare appearances as a recitalist.

Handschin's chief achievements as a musicologist are in medieval music: following Ludwig and Wolf he was one of the first to initiate and develop an approach to the period through style criticism. He was an unrivalled authority on the schools of St Martial and Notre Dame (the subject of his *Habilitationsschrift*, 1924) and on English polyphony before the 13th century. He did research on neumes and wrote essays defining conductus, trope, sequence and *estampie* by means of style criticism. His interest in the Middle Ages extended to Byzantium and Syria; he also had a clear insight into non-European music, aided by his command of languages and phenomenal memory, though he was almost totally dependent for sources on rolls from the Berlin Phonogramm Archiv. He collected the results of his research in systematic musicology in *Der Toncharakter* (1948), a study of sound in its historical context which is still influential and in which he refuted any primarily experimental and systematic psychology of sound. Having written chiefly in the form of short studies on specific historical topics he felt obliged – particularly as an academic teacher – to write *Musikgeschichte im Überblick* (1948). This was planned as an objective history of music giving each period equal attention; the 19th century, for instance, was treated far more tersely than is usual in general music histories. At his death Handschin had almost completed a comprehensive edition of polyphonic pieces of the St Martial era.

HANS OESCH/JANNA KNIAZEVA

Handstück (Ger.: 'hand piece'). A term used by D.G. Türk for a didactic keyboard piece suitable for the development of a student's technical proficiency. In the late 18th century such pieces were often written by keyboard teachers but were seldom published. The 12 *Handstücke* included in Türk's treatise were joined by another 60 in his later collection *Sechzig Handstücke für angehende Klavierspiele* (1792). In the early 19th century, the term was superseded by the French word 'étude'.

□

Handy, W(illiam) C(hristopher) (*b* Florence, AL, 16 Nov 1873; *d* New York, 28 March 1958). American composer and bandleader. His main claim to fame is summarized by the controversial attribution of 'Father of the Blues' that he assiduously cultivated, that others applied to him and that became the title of his autobiography (1941). Whether or not he deserved this lofty reputation, there can be no doubt that Handy played a major role in the early popularization of the blues form and in the arrangement and adaptation of what was essentially a type of folk music into something that was acceptable and accessible to mainstream American and international tastes.

There are two main problems in cutting through the hagiography and arriving at an objective assessment of Handy's role and importance in the blues and in American music. One is the fact that he viewed and treated the blues primarily as a musical form, whereas throughout most of its history it has existed also as a performance art and an evolving set of musical styles. The other is the fact that most of what we know about his life comes directly or indirectly from Handy himself. In different accounts details have varied and been altered, reinterpreted and polished to support his status as a central figure in blues music and an icon in 20th-century American music.

Handy's life and career in music can be divided into several distinct phases. Up to 1903 there was a period of formal training in music, absorption and observation of

W.C. Handy

various types of music ranging from folksongs and spirituals to popular ragtime and light classics, and an itinerant life with participation in late 19th-century currents in popular music, including quartet singing, leading a minstrel show band and college music teaching. From 1903 to 1911 Handy underwent a period of intensive exposure to African-American folk music, especially the newly emerging blues, in the Mississippi Delta and Memphis, and this music influenced his repertory as a bandleader, arranger and performer. The year 1912 saw him launch a successful career as a composer, arranger and publisher of blues music, in which he drew inspiration and material from what he had been exposed to earlier. His success lasted into the early 1920s. The remainder of his life was spent in consolidating his business position and reputation through high-profile performances and through his writings, in exploring other types of music with somewhat less success, in receiving many honours, and in serving as a spokesman and advocate for blues and black American folk music in general.

Handy was the son and grandson of Methodist ministers in Florence and his family expected him to follow in their footsteps. However, he showed an early interest in a musical career and eventually became proficient on organ, piano, guitar and especially cornet and trumpet. He studied vocal music for 11 years in the Florence District School with Professor Y.A. Wallace, a graduate of Fisk University, also studying popular music with the violinist Jim Turner. He left Florence in 1892 and organized a brass band in Bessemer, Alabama, and later a vocal quartet in Birmingham, Alabama. The quartet went on the road but was stranded in St Louis in 1893 without work. Handy drifted to Evansville, Indiana, and worked with local brass bands there and in Henderson, Kentucky. In 1896 he joined the band of Mahara's Minstrels, where he became a lead cornettist, arranger, and eventually bandleader. For the next several years he toured throughout the United States, Canada, Mexico and Cuba, taking two years off between 1900 and 1902 to teach at the Agricultural and Mechanical College in Normal, Alabama.

In 1903 Handy took over the leadership of the Knights of Pythias band in Clarksdale, Mississippi. During his travels through the state's Delta region he frequently heard performances of folk blues and was impressed by their popularity with both black and white audiences. He began arranging these songs and other popular ragtime tunes for his band. By 1907 Handy was resident in Memphis, leading the Knights of Pythias band there. They were hired to play for the 1909 mayoral campaign of E.H. Crump for which Handy arranged an instrumental version of a folksong that had been critical of Crump's reform pledges. The tune was successful and helped Crump to win the election.

In 1912 Handy published *Mr Crump* as *Memphis Blues*, combining it with typical 12-bar, three-line blues strains to create a medley along the lines of a ragtime instrumental tune. Although it was not the first published blues, as Handy would later claim, it was certainly the most popular to date, especially after the publication the following year of lyrics by George A. Norton that prominently linked Handy and his band with the blues and Memphis. With Harry Pace, Handy established a publishing company, Pace and Handy (known as 'The Home of the Blues'), later to become Handy Brothers, and had successes for the next several years with *Jogo Blues* (1913), *St Louis Blues* (1914), *Yellow Dog Blues* (1914), *Joe Turner Blues* (1915), *Hesitating Blues* (1915), *Ole Miss* (1916), *Beale Street Blues* (1917), *Loveless Love* (1921), *Aunt Hagar's Children Blues* (1921), *Harlem Blues* (1923) and *Atlanta Blues* (1924). He recorded with his band for Columbia Records in 1917 and for Paramount and Okeh Records in 1922 and 1923. In 1918 he shifted his base of operations from Memphis to New York City.

From 1924 onward, Handy turned his attention increasingly to the arrangement and publication of

traditional spirituals and to songs and tunes on broader African-American themes, including collaborations with a variety of lyricists. He consolidated his position in the blues with the publication in 1926 of an anthology of his works and those of other composers, and his autobiography in 1941. He produced concerts of African-American music and was a leading figure in the Harlem Renaissance of the 1920s. A park on Beale Street in Memphis was dedicated in his honour in 1931 and a statue erected there in 1960. In his later years Handy frequently appeared at civic and charity events and spoke on behalf of the dignity of blues and folk music. A film based on his life, *St Louis Blues*, starring Nat 'King' Cole, was released in 1958, and in 1969 the United States honoured Handy with a postage stamp. The major annual awards for accomplishment in blues music are known as Handys in his honour.

WORKS
(*selective list*)

dates are those of copyright; first published in Memphis until 1918, thereafter in New York

Editions: *Blues: an Anthology* (New York, 1926, rev. 1972/*R* and 1990 by J. Silverman)

DAVID EVANS

Ḫandzt'a, [Khandzta], **Gregory [Grigol] of** (759–861). Hymnographer of the Georgian Church; *see* GEORGIA, §II, 2.

Hanelle, Jean (*b* ?1380–85, diocese of Thérouanne; *d* after 16 Dec 1436). French singer, composer and ?scribe, also active in Cyprus. He was first recorded as a *petit vicaire* at Cambrai Cathedral, between 24 June 1410 and 24 June 1411. After this date he entered the service of Charlotte of Bourbon, Queen of Cyprus from 1411 to 1422. A papal register of 4 August 1428 mentions him as a candidate for the *scribendaria* at Nicosia Cathedral. He was at the Savoy court after the wedding of Anne de Lusignan to Louis of Savoy in February 1434; here he is identified as 'cantor Regis Chippra' and 'mestre de chappelle du Roy de Chippre'.

After his early career at Cambrai, he apparently rose to a distinguished position within the Lusignan court's musical establishment. He is likely to have been the author of at least some, and perhaps many, of the works preserved in the Cyprus Codex (*I-Tn* J.II.9), although none is directly attributed to him; he may also have played a prominent role in the compilation of that manuscript, including the copying of text and music.

Hanet, Jean-Baptiste. *See* ANET, JEAN-BAPTISTE.

Hanff, Johann Nicolaus [Nikolaus] (*b* Wechmar, Thuringia, 1665; *d* Schleswig, winter 1711–12). German composer and organist. Mattheson reported that for four years from the age of seven, in 1688, he studied keyboard performance and composition with Hanff in Hamburg. Before 1696 Hanff was appointed court organist to the Prince-Bishop of Lübeck at his residence at Eutin. When the court at Eutin was dissolved after the death of Bishop August Friedrich in 1705, he apparently returned to Hamburg; at least two of his sons were born there during the next few years, in 1706 and 1711 respectively (Mattheson was godfather on the latter occasion). Hanff was promised the post of cathedral organist at Schleswig, but the position did not become vacant until 1711; he took over the position on 26 August 1711 but died a few months later. Of his compositions only three church cantatas and six organ chorale preludes survive. The cantatas are good examples of those that follow north German models, with a typical reliance on contrasting performing groups (e.g. chorus–soloist–chorus) as well as on sections in different tempos. The chorale preludes, which exist in copies made by J.G. Walther, are generally in the style developed by Buxtehude with the chorale melodies expressively ornamented in the upper keyboard part. One example, however, *Erbarm dich mein, o Herre Gott*, has a two-part form concluding with a chorale fugue that is perhaps more typical of Hanff's middle German, Thuringian musical heritage (see *ApelG*).

GEORGE J. BUELOW

Hangal, Gangubai (*b* Dharwar, 5 March 1913). Indian singer. She was born into a South Indian family and her mother was an accomplished Karnatak musician, but Gangubai studied North Indian music rather than South Indian. At the age of 13 she began formal training in Hubli at Krishna Acharya's music school. She became a disciple of Sawai Gandharva of the Kirana *gharānā*, but she was only able to study with him for 15 days a year when he returned to his village. After he settled there in 1938, Gangubai received three years of intensive training, then sporadic training until his death in 1942. It is remarkable that Gangubai managed to become a musician and to achieve success. She performed throughout India and broadcast for All-India Radio stations until 1945; her performances included lighter genres such as *bhajan*, *ṭhumrī* and Marathi songs, but she finally devoted her creative attention to *khayāl*. She received the Padma Bhushan from the Government of India and the President's Award for Hindustani Vocal Music from the Sangeet Natak Akademi.

Gangubai's voice was powerful and vigorous. She cultivated dramatic contrast through ornamentation and vocal production; with minimal use of textual material and little emphasis on rhythm, her style resembles that of the Kirana *gharānā*.

Hanke [Hancke], **Karl** (*b* Rosswald, Moravia [now Rudoltice, Czech Republic], 1750; *d* Flensburg, 10 June 1803). German composer. In his youth he was in the famous orchestra at Count Albert von Hoditz's Rosswald estates praised by Frederick the Great. Some time between 1772 and 1775 he was a pupil of Gluck at Vienna (as shown by the dedication in the vocal score of his Singspiel *Robert und Hannchen*); according to an obituary in the *Flensburgisches Wochenblatt* he was also taught by J.G. Graun. He led the Rosswald court orchestra from 1776 until it was disbanded in 1778 on the count's death; after visiting Italy he was successively musical director at theatres in Brno, Warsaw, Hamburg (from 1783) and Schleswig (from 1786). In 1792 he settled in Flensburg, where he was *Stadtmusikant*, a post comparable to that of Stadtpfeifer or *Kunstgeiger* at other German cities. About this time the increase of middle-class music-making had begun to undermine the earlier importance of the guild-orientated *Stadtmusikant*, but Hanke was able to retain some of the authority of his position by taking on the function of a Kantor; to this end he founded a Singschule (municipal choral society), patterned on recent models in other German cities, to replace the obsolete Kantorei. However, the regular public concerts which he instituted in 1792 (the first such series in Flensburg) soon became secondary in importance to those of middle-class musical societies and non-resident ensembles.

Hanke's comprehensive oeuvre (first catalogued in *GerberNL*) shows him to have been a skilled, versatile composer of *Gebrauchsmusik* to meet the changing requirements of his varied career. His most successful work was the Singspiel *Robert und Hannchen* (or *Der Wunsch mancher Mädchen*, as it was first produced in Warsaw); his other works, apart from two published symphonies and various lieder collections, are apparently lost.

WORKS

MSS lost unless otherwise stated

STAGE

Cassandra abbandonata (int), Rosswald, before 1781
Der Wunsch mancher Mädchen (Spl, 2, C. Plümicke), Warsaw, 1781, *B-Bc*; vs, as Robert und Hannchen (Hamburg, 1786)
Xaphire (romantisches Oper, 'A.B.C. d'Arien'), Hamburg, 1786
Doktor Fausts Liebgürtel (Spl, 2, 'd'Arien', after J.-J. Rousseau and W.C.S. Mylius), composed by 1786, perf. Flensburg, 1794
Hüon und Amande (romantisches Spl, 5, S. Seyler, after C.M. Wieland: *Oberon*), Schleswig, Hof, 1789
Ballets: Pygmalion, Rosswald, 1777; Die Spitzenputzerin, *c*1786; Cato; Die Jäger; Die Wassergötter; Phöbus und Daphne; Die Dorfschule
Incid music: Gesänge und Chöre zum lustigen Tag oder Die Hochzeit des Figaro (C. de Beaumarchais), vs (Hamburg, 1785), ?lost; entr'acte music for Fiesco (C.F. Schiller), Clavigo (J.W. von Goethe); choruses to Rollas Tod oder Die Spanier in Peru (A.F. von Kotzebue)

OTHER WORKS

Lieder: Gesänge beim Clavier für Kenner und Liebhaber, i–ii (Flensburg, Schleswig and Hamburg, 1790), iii–iv as Gesänge und Lieder welche bei Gelegenheit des Hohen Vermählungs-Festes (Schleswig and Hamburg, 1791); Gesänge und Lieder einheimischer Dichter für Kenner und Liebhaber (Altona, nr Hamburg, 1796–7); others in Einige auserlesene Klavier und Singstükke (Rinteln, 1789) and perhaps Winterblumen am Clavier (Berlin, *c*1795)
Other vocal: Die Feyer der Tonkunst (H. Harries), Flensburg, 1794, at Consecration of Concert Hall; Lob der Gottheit (Ps ciii, trans. Harries), text *D-FLa*; Am Geburtstag unseres Königs (Harries), *FLa*, possibly same as Heil dir, dem liebenden Herrscher, birthday lied for King Christian (Hamburg, *c*1796); many sacred cants. and other sacred pieces, 13 occasional cants. in Ger. or It., all cited in *GerberNL*, several texts in *FLa*
Inst: Serenate ou sinfonie, op.5 (Brunswick, 1797); Sinfonie, op.6 (Brunswick, 1797); syms., hn concs., other concs., sextets, qts, trios, duets [incl. *c*300 for 2 hn], solos for vn, fl, all cited in *GerberNL*

Hanke, Martin. *See* HANCKE, MARTIN.

Hanlon, Kevin (Francis) (*b* South Bend, IN, 1 Jan 1953). American composer and guitarist. He studied composition at Indiana University, South Bend (BA 1976), the Eastman School of Music (MM 1978) and the University of Texas, Austin (DMA 1983). His principal teachers included Barton McLean, Samuel Adler, Warren Benson and Mario Davidovsky (at the Berkshire Music Center). He has taught at the University of Kentucky (1982–3), the University of Arizona (1983–8) and Southern Methodist University (from 1988). As a guitarist Hanlon has performed with, directed and helped to found a variety of ensembles. Indeed, these range from those focussed on contemporary concert music to those exploring rock and

inter-arts improvisation. He has also appeared as a singer and conductor. His honours include a Koussevitzky award (1981) and fellowships from the Fromm Foundation (1981) and the AMC (1982).

Hanlon's musical career began as a guitarist in rock bands. As his musical experience widened, he remained committed to the creative and expressive roots of progressive, improvisatory vernacular music. He has produced a broad spectrum of works, usually tonally focussed and rhythmically charged, and has created compelling unity from diverse styles. His orchestral music has been performed by the Chicago SO and other prominent American orchestras.

WORKS

LANCE W. BRUNNER

Hann, Georg (*b* Vienna, 30 Jan 1897; *d* Munich, 9 Dec 1950). Austrian bass. After study with Theodor Lierhammer in Vienna, he joined the Staatsoper in Munich in 1927. There he sang a wide variety of roles ranging from the deep bass of Sarastro to dramatic baritone parts such as Scarpia and Tonio. In 1942 he created La Roche in *Capriccio*. He also appeared at the Salzburg festivals of 1931, 1946 and 1947, and was a guest artist in Vienna and Berlin. At Covent Garden he sang in *Salome* in 1924 and reappeared there, with the Vienna Staatsoper, in 1947 as Leporello and Pizarro. His strong personality, vivid characterization and tendency to roughness and exaggeration are evident in many recordings of opera and lieder, some of them taken from wartime broadcasts; among the best is his Daland in *Der fliegende Holländer*.

J.B. STEANE

Hannay, Roger (Durham) (*b* Plattsburgh, NY, 22 Sept 1930). American composer. He studied composition at Syracuse University, Boston University and the Eastman School of Music (PhD 1956); his teachers included Howard Hanson and Lukas Foss. In 1966 he was made head of the department of theory and composition at the University of North Carolina, Chapel Hill, where he founded the New Music Ensemble, the Composer-Concert series and the electronic music studio. His awards include an NEA grant (1975) and a fellowship from the MacDowell Colony (1982).

Hannay's compositions fall into four distinct periods. His earliest works (1952–4) employ dissonant tonality, a musical language that expanded rapidly to an extensive use of the 12-note system. His music from 1955 to 1964 exhibits an alternation and mixture of serial techniques, free atonality and tonal elements. From 1966 to 1969 he was deeply involved in experimental electronic and percussion music, and mixed-media theatre works on social and political topics (*Marshall's Medium Message*, *Live and in Color!*). In 1970 his music took on a new lyricism, often involving re-interpretations of music of the past (*Listen*, *Tuonelan Joutsen*). His Third and Fourth Symphonies (1967–77, 1977), subtitled 'The Great American Novel' and 'American Classic' respectively, are collage works based on re-compositions of American symphonic music of the 19th and early 20th centuries. In 1983 he completed *The Journey of Edith Wharton*, a large 'dramatic-musical exploration'.

DON C. GILLESPIE

Hannikainen. Finnish family of musicians.

(1) Pekka [Pietari] **(Juhani) Hannikainen** (*b* Nurmes, 9 Dec 1854; *d* Helsinki, 13 Sept 1924). Composer,

conductor, educationist and writer. The son of a cantor, he held a degree in chemistry but was almost entirely self-taught in music. In 1882 he formed and conducted the Helsinki student choir 'YL' to give Finnish-language performances, and from 1885 to 1887 was theatre and music critic for the newspaper *Uusi suometar* (now *Uusi suomi*). For 30 years from 1887 he pioneered musical education and taught choral singing at the training college (now university) in Jyväskylä, forming the men's Sirkat choir there in 1899 and directing it for 16 years. He was active in national song and music festivals, made collections of folk music from Finnish and Russian Karelia, and founded the first Finnish music journal, *Säveleitä* ('Melodies'), which he published for four years. Many of his school songs and other choral works became well known nationally, and he played a leading part in his country's musical growth. As well as writing more than 70 poems, he translated literary works into Finnish (including the libretto of *Lohengrin*). His wife Alli (Laura Alfhild) (*b* Helsinki, 21 June 1867; *d* Helsinki, 12 April 1949) was a singing teacher and choral conductor who founded the Vaput women's choir at Jyväskylä in 1909 and directed it until 1917.

(2) **(Toivo) Ilmari Hannikainen** (*b* Jyväskylä, 19 Oct 1892; *d* Kuhmoinen, 25 July 1955). Pianist, composer and teacher, son of (1) Pekka Hannikainen. He studied the piano and composition at the Helsinki Music Institute (1911–13), in Vienna with de Conne and Schreker (1913–14), and in Petrograd (St Petersburg) with Ziloti and Steinberg (1916–17), later continuing his studies in Paris with Cortot and in Antwerp with Ziloti, who was a significant influence on him. He made his début at a Helsinki concert in 1914 and began to tour abroad, appearing with the Queen's Hall Orchestra in London from 1921, and as a member of the Hannikainen Trio with his brothers (4) Arvo and (3) Tauno. He was regarded as one of Finland's leading pianists, especially in music by Sibelius and Rachmaninoff. After teaching at the Helsinki Music Institute, he became professor of the piano in 1939, the year the Music Institute was renamed the Sibelius Academy. He held this post until his death, and was an important influence on the younger generation of Finnish pianists. His compositions include a piano concerto, the lyric play *Talkootanssit* ('Harvest Dances'), and songs; they are Impressionistic and are marked by unaffected warmth of melody. He also compiled and made arrangements of folk music.

(3) **Tauno (Heikki) Hannikainen** (*b* Jyväskylä, 26 Feb 1896; *d* Helsinki, 12 Oct 1968). Conductor and cellist, son of (1) Pekka Hannikainen. He studied the cello under O. Forström in Finland, and in 1921 with Casals in Paris, having made his début in Helsinki the previous year. He also first appeared as a conductor in 1921, was engaged in this capacity at the Finnish Opera (1921–7), and was conductor of the Turku PO (1929–39). At the same time he continued to appear as a cellist, both in solo concerts and in the Hannikainen Trio with his brothers (2) Ilmari and (4) Arvo. He went to the USA in 1940, becoming music director of the Duluth SO (1942–7), and second conductor of the Chicago SO (1947–50). In 1951 he returned to Finland as conductor of the Helsinki City Orchestra and toured widely as a guest conductor, including appearances in South America and East Asia. He specialized in Sibelius's music, which he conducted with other contemporary Finnish works at London concerts with the LSO in 1952 and 1953. His recordings include Sibelius's second and fifth symphonies and his Violin Concerto.

(4) **Arvo (Sakari) Hannikainen** (*b* Jyväskylä, 11 Oct 1897; *d* Helsinki, 8 Jan 1942). Violinist, son of (1) Pekka Hannikainen. He studied the violin in Helsinki (1915–17), in Berlin and Weimar (1920–23), later with Thibaud, Ysaÿe and others in Paris, and in 1931 with Jacobsen in Berlin. Meanwhile he was engaged as a violinist with the Helsinki City Orchestra from 1917, making his début as a soloist in 1920 and becoming the orchestra's first violin in 1923. He also appeared at home and abroad in the Hannikainen Trio with his brothers (3) Tauno and (2) Ilmari. He taught the violin and ensemble playing at the Helsinki Music Institute, where he was conductor of the student orchestra from 1926. His wife Mary (Helena) (née Spennart) (*b* Helsinki, 12 Jan 1901; *d* Stockholm, 8 Feb 1974) was a singer and actor.

(5) **Väinö (Aatos) Hannikainen** (*b* Jyväskylä, 12 Jan 1900; *d* Kuhmoinen, 7 Aug 1960). Harpist and composer, son of (1) Pekka Hannikainen. He studied the harp at the Helsinki Music Institute (1917–20), with Max Saal in Berlin (1921–3) and also in Paris. In 1923 he was appointed principal harp with the Helsinki City Orchestra. He composed much music for the stage, and the ballet *Onnen linna* ('The Happy Castle'); he also made a collection of north Karelian songs and dances, including an arrangement of 42 published as *Kiihtelysvaarasta*.

TIMO MÄKINEN

Hannover (Ger.). *See* HANOVER.

Hannreither, Erasmus. *See* ROTENBUCHER, ERASMUS.

Hanon, Charles-Louis (*b* Renescure, 2 July 1819; *d* Boulogne-sur-Mer, 19 March 1900). French composer and writer of pedagogical works. Born into a devout Catholic family, he studied with a local organist. In 1846 he settled in Boulogne as a choirmaster and organist but was dismissed in 1853 and, together with his brother, taught singing and piano privately and also began to publish his own compositions. Except for playing the organ occasionally, he took little part in local musical life, which was dominated by Guilmant. As a Third-Order Franciscan and member of the Society of St Vincent de Paul, Hanon led a devotedly religious and charitable life; ultra-conservative in nature, he showed a marked aptitude for business.

All of Hanon's works have a didactic or popularizing purpose or are religious and moral in inspiration: he composed methods for the piano, organ, accompaniment etc., teaching pieces, and simple hymns and canticles for church use. But it is for *Le piano virtuose*, a set of 60 technical exercises, that he is chiefly remembered. Published in Boulogne in 1873 and approved for use at the Paris Conservatoire during his lifetime, this work has been frequently reprinted, translated into several languages (the English translation appeared in 1894), and arranged for piano by several authors. This method was

simpler than other methods existing at that time. Other piano works include *L'étude complète du piano*, a collection of 25 pieces of progressive difficulty, some taken from the earlier *Les délices des jeunes pianistes*; the insignificance of their content is matched only by the vacuity of their titles. He also arranged various Italian opera arias and, after the defeat of France in the Franco-Prussian war, works by German composers as easy salon pieces. His *Système nouveau ... pour apprendre à accompagner tout plain-chant à première vue sans savoir la musique et sans professeur* (Boulogne, *c*1859) is a primer on how to accompany church services on the harmonium, an instrument of growing popularity in small country churches; the harmonizations are rudimentary, but the method was so successful that the pope named him honorary *maestro* in composition of the Accademia di S Cecilia in Rome.

PHILIPPE ROUGIER

Hanot, François (*b* Dunkirk, 10 July 1697; *d* Tournai, 26 Feb 1770). French composer and violinist. He lived at first in his native town, then in Lille and finally in Tournai. Not to be confused with a namesake who was an *ordinaire de la musique royale*, he was active as a teacher of the violin and dancing in colleges and monasteries, in Rouen, Mons and elsewhere; he styled himself 'maître de danse et de violon, pensionné des Dames de Marquette pour y enseigner à danser aux demoiselles pensionnaires' and 'maître de ballets qui se font dans les tragédies des colleges des RR.PP. Jésuites et Augustins'. He seems to have followed this career both in Lille and in Tournai, where, after a petition of 1742, he is mentioned as a dancing and violin master. The town granted him a substantial pension which continued to be paid to his widow. Hanot's reputation seems to have reached Paris at the time of the publication of the 'Airs' which form part of the *Récréations de Polymnie*. His sonatas, which are in three or four movements, are still monothematic; compared with those of Jean-Marie Leclair, they appear distinctly weaker both in inspiration and in virtuosity. His works have a marked italianate accent, with clear and simple themes of little originality but much ornamentation.

WORKS

6 sonate, fl/vn, bc, op.1 (Lille and Rotterdam, ?1740)
6 sonates, vn/fl, bc, livre 2 (Tournai, 1745)

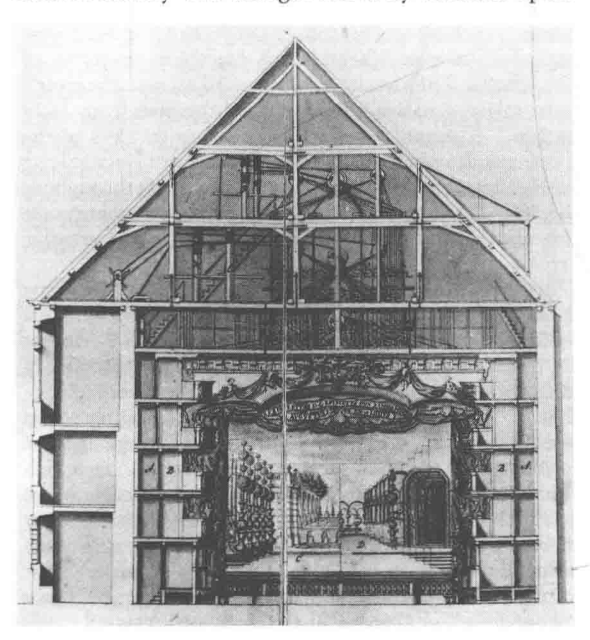
PHILIPPE MERCIER

Hanover (Ger. Hannover). City in Germany, capital of Lower Saxony. It is first mentioned in about 1100. Duke Georg of Calenberg established a residence there in 1636; it soon became an important musical centre, particularly in the introduction of Italian opera to Germany. In 1692 Duke Ernst August of Brunswick-Lüneburg was granted the rank of elector and adopted the town as his capital; the court remained musically important up to 1918, despite a decline after 1714 when Georg Ludwig became King George I of England. The city was capital of the Kingdom of Hanover from 1815 until it was absorbed into Prussia in 1866.

1. Up to 1714. 2. 1714–1866. 3. Since 1866.

1. Up to 1714. In the Middle Ages Hanover belonged to the diocese of Minden and the archdiocese of Cologne, and presumably liturgical Offices used in Hanover were governed by Cologne. The main churches were the St Georg und St Jacobus (the Marktkirche), the Aegidienkirche and the Kreuzkirche. The Franciscans and several other monastic orders had settlements in the city, although none was of musical significance. The Marktkirche developed a musical tradition, and had an elaborate Easter procession dating back at least as far as 1441; the Good Friday ceremonies are described in a manuscript of 1506 in the Stadtarchiv. An organ in the Marktkirche is recorded in 1350, and between 1590 and 1593 it was rebuilt. At the Aegidienkirche an organ builder named Hans is mentioned between 1533 and 1537. In 1542 Harmen Maler was organist at the Aegidienkirche, and from 1547 to 1569 the position was held by Gerdt Schildt, grandfather of Melchior Schildt. Zacharias Funke succeeded him in 1569 and was followed by his son Vitus, previously organist at the Kreuzkirche, in 1614. Accounts for 1557 give details of a major rebuilding of the organ, and between 1574 and 1630 various repairs and conversions are recorded.



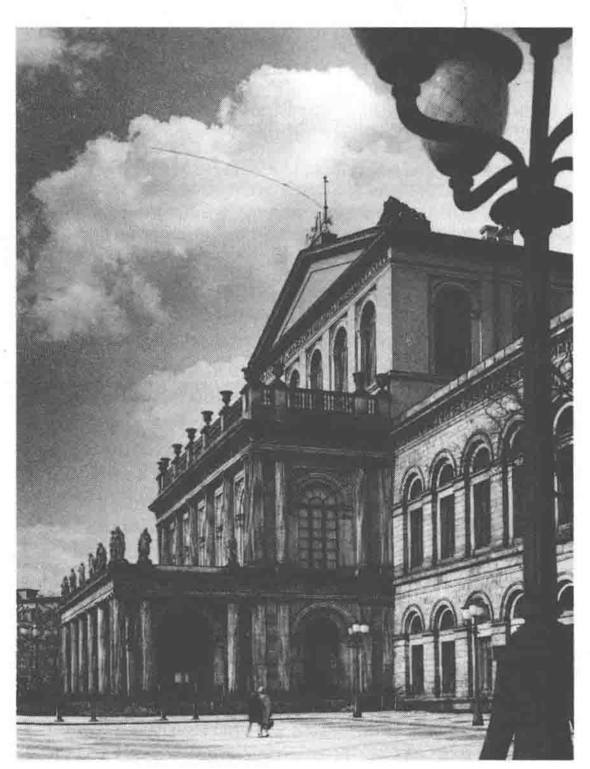
After the Reformation (1533) there is evidence of more intensive musical activity. Precise instructions for the use of music in worship are given in the church ordinances of Urbanus Rhegius in 1536: for example, those with little education sang hymns in German while the youth sang in Latin 'since there are many fine hymns in Latin'. The liturgy for Sundays and feast days was musically elaborate. The principal church for music was the Marktkirche, where the first notable Lutheran Kantor (1568–1616) was Andreas Crappius, also Kantor at the Ratsgymnasium. Antonius Schildt and his sons Ludolph and Melchior were organists at the Marktkirche; Melchior, a pupil of Crappius and of Sweelinck in Amsterdam and Hanover's most talented native musician, held the post from 1629 to 1667. A school Kurrende was set up in 1561 at the Lateinschule, where there had been a Kantor since at least 1546. Church music maintained its standards throughout the 17th, 18th and 19th centuries, although there were few church musicians who were important as creative artists.

Little is known of early secular music in Hanover apart from the existence of a city musician who, with his assistants, performed such traditional duties as *Turmmusik* from the Marktkirche. However, when Duke Georg of Calenberg established a residence at Hanover in 1636, the city's first Hofkapelle was formed, consisting of the lutenist J.P. Sponderino, the violinists Ernst Abel, Jobst Heider and S. Strohmeyer and two choirboys, to which could be added six trumpeters and a timpanist. From 1639 to 1641 Schütz acted as temporary Kapellmeister there. As early as the mid-17th century a definite French influence was evident in the Hofkapelle's music. Great improvements were made during the reign of Duke Johann Friedrich (1665–79): the Hofkapelle was enlarged, and in addition to Italian and French musicians C.H. Abel and N.A. Strungk were appointed; Johann Friedrich's Kapellmeister was Antonio Sartorio. After the duke's

conversion to Catholicism (1651) the ducal chapel was until 1680 a notable centre of Italian church music, with Vincenzo De Grandis (ii), Kapellmeister from 1674 to 1680, achieving a considerable reputation.

The first opera performance in Hanover was of Cesti's *Orontea*, produced in the Guelph's ducal castle, the Leineschloss, in 1678. In 1688 Duke Ernst August completed the building of the magnificent Grosses Schlosstheater in the Leineschloss which was opened in January 1689 with a performance of Steffani's *Henrico Leone* (fig.1). The opera was under the direction of Steffani from 1688 until Duke Ernst August died in 1698. There were also performances at the Gartentheater in Herrenhausen, built in 1689–91 and the oldest surviving garden theatre in Germany, which came to occupy an important place in the musical life of the court. Steffani wrote at least eight operas for Hanover, and with Leibniz, the court poet Ortensio Mauro and the Duchess Sophie, he was a member of an intellectual circle that might well stand comparison with that of Versailles. The Hofkapelle, modelled on French lines, was distinguished by its excellent oboists. Chamber music was composed by J.B. Farinel and Francesco Venturini; Telemann became familiar with Hanover's chamber music during his schooldays at Hildesheim, and Mattheson wrote a critical study on the subject. The number of chamber musicians employed reached a peak under the Elector Georg Ludwig, the successor of Ernst August. In about 1680 and again after 1695 Farinel was Kapellmeister; he was succeeded on 16 June 1710 by Handel, who had an orchestra of 18 musicians at his disposal. However, he stayed in Hanover only nine months; Farinel then held the appointment again until he was succeeded in 1713 by Venturini. After Georg Ludwig had become King George I of England in 1714, music at the Hanover court declined rapidly, although the post of Kapellmeister was not abolished.

2. 1714–1866. In the late 18th century a revival of musical activity was brought about by itinerant opera companies who performed Singspiele and operas. The Singspiel was introduced to Hanover by Seyler's company in 1769, but more significant productions of opera and Singspiel began in 1773 with F.L. Schröder; he produced works by J.F.G. Beckmann, F.G. Fleischer, Hiller, Grétry and Paisiello. Great success was achieved by Georg Benda's melodrama *Ariadne auf Naxos*. Schroeder produced 23 different operas and Singspiele, as well as numerous ballets. On 10 April 1787 G.F.W. Grossmann's theatre company presented its first production in Hanover; in the next decade, with mixed success, it staged 92 operas, of which 40 were German, 36 Italian and 16 French. The repertory included Holzbauer's *Günther von Schwarzburg*, Gluck's *La rencontre imprévue*, and Mozart's *Die Entführung aus dem Serail*, *Le nozze di Figaro* and *Don Giovanni*, the last two in German versions by Adolph von Knigge and his daughter Philine (1791). The musical director of Grossmann's company was B.A. Weber. Concerts began to flourish once more in about 1775. Performances by the small Hofkapelle under J.B. Vezin (Kapellmeister from 1765) alternated with amateur concerts of oratorios and cantatas. Handel's *Messiah* was first heard in 1775. In 1790 Grossmann founded a series of *concerts spirituels*; there were also private concerts by such virtuosos as G.J. Vogler, Luisa Todi and Carl Stamitz, and opera performances with the poorly paid members of the Hofkapelle constituting the orchestra. In 1795 the Duke of Cambridge, son of George III of England, took up residence at Hanover; he reorganized the Hofkapelle, engaging A.W. L'Evêque as director. It then consisted of nine chamber musicians, supplemented by ten of the garrison's best oboists.



1. Grosses Schlosstheater, Hanover, inaugurated with Steffani's 'Henrico Leone', 1689: cross-section showing stage machinery (Historisches Museum am Hohen Ufer, Hanover)

With the formation of the Kingdom of Hanover in 1815, a particularly flourishing period began in the history of opera in Hanover. Wilhelm Sutor, the royal Kapellmeister, succeeded Lüders as musical director of the opera in 1818. In the same year Hanover had its first permanent opera and theatre, where the works of Spontini and Rossini featured prominently. Weber's *Der Freischütz* was received enthusiastically in 1822, and Beethoven's *Fidelio* was given in 1824. Sutor died in 1828, and was succeeded in 1829 by H.A. Praeger. Carl Kiesewetter was appointed Konzertmeister on 28 October 1814. Beethoven's music was first heard in Hanover when the Third Symphony was played in 1815. In 1817 a large-scale music festival took place in the Marktkirche, organized by the director of music in Hildesheim, G.F. Bischoff. Amateur concerts were given on a subscription basis on Sundays in the Ballhof, where Kiesewetter conducted the instrumental music and Sutor the vocal music; an innovation of Kiesewetter's was that symphonies were always performed without cuts. He relinquished his duties in 1822; his successor from 1824 to 1832 was Ludwig Maurer, who during the Kapellmeister's absence also directed the opera.

The Singakademie, a mixed choir founded some time after 1802, gave performances of oratorios. In March 1830 the Alte Hannoversche Liedertafel was founded, the first male-voice choir in Hanover. In 1831 Heinrich Marschner was appointed Kapellmeister, his *Der Vampyr* already having been successfully performed in Hanover in 1828. His works met with some success there, but French and Italian opera also remained popular under King Ernst August. The theatre was rebuilt and renamed the Hofoper in 1837, but the standard of opera fell

considerably between 1841 and 1846 because of inadequate finances and personnel, although there was an outstanding production of Flotow's *Alessandro Stradella* in 1845. Concerts changed in character between 1830 and 1850, under the Konzertmeister Maurer, Anton Bohrer, F.W. Lübeck and Georg Hellmesberger (ii): the orchestra of the Hofoper then consisted of about 40 musicians, and concert programmes came to include contemporary works alongside those of Haydn, Mozart, Beethoven and Weber. Choral music flourished after 1830, and in 1834 the Singakademie gave the first Hanover performances of Bach's *St Matthew Passion*, Mozart's Requiem and Haydn's *The Creation*. Two male-voice choirs were founded in 1850: the Union and the Neue Liedertafel, the latter conducted by Karl Klindworth. The Hannoverscher Männergesangverein was founded in 1851 and has continued to be active. Although church music declined in the 19th century, the tradition was maintained by the Schlosskirche choir founded in 1840 and the Verein für Kirchlichen Gesang founded at the Marktkirche in 1856.

The building of a new Hoftheater was commissioned by King Ernst August in 1843, but was completed in 1852 (fig.2) under his successor, the blind Georg V, a notable pianist and composer, who ratified Marschner's appointment as court Kapellmeister, and appointed C.L. Fischer from Mainz as Kapellmeister and Joachim as Konzertmeister in 1852. Music in Hanover flourished during his reign: *Tannhäuser* was performed there in 1855, followed by *Lohengrin*, *Der fliegende Holländer* and *Rienzi*. In 1859 Marschner was pensioned with the honorary post of Generalmusikdirektor. The new Kapellmeister ('assistant' until Marschner's death in 1861) was Bernhard Scholz; he resigned in 1865 and was succeeded by Spohr's pupil J.J. Bott. At that time the orchestra was enlarged to 75 members, while the opera chorus had 51 singers. In 1862 Gounod conducted his *Faust* with great success. From 1852 subscription concerts were given under Joachim's direction in the concert hall of the new Hoftheater. He gave the first performances in Hanover of works by Schumann and added variety to the symphonic programmes by including chamber music. Clara Schumann often appeared as a soloist at the subscription concerts. In 1856 the Joachim Quartet began to give regular recitals, including Beethoven's late quartets and the early chamber works of Brahms.

2. Hoftheater (now Niedersächsisches Staatstheater), Hanover, designed by Georg Ludwig Friedrich Laves, opened 1852, destroyed 1943, rebuilt by Werner Kallmorgen, 1950

3. SINCE 1866. In 1866 the Kingdom of Hanover became a province of Prussia and its music became strongly influenced by that of Berlin. Bülow succeeded Fischer as court Kapellmeister (1877–9), assuming responsibility for both theatre and concert music. Until World War I the Hoftheater remained in the hands of excellent administrators and Kapellmeister. The Stadthalle, built shortly before World War I, was the first in Hanover to accommodate public concerts; its two halls are the Kuppelsaal, whose great concert organ was destroyed in World War II, and the Beethovensaal for chamber music. In 1921 the Hoftheater's administration was transferred to the municipal authorities, and it became known as the Städtisches Opernhaus. Rudolf Krasselt was Generalmusikdirektor from 1924 to 1943, the zenith of the Hanover opera.

The opera house, severely damaged in 1943, was completely rebuilt and reopened as the Landestheater in 1950; in the interim the Galeriegebäude in Herrenhausen provided temporary accommodation. In 1970 the Landestheater was renamed the Niedersächsisches Staatstheater; its personnel comprises the Staatstheater company and the Staatsoper company. From 1945 to 1949 Franz Konwitschny was Generalmusikdirektor and conducted the operas and subscription concerts; he was succeeded by Johannes Schüler (1949–59), Günther Wich (1961–5) and G.A. Albrecht (1965–93) and Christoph Prick (from 1993). The theatre's centenary was celebrated in 1952 with the première of Henze's *Boulevard Solitude*; it was later renowned for its ballet productions under Yvonne Georgi (*d* 1975). In 1984–5 the theatre was renovated; the auditorium (cap. 1207) is modern in style, but with classical elements relating it to the external façade. The Staatsoper has an active education department which holds children's festivals and performs children's operas.

Hanover, a provincial capital from 1945, has followed far-sighted policies in encouraging music since the war. In this a number of institutions have played a significant part. The opera orchestra is of a high standard, as was the Niedersächsisches Symphonie-Orchester, conducted by Helmuth Thierfelder (*d* 1966), which ceased to exist in 1968. The Hanover RO (from 1992 the Radio Philharmonie Hanover) was formed in 1950; it plays principally for broadcasts but has also mounted subscription concerts. The city has numerous choirs, notably the Städtischer Chor, which gives regular performances of oratorios. A festival of contemporary music was established in 1958; more recently the Hanover Gesellschaft für Neue Musik, founded in 1987, has promoted concerts of new music and other events. Other festivals include music and theatre at Herrenhausen and an international organ festival in the Gartenkirche. The main centres of

Protestant church music are the Marktkirche and the Gartenkirche, both of which have notable organs.

The Hanover Konservatorium was founded privately in 1890. After World War I it established a comprehensive range of courses under the leadership of Walther Höhn (*d* 1953); it became the Städtisches Konservatorium in 1921 and the Landesmusikschule in 1943. It was known as the Akademie für Musik und Theater from 1950 until 1961, when it was renamed the Niedersächsische (later the Staatliche) Hochschule für Musik und Theater (rebuilt 1973). The Kammermusik-Gemeinde (1929) has had much influence on the city's musical life. Since World War I Hanover has been an important centre of the German organ movement, largely through the work of Christhard Mahrenholz and his colleagues. The firm of Furtwängler & Hammer (now Hammer-Orgelbau), one of its most important organ builders, has been internationally known since the 19th century; after 1945 the firms Gebrüder Hillebrand and Schmidt & Thiemann also built up fine reputations.

HEINRICH SIEVERS/R

Hanover Band. English period-instrument orchestra. Formed by Caroline Brown, its artistic director, in 1980 on the Viennese Classical model, the orchestra was the first period orchestra to record the complete symphonies of Beethoven, Schubert and Schumann. Its repertory subsequently expanded, back to the Baroque and forward to Dvořák, Brahms and Sullivan. Directed initially by its leader, Monica Huggett, it has subsequently been conducted by Roy Goodman (1986–94), with whom it recorded a series of Haydn symphonies, and then by specialist guest directors. The orchestra makes regular tours in Europe and the USA.

GEORGE PRATT

Hanover Square Rooms. London concert room, opened in 1775; it was the site of the series of subscription concerts organized by J.C. Bach and C.F. Abel up to 1782, and of the Salomon concerts at which Haydn appeared between 1791 and 1795; *see* LONDON, §V, 2.

Hänsel, Peter (*b* Leipa, Silesia, 29 Nov 1770; *d* Vienna, 18 Sept 1831). German violinist and composer. He was educated and taught the violin by an uncle in Warsaw. In 1787 he played under Sarti in Prince Potemkin's orchestra at St Petersburg. He became Princess Lubomirsky's Konzertmeister in Vienna in 1791, and from 1792 he took composition lessons with Haydn for some years. He started to publish music in 1798. He was in Paris for six months from 1802 to 1803, and wrote his first string quintet there. Returning to Vienna, he continued in the princess's service until her death in 1817, after which he received a pension, and spent the summers at the castle of Prince Lubomirsky in Łańcut. His death was probably caused by the cholera epidemic.

Hänsel's autobiography (MS in *A-Wgm*) reveals an essential modesty which is reflected in his musical style, which developed from that of Haydn (he was not influenced by Beethoven), and his works were widely played, especially in Germany. His printed works include 58 string quartets, four string quintets, six string trios, 15 duos and 30 polonaises for strings.

Hänselt, (Georg Martin) Adolf (von). *See* HENSELT, (GEORG MARTIN) ADOLF (VON).

Hansen. Danish firm of music publishers. It was founded in Copenhagen in 1853 by Jens Wilhelm Hansen (1821–1904), and until 1988 was continuously owned and managed by his descendants. In 1847 he established himself as an engraver, printer and lithographer, and in 1853 began printing and publishing music from his home; in 1857 he opened a music shop that included a music hire library, and in 1874 he took into partnership his two sons, Jonas Wilhelm Hansen (1850–1919) and Alfred Wilhelm Hansen (1854–1923). The following year the publishing firm of C.E. Horneman (founded in 1861) was acquired and amalgamated with the Hansen firm. At first Hansen had published mainly educational and salon music, but it then began to issue new works by Danish

composers, including Niels Gade and J.P.E. Hartmann, thus establishing a practice that is still continued. In 1879 the firm acquired a leading position in Danish music by taking over, on 25 June, the two dominating music publishers and dealers, LOSE (founded in 1802) and HORNEMAN & ERSLEV (founded in 1846). Their numerous and valuable publications and their very extensive retail departments gave Hansen a virtual monopoly of the music trade in Denmark. In the following year the firm took over Lose's premises at Gothersgade 11, where it has remained.

Expansion continued with the incorporation of more Danish music publishing firms, and in 1887 a branch office was opened in Leipzig; this was very active until it was closed during World War II. In 1908 Hansen and the firm of Brødrene Hals in Oslo took over the house of Carl Warmuth (founded in 1843), and jointly established Norsk Musikforlag in Oslo (1 January 1909). When Hansen took control (1910) of the only competing Danish firm, Nordisk Musikforlag (begun in 1880 as Kgl. Hof-Musikhandel), the firm again acquired an exclusive status in Denmark. In 1915 a Swedish house, Nordiska Musikförlaget, was founded in Stockholm. After Alfred Wilhelm Hansen's death business was carried on by his sons Asger Wilhelm Hansen (1889–1976) and Svend Wilhelm Hansen (1890–1960), whose two daughters, Hanne Wilhelm Hansen (*b* 1927) and Lone Wilhelm Hansen (1929–94), subsequently took over the management. In 1951 a new German branch was established, Wilhelmiana Musikverlag in Frankfurt, and in 1957 the house of J. & W. Chester, London, became associated with the Copenhagen mother firm. A Finnish branch office was opened in 1986 in Helsinki.

Since 1879 Hansen has been the leading Scandinavian music publisher, promoting the music of most northern European composers. Through the Leipzig branch many Scandinavian works were brought to the attention of a receptive international public. Denmark was represented by Peter Heise and Emil Hartmann, and later by Carl Nielsen and the following generation, including Riisager, Tarp and Holmboe; Norway by Sinding, Backer-Grøndahl, Johan Svendsen and Halvorsen; Sweden by Alfvén, Stenhammar, Sjögren, and later Hilding Rosenberg and Sven-Erik Bäck; and Finland by Sibelius (the later symphonies), Kilpinen and Palmgren. The firm has also published progressive international works, including (in the 1920s) compositions by Schoenberg, Stravinsky, Honegger and Poulenc, and (more recently) works by Lutosławski and Antonio Bibalo. It reflects educational and national trends, and its programme includes critical editions by Knud Jeppesen and others.

In November 1988 the Hansen family sold the entire business, with the exception of Norsk Musikforlag in Oslo, to Music Sales, also disposing of its retail business and concert agency. Publishing continues in Copenhagen under the name of Edition Wilhelm Hansen with Tine Birger Christensen, the daughter of Lone Wilhelm Hansen, as managing director.

DAN FOG

Hansen, Finn Egeland (*b* Århus, 13 March 1938). Danish musicologist. He studied musicology under Søren Sørensen and Finn Mathiassen at the University of Århus (MA 1964), gaining the university's gold medal in 1962 for a survey of the most important Western modal and tonal systems from classical antiquity to the 20th century. From 1968 he was assistant professor at Århus University, where he also took the doctorate in 1979 with a dissertation on Gregorian tonality. He was appointed professor of musicology at the Royal Danish School of Educational Studies in Copenhagen in 1978, then at the Department of Music and Music Therapy of the University of Ålborg in 1990. His research interests are wide-ranging: he has provided the basis for important studies in Gregorian tonality with his valuable edition of the 11th-century Tonary of St Bénigne, Dijon (Montpellier H 159), while with a research team at Århus (1972–7), he contributed to the development of one of the first purely digital sound synthesizers, the EGG synthesizer. He has also been active in the administration of governmental support for research and education in music as a member (1983–91) and chairman (from 1987) of the Danish Music Council. In 1990 he took the initiative for establishing the Foundation for the Publication of the Works of Niels W. Gade, of which he is the chairman. From 1980 to 1990 he was president of the Danish Musicological Society.

Hanslick, Eduard (*b* Prague, 11 Sept 1825; *d* Baden, nr Vienna, 6 Aug 1904). Austrian music critic, aesthetician and historian. Sensing his vocation as a critic and writer on musical topics early on, he became one of the first widely influential music critics in the modern sense; he was also among the first to receive an official university appointment in music, as professor of the history and aesthetics of music at the University of Vienna, in 1861. His early treatise on questions of musical form and expression (*Vom Musikalisch-Schönen*, 1854) challenged

Hanslick and Wagner: silhouette by Otto Böhler

a long tradition of aesthetic thought that located the essence and value of music in a loosely defined 'expression of feelings', and it has remained a touchstone in musical-aesthetic debates to the present day. As a critic he covered a huge cross-section of musical life in the second half of the 19th century. His journalism – trenchant and entertaining in style – remains of great interest for the historical as well as critical insights it offers.

1. Life. 2. Aesthetics. 3. Criticism.

1. LIFE. Hanslick's father came from a family of German-speaking small landowners in Bohemia (Rakonitz/Rakovník). Having first trained for the priesthood, the senior Hanslick decided to devote himself to the study of philosophy, aesthetics and music. An accomplished pianist and singer, he earned a meagre living from giving lessons and working part-time for the university library. A winning lottery ticket enabled him to marry one of his pupils, the daughter of well-to-do Jewish merchant, Salomon Abraham Kisch. The daughter (Caroline, or 'Lotti') converted to Catholicism upon her marriage to Eduard's father. Her enthusiasm for French novels and for the theatre was passed on to her son, as were the father's combined scholarly and musical inclinations. The young Eduard Hanslick received a solid musical training from Tomášek, whom he described as the 'Dalai Lama' of musical Prague in the *Vormärz* era. Influential acquaintances from his school years included the philosopher Robert Zimmermann and the music historian and fellow-critic Ambros, both of whom, like Hanslick, were studying law in preparation for the civil service appointments that supported so many middle-class citizens of the Austrian empire. With Ambros, he soon came to devote much of his spare time to making music, studying classical and modern repertory and writing criticism. From 1844 Hanslick wrote occasional pieces for the journal *Ost und West* (and its literary supplement, *Prag*), from 1846 for the *Wiener Allgemeine Musik-Zeitung* (which featured his extensive and enthusiastic critique of Wagner's *Tannhäuser*), and from 1848 for the *Wiener Zeitung*, the *Sonntagsblätter* and other journals and papers both in and outside Vienna.

After receiving his law degree at the University of Vienna in 1849 he took up a temporary post in the state finance office in Klagenfurt (1850–52). This period he regarded as one of spiritual as well as geographical exile, but his cultured conversation and musical skills made him a welcome figure in local society ('I was the Liszt of Klagenfurt', he comments sardonically in his memoirs). In 1852 Hanslick obtained a transfer to the finance ministry back in Vienna, with a promotion, and soon thereafter moved to a still more sympathetic position in the ministry of education. These positions left him ample time to continue his activities as a music critic for the ('imperial') *Wiener Zeitung* and, from 1855, for the liberal-minded and more widely influential paper, *Die Presse*. When two sub-editors broke away to found the *Neue freie Presse* in 1864 Hanslick joined them; he remained the music critic for this paper to the end of his career. In the meantime he had been spending afternoons in the library and the occasional free evening at home studying a wide variety of scores as well as books on aesthetics and music history. This extensive reading, he claimed, provoked him to write his own reflections on the nature of 'the beautiful in music' (*Vom Musikalisch-Schönen*) as a corrective to so much loose thinking about music and 'feelings' and to the exaggerated philosophical and cultural pretensions of the writings by and about Wagner and Liszt beginning to proliferate around this time (see illustration). The cogent and pithy character of Hanslick's arguments quickly brought his book to the attention of the whole of German-speaking Europe. It generated a sizeable literature of reviews, rebuttals and revisions, as well as some significant commendations. Hanslick himself published no further books or essays on general questions of music aesthetics, although he did continue to revise and expand his one short treatise through numerous later editions.

Acknowledging *Vom Musikalisch-Schönen* as a *Habilitationsschrift* in 1856 led the University of Vienna to

appoint Hanslick to an external (unpaid) lectureship, and from then until the late 1890s he offered regular lectures on the history and 'appreciation' of music. In 1861 he was promoted to associate professor in the 'history and aesthetics of music', and was able to devote himself entirely to lecturing, scholarship and journalism. (Full professorship followed in 1870, and the awarding of the doctorate *in honoris causa*.) This official distinction and his high standing as a critic enabled Hanslick to travel throughout Europe as an adjudicator in competitions and exhibitions of instruments, as a representative to conferences on the normalization of concert pitch and other such practical issues, and of course as a reporter on musical affairs in other European capitals. Much of the latter half of the memoirs (*Aus meinem Leben*) is taken up with accounts of Hanslick's multiple visits to Paris, London, Milan, Rome, Berlin and other German cities. In Vienna, too, his advice was often sought in official matters relating to the musical life of the city, such as the building of the new opera house in 1866 (he claims to have argued broad-mindedly in favour of including a bust of Wagner among the musical luminaries to be honoured there). At the age of 51 he married the young singer Sophie Wohlmuth, whom he had coached for some time. She agreed to forgo a career on the stage (for which, Hanslick argued, her delicate voice and unworldly simplicity did not suit her), and limited her appearances to vocal illustrations for her husband's lectures and the occasional private soirée. In 1895, one year after completing his memoirs, he retired from regular service as a critic and lecturer, though he did still cover some notable premières up to the end of the century (Verdi's *Falstaff*, Strauss's tone poems up to *Zarathustra*, Mahler's *Gesellen* and *Wunderhorn* songs, and Zemlinsky's opera *Es war einmal*). Brahms and Theodor Billroth remained intimate friends through his later years.

2. AESTHETICS. Hanslick's early fame as the author of the contentious treatise, *Vom Musikalisch-Schönen*, was later overshadowed by his fame as the leading critical antagonist of Richard Wagner and the New German School in general, opposing their claims that programmatic instrumental music and the symphonically through-composed, naturalistically declaimed 'music drama' represented the way of the musical future. The roles of aesthetician and conservative critic have both played a part in his posthumous reputation, though that of aesthetician has received wider attention, while that of advocate for the continuity of a 'classical' tradition has tended to recede to a position of historical interest. The two roles are congruent, in any case, when Hanslick is viewed as an opponent of the radical dissolution of melodic and formal convention celebrated by the 'progressives' of the day as a means of achieving greater expressive truth or the articulation of an ideal or conceptual content – goals that would be judged specious by Hanslick's aesthetics.

The core of Hanslick's treatise is in its first three chapters. Here he lays out the logical deficiencies of the traditional 'aesthetics of feeling' that had dominated writing on music for at least 100 years (chapter 1) and presents his own 'negative thesis' that the expression or representation of distinct feelings cannot be considered the 'content' of music or the basis of its aesthetic value (chapter 2), which should instead be sought in the properties of its own 'sonically moving forms' (*tönend bewegte Formen*) – the alternative, 'positive thesis' expounded in chapter 3. Another positive thesis, or an important concession, is developed in chapter 2: that music will often possess the dynamic properties characteristic of different emotional states, while the correlation is not sufficiently direct or consistent to qualify as representation. Hanslick also argues that the lack of a distinct object or referent in the case of non-programmatic instrumental music renders the expression of distinct, specific feelings impossible. The discussion of the 'subjective impression' of music (chapter 4) anticipates modern reception theory in distinguishing between the nature of the musical work as aesthetic object and the activity of the listener. Hanslick upholds the postulate of aesthetic autonomy, asserting that 'aesthetic contemplation cannot be based on any circumstances existing outside the artwork itself'. The foundations of a formalist aesthetic present in chapters 3 and 4 are extended in the fifth chapter, which distinguishes between the active aesthetic contemplation of music as 'composition' and the passive, unreflective or 'pathological' reception of music as mere sound stimulus, associated with the aesthetics of feeling. (Subjective response to the basic acoustic and timbral qualities of music, Hanslick argues, is outside the bounds of aesthetic analysis proper.) Throughout the last three chapters, and most explicitly in the final one, Hanslick returns to the problem of identifying a 'content' in music independent of its detailed formal structure. Natural objects and literary or historical characters and events can no more constitute the objective 'content' of music than can emotions (or their representation). He allows that the 'thematic idea' might be construed as a specifically musical content that is elaborated within the larger form (chapter 7). The net result of the thematic idea as deployed in the overall structure will determine the aesthetic quality and value of the work, and can be identified as its 'spiritual/intellectual substance' (*geistiger Gehalt*). This alternative to traditional categories of content or subject matter is seen as better suited to the medium of music; it also represents an alternative to Hegel's view of music as the expression of 'pure subjectivity', un-individuated and lacking substantial traces of mind or spirit.

The torrent of responses to Hanslick's radical 'contribution to the revision of musical aesthetics' (as it is subtitled) began almost immediately and shows that he had struck a nerve in contemporary musical thought. While earlier Romantic critical theory prepared the way for an aesthetic of autonomous art, and while many philosophers and scholars of Hanslick's own generation shifted their allegiances from idealism toward positivist materialism, little of that is reflected in the reception of *Vom Musikalisch-Schönen* by musicians and critics. Many, like Lobe, Franz Brendel or Hanslick's long-time associate Ambros, worried that Hanslick's rigorous, unsentimental objectivity threatened music's precarious new status as a significant cultural product. Others, like Ferdinand Graf Laurencin (a Viennese acquaintance), wilfully ignored the logic of Hanslick's arguments, motivated by a blind sense of chivalrous duty to defend the honour of musical expression. Even though Hanslick was arguing in favour of a 'specifically musical' aesthetics that would be accountable to the technical specifications of the medium, his advocates came principally from the ranks of philosophers and writers rather than musicians; among them were Karl Köstlin, his childhood friend

Robert Zimmermann, Hermann Lotzte, F.T. Vischer, D.F. Strauss and the Englishman James Sully but also the music theorist Hauptmann and the acoustical researcher Helmholtz. By the end of the 19th century the combined influence of Wagner, Schopenhauer and Nietzsche on German aesthetic thought tended to prejudice even professional philosophers (such as E. von Hartmann) as well as aestheticians of music (F. von Hausegger, F. Stade, Arthur Seidl) against Hanslick, although he was eventually able to cite Nietzsche's later writings in defence of his own anti-Wagnerism. He is still routinely cited as the godfather of musical 'formalism', but if Hanslick's treatise may be said to provide a philosophical justification for 20th century 'formalist' analysis, it is not an activity he himself ever pursued or consciously promoted. His own position on music's capacity to represent the emotions or to exemplify character and other kinds of 'ideas' remains a matter of debate, since his treatise is neither dogmatic nor wholly systematic. Philosophers who consider Hanslick solely as the author of *Vom Musikalisch-Schönen* overlook the extent to which he came to view aesthetic arguments as ultimately subordinate to particularities of history and culture. Still, his demand for a more philosophically and musically responsible discourse of musical 'expression' continues to challenge writers of all kinds who seek to describe, analyse and interpret music.

3. CRITICISM. Throughout his adult life, Hanslick's principal metier was that of music critic. As a professor at the University of Vienna he did give regular lectures and serve as musical authority in various civic capacities, and he never ceased to immerse himself in music history and *belles lettres*; but apart from the aesthetic treatise and his chronicle of musical institutions and activities in Vienna (*Geschichte des Concertwesens in Wien*, 1869) he produced no scholarly work. From his student years in Prague and Vienna up almost until his death, Hanslick consistently reported on the musical life of his time, and it was in this capacity, rather than as aesthetician or academic, that he was regarded as such an influential figure in his own day. While one can observe in the course of his career the steady growth of a fixed canon of 'classics' in both the opera house and the concert hall, the majority of his criticism concerns new works, less often the revival of works from the 18th or earlier 19th centuries. Even so, his treatment of older repertory is instructive with respect to the evolving music-historical consciousness of his day (to which he made significant contributions). Unlike such musical 'antiquarians' as Kiesewetter, Winterfeld, Baini, Anton Thibaut or Ambros, Hanslick showed virtually no interest in repertory from before 1700, and his appreciation of Bach and Handel was at best highly qualified. (Robert Hirschfeld's 1885 pamphlet *Das kritische Verfahren E. Hanslicks* denounced this lack of receptivity for the 'old masters'.) For his own part, Hanslick was sceptical of those who made a pious display of respect for any music predating the Viennese classics; he viewed the scholarly efforts of Spitta, Chrysander and Jahn, for example, as tending toward special pleading, and made no secret of his low opinion of Gluck's 'specifically musical' talents and the dubiously 'puritanical' element of his operatic reforms. As a scholar and lecturer Hanslick did cultivate an interest in some aspects of pre-Classical repertory; but it was precisely his growing belief that 'the beautiful in music' is historically dependent, that is to say that musical style and expressive means are grounded in a broader cultural-historical context, that led him to distinguish between an older repertory of mainly antiquarian interest and what he considered a viable modern canon.

The role of the virtuoso instrumentalist and the international operatic star also grew considerably in Hanslick's lifetime, and (as he complains in the memoirs) lesser talents were constantly fishing for a 'good review in Vienna' to bolster a career teaching, singing, or playing in the provinces. Yet relatively little space in his reviews is devoted to the critique of specific performances. Among performers, singers naturally receive the most attention, instrumental soloists and chamber ensembles considerably less, while evaluation of orchestral performance, conductors and 'interpretation' is scarcely a concern at all. His activity as critic merged rather with that as professor in combining the educative and entertainment functions of criticism to promote a general cultural awareness among the concert- and opera-going public.

Posterity remembers Hanslick above all as the champion of Brahms and the antagonist of Wagner (along with Liszt and other self-identified progressives). His attitudes toward both composers were less one-sided than is generally supposed, and while it is true that by the end of his career Hanslick had become a conservative voice, his tastes and opinions were not as narrow, pedantic and backward-looking as Wagner's vengeful tribute in the figure of Beckmesser (in *Die Meistersinger*) would have one believe. Hanslick clearly appreciated the Romantic and 'modern' elements in Brahms as much as the perpetuation of Classical instrumental forms. Although he generally took the side of the average concert-goer in his reviews, he repeatedly defended the demanding, dense and intellectual qualities of Brahms's compositions and their right to repeated hearings before passing judgment. The 'charms' of the Fourth Symphony he admitted, for example, are not exactly 'of a democratic nature'. (He professed a private fondness for the Third.) It has often been noted that Hanslick relaxed his scruples about applying affective descriptions to music in his own reviews, and there is no shortage of evocative, even flowery metaphor even in his Brahms criticism. (There is nothing in *Vom Musikalisch-Schönen*, in fact, that would prohibit the use of interpretative metaphor in music criticism.) But it is also interesting to see how the music of Brahms prompted him to revise his thesis that the musical theme might be regarded as the essential 'content' of a composition: reviewing the F major Cello Sonata op.99 and the A major Violin Sonata op.100, he dismissed the utility of printing thematic examples in the fashion of 'English concert programmes' – 'what does one know of Brahms if one knows merely his naked themes?' (As if to reciprocate, when Brahms came to revise his op.8 Piano Trio later in life he omitted the prominent fugato episode in the first movement that Hanslick had described as a 'Latin schoolroom exercise interpolated into a love-poem'.) Above all Hanslick seems to have admired Brahms as the musical and 'spiritual' heir to Schumann, whose music lay closest to Hanslick's heart. For years he would play a Schumann piano piece before retiring to sleep, in order to compose his mind and 'cleanse his soul' from daily cares: the cult of Romantic poetic 'inwardness' became a kind of private religious devotion.

A rather different cult, that of the Wagnerian *Gesamtkunstwerk*, provoked Hanslick's unceasing opposition.

Indeed, in his later writing he tended to restyle his notorious opposition to Wagner's works as an opposition to the composer's exaggerated self-promotion and the dogmatic rhetoric of the 'Wagner cult' (the subject of a sarcastic essay written in the wake of the 1882 *Parsifal* première). The anti-Wagner stance evolved from mixed motives, critical and personal. On one hand he was firmly convinced that the 'naturalistic' dialogic principle that emerged in *Lohengrin* and governed the idiom of the *Ring* and later works was a fundamental mistake – that opera thrived precisely in its concessions to musical-formal artifice, in dynamic equilibrium with values of dramatic truth and poetic expression. On the other hand, it is possible that (as Eric Sams suggested) he took affront at Wagner's *Judaism in Music* (1850) even before, or apart from, the tracts on operatic-cultural reform and before getting to know *Lohengrin* and the subsequent music dramas. This affront became a directly personal matter with the famous reading of the *Meistersinger* draft at the home of Josef Standhartner in 1862 in Hanslick's presence (Beckmesser is styled at this point 'Veit Hanslich'), and with the egregious swipes at Hanslick and *Vom Musikalisch-Schönen* in the preface to the 1869 edition of the *Judaism* essay ('Aufklärungen über das Judenthum in der Musik'), where Wagner portrays the postulate of autonomous musical beauty as a kind of ideological conspiracy to promote the ideals of a 'Judaized' musical culture (the legacy of Mendelssohn and Schumann) against those of the *Gesamtkunstwerk*.

The original edition of Hanslick's treatise made only passing mention of Wagner's writings or his operas (comparing *Lohengrin* unfavourably with *Tannhäuser*, for instance). Disparaging remarks about Wagner's ideas and his works accumulated with later editions, the first of which coincided with Hanslick's first negative review of the composer (the first Viennese production of *Lohengrin* in 1858). Between that date and the 1862 'Beckmesser affair' in Vienna the antagonism between critic and composer solidified; the same period saw the debates over the 'music of the future' reaching their loudest and most acrimonious levels in the musical press. After this point it is difficult to know what Hanslick might have made of Wagner's output without the issue of personal animus (and his distaste for the rhetorical public persona). He clearly, and predictably, preferred *Die Meistersinger* to *Tristan und Isolde* (Beckmesser notwithstanding). He later regretted, privately, some of the disparaging criticisms he made of the former work at its première (attributing them to a short deadline and personal stress), yet he did not bother to revise those criticisms when reviewing *Die Meistersinger* in Vienna two years later. He defended himself against the Beckmesser caricature in asserting that he had never attacked Wagner on pedantic details of perceived harmonic or contrapuntal infractions but only on general principles of style and dramaturgy, or perhaps infractions of dramatic logic and plausibility.

The series of communications to the *Neue freie Presse* on the 1876 première of the *Ring* cycle in Bayreuth (reprinted in *Musikalische Stationen*) gives a good impression of Hanslick's views on Wagner, including his attempts to be even-handed and objective. The 'affected' poetic diction of the texts, the emphasis on symbol and obscure psychological suggestion at the expense of natural and 'logical' exposition, and the general atmosphere of worshipful, pseudo-religious awe surrounding the event (as with *Parsifal* later on) arouse more opprobrium than the actual musical setting of the tetralogy. Wagner's genius for effective musical-scenic 'pictures' elicits Hanslick's repeated admiration (he speaks of the composer as a great musical *regisseur*, as distinct from his failings as a dramatist). All the manifestations of a consciously theorized 'reform' of opera, on the other hand, provoke censure. The full-scale application of associative musical motifs is dismissed as an inartistic experiment (Hanslick seems to be the one who coined the popular image of Wolzogen's thematic indexes as 'musical Baedeker guides'). The forfeit of independently formed vocal melodies in favour of an 'endless' orchestral melody feeding off leitmotivic fragments is regarded as the cardinal sin of the Wagnerian 'music drama', together with the lack of ensemble and choral singing. He finds little to appreciate in Wagner's conception of dramatic monologue or dialogue as a freely evolving musical form supported by 'psychological' motivic commentary in the orchestra. In his later Wagner criticism Hanslick repeatedly resorted to metaphors of physical and mental 'pathology'. He denounced in Wagner symptoms of cultural sickness and decay, the atavistic and anti-rational side of modernism that he and many others regarded as a threat not only to tradition, but also to the healthy, pragmatic, properly 'progressive' aspect of modern bourgeois culture. (His resistance to Bruckner's symphonies is grounded in similar responses, and there can be little doubt that he was sensitive to precisely the qualities in Wagner and Bruckner that would eventually appeal to the nationalistically tinged mystical exaltations of the fascist ethos.)

It is easy to fault Hanslick for his wilful blindness to the symbolic and psychological dimensions of Wagner's works, their profoundly inventive approach to harmonic progression or their fluid conception of musical form. (Like most critics of musical 'progressives' in his day, Hanslick granted the virtuosity of orchestration, though in speaking of its 'fascinating fragrance' or 'demoniac charm' the praise is backhanded, at best.) Some of his criticisms, however, are more difficult to refute, such as the frequent opacity of the diction, rendered further inaccessible by the musical setting. And however wide of the mark his judgments often appear in hindsight, his prediction (from an 1883 'epilogue' to essays on *Parsifal* and on Wagner's passing) that 'a time not too distant from now will clearly recognize the unhealthy, overrefined, and corrupting qualities of his poetry and his music' was borne out accurately enough by the generation after World War I.

A logical corollary of Hanslick's critique of Wagner and Wagnerism was his resistance to the increasingly chauvinistic discourse of German music criticism in the latter half of the 19th century and his consistent defence of French grand opera and *opéra comique*, including the more successful works of Auber, Meyerbeer, Halévy, Thomas, Gounod and others. An early bias against the Italian bel canto repertory and the operas of Verdi softened with time, as some of these works entered the international canon. His sceptical position towards the nationalist cultural 'identity politics' of his native Bohemia in the later 19th century, on the other hand, reflects his own sense of identity as an Austrian citizen and a cosmopolitan. In most of these opinions, as in his attitude towards Wagner and the 'New Germans', Hanslick was

a representative spokesman for his audience in Vienna and beyond. He valued the qualities that made an opera or a concert work successful with the public, even while he was committed to educating the popular taste, and 'correcting' it (or at least taking issue with it) when he felt it necessary. His obvious pleasure in the effective coordination of music, drama and spectacle in opera, and his innumerable comments on the apt (or inapt) expression of poetic text and dramatic situations in the works he reviewed, belie the popular misapprehension of Hanslick as a purveyor of some modernist or formalist creed of 'pure music'. (Indeed, he explicitly and repeatedly spoke of opera as a 'hybrid' medium that must be evaluated accordingly.) On the other hand, his scepticism towards modern programme music – even by composers he championed, such as Dvořák – remains consistent with the views articulated in *Vom Musikalisch-Schönen* that instrumental music is not a representational medium, and that representational impulses are likely to distract both composer and listener from music's true nature as 'beautiful' (and freely or abstractly expressive) form. In this opinion he saw himself as aligned with the Romantic poetics of Robert Schumann rather than as the cold-blooded 'classical' pedant portrayed by his detractors. Altogether, Hanslick's affection for a Classical-Romantic tradition of recent vintage and his aim to speak for his audience, while also trying to educate them as to what was best (by his lights) in newer music, suggest a figure rather closer to Hans Sachs than to Beckmesser.

WRITINGS

Vom Musikalisch-Schönen: ein Beitrag zur Revision der Ästhetik der Tonkunst (Leipzig, 1854/*R*, 2/1858, 3/1865, 4/1874, 9/1896, 16/1966; Eng. trans., G. Payzant, 1986) [edns. 2–8 rev. and enlarged; see also Strauss, 1990]

THOMAS GREY

Hanson, Howard (Harold) (*b* Wahoo, NE, 28 Oct 1896; *d* Rochester, NY, 26 February 1981). American composer, educator and conductor of Swedish ancestry. He studied at Luther College, Wahoo (diploma 1911), with Percy Goetschius at the Institute of Musical Art (1914) and at Northwestern University (BA 1916), where he was an assistant teacher in 1915–16. Subsequently he was a theory and composition teacher at the College of the Pacific in California (1916–19) and became dean of the Conservatory of Fine Arts in 1919. During his time in California, Hanson wrote his first important compositions, including the *Concerto da camera*, a Grieg-influenced work, and *California Forest Play of 1920*, which won the Rome Prize in 1921. Hanson became the first American winner of the prize to take up residence in Rome and during his three years in Italy he studied orchestration with Respighi and the work of the great Italian visual artists. These experiences were to play a crucial role in Hanson's later compositions; his post-1921 compositions frequently feature lush Respighi-like orchestrations, and his variation-form work *Mosaics* was acknowledged by the composer as having been directly influenced by his study of Italian mosaics over 35 years before.

Back in the USA in 1924, Hanson was appointed director of the Eastman School of Music, Rochester, a post he held until 1964. He built the institution into one of the finest university schools of music in the Americas, broadening its curriculum, improving its orchestras and attracting outstanding faculty members. Among Hanson's composition students were Beeson, Bergsma and Mennin. In 1964 Hanson founded the Institute of American Music at the Eastman School, making a substantial financial contribution to help the Institute in meeting its goal of publishing and disseminating American music and providing for research in the history of 20th-century styles. Hanson was also deeply involved with national music organizations, such as the National Association of Schools of Music, the Music Teachers National Association (president, 1930–31), and the Music Educators National Conference. He was also a founder and president of the National Music Council. His addresses at conferences of these organizations frequently dealt with advocacy issues in the performing arts. Among Hanson's numerous awards were 36 American honorary degrees, membership of the Swedish Royal Academy of Music, a Pulitzer Prize for Symphony No. 4, the Ditson Award, and the George Foster Peabody Award. He was elected to the National Institute of Arts and Letters in 1935 and to the Academy of the American Academy and Institute of Arts and Letters in 1979.

Hanson was also active for five decades as a conductor, making his American début in 1924, directing the New York SO in the première of his symphonic poem *North and West*, at the invitation of Damrosch. He subsequently conducted widely in both the US and Europe, his association particularly strong with the Boston SO, for which he wrote the *Elegy* and the Symphony No. 2. As a conductor, Hanson especially featured American compositions, and was an early champion of William Grant Still and John Alden Carpenter.

Hanson has generally been considered a neo-Romantic composer, influenced by Grieg and Sibelius, due in part to the success of the second symphony. However, he also took at times a more abstract approach to musical structure, as in the *Mosaics* and in the Concerto for piano and orchestra in G op.36, notable for its prevalence of short thematic fragments and traces of jazz and Tin Pan Alley. His multi-movement works also tend to be thematically cyclical. Hanson's combination of quotations from Gregorian chant and little-known chorales, sometimes biting bitonal harmonies and driving motor rhythms proved highly applicable to the concert band – a medium he explored from the mid-1950s to the 1970s, in such works as *Chorale and Alleluia* and *Dies natalis II*. His frequently performed *Serenade* for flute, harp, and strings op.35 and the *Fantasy* for clarinet and chamber orchestra (the second movement of the ballet suite *Nymph and Satyr*) of 1978 combine transparent textures with melodic and harmonic touches of Impressionism. Moreover, all Hanson's works display rhythmic vitality, frequently using tonally-based ostinatos and sensitivity towards timbral combination.

Hanson was the author of articles in professional journals, particularly related to music education and support for the performing arts in America. He contributed regularly to the *Rochester Times-Union* until the mid-1970s and wrote *Music in Contemporary American Civilization* (Lincoln, Nebraska, 1951). His most important publication, however, was *Harmonic Materials of Modern Music: Resources of the Tempered Scale* (New

York, 1960), a seminal work in what would later be termed pitch-class set theory.

WORKS
(*selective list*)

STAGE AND CHORAL

Stage: California Forest Play of 1920 (ballet, D. Richards), op.16, California State Redwood Park, 1920; Merry Mount, op.31 (op., 3, R.L. Stokes, after N. Hawthorne), op.31, 1933, New York, Met, 10 Feb 1934; Nymph and Satyr (ballet suite), lost, 2nd movt pubd as Fantasy, Cl, chbr orch, 3rd movt pubd as Scherzo, bn, orch

Choral: North and West (sym. poem, textless), op.22, chorus obbl., orch, 1923; The Lament for Beowulf (trans. W. Morris and A. Wyatt), op.25, chorus, orch, 1925; 3 Songs from Drum Taps (W. Whitman), op.32, Bar, chorus, orch, 1935; The Cherubic Hymn (Gk liturgy, trans. S. Hurlbut), op.37, chorus, orch, 1949; How Excellent Thy Name (Ps viii), op.41, female vv, pf, 1952; Song of Democracy (Whitman), op.44, chorus, orch, 1957; Song of Human Rights, op.49, chorus, orch, 1963; Ps cl, male chorus, 1965; Ps cxxi, Bar, chorus, orch, 1968 arr. mixed chorus, 1969; Streams in the Desert (Bible: *Isaiah*), chorus, orch, 1969; The Mystic Trumpeter (Whitman), nar, chorus, orch, 1970; New Land, New Covenant (orat., I. Watts, J. Newton, Bible, T.S. Eliot, Declaration of Independence)

ORCHESTRAL

Sym. Prelude, op.6, 1916; Sym. Legend, op.8, 1917; Sym. Rhapsody, op.14, 1918; Before the Dawn, sym. poem, op.17, 1919; Exaltation, sym. poem, op.20, with pf obbl., 1920, arr. 2 pf, small ens; Sym. no.1 'Nordic', e, op.21, 1922; Lux aeterna, sym. poem, op.24, with va obbl., 1923, arr. vc, pf; Pan and the Priest, sym. poem, op.26, with of obbl., 1926; Org Conc., op.27, 1926, rev. as Conc. for Org, Hp and Str, op.22 no.3, 1941; Sym. no.2 'Romantic', op.30, 1930; Sym. no.3, op.33, 1937–8, rev. with wordless choral finale; Merry Mount, suite, 1938; Fantasy, str, 1939 [based on Str. Qt, op.23]; Sym. no.4 'The Requiem', op.34, 1943; Serenade, op.35, fl, hp, str, 1945, arr. fl, pf; Pf Conc., G, op.36, 1948

Pastorale, op.38, ob, hp, str, 1949; Fantasy-Variations on a Theme of Youth, pf, str, op.40, 1951; Sym. no.5 'Sinfonia sacra', op.43, 1954; Elegy, op.44, 1956; Mosaics, 1957; Summer Seascape, 1958; Bold Island Suite, op.46, 1961 [incl. Summer Seascape]; For the First Time, 1963; Summer Seascape II, va, str qt, str, 1966; Dies natalis I, 1967; Sym. no.6, 1968; Rhythmic Variations on 2 Ancient Hymns, str, lost; see also Choral

OTHER WORKS

Wind ens: Chorale and Alleluia, op.42, band, 1954; Centennial March, band, 1967; Dies natalis II, band, 1972; Young Person's Guide to the Six-Tone Scale, pf, wind, perc, 1972; Laude: Chorale, Variations and Metamorphoses, band, 1976; Variations on an Ancient Hymn, 1977

Chbr: Conc. da camera, op.7, pf, str qt, 1917; 3 Miniatures, op.12, pf, 1918–19; Scandinavian Suite, op.13, 1918–19; Str Qt, op.23, 1923; Vermeland, pf, 1926, arr. org; Dance of the Warriors, pf, 1935; Enchantment, pf, 1935; Pastorale, op.38, ob, pf, 1949, arr. ob, hp, str, 1949; Elegy, va, str qt, 1966

Songs, pf pieces, arrs.

RUTH T. WATANABE/JAMES PERONE

Hanson, Raymond Charles (*b* Sydney, 23 Nov 1913; *d* Sydney, 6 Dec 1976). Australian composer and music educator. Self-taught as a composer, except for one year of study with Alex Burnard at the NSW State Conservatorium of Music (1947–8), Hanson's understanding of virtuoso pianism is evident in the powerful Piano Sonata and Preludes, while the most consistent seam of his creativity appears in the Tagore settings for solo voice and for chorus, ranging from 1935 (*I dreamt that she sat by my head*) to the magisterial oratorio *The Immortal Touch*, completed in 1976. A concert of his works in 1941, comprising songs and the sonatas for piano, flute and violin, drew praise from Cardus, who observed in his music an originality that avoided anglocentrism. As a lecturer at the Sydney Conservatorium, Hanson developed new approaches to the teaching of aural training and composition, and was active in curriculum development and the introduction of the BMEd. He became a mentor to many Australian musicians, including composers Nigel Butterley, Barry Conyngham, Richard Meale and Larry Sitsky, pianist Roger Woodward and jazz musicians Don Burrows and Frank Smith. He was honoured with the Award of Merit in 1976.

GRAHAM HARDIE

Hanson, Sten (Håkan) (*b* Klövsjö, 15 April 1936). Swedish composer and administrator. He is self-taught as a composer, and since the early 1960s has worked within a wide range of artistic activities in experimental music, literature and the arts. As a lecturer and performer of his own works, he has made extensive worldwide tours. He directed the language group of the concert organization Fylkingen from 1968, and for many years was responsible

for its text-sound festival. His several administrative roles include that of chairman of Fylkingen (1982–4) and President of the Society of Swedish Composers (1984–93). He is a member of the executive committees of ISCM, ICEM and the Electronic Music Studio (from 1984). In 1982 he became a member of the Collège de compositeur de GMEB.

After working with happenings and instrumental theatre he became, towards the close of the 1960s, one of the pioneers of text-sound composition in Sweden. He first composed works that alternated between burlesque diction experiments, as in *Coucher et souffler*, *How Are You* and *The Flight of the Bumblebee*, and provocative social criticism, as in *Che (hommage à Guevara)*, *Western Europe* and *Revolution*. Later he created wholly electro-acoustic works such as *Fnarp(e)*, *Oips* and *Ouhm*, as well as instrumental and vocal music. The voluminous *John Carter Song Book* (1979–85), based on texts by Edgar Rice Burroughs, concerns adventures among little red men on Mars. The ingenious *Wiener-Lieder* (1986) seems to be a summation of all his experiences to that date.

WORKS
(*selective list*)

Music theatre and intermedia: Somnambulistique fugue, 6 dancers, tape, 1961; Visual & Conceptual Music, various performers, 1962–75; Robespierre's Last Night, intermedia-opera, 1975; Take the Cage-Train, 1978, collab. ROLF HAGLUND

Hanson-Dyer, Louise. *See* OISEAU-LYRE, L'.

Hanssens. Flemish family of musicians.

(1) Joseph-Jean Hanssens (*b* Ghent, *c*1770; *d* Amsterdam, 6 Oct 1816). Conductor. He was city musical director at Ghent and moved later to Amsterdam, where in 1808 he became assistant musical director of the Dutch theatre.

(2) Charles-Louis(-Joseph) Hanssens [l'aîné] (*b* Ghent, 4 May 1777; *d* Brussels, 6 May 1852). Violinist, conductor and composer, brother of (1) Joseph-Jean Hanssens. He was taught the violin by Wauthier, first violin at the Ghent theatre, and composition by Verheym, choirmaster at the cathedral. After over a year in Paris studying harmony with Henri-Montan Berton he returned to Ghent and completed his studies with his brother Joseph and the violinist Ambroise Femy. He began his career in 1802 as conductor of a theatre for amateurs in Ghent, the Théâtre de Rhétorique; soon he left to conduct a French company performing in Amsterdam, Utrecht and Rotterdam. In 1804 he went to Antwerp as conductor of the theatre, but returned to Ghent, where he was conductor of the theatre until 1825. In that year he succeeded Charles Borremans at the Théâtre de la Monnaie in Brussels. In 1827 King William of the Netherlands chose Hanssens as his musical director and later in the same year he became inspector at the school of music (forerunner of the conservatory). During the Revolution in 1831 he fell under suspicion and was arrested. On being released he remained in obscurity until 1835 when he returned to direct the orchestra at La Monnaie. He was dismissed in 1838 but took over a third time in 1840, at the same time taking a financial interest in the theatre: this speculation was a failure and he spent the last years of his life in poverty.

WORKS

4 ops: Les dots (oc), Ghent, 1804; Le solitaire de Formentera (2, after A. von Kotzebue), Ghent, 1807, *B-Bc*; La partie de trictrac, ou La belle-mère (oc, 2), Ghent, 1812; Alcibiade (grand opéra, 2, E. Scribe), Brussels, Monnaie, 1829, *Bc*

6 motets, 4vv, orch, incl. TeD, 1833, *Bc*; 6 masses; cantata

(3) Charles-Louis Hanssens (*b* Ghent, 12 July 1802; *d* Brussels, 8 April 1871). Cellist, conductor and composer, son of (2) Charles-Louis Hanssens. By the age of ten he was already a cellist in the orchestra of the Stadsschouwburg in Amsterdam; at 20 he was assistant conductor. In 1824, after a disagreement with the theatre management, he went to Brussels and became a cellist and, before long, assistant conductor at La Monnaie. He was appointed professor of harmony at the school of music in 1827, but left both positions during the Revolution and returned to Holland. In 1834 he went to Paris, becoming successively solo cellist, composer and conductor at the Salle Ventadour, but the bankruptcy of that theatre soon sent him to The Hague. Back in Paris in 1835 he could not find a position and went to Ghent, where he conducted at the theatre until 1848 when he became conductor at La Monnaie. He retired in 1869. As a composer he was, Fétis noted, not strikingly original; his avowed sympathy with German music and distaste for contemporary French musical fashions inhibited his success.

WORKS

8 ops, incl.: Le siège de Calais (4, E. Wacken), Brussels, Monnaie, 20 March 1861; Marie de Brabant, not perf.

15 ballets, incl.: Le 5 juillet (1), Brussels, 9 July 1825; Le château de Kenilworth; Pizarre (3), not perf.
Requiem, 4 solo vv, 4vv, orch, 1837 (Brussels, *c*1850); 2 masses
Le sabbat (orat), solo vv, 4vv, orch, Brussels, 1870, vs (Paris, *c*1875)
4 cants.; several unacc. choruses
Orch: 9 syms.; 26 ovs.; fantasies; 5 concs., cl, cl, pf, vn, vc; Concertino, cl, *US-Bp*
Band music; str qts

JOHN LADE

Hänssler. German firm of music publishers. Founded in 1919 by Friedrich Hänssler in Stuttgart, it quickly built up a reputation for scholarly yet practical editions of Lutheran church music including cantatas, motets and instrumental settings. In particular, Hänssler has issued collections of the motets of Calvisius, Crüger, Gumpelzhaimer, Hammerschmidt, Raselius, Selle and Vulpius in its series Das Chorwerk Alter Meister. The series Die Motette contains many individual motets by such composers as Melchior Franck, Giovanni Gabrieli, Praetorius, Rosenmüller and Scheidt. Apart from building up a catalogue of modern German composers, the firm has started publishing the collected Stuttgarter Schütz-Ausgabe under the general editorship of Günter Graulich, as well as practical performing editions to accompany the series. In addition the Stuttgarter Ausgabe series contains editions of J.S. Bach, Bach's sons, Buxtehude, Eccard and Telemann. The company has become the sole German agent for publications of the American Institute of Musicology and the scholarly publications of Friedrich Gennrich as well as agent for numerous other foreign publishers.

Hans von Basel. Alternative name of HANS TUGI and of Johannes Gross.

Hans von Bronsart. *See* BRONSART VON SCHELLENDORF, HANS.

Hans von Wurms. *See* FOLZ, HANS.

Hanták, František (*b* Planá nad Lužnicí, 19 June 1910; *d* Prague, 23 Sept 1990). Czech oboist. He attended the military music school in Prague (1924–7) and then played in a regimental band in Valašské Meziříči (until 1931). While still a student at the Prague Conservatory, where he graduated from Skuhrovský's class in 1936, he joined the Czech PO as first oboist. He then moved to the Czech RSO and from 1956 to 1970 was soloist with the State PO in Brno. He was a member of the Czech Nonet (1937–46, 1950–56) and from 1960 of the wind quintet of the Philharmonic. Hanták worked as a soloist from 1927, his repertory including works by Handel, Telemann, Bach, Haydn, Mozart and the Czech Franz Krommer (Kramář); his interpretations displayed a virtuoso control of oboe technique and of the instrument's wide dynamic possibilities, and stimulated discussion on the individuality of his approach, which made notable use of agogic accentuation. His fine recording of the Concerto in F by Krommer attracted attention in Britain. Hanták also devoted himself to the modern oboe repertory and his masterly playing inspired many Czech composers (including Jaroslav Kvapil, Jan Novák, Sláva Vorlová, Jan Hanuš, Miroslav Kabeláč, Viktor Kalabis and Petr Eben) to dedicate works to him. He gave concerts in many European countries and toured in China, Korea and Mongolia (1956).

ALENA NĚMCOVÁ

Hantke [Handke], **Mořic** (*b c*1723; *d* Kroměříž, bur. 13 June 1804). Czech composer. He devoted himself intensively to composition while working in the accounts department of the archiepiscopal estate at Kroměříž (1769–90), and was perhaps engaged in the bishop's orchestra or at the church of St Mořic. In 1769 and 1777 he applied, unsuccessfully, for the position of Kapellmeister at the Olomouc Cathedral, stressing in his applications that he had studied composition according to Fux's principles. He spent the rest of his life in retirement in Kroměříž.

Hantke's compositions (mostly in manuscripts in *CZ-Bm* and *KRa*) include ten masses, a Requiem, a litany, 25 pairs of graduals and offertories and 20 smaller sacred works, as well as two organ concertos and a parthia for wind quintet. The sacred works are predominantly for four voices, doubled by violins and trombones; only in the masses is the accompanying ensemble enlarged to the proportions of the Classical orchestra. The pieces have simple phrase structures and an impersonal style, the severity of which contrasts with contemporary secularized church music; perhaps because of these qualities they remained in the Moravian church-choir repertories to the mid-19th century. The organ concertos are in three movements and are pre-Classical in both melody and expression. The solo parts are not particularly idiomatic, but like other Viennese-influenced organ concertos contain writing more associated with the harpsichord.

JIŘÍ SEHNAL

Hantzsch, Andreas (*d* after 1610). German printer, son of Georg Hantzsch. He took over his father's press in 1583 and printed in Mühlhausen until 1599, when he was invited to become city printer at Hildesheim. He started there in 1600 with an ambitious list, but production fell away and he was back in Mühlhausen in 1609. His last recorded edition is dated 1611; all the music that survives from his press appeared before 1600, with the exception of a treatise by Martin Scheffer, printed in 1603. The rest comprises, almost exclusively, volumes dedicated to works by Burck, several of which are editions of music first printed by his father.

STANLEY BOORMAN

Hantzsch, Georg (*b* ?*c*1520; *d* Mühlhausen, 1583). German printer, father of Andreas Hantzsch. When he was accorded citizenship of Leipzig in 1545 he was already called a printer. In 1550 he married the widow of Michael Blum, a local printer, and acquired his press. At Leipzig he printed some theoretical writings, editions of Zanger, and of Heinrich Faber, Figulus and Listenius that had appeared elsewhere. In 1560 he went to Weissenfels and by 1567 to Mühlhausen, where he printed several volumes of music, including most of the work of Burck, and some music by Eccard and others. He also reprinted some of Faber's works and other titles. When he died his press passed to his son.

Hanuš, Jan (*b* Prague, 2 May 1915). Czech composer. He studied composition with Otakar Jeremiáš (1932–40) and at the Prague Conservatory (1940), where he also studied conducting with Pavel Dědeček. After further studies at a business school, he joined the music publishers F.A. Urbánek & Sons and in 1963 became director of the publishers Panton, a post he held until 1970. Hanuš played an important role in the commissions overseeing the complete editions of Dvořák, Fibich and Janáček. In 1960 he received the Gottwald State Prize for his ballets *Otello* and *Sůl nad zlato* ('Salt More Precious than Gold'), and in 1965 and 1988 respectively he was created Outstanding Artist and National Artist; he relinquished all these awards, however, in 1989 in protest at the politically motivated prosecution of students. In 1985 he was appointed honorary vice-president of the International Society of A. Dvořak in Great Britain, and after 1990 he served as honorary president of the Union of Czech Composers. In his stage and vocal works Hanuš draws on esteemed poetry such as that of the Nobel prizewinner Jaroslav Seifert, who was a friend of his. Besides remarkable chamber music with high musical and technical demands, his output contains instructive works for laymen and young persons; a particular aim of his is to provide childrens' choirs with suitable and worthy repertory. Though based on the tradition of Smetana, Dvořák and Janáček, his music continually explores new directions in composition and instrumentation.

WORKS
(*selective list*)

Stage: Plameny [Flames] (Spl-rhapsody, 2, J. Pokorný and Hanuš), op.14, 1944, Plzeň, Tyl, 8 Dec 1956

HARALD MÜLLER

Happy Mondays, the. English rock group. It was formed in Manchester in 1985 by Shaun Ryder (*b* Little Hulton, Lancs., 23 Aug 1962; vocals), Paul Ryder (*b* Manchester, 24 April 1964; bass guitar), Gaz (Gary Whelan; *b* Manchester, 12 Feb 1966; drums), Paul Davis (*b* 7 March 1966; keyboards) and Bez (Mark Berry; *b* Manchester, 1964; percussion and dancing). The Happy Mondays made an important contribution to the development of popular music in the UK. They were one of the first indie groups to recognize the potential in contemporary dance music, and fused the rhythms of hip hop and acid house with minimal rock grooves. Ryder's half-spoken, sneering Mancunian accentuation was instantly recognizable on songs such as *Wrote for Luck* (1988), which became an instant classic in the independent charts. By 1990 the band was one of the most successful UK indie acts with its seminal album, *Pills 'n' Thrills and Bellyaches* (Factory). With such bands as the Stone Roses, the Happy Mondays encapsulated the early 1990s 'Madchester' rave scene – a hedonistic, creative environment that produced some of the most resonant music of the decade and whose sounds were echoed later by groups such as Oasis. The band split up in 1992, and after a brief hiatus Ryder and Bez formed the equally intriguing Black Grape with rappers Kermit and Jed (of the Ruthless Rap Assassins), and guitarists Wags and Craig Gannon. Their 1995 album *It's Great when You're Straight. . . Yeah* (Radioactive), a fusion of rap and contemporary rock styles, brought Ryder his biggest commercial success. In 1999 the Happy

Mondays reformed for live dates to promote their retrospective album *Happy Mondays' Greatest Hits*.

DAVID BUCKLEY

Hapsburg. *See* HABSBURG.

Haquinius, Johan Algot (*b* Stockholm, 30 July 1886; *d* Stockholm, 6 Feb 1966). Swedish composer, pianist and teacher. He studied the piano with Thegerström and Lundberg at the Swedish Royal Academy of Music (1898–1906), where he later studied composition with Ellberg and Lindegren. Thereafter he continued his piano studies with Moszkowski in Paris and Friedmann in Berlin. He established himself as one of the finest pianists in Sweden, performing both as a soloist and in chamber ensembles, and he was also an appreciated teacher. In 1941 he was elected to the Swedish Academy of Music. His music has an intimate, individually coloured, Scandinavian Romantic tone, which moved gradually towards impressionism. In some of his songs of the 1940s he developed a harsh, expressionist style with strong dramatic accents. (B. Sjögren: *Algot Haquinius, 1886–1966: svensk pianist, tonsättare och pedagog*, diss., U. of Stockholm, 1990)

BERTIL WIKMAN

Hara, Kazuko (*b* Tokyo, 10 Feb 1935). Japanese composer. She studied with Ikenouchi and later with Dutilleux in Paris (1962) and with Alexander Tcherepnin. She also studied singing with I.A. Corradetti at the Venice Conservatory (1963) and Gregorian chant on her return to Japan, both experiences that greatly expanded her creative horizons. She made her début as an opera composer in 1981 with a chamber opera, *Shārokku Hōmuzu no jikenbo*; her second opera, *Iwai-uta ga nagareru yoru ni* (1982–3), an anti-war drama describing the downfall of a rich and traditional family, was a sensational success in Tokyo, establishing her name and winning a Giraud Opera Prize as well as a prize for its libretto. She wrote a dozen more operas in quick succession, including a revision of an early work, *Chieko-shō* (1978, revised 1984), describing the mutual devotion of the poet-sculptor Kōtarō and his wife Chieko, *Sute-hime* (1986), for which Hara received another Giraud Opera Prize, and *Sonezaki shinjū* (1986), her version of a well-known puppet play by Chikamatsu. *Nōshi o koete* (1987) created another sensation for its topical subject matter of organ transplants as well as its Expressionistic music; it won a Ministry of Education Prize at the National Art Festival. After 1990 Hara started to write a series of operas for provincial towns; *Iwanaga-hime*, based on another classic by Chikamatsu, was commissioned by the city of Amagasaki.

Hara is particularly skilled at depicting character in her music, which is spare, never Romantic and always well controlled, creating tension with minimal material. Her melodies are usually simple and expressive, the rhythms pulsating and effective, and each note is placed with care.

WORKS

Stage: Cheiko-shō [A Selection for Cheiko] (op. J. Maeda), 1978, rev. 1984; Shārokku Hōmuzu no jikenbo: kokuhaku [The Casebook of Sherlock Holmes: the Confession] (chbr op, 2, Maeda, after A. Conan Doyle), 1981; Iwai-uta ga nagareru yoru ni [On the Merry Night] (op, 2 Hara, after I. Kikamura), 1982–3; Sute-hima: shita o kamikitta onna [Princess Sute: the Woman who Bit off her Tongue] (op, 2, Hara, after S. Murō), 1985; Sonezaki shinjū [A Love Suicide at Sonezaki] (op, 4, Hara, after M. Chikamatsu), 1986; Nōshi o koete [Beyond Brain Death] (chbr op, 1, Hara, after S. Fujimura), 1987; Yosakoi-bushi kien [The History of Yosakoi-bushu] (op, 2, Hara, after F. Tosa), 1988; Iwanaga-hime [Princess Iwanaga] (op, 2, B. Yoshida, after Chikamatsu), 1990; Nasu-no-Yoichi (op, 3, Y. Narushima), 1991; Petro Kibe (op, 2, Hara), 1991; Tonēru no fushigi no ki [Tonnerre's Miraculous Tree] (operetta, 1, Hara), 1992; Maria no shōgai [The Life of the Virgin Mary] (orat), 1993; Otowa no tsubaki (op, 4, S. Nakamura), perf. 1995; Sanshō-day ū [Lord Sanshō] (op, 2, H. Hasegawa), 1995; Nukata-no-ōkimi [Princess Nukata] (op, 4, Hara), 1996; Taki Rentarō (op, 2, Hara), 1997; Tsumi to batsu [Crime and Punishment] (op, 2, Maeda, after F.M. Dostoyevsky], 1998

Inst: Concertino, fl, hpd, str, 1966; Frammento, orch, 1969; several chamber pieces

MASAKATA KANAZAWA

Harahap [Oe'Harahap], **Irwansyah** (*b* Medan, Sumatra, 21 Dec 1962). Indonesian composer. He taught himself the guitar at the age of seven and played the bass guitar in a band at school; after leaving school he played in several pop bands around Medan and developed an enthusiasm for jazz. Harahap's interest in ethnomusicology, beginning in 1983, arose from his involvement with local musical traditions in Medan as well as with the varieties of world music he encountered during his academic training. The instruments he studied exemplify this cultural diversity: bass guitar, *gambus*, *'ud* (Turkish lute), *setār* (Persian lute), *tablā* (Indian pair drum), *taganing* (Toba Batak drum-chime), *gondang hasapi* (Toba Batak string and xylophone ensemble), *gordang sambilan* (Mandailing Batak 9-drum set) and *qawwālī* (Pakistani singing style that he studied with Nusrat Fateh Ali). These experiences influenced his work as a composer, which began in 1985, in both a theoretical and practical way; his compositions have been described as neo-traditional, cross-cultural and as ethnic jazz. The themes he most often deals with are those concerning humanity, community, the environment and the deepening of personal spirituality. Harahap studied ethnomusicology at the University of Washington in Seattle (MA 1994) and at the University of North Sumatra in Medan, where he subsequently became a teacher. He founded and became director of the group Gaung Sumatera Utara ('Echoes of North Sumatra') in 1995, bringing together various performance traditions and fostering the development of a cross-cultural approach to contemporary music, dance and drama.

JODY DIAMOND

Harant z Polžic a Bezdružic, Kryštof (*b* Klenové Castle, nr Klatovy, 1564; *d* Prague, 21 June 1621). Czech composer and writer. He came from the lower Czech nobility attached to the Habsburg monarchy. At the age of 12 he was sent to be educated at the court of Archduke Ferdinand II at Innsbruck. Here, as a page, he received an all-round education, studying music with Gerard van Roo and Alexander Utendal and mastering the technique of Netherlandish polyphony. On his father's death in 1584 he returned to Bohemia and with his brother took over the management of the family estates. He was in the emperor's army, taking part in the Turkish wars from 1593 to 1597, and for this he was awarded an allowance for life. In 1597 he set out with the knight Heřman Černín z Chudenic on a pilgrimage to the Holy Land and Egypt. He described his experiences in a book which contains his six-part motet *Qui confidunt in Domino*, written in September 1598 on his visit to Jerusalem.

When he returned to Bohemia he became valet to the Emperor Rudolf II in Prague and in 1603 was ennobled. He served Rudolf until the latter's death in 1612 and he continued for a time as valet to his successor, Matthias. In 1615 he was unexpectedly released from his court duties and he went to live in seclusion at Pecka Castle, where, on the evidence of an inventory, he kept a musical establishment. Although he had been brought up from childhood as a Catholic, he was converted, by 1618 at the latest, to neo-Utraquism. In the rebellion of the Czech Estates he sided with the rebels and as commander of their artillery in 1619 ordered the imperial palace in Vienna to be bombarded while the Emperor Ferdinand II was inside. The Elector Palatine Friedrich V (the 'Winter King') named him court and chamber adviser and president of the Czech chamber. On 25 July 1620 a mass by him was performed with great show in – surprisingly – the Catholic church of St Jakub, Prague. He did not take part in the Battle of the White Mountain in 1620, but in spite of his plea for mercy to the emperor for his part in the uprising he was arrested in his castle at the beginning of March 1621 and taken to Prague, where he was condemned to death and to the sequestration of his property. On 21 June he was beheaded in the Old Town square with the other 26 leaders of the uprising.

According to his contemporaries he was a good singer and instrumentalist and his compositions were performed not only at the emperor's court but also at those of German noblemen. The seven pieces that survive are predominantly contrapuntal and conservative, with only occasional up-to-date touches where melodic writing takes precedence over polyphony.

WORKS

Edition: *Harant z Polžic a Bezdružic, Kryštof: Opera musica*, DHM, ii (1956)

Mass, 5vv, 1602[10] [based on *Dolorosi matir* by Marenzio]

Maris Kron (motet), 1604[7]

JIŘÍ SEHNAL

Harapi, Tonin (*b* Shkodra, 4 June 1928; *d* Tirana, 30 July 1992). Albanian composer and teacher. From the age of six he was a member of the choir of the Franciscan church in Shkodër, where he was introduced to music by Filip Mazreku and Gjoka. In *c*1936–41 he studied the clarinet, theory and solfège in the children's band of the Francisian society Antoniana, under Jakova, later he studied the piano at the Jordan Misja Art Lyceum, Tirana (1946–51), and after a period working in Shkodra, studied composition with Chulaki at the Moscow Conservatory (1959–61). His studies there having been cut short by the breach between Albania and the USSR, he enrolled at the newly founded Tirana Conservatory, where his teachers included Zadeja and Daija (1962–4). He taught composition there from 1964 until his death.

In spite of his studies in Moscow, there is not a hint of Russian or Soviet influence in Harapi's output. His music shuns grandiloquent statement, displaying an instinctive elegance of proportion and a miniaturist's attention to detail, though with no loss of emotional depth. His melodies often betray the influence of Shkodran folksongs and their modal inflections. Harapi's skill in choosing texts enabled him to excel in larger vocal forms, such as oratorios and cantatas. His opera *Zgjimi* ('Awakening', 1976, rev. 1986) is striking for its lyrical inventiveness and exquisite choral passages. Harapi wrote a number of songs in the romancat genre, and was also one of the pioneers of Albanian chamber music, composing four string quartets and a piano trio.

GEORGE LEOTSAKOS

Harašta, Milan (*b* Brno, 16 Sept 1919; *d* Brno, 29 Aug 1946). Czech composer. As a child he was strongly impressed by a stay in Transcarpathian Ukraine; the influence of this experience is evident in such works as *Poloninkské tance* ('Polonina Dances') and the opera *Nikola Šuhaj*. He studied musicology with Helfert at Brno University from 1938 until the closure of the Czech universities by German occupying forces. Then until 1942 he studied composition under Kaprál and conducting under Quido Arnoldi and Antonín Balatka at the Brno Conservatory. He earned his living through music criticism and teaching at music schools; the additional strain of wartime duties undermined his health, and he died from tuberculosis.

At the age of 14 he began composing in the Czech Romantic tradition, but within four years he was writing atonally. He was markedly influenced by the modality and block construction of Janáček's music – particularly in his Second Symphony (1942–3) and the orchestral *Cocktaily* – and, despite the isolation caused by the war, was able to adopt other advanced techniques. Harašta and Haas were the only composers to make progress from Janáček's style, which it had been thought impossible to imitate or pursue. The great development that Harašta achieved in his short life is most evident in the orchestral works. Dramatic works on subjects and texts from Rolland, Eluard, Tzara, Březina and Soviet writers were planned, but only the opera *Nikola Šuhaj* was completed.

JIŘÍ FUKAČ (text, bibliography), KAROL STEINMETZ (work-list)

Haraszti, Emil (*b* Nagyvárad, Hungary [now Orádea, Romania], 1 Nov 1885; *d* Paris, 27 Dec 1958). Hungarian musicologist. After studying the piano with Albert Geiger, composition with Edmund von Farkas and musicology in Leipzig and Paris, he taught musicology at Budapest University (from 1917) and served as music critic of several newspapers and journals (*Pesti Hirlap*, *Zenevilág*). He was director of the music section of the Budapest National Library (1917) and head of the Budapest Conservatory (1918–27), which he reorganized with Aurelian Kern. In the choral and orchestral concerts that he revived he conducted the first Hungarian performances of works by Janequin, Rameau, Lully and Grétry. In 1928 he was sent as an embassy official to Paris, where he settled after the war, doing research in archives and libraries there and elsewhere.

Haraszti's main areas of research were Liszt, Hungarian music history and French music; he was particularly interested in the relation between Hungarian and European music during the Renaissance and 19th century. His research on Liszt brought much new thought and information to the subject; in *Franz Liszt* (published

posthumously) he claimed that French Romanticism, rather than Austro-German culture, was the determinant influence on Liszt – a view that he attempted to justify with detailed documentation of Liszt's relationships with Marie d'Agoult and Carolyne Sayn-Wittgenstein. Bartók was dismissive about Haraszti's biography of him.

AGNES GÁDOR

Harbison, John (*b* Orange, NJ, 20 Dec 1938). American composer. Born into an intellectually and culturally vigorous environment, his earliest significant musical impressions were of jazz (he was the pianist in his own jazz band by the age of 11) and Bach. Together with Stravinsky they were to remain his chief musical influences. Harbison has written that the Bach cantatas were formative for him in the way that the Beethoven quartets are for most musicians. He studied with Piston at Harvard, winning honours in both composition and poetry (BA 1960). Later studies were with Blacher at the Berlin Musikhochschule (1961) and Sessions and Earl Kim at Princeton (MFA 1963). Very decisive for Harbison was a summer (1963) spent at the Santa Fe Opera Co. at the invitation of Sessions, where the complete operas of Stravinsky were being rehearsed and performed in the presence of the composer. He has been composer-in-residence with the Pittsburgh SO (1981–3) and the Los Angeles PO (1985–8), and was the recipient of the 1987 Pulitzer Prize for *The Flight into Egypt*, a MacArthur Fellowship (1989) and the Heinz Award (1997). In 1969 he became a professor at the Massachusetts Institute of Technology, receiving the honorific position of Institute Professor in 1996.

The works from his earliest period show the dual influences of serialism and Stravinskian neo-classicism. Jazz, too, is apparent in such early works as the *Duo* for flute and piano. From a conflict between serial segmentation and a concern for pitch centres at the opening, the work moves towards a more defined tonality in the uninhibited jazz impulses of the neo-classical final movement. Harbison went through a period of intense engagement with serialism before finding his own distinctive voice. *Confinement*, for large chamber ensemble, is structured so that the pervasive serial procedures themselves become restraints against which the emotional thrust of the music must pit itself. Jazz elements, as typified by the saxophone, are present throughout. In the operas *Winter's Tale* and *Full Moon in March*, with librettos adapted by the composer from Shakespeare and W.B. Yeats, the element of ritual, implicit in Harbison's earlier work, becomes overt in the hieratic nature of scene construction. The operas are psychological in the sense that archetypal situations are explored, but the focus is on using the music to reveal the universal rather than the personal utterance of the texts. An abhorrence of the notion of composition as an emotional diary informs Harbison's music, making it all the more striking when a deeply personal note sounds, as in the darkly turbulent Symphony no.2 or the harrowing lament of the final movement of the Piano Quintet.

Exceptional in Harbison's prolific output are his many song cycles, and the most significant of these is the work with which he consolidated his mature style, *Mottetti di Montale*, an engagement with Eugenio Montale's love poems that recalls the Müller cycles of Schubert. He establishes tonal centres by various means, employs jazz-derived chords without imparting the flavour of jazz and unifies the cycle with linear planning. Magical effects are accomplished with an economy of means reminiscent of Stravinsky or Britten. The music achieves its effect in part

through a subtle allusion to stylistic elements which remain suggestively or provocatively in the background. His conducting commitments have included the Cantata Singers and the new music group Collage and his active involvement with Emmanuel Music in Boston has prompted the composition of a body of choral works that includes the remarkable motets *Ave verum corpus* and *Concerning Them which are Asleep*. Unconnected with Emmanuel but of great significance is *Emerson* for double chorus, an intense, radiant meditation on two excerpts from Emerson's *Essays*, almost Schütz-like in its text specificity and in the remarkable way that Harbison carves a powerful dramatic structure out of meaning and syntax in Emerson's prose.

Central to his extensive chamber music output are the three string quartets, which are studies in contrast: the first austere and determinedly self-referential, the second spacious and refulgent and the third warmly mysterious. Among the most frequently played of Harbison's chamber works are the Piano Quintet and the Wind Quintet. Of the concertos, which figure prominently in Harbison's work, the most important is that for violin; it was written for his wife, the violinist Rose Mary Harbison, who has been the inspiration for many of his important works. In 1995 the Metropolitan Opera commissioned him to write a full-scale opera, enabling Harbison to fulfil an ambition to set F. Scott Fitzgerald's novel *The Great Gatsby* as a stage work. Jazz accents inform the music at all levels, ranging from freshly composed pop songs to the darker inflections of Gatsby's monologues.

Harbison has defined his artistic credo as an attempt 'to make each piece different from the others, to find clear, fresh, large designs, to reinvent traditions'. His work is eclectic, ever open to fresh sources of development in the music of any style or period, and always rigorously self-disciplined. Revelling in ambiguities of all kinds, it reveals further levels of meaning upon repeated listening.

WORKS
(*selective list*)

DRAMATIC

Winter's Tale (op, Harbison, after W. Shakespeare), 1974, San Francisco, 20 Aug 1979, rev. 1991
Full Moon in March (op, 1, Harbison, after W.B. Yeats), 1977, Cambridge, MA, 30 April 1979
Ulysses (ballet, 2), 1983
The Great Gatsby (op, 2, Harbison and M. Horwitz, after F. Scott Fitzgerald), 1999, New York, Met, 20 Dec 1999

DAVID ST GEORGE

Harburg, E(dgar) Y(ipsel) [Yip] [Hochberg, Isidore] (*b* New York, 8 April 1896; *d* Brentwood, CA, 5 March 1981). American lyricist and librettist. Born of poor Russian immigrant parents on the East Side of Manhattan, he started writing light verse in high school and attended City College where he worked on the college newspaper and submitted comic pieces to the city's newspaper columnists. After graduation Harburg went into business but his electrical supply firm failed with the Wall Street Crash of 1929 so he started writing full-time. His first of many collaborators was composer Jay Gorney and some of their songs were seen in Broadway revues as early as 1929. In *Americana* (1932) their song 'Brother, Can You Spare a Dime?' was featured and it subsequently swept the nation, becoming the theme song of the Depression. Throughout the 1930s and 40s Harburg contributed to several Broadway musicals, most memorably *Finian's Rainbow* (1947), which he wrote with composer Burton Lane, and films, including *The Wizard of Oz* (1939) with composer Harold Arlen, which became the peak of both their careers. During the 1950s Harburg was blacklisted from Hollywood because of his political ideas but he did write a handful of Broadway musicals, few of them successful. His last stage work was the commercial failure *The Darling of the Day* (1968) with composer Jule Styne.

Harburg was one of the very few American lyricists with a political agenda. Although his works are musical comedies and fantasies, he tackled such subjects as racial prejudice, government corruption, the atom bomb, women's rights and the ravages of war. Ironically, his shows, for which he usually wrote the librettos as well as the lyrics, were unusually sprightly and his satire was often light-footed. Harburg's lyrics are known for their sly wit, clever wordplay and short, terse phrasing.

WORKS
(*selective list*)

lyrics by Harburg unless otherwise stated; names of composers given in parentheses

STAGE

dates are those of the first New York performance

Americana (revue, J. Gorney), 5 Oct 1932 [incl. Brother, can you spare a dime?]

Walk a Little Faster (revue, V. Duke), 7 Dec 1932 [incl. April in Paris]

Life Begins at 8:40 (revue, H. Arlen), 27 Aug 1934 [incl. You're a builder upper, What can you say in a love song?]

Hooray for What! (musical, Arlen), 1 Dec 1937 [incl. Moanin' in the Mornin', Down with love]

Hold On to Your Hats (musical, B. Lane), 11 Sept 1940 [incl. There's a great day coming mañana]

Bloomer Girl (musical, Arlen), 5 Oct 1944 [incl. Right as the Rain, The eagle and Me]

Finian's Rainbow (musical, Lane), 10 Jan 1947 [incl. If This isn't Love, How are things in Glocca Morra?, Look to the rainbow, Old Devil Moon, When I'm Not near the Girl I Love]; film, 1968

Flahooley (musical, S. Fain), 14 May 1951 [incl. Here's to your illusions]

Jamaica (musical, Arlen), 31 Oct 1957 [incl. Ain't it de truth, Cocoanut Sweet, Napoleon]

The Happiest Girl in the World (musical, J. Offenbach), 3 April 1961 [incl. Adrift on a Star]

The Darling of the Day (musical, J. Styne), 27 Jan 1968 [incl. Sunset Tree]

FILMS

Follow the Leader [collab. R. Rainger] (A. Schwartz), 1930 [incl. Brother just laugh it off]; The Wizard of Oz (Arlen), 1939 [incl. Over the Rainbow, Ding dong! the witch is dead, We're off to see the wizard, If I only had a brain, If I were king of the forest]; At the Circus (Arlen), 1939 [incl. Lydia the Tattooed Lady]; Babes on Broadway (Lane), 1941 [incl. Anything can happen in New York]; Cabin in the Sky (Arlen), 1943 [incl. Happiness is a thing called Joe]; Can't help singing (J. Kern), 1944 [incl. Can't help Singing]; Gay Purr-ee (Arlen), 1962 [incl. Paris is a lonely town]

Hard, Johann Daniel. *See* HARDT, JOHANN DANIEL.

Hardanger fiddle [Harding fiddle] (Nor. *hardingfela*, *hardingfele*). A folk violin of western Norway, generally having four melody strings above the fingerboard, four or five wire sympathetic strings below, and characteristic national decoration. The earliest known example, which has only six strings altogether, is by Ole Jonsen Jaastad of Hardanger and controversially dated 1651 (see illustration). The next ones known to survive are from *c*1750, by Isak Nielsen Skar (1663–1759) and his son Trond Isaksen (1712–72), who popularized the instrument. These fiddles are narrower than the ordinary violin, often with deeper ribs and more pronounced arching of the belly and back. The neck is short, as the music is normally played in the first position, but the pegbox is long and surmounted by a carved head. The fingerboard is flat and the bridge only slightly curved, to facilitate double stops and droning.);

During the 19th century the instrument's shape became nearer to that of the violin, owing mainly to the work of

Hardanger fiddle by Ole Jonsen Jaastad, 1651 (Historisk Museum, University of Bergen)

Eric Johsen Helland (1816–68), one of a celebrated fiddle-making family in Telemark. A recent addition is the chin rest: the fiddle nowadays is often bowed at the shoulder, whereas before it was usually held at the chest of the performer.

Over 20 tunings are known, the most usual being *a–d′–a′–e″* (melody strings) and *d′–e′–f♯′–a′* (sympathetic strings). The repertory consists of folksongs, dances (*slåtter*) such as the *halling*, *gangar* and *springar*, and bridal marches, often embellished. In some districts, especially the coastal provinces north of Bergen, most tunes are straightforward bipartite dances. Elsewhere, notably in and near the province of Telemark, an 'organic building technique' prevails: two-bar blocks are each repeated several times, with each repetition adding small changes which are cumulatively quite dramatic. Torgeir Augundson (1801–72), a miller's son of Telemark, fired

the enthusiasm of the violinist OLE BULL; the traditional melodies have subsequently been collected and they were much used by Grieg.

In the late 20th century both the Hardanger fiddle and the conventional violin have flourished in a nativistic folk revival centred on contests. Competitors are required to play the type of instrument, the tunes and the styles of music peculiar to their own region, thus reflecting the local essence of Norwegian nationalism. Although the conventional violin is somewhat more common than the Hardanger fiddle, the latter is more frequently used to symbolize Norway, both to Norwegians and to outsiders. (*See also* NORWAY, §II, 3, and fig.3.)

MARY REMNANT/CHRIS GOERTZEN

Hard bop. A substyle of BOP dating from the mid-1950s. It stands in opposition to cool jazz and particularly to West Coast jazz in its re-emphasis on the African-American roots of bop and its reaffirmation of forthright musical and emotional qualities. Its leading practitioners were based in New York, but an oppositional stylistic label, East Coast jazz, is a literary conceit that never acquired wide currency. As practised by the Clifford Brown-Max Roach quintet (which, ironically, was organized while they were working in the heart of the West Coast jazz movement in Los Angeles), the Miles Davis quintet and Sonny Rollins's small groups of the mid-1950s, hard bop is largely indistinguishable from the parent style, bop. However, other exponents, most notably Horace Silver, Art Blakey, Jimmy Smith, Charles Mingus and Cannonball Adderley, introduced elements of greater simplicity and tunefulness, linking hard bop to the swing era through the use of riff themes, and at the same time linking it to African-American gospel music through the incorporation of melodic devices that served as an instrumental parallel to preaching. This latter tendency was developed into a further substyle that was initially called funky jazz and later came to be known as soul jazz.

BARRY KERNFELD

Hardebeck, Carl (*b* London, 10 Dec 1869; *d* Dublin, 11 Feb 1945). Irish composer of English birth. He moved to Belfast in 1893 as a partner in a music business. When this venture failed, he taught and served as the organist at St Peter's Cathedral (1904–19). He later assumed the mastership of the Cork School of Music and held the Cork Corporation chair of Irish music at Cork University. These appointments proved controversial however, causing him to resign the latter post after only one year. He returned to Belfast in 1923.

Hardebeck became one of the strongest advocates for a distinctly Irish music. He dedicated his life to the preservation and propagation of Irish folk music and produced a substantial number of arrangements of Irish airs. Despite the blindness which afflicted him at an early age, he was indefatigable in his role as a musical pioneer, trusting that his work would inspire future generations of Irish composers. His own compositions, which include two Irish Rhapsodies, *Meditation on an Irish Lullaby* and *Seoithín Seó* (Lullaby), are faithful to his interpretation of the Irish idiom, but do not stand out as his primary contribution to Irish music.

JOSEPH J. RYAN

Hardel [Hardelle, Hardelles, Ardel]. French family of instrument makers and musicians. They were active in France from 1611 at the latest, when Gilles Hardel is recorded as a 'maître facteur d'instruments'. His son Guillaume (*d* 1676) became a master lute maker and had two children, Françoise (*b* 1642) and Jacques (*d* March 1678), who in 1663 was old enough to be a godfather. Guillaume is mentioned in 1673–4 as harpsichord teacher of the daughter of Philippe d'Orléans and in 1676 as an officer of the Duchess of Orleans. An inventory of his belongings after Jacques' death shows him to have been a wealthy musician; it includes a two-manual harpsichord by Philippe Denis, a spinet, harpsichord parts, various viols, lutes and other instruments.

In 1680 Le Gallois referred to Jacques as 'the late Hardel', placing him at the head of all the pupils of Chambonnières whose pieces, especially the last ones, Hardel took down by dictation, thus becoming their 'sole possessor'. His own pieces 'delighted the court and particularly the king, who ... took special pleasure in hearing them played every week by Hardel himself in concert with the lutenist Porion'. He bequeathed all his music (and possibly that of Chambonnières too) to a pupil, an unidentified 'Gautier', with whom he had lived for several years in 'very close friendship'. His surviving output amounts to only eight short pieces, all but one for harpsichord; the exceptional lute piece may be a transcription of a lost harpsichord work. Their quality, however, confirms Le Gallois's judgment. It was Hardel, rather than Louis Couperin or d'Anglebert, who inherited Chambonnières' strong sense of line. No piece by either of those composers achieved the popularity of Hardel's Gavotte in A minor, to which Couperin (?Louis) composed a *double* and which is found in many manuscript collections into the 18th century, sometimes in versions for lute and voice. But while Chambonnières concentrated his talent on the melody, Hardel also gave direction to the bass, thereby tightening the harmonic logic and making a more modern sound. Six of his pieces – an allemande, three courantes, a sarabande and a gigue, all in D minor – constitute a very early example of the fully 'classical' French harpsichord suite (*see* SUITE, §§2 and 6 (iii)).

DAVID FULLER/BRUCE GUSTAFSON

Hardelot, Guy d' [Rhodes (née Guy), Helen M.] (*b* Château Hardelot, nr Boulogne, *c*1858; *d* London, 7 Jan 1936). French composer, pianist and singing teacher. She was the daughter of an English sea captain and the singer Helen Guy. At the age of 15 she was taken to Paris, where she studied at the Conservatoire under Renaud Maury, and success came in her early 20s with the song *Sans toi* (words by Victor Hugo). Gounod and Massenet were among those who encouraged her in composition, and those who introduced her songs included Nellie Melba, Victor Maurel and Pol Plançon, as well as Emma Calvé, with whom she went to the USA in 1896 as accompanist. After marrying an Englishman she settled in London, where she continued to produce sentimental songs, about 300 in all, notable for their easy melody and typical dramatic climax. They include *Three Green Bonnets* (H.L. Harris; 1901), *Because* (E. Teschemacher; 1902), *The Dawn* (Teschemacher; 1902), *I know a lovely garden* (Teschemacher; 1903) and the song cycle *Elle et lui* (F.E. Weatherly; 1895). She was also a singing teacher, her pupils including Miriam Licette.

ANDREW LAMB

Hardenberger, Håkan (*b* Malmö, 27 Oct 1961). Swedish trumpeter. He studied the trumpet with Bo Nilsson (1969–78) and then at the Paris Conservatoire with Pierre Thibaud (1978–81); he subsequently studied with Thomas Stevens in Los Angeles and Edward Tarr in Basle. In 1981 he won the Toulon Competition and was joint first prizewinner in the Geneva Competition. Hardenberger has pursued an exclusively soloistic career, and has recorded extensively. Although he performs the entire repertory, his particular contribution has been to contemporary music. He frequently performs the concertos by Maxwell Davies and Zimmermann, and has given the first performances of works by Birtwistle (*Endless Parade*, 1987), Blake Watkins, Börtz (the concerto *Songs and Dances*, 1992), Ligeti (*Mysteries of the Macabre*, 1992), Henze (*Requiem*, 1993), Pärt (*Concerto piccolo on B–A–C–H*, 1994 version) and Takemitsu. Hardenberger also performs with the pianist Roland Pöntinen. In 1995 he became professor at the Malmö Conservatory and was appointed honorary Prince Consort Professor at the RCM.

EDWARD H. TARR

Harder, August (*b* Schönerstedt, nr Leisnig, 17 July 1775; *d* Leipzig, 22 Oct 1813). German composer and teacher. He received his basic musical training from his father, a schoolteacher in Schönerstedt, and completed his secondary education in Dresden. He then studied theology at the University of Leipzig, but his aptitude as a teacher, apparently inherited from his father, led him to give up theology for music. He settled in Leipzig as a composer, singer, guitarist and pianist.

Known today only for the melody to Paul Gerhardt's hymn *Geh aus, mein Herz*, Harder was one of the most popular composers of songs and guitar music of his time. The esteem he met with in the professional world, as a composer of the petite bourgeoisie, is documented amply by reviews of his works in the *Allgemeine musikalische Zeitung* and by the publication of several songs both there and in the *Zeitung für die elegante Welt*, then a widely circulated periodical, as well as in song collections and almanacs. He was praised for 'his talent for inventing appropriate, flowing, songful melodies and his simple, natural good taste'. In keeping with the ideals of the Berlin lieder composers, Harder preferred the simple strophic song, although he occasionally used alternating strophes or the alternation of the major and minor modes in his settings, as well as harmonic or melodic variants from strophe to strophe. He kept his piano and guitar accompaniments simple, in accordance with the abilities of players 'of moderate training' for whom he wrote them; it was for such circles that he wrote his pedagogical works for the guitar (the 'poor man's piano') and arranged various songs by Himmel, Righini, Reichardt and Zumsteeg for voice and guitar. Noteworthy, too, is his contribution to the development of the folksong arrangement and to school songs and children's songs; the emphasis on moral and religious intentions in his prefaces to Kühne's folksong collections and to his settings of texts from Krummacher's *Sonntag* is evidence that Harder himself strove 'to further simple singing in schools, in institutions and at home'.

WORKS

Geh aus, mein Herz, und suche Freud (cant., P. Gerhardt), solo vv, chorus, insts
Partsongs: Gesänge und Lieder aus dem Sonntage (F.A. Krummacher), 1–4vv, pf (Duisburg, 1807); 6 Gedichte (E. von der Recke), 1–4vv, pf, op.31 (Leipzig, *c*1810); 3 dreystimmige Lieder, 2 T, B, op.34 (Berlin, 1811); Lenzgespräch (A. Kuhn), 2vv, pf (Berlin, 1811); Gesänge und Lieder aus dem Christfeste (Krummacher), 1–4vv, pf (Duisburg and Essen, 1811); Vierstimmige Gesänge für Schulen und Singchöre, op.39 (Berlin, *c*1812); Wein und Liebe in Liedern (G.E. Lessing), 3–4vv, pf acc. ad lib, op.46 (Leipzig and Berlin, 1812)
Numerous songs: 1v, pf; 1v, gui; 1v, pf/gui
Pieces and didactic works, gui

GUDRUN BECKER-WEIDMANN

Harding, Daniel (*b* Oxford, 31 Aug 1975). English conductor. In 1994, while still a student at Cambridge University, he made his professional début conducting the CBSO, for which he won the Royal Philharmonic Society's 'Best Début' award. After assisting Rattle at the CBSO in 1993–4 he was Abbado's assistant at the Berlin PO in 1995–6, making his début with the orchestra at the 1996 Berlin Festival. In 1996 Harding also became the youngest conductor to appear at the Proms. The following year he became principal conductor of the Trondheim SO and in 1999 was appointed music director of the Deutsche Kammerphilharmonie, Bremen, with which he has recorded a disc of Beethoven overtures. He is also principal guest conductor of the Norrköping SO in Sweden, and of the Mahler Chamber Orchestra, and has appeared with the Leipzig Gewandhaus Orchestra, the Los Angeles PO, the LPO, the LSO and other leading orchestras. His major operatic début was at the Aix-en-Provence Festival in

1998, when he conducted *Don Giovanni* and *Jenůfa*. Harding's other recordings include music by Lutosławski and an award-winning disc of works by Britten.

RICHARD WIGMORE

Harding, James [Harden, Jeames] (*b* c1550; bur. Isleworth, 28 Jan 1626). English flautist and composer of French extraction. He was appointed flautist at the English court on 22 May 1575, holding the post until his death. His son Edward was also a court musician. In the 1590s the family moved from Holy Trinity Minories (where James was at one time churchwarden) to Isleworth.

The few compositions by Harding that survive show him to have been a competent composer. Two sturdy fantasias for keyboard (ed. in MB xlv, 1979–88; lv, 1989) probably originated as consort pieces. Undoubtedly his most popular work was the five-part galliard, which Byrd arranged for keyboard (*Cfm*, Fitzwilliam Virginal Book no.122) and which is found in several manuscript sources. A mutilated arrangement of it was published in Zacharias Füllsack's *Ausserlesener Paduanen und Galliarden erster Theil* (RISM 1607[28]). His other surviving compositions are a six-part almain for wind (*Cfm* Mus.24.E.13–17), seven incomplete five-part pavans and galliards (*US-NH* Filmer 2) and a canonic-style duo (ed. in MB, xlv, 1979–88).

Hardingfele [hardingfela] (Nor.). A folk violin of western Norway. *See* HARDANGER FIDDLE and NORWAY, §II, 3.

Hardouin, Henri (*b* Grandpré, Ardennes, 7 April 1727; *d* Grandpré, 13 Aug 1808). French composer. In 1735 he entered the boys' choir of Reims Cathedral. He later entered the seminary and took low orders, prematurely, in 1748. Soon after he became a sub-deacon and by 1749 he was *maître de musique* of the *maîtrise*. The appointment at such an early age may have been caused by an attempt to end the rapid turnover of imported musicians in that position; Hardouin remained for 42 years. In 1751 he was received into the priesthood and in 1776 he became a canon.

Apart from his duties at the cathedral, Hardouin directed weekly concerts in the Reims town hall for the Académie de Musique from 1752 until 1773; he was often the conductor, impresario, programme director and composer. Surviving programmes indicate that he was well acquainted with Rameau's works. Hardouin's music was known outside Reims: works by him were performed at Lyons (1759 and 1760) and at the Paris Concert Spirituel (1765).

Hardouin apparently revised and embellished the plainchant in the *Breviarie du diocèse de Reims* (1759). His *Méthode nouvelle pour apprendre le plainchant* (1762) was commissioned by the Archbishop Jules de Rohan. In 1772 he published six unaccompanied masses in four parts and in 1775 he collaborated with the king's musicians Giroust and François Rebel on a *Messe solennelle* to celebrate the coronation of Louis XVI.

During the Revolution Hardouin lost both his canonry and his position in the *maîtrise*. His whereabouts between 1792 and 1795 are uncertain; Leflon has suggested that he hid with his niece and her husband. Simon mentioned a farm in Cléville that fugitive priests visited for the illegal celebration of Mass. Among these was a 'M. Hardouin, Curé of Cantalou'. After the death of Robespierre (1794), Hardouin resumed his duties in the *maîtrise*. On retirement in 1801 he donated his manuscripts to Reims Cathedral and returned to Grandpré.

WORKS

Sacred: Lauda Jerusalem, in La musique de l'église (?Paris, 1760); 6 missae, 4vv (Reims, 1772): 1 Incipite Domino in tympanis, 2 Cantate Domino in cymbalis, 3 Jucundum sit ei eloquium, 4 Exaltate et invocate nomen ejus, 5 Laudate nomen Domini, 6 Collaudate canticum; MSS at Reims Cathedral before World War I (some destroyed in war): 22 masses, acc. orch, 24 masses unacc., 5 Requiem, masses for Advent, masses for Lent, 91 hymns, 85 motets, 6 TeD, 9 Mag, other works for Advent, Lent, Holy Week, Easter; Musique du sacre, 4vv, incl. 6 motets and Messe solennelle, 1775 [for the coronation of Louis XVI]; masses in Méthode nouvelle pour apprendre le plainchant

Pedagogical: Méthode nouvelle pour apprendre le plainchant (Charleville, 1762, 3/1790, rev. 1818, 1828); Principes de la musique, frag., *I-Mc*; Leçons de musique suivies de duos, *Mc*

DAPHNE SCHNEIDER

Hardouin, Pierre(-Jean) (*b* Paris, 9 Aug 1914). French musicologist. He was an organ pupil of Brunold and studied classics (diplôme d'Etudes Supérieures 1937; agrégation, 1939) and musicology with Pirro and Masson at the Sorbonne. After teaching arts subjects at schools in Paris, he was successively general editor of two reviews devoted to the organ, *Renaissance de l'orgue* (1968–70) and *Connaissance de l'orgue* (1971). He became vice-president of the French Association for the Preservation of Ancient Organs in 1968, the year of its foundation.

Hardouin is a specialist in the French classical organ, its music, history and in particular its structure and technique. He has written many important general articles, monographs on the organ and biographies of organ makers, organists and composers. The value of his work lies in his careful scholarship, marked by continual return to the sources, exhaustive use of archives and first-hand investigation.

CHRISTIANE SPIETH-WEISSENBACHER

Hard rock. An imprecise term, partly co-extensive with heavy metal, referring to a group of styles originating in the late 1960s as a response to and development of the prevailing counter-culture. Dominant techniques include deep-tuned drums and ringing cymbals played with a marked absence of local syncopation, and declamatory vocals inherited from Mick Jagger. The characteristic and frequent use of organs can be heard in the works of Deep Purple, the Doors and Steppenwolf, along with guitar riffs, power chords and boogie patterns largely from the blues-based playing of Cream, the Groundhogs and Led Zeppelin. Slower ballads mix these features with ringing arpeggios. Gary Moore's *Victims of the Future* (1984) encapsulates many of these techniques.

The subject matter of the songs emphasizes a misogynistic, macho sexuality and an unfocussed but often environmentally aware liberal politics. Hard rock, however, avoids heavy metal's leanings towards madness, violence and the occult. Steppenwolf's early *Born to be Wild* (1967), which popularized the term heavy metal, typifies hard rock's crucial connotations of rootlessness and individual autonomy. Like heavy metal, the style has found worldwide exponents. Leading performers include: Deep Purple, Whitesnake and Def Leppard in Britain; Meatloaf, Bon Jovi and Aerosmith in the United States; Bryan Adams and Rush in Canada; the Scorpions and Running Wild in Germany; StageDolls in Norway; Ōtokogumi in Japan and AC/DC in Australia.

ALLAN F. MOORE

Hardt [Hard, Hart], **Johann Daniel** (*b* Frankfurt, 8 May 1696; *d* after 1755). German bass viol player and composer. Details of his early life are obscure, but von Uffenbach evidently met him at Strasbourg in 1714 (see Preussner). Hardt then spent five years as treasurer and viol player to King Stanislas during his residence at Zweibrücken. In 1720 he entered the service of the Bishop of Würzburg, and when this Kapelle was disbanded in 1724 he found employment at the court of Württemberg. He remained there for the rest of his career, serving first as an ordinary member of the orchestra and later as Konzertmeister and Kapellmeister. When Charles Alexander died (1737) severe economies were made at the Stuttgart court and Hardt was one of the few musicians retained. In 1738 he was listed as Kapellmeister (under Brescianello) with a basic salary of 400 gulders and gifts in kind to the value of 300 gulders. On the accession of Charles Eugene (1744) the Kapelle was enlarged and figures of international repute were attracted to the court. Hardt thus served under both Ignaz Holzbauer (from 1751) and Nicolò Jommelli (Oberkapellmeister from 1753). In 1755 Hardt's name appears among the list of pensioners. He wrote several pieces for bass viol which are now lost (see Pauls). A keyboard sonata was published by Haffner in 1761; it is in four movements and exhibits the melodic grace of the *galant* style.

PIPPA DRUMMOND

Hare. English family of music publishers and violin makers. The business was founded by John Hare (*d* London, bur. 9 Sept 1725), who by July 1695 was established in London as a printer and publisher. In August that year he acquired additional premises in London which he probably took over from John Clarke (the 11th edition of *Youth's Delight on the Flageolet*, earlier editions of which had been issued by Clarke, was one of Hare's first publications). He gave up these two premises for new ones in April 1706 and remained in business alone until December 1721. His son Joseph Hare (*d* London, bur. 17 July 1733) joined him in January 1722, and they published jointly until John's death in September 1725. Joseph then carried on the business in his name, probably on behalf of his mother Elizabeth Hare ('the elder') (*d* Islington,

London, bur. 8 July 1741), until June 1728 when he formed his own business. Elizabeth apparently continued her late husband's business with JOHN SIMPSON until July 1734, when it was sold and she retired to Islington; Simpson then took over her sign and set up on his own account. Joseph Hare's concern was continued after his death by his widow Elizabeth Hare ('the younger'), who was active as a publisher at least until July 1752.

The number of independent publications by the Hare family is comparatively small. From 1695 until about November 1730, however, John, and later Joseph, Hare had close ties, perhaps family ones, with JOHN WALSH (i), and a great number of Walsh's publications bear their names in conjunction with his own. John Hare was also associated with Henry Playford for a time. The Hares presumably supplied the Walshes with the instruments sold to the royal court. Several Hare instruments have survived, those by Joseph indicating that he was among the first to adopt Stradivarian design in London.

WILLIAM C. SMITH/PETER WARD JONES, DAVID HUNTER

Harelava, Halina Kanstantsinawna (*b* Minsk, 5 March 1951). Belarusian composer. In 1977 she graduated from Smol'sky's composition class at the National Conservatory in Minsk, and since 1980 has taught theory and composition there. She first attracted attention with her Violin Concerto (1979), which while displaying the influence of Shostakovich is notable for its emotive expression and richness of melodic development. In the chamber and vocal works of the early 1980s, she developed themes of the love and life of woman in a Schumannesque vein while employing contemporary modal techniques and modern interpretations of Belarusian folk idioms. Works written at the beginning of the 1990s, especially *Tïsyacha let nadezhdï* ('A Thousand Years of Hope') – noted for its impressionistic oriental colouring – and *Anno mundis ardentis* (for which she received the State Prize of Belarus' in 1992), have been regarded as important phenomena in the history of Belarusian music. In the concertos written from the second half of the 1980s onwards, she finds new reserves of timbre through the imitation of practices specific to folkmusic performance traditions, yet still relies on orthodox forms. Her achievements in the field of children's music are significant and many of her programmatic works – such as *Pėsazhï* ('Landscapes') and *Alyoshin ugolok* ('Alyosha's Corner') – feature regularly in many repertories. Her musical style shares affinities with that of both Sviridov and Bartók. At the same time it is distinguished by its lyricism, poetic spirituality and peculiarity of instrumental colour.

WORKS

Vocal orch: Liricheskaya kantata [Lyrical Cant.] (trad. Belarusian texts), female chorus, orch, 1979; Anno mundis ardentis (P. Antokol'sky, G. Appolinaire, L. Aragon, V. Bryusov, S. Kirsanov, A. Rimbault, A. Tarkovsky), Mez, Bar, orch, 1989; Tïsyacha let nadezhdï [A Thousand Years of Hope] (poets of the 10th–20th centuries), female v, orch, 1990
Orch: Vn Conc., 1979; Ob Conc., 1984; Bandarowna, sym. poem, 1986; Balalaika Conc., 1991; Tpt Conc., 1992; Gui Conc., 1994; Pėsazhï [Landscapes], sym. poem; Alyoshin ugolok [Alyosha's Corner], sym. poem

RADOSLAVA ALADOVA

Harelbecanus, Sigerus Paul (*fl c*1590). Flemish composer. In 1590 he was living in Cologne. His only known work is *Psalmodia Davidica* (Cologne, 1590), 50 psalms translated into German and set in three to six parts, so written that they could be either sung or played on various instruments.

LAVERN J. WAGNER

Harepa. Neo-traditional musical style found among Pedi-speaking peoples of South Africa. The *harepa* style is named after the German autoharp which was introduced to the Pedi by Lutheran missionaries in the 19th century. The instrument was adapted to indigenous musical forms, with the strings plucked individually to accompany singing. The style draws on African call-and-response patterns, but also includes uncharacteristic descending lines. Among the principal post-1970s musicians performing *harepa* is Johannes Mohlala, who recorded for the Gallo label. R. Allingham discusses *harepa* in 'Township Jive', *World Music: the Rough Guide* (London, 1994), 373–90.

GREGORY F. BARZ

Harewood, 7th Earl of [Lascelles, George Henry Hubert] (*b* London, 7 Feb 1923). British administrator and writer. Educated at Eton and Cambridge, he began writing opera criticism for the *New Statesman* and *Ballet and Opera* in 1948; in 1950 he founded the periodical *Opera*, which he edited until 1953. The following year he brought out a revised edition of *Kobbé's Complete Opera Book* (further revised and enlarged editions, 1976 and, with much new material, 1987 and 1998). His own entries are mastery in delineating plot and its musical treatment. He was a director of the Royal Opera House, Covent Garden (1951–3, 1969–72), and an administrative assistant there (1953–60), and was also a director of the Edinburgh Festival (1951–5) and Leeds Festival (1958–74). He was managing director of English National Opera (Sadler's Wells Opera until 1974) from 1972 to 1985, where he oversaw the many positive changes in policy of that period, and held the same post at English National Opera North (1978–81). His musical tastes show a particular leaning to Slavonic music and the operas of Verdi; his years as the head of the ENO were marked by their imaginative artistic policy. He is an acknowledged expert on vocal recordings of which he has a large and discerning

collection. He was, for a time, chairman of the advisory committee of the NSA. His memoirs, *The Tongs and the Bones*, were published in London in 1981.

Harich-Schneider, Eta (*b* Oranienburg, Berlin, 16 Nov 1897; *d* Vienna, 16 Oct 1986). German harpsichordist, musicologist and authority on Japanese music. After studying the piano and musicology (under Kurt Sachs and others), she made her début as pianist in Berlin in 1924 (when she gave the first performance of Hindemith's *1922 Suite*), and the following year was awarded the City of Frankfurt Kulturpreis. Attracted by the harpsichord, she studied with Günther Ramin (1928–9) and Landowska (1929–35), making her concert début on this instrument in Berlin in 1931. She had already formed an ensemble for early music; in 1934 she won acclaim for the first complete performance in Berlin of Bach's *Goldberg Variations*. She became a professor at the Berlin Hochschule für Musik, but in 1940 was dismissed after refusing to join the Nazi party and fled to Tokyo, where she lived until 1949; in 1945 she directed the music department of the US Army College there, and for two years from 1947 taught Western music to the musicians of the imperial court, becoming herself increasingly interested in Japanese music.

In 1949 Harich-Schneider moved to New York, and pursued her Japanese studies at Columbia University. After taking the MA in sociology at the New School for Social Research in 1955, she received research fellowships from the Guggenheim Foundation (1955–7) and Bollingen Foundation (1962–6); meanwhile she held a post as professor of the harpsichord at the Vienna Academy (1955–61). She was a guest lecturer in Japanese music at the universities of Chicago, London, Paris, Utrecht, Amsterdam and Leiden, and in 1968 she was decorated by the Austrian government for her services to musical scholarship.

Harich-Schneider's writings on harpsichord playing form a thorough and concise introduction to matters of technique and style. Besides performances of music by Rameau, Bach and Scarlatti, and a complete recording of Couperin's keyboard works, she recorded commentaries on sacred music of the Tenri cult and, for UNESCO, Shintō music and Buddhist music (which won a Grand Prix du Disque in 1967). Her writings on Japanese music dealt mainly with art music rather than folk music. Her first major work (1954) was devoted to the court music of Japan (*gagaku* and *bugaku*). The later *History of Japanese Music* (1973) dealt not only with court music and dance, but also with Noh, Buddhist and Shintō music, and brought to light much previously unavailable source material on these subjects.

LIONEL SALTER

Harington, Henry (*b* Kelston, Somerset, 29 Sept 1727; *d* Bath, 15 Jan 1816). English physician, author and composer. He came of a landed Somerset family, and entered Queen's College, Oxford, on 17 December 1745, graduating BA in 1749 and MA in 1752. While there he sang and played the flute, and joined the Club of Gentlemen Musicians directed by William Hayes. Instead of taking orders, as he had originally intended, he studied medicine, and on leaving Oxford in 1753 he began to practise as a physician at Wells. In 1762 he took the degrees of MB and MD at Oxford. In 1771 he moved to Bath, where he continued to practise, and became a well-known and well-loved local personality. He was in turn alderman, magistrate and mayor. He was appointed physician to the Duke of York, and in 1784 'composer and physician' to the Harmonic Society of Bath on its foundation by Sir John Danvers.

Though an amateur, Harington (like Lord Mornington) established a position as one of the leading glee writers of the day. He published four collections between about 1780 and 1800, as well as many single glees, catches, duets and so on. Many of his glees also appeared in the anthologies of the period. One of them, *Retirement* ('Beneath the silent rural call', *c*1775) was converted by Thomas Williams into a hymn tune, still well known under the alternative names 'Harington' and 'Retirement'. Otherwise his most popular pieces were two duets, *How sweet in the woodlands* (for two sopranos), first published in the *London Magazine* for October 1774, and *Damon and Clora* (soprano and tenor), composed 1745, published in about 1770. He was particularly successful in satirical

catches, such as *The Stammerers*, *The Alderman's Thumb* and *Dame Durden*; in lyrical or sentimental vein his music is pleasing, though hardly profound. He also produced a few sacred pieces, similar in style to his serious glees. His hymn *Eloi! Eloi!* was sung on Good Friday in Bath Abbey for many years. He wrote a good deal of unimportant poetry, *A Treatise on the Use and Abuse of Music*, and some theological works.

WORKS

SECULAR VOCAL

46 glees, catches and trios, and *c*30 songs and duets pubd singly, in 18th-century anthologies, and in Harington's collections: A Favorite Collection of Songs, Glees, Elegies and Canons, 1–5vv (London, *c*1780); 3 Remarkable Admir'd Catches, 3vv (Dublin, *c*1780); A Second Collection of Songs, Glees, Elegies, Canons and Catches, 1–36vv (London, *c*1785); A Third Collection of Trios, Duetts, Single Songs & Rotas, 1–3vv (Bath, *c*1790); Songs, Duetts, and other Compositions ... never before published (London, *c*1800)

Lucy, or Fixt Air, a Cantata set to music by l'Abbate Burletti on the Model of the Ancient Chromatic System (London, *c*1780)

SACRED VOCAL

I Heard a Voice from Heaven (A Requiem), 3vv (London, *c*1775)

Eloi! Eloi! or, The Death of Christ, chorus, orch (Bath, *c*1800)

4 anthems and 1 hymn pubd singly and/or in 18th-century anthologies

NICHOLAS TEMPERLEY

Harjanne, Jouko (*b* Rauma, 21 June 1962). Finnish trumpeter. He studied with Raimo Sarmas at the Tampere Conservatory from 1976 to 1983 and subsequently with Henri Adelbrecht and Timofey Dokshitser. After serving as co-principal trumpeter with the Tampere PO from 1978 to 1984, he became principal in the Finnish RSO; in 1989 he was appointed to the Sibelius Academy.

Very active as a soloist, Harjanne made his début on 14 November 1978 with the Finnish RSO. He has given the first performances of concertos by Segerstam (1984), Gruner (1987, 1992), Linkola (1988, 1993), Wessman (1991) and Bashmakov (1992). He also gave the European première of Shchedrin's Concerto (Moscow, October 1995). Harjanne has recorded concertos by Haydn, Hummel, Shostakovich, Jolivet, Goedicke, Harut'unyan, Vasilenko, Tamberg and B.A. Zimmermann, as well as works by Finnish composers. He won second prize in the Prague Spring International Competition in 1987. In 1996 he became artistic director of the Lieksa Brass Week.

EDWARD H. TARR

Harline, Leigh (*b* Salt Lake City, 26 March 1907; *d* Long Beach, CA, 10 Dec 1969). American composer and conductor. He studied music at the University of Utah and took private piano and organ lessons with the conductor of the Mormon Tabernacle Choir, J. Spencer Cornwall. After working for radio stations in his native city, he moved to California (1928), where he arranged music and conducted for radio stations in Los Angeles and San Francisco. From 1932 to 1941 he worked for Walt Disney, writing for the Silly Symphony series and many other short films. He also composed for Disney's first two animated feature films: *Snow White and the Seven Dwarfs* and *Pinocchio*; for the latter he won Academy Awards for best original score and best song (*When You Wish Upon a Star*). After leaving Disney he worked at various studios (mainly RKO and 20th Century-Fox), composing, conducting and arranging for more than 120 feature films and several television programmes. Although sometimes typecast as a scorer of comedies, Harline was a skillful, imaginative and often original craftsman, whose best work reveals a genuine dramatic flair. Two of his Disney scores, *The Pied Piper* (1933), a miniature operetta, and *The Old Mill* (1937), in its lyrical expression, musical unity, use of 'symphonic' scoring and textless female chorus, must be considered among his most agreeable and imaginative works.

WORKS

(*selective list*)

Film scores: Silly Symphonies, 1932–9 [incl. The Pied Piper, 1933, Music Land, 1935, The Country Cousin, 1936]; The Old Mill, 1937; Snow White and the Seven Dwarfs, 1937, collab. P.J. Smith, F. Churchill; Pinocchio, 1940; Mr. Bug Goes to Town, 1941; The Pride of the Yankees, 1942; Tender Comrade, 1943; China Sky, 1945; Isle of the Dead, 1945; Johnny Angel, 1945; Man Alive, 1945; A Likely Story, 1947; The Farmer's Daughter, 1947; The Boy with Green Hair, 1949; They Live by Night, 1949; Perfect Strangers, 1950; Broken Lance, 1954; Good Morning, Miss Dove, 1955; The Enemy Below, 1957; The Wayward Bus, 1957; Ten North Frederick, 1958; Seven Faces of Dr. Lao, 1964

Orch: Civic Center Suite, 1941; Centennial Suite, 1947

FRED STEINER

Harman, Carter (*b* Brooklyn, NY, 14 June 1918). American critic and composer. He studied composition with Sessions at Princeton University (BA 1940) and with Luening at Columbia (MA 1949), having taught at Princeton from 1940 to 1942. Babbitt introduced him to the possibilities of film soundtrack manipulation, and in 1954 he made his first experiments in tape composition. He held positions as a music critic with the *New York Times* (1947–52) and *Time* (1952–7), and has written many journal articles as well as *A Popular History of Music* (New York, 1956, rev. 2/1969). He has worked as a recording engineer as well as a location sound engineer for such films as *Lord of the Flies*. He served as president of the West Indies Recording Corporation in Puerto Rico (1960–69); in 1967 he became executive vice-president and producer for CRI and from 1976 to 1984 its executive director. His compositions are lyrical and expressive, and his vocal works demonstrate an ability to set words naturally and attractively. He sees himself principally as an advocate for contemporary music, both as a writer and as a producer of recordings, for which services he received in 1981 both the Commendation of Excellence from BMI and the Laurel Leaf Award of the ACA.

WORKS

Stage: Blackface (ballet), 1947, arr. orch suite, 1948; The Tansy Patch (musical fantasy, 2, N. Hallanan), 1949, renamed The Food of Love, 1951; Circus at the Opera (children's op, D. Molarsky), 1951

Orch: 3 Episodes, 1949; Music for Orch, 1949

Vocal: From Dusk to Dawn (e.e. cummings), S, str qt, 1951; A Hymn to the Virgin (anon.), vv, 1952; You and I and Amyas (anon., Oxford Book of English Verse), round, 3 vv, 1952; Castles in the

Sand (Molarsky), song cycle, female v, 1952; many children's songs, 1947–52
Other: several ens works, incl. Variations, str qt, 1950; pf pieces; Alex and the Singing Synthesizer, elec, 1974–7

BARBARA A. RENTON

Harmat, Artúr (*b* Nyitrabajna [now Bojna, Slovakia], 27 June 1885; *d* Budapest, 20 April 1962). Hungarian composer, conductor and writer on music. He completed training as a schoolmaster in Esztergom, where he took lessons in composition and church music with Ferenc Kersch. Then he settled in Budapest, graduating in composition from the High School of Musical Art in 1908. His studies of church music were continued in Prague, Berlin and Beuron, and concluded under Dominicus Johner in 1927. Harmat was professor of liturgy and Gregorian chant at the High School of Musical Art (1924–50). In the 1920s he directed the Palestrina Kórus, which he developed into a leading ensemble, and in 1926 he was appointed principal of the Budapest St Cecilia Society. He was director of music at St Stephen's Cathedral, Budapest, from 1938, receiving the Papal Order of St Gregory in 1942. Apart from his work in Catholic church music, he took an interest in the music of other Christian faiths, in religious folk music and in church music education, on all of which he published numerous articles in Hungarian music periodicals. His autobiography and a full list of works appear in J. Marosné Harmat: *Harmat Artúr: Emlékkönyv születésének* (Budapest, 1985).

WORKS

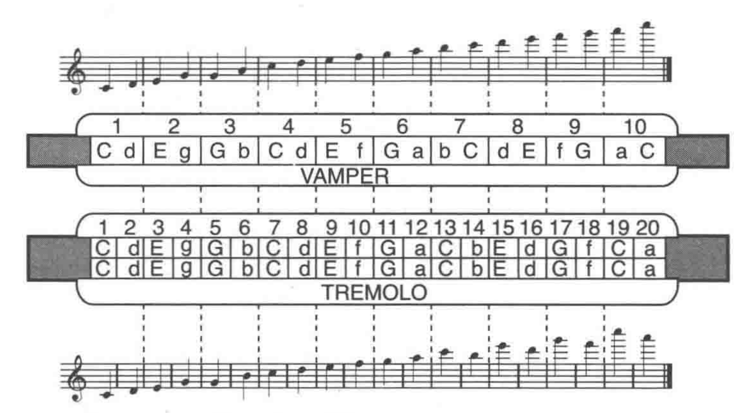
JOHN S. WEISSMANN/R

Harmonia (i) (Gk., pl. *harmoniai*; Lat. *harmonia*). A term with various meanings in ancient Greek literature and philosophy, and specifically in the tradition of ancient Greek music theory. In its most general sense it signifies a joining together or adjustment of parts. PLATO, in his *Timaeus*, follows the Pythagorean tradition by investing the term with metaphysical and ethical meaning when he defines the perfect proportional ordering of the cosmos as *harmonia*; but he also uses the term in the *Republic* in the more technical musical sense of an octave consisting of eight tones, a definition perhaps derived from the scale of PHILOLAUS. The term is also regularly applied to one of the three basic genera, the enharmonic (*see* GREECE, §I, 6(iii)(c)); to each of the seven octave species (*see* GREECE, §I, 6(iii)(d)); to a 'style' of music associated with one of the ethnic types or *tonoi* (*see* GREECE, §I, 6(iii)(e)); and, in its adjectival form (*harmonikos, -ē, -on*), to musical science and those who study the science (*see* GREECE, §I, 6(ii)). This breadth of meaning enabled writers to draw elaborate parallels in which music could be viewed as a paradigm for any number of orders ranging from the socio-political to the structure of the cosmos.

THOMAS J. MATHIESEN

Harmonia (ii). *See under* ORGAN STOP.

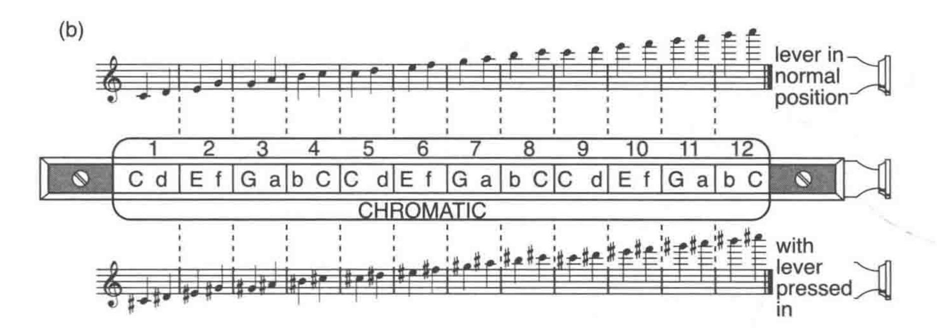
Harmonia Mundi. French classical record company, later divided into two separate companies, Harmonia Mundi France and Deutsche Harmonia Mundi. Harmonia Mundi was founded in 1958 in Saint-Michel de Provence by Bernard Coutaz; the firm moved to Arles in 1986. Early recordings were devoted to organ music played by Michel Chapuis and others. A series of recordings was also licensed from Balkanton. From 1966 until his death Alfred Deller made over 50 recordings for the label; initially these were identified on the label as Deller Recordings. In the USA Deller's recordings were briefly licensed to RCA Victor, while other French productions were licensed to Columbia's Odyssey label. Later HNH Recordings issued the French productions using the original cover art. The roster of performers grew with the addition of René Clemencic, the countertenor (and later conductor) René Jacobs with Concerto Vocale, Les Arts Florissants directed by William Christie, the Ensemble Clément Janequin, the conductor Philippe Herreweghe, Marcel Pérès with Ensemble Organum (in medieval music), and others. In 1976 the firm established its own distribution, adding other labels; a year later, separating from its German affiliate, the label became Harmonia Mundi France. In the early 1980s the firm established branches in Britain, the USA, Germany (Helikon Harmonia Mundi), Spain (HM Iberica) and the Netherlands and Belgium (HM Nandi). The US branch has a sizable recording programme with the vocal ensemble Anonymous 4 (in medieval music), the conductor Nicholas McGegan (in several Handel operas and oratorios) and others.



The German branch of Harmonia Mundi was opened under the direction of Rudolf Ruby in 1959. The producer Alfred Krings built up a catalogue of music of the Classical, Baroque and earlier periods using Collegium Aureum, a period-instrument ensemble from Cologne. Cooperative ventures with Angelicum and Vanguard soon followed. In the USA the German productions were briefly licensed to RCA Victor. In 1971 the German company, along with others, was bought by BASF, but in 1977 the two businesses were separated as Harmonia Mundi France and Deutsche Harmonia Mundi. When BASF dispersed its record holdings, EMI acquired Deutsche Harmonia Mundi and continued to operate it as a separate label. Günter Wand recorded the symphonies of Beethoven, Schubert, Brahms and Bruckner; Sequentia Ensemble and the Schola Cantorum Basiliensis provided recordings of medieval music. At the end of 1989 the label was sold to BMG, still under Ruby's direction. The firm remained in its offices at Freiburg until 1993.

JEROME F. WEBER

Harmonica (i) [mouth organ] (Fr. *harmonica à bouche*; Ger. *Mundharmonika*; It. *armonica a bocca*). An instrument consisting of a small casing containing a series of free reeds in channels leading to holes on the side of the instrument (for illustration, *see* REED INSTRUMENTS). It is placed between the lips and played by inhalation and exhalation, unwanted holes being masked by the tongue.

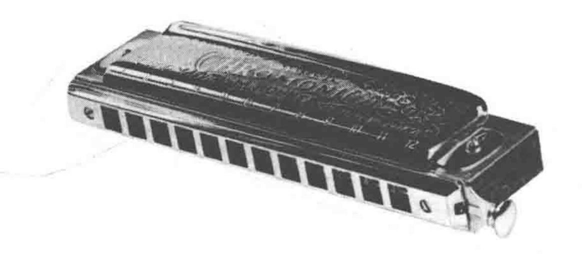


1. *Harmonica tuning charts*

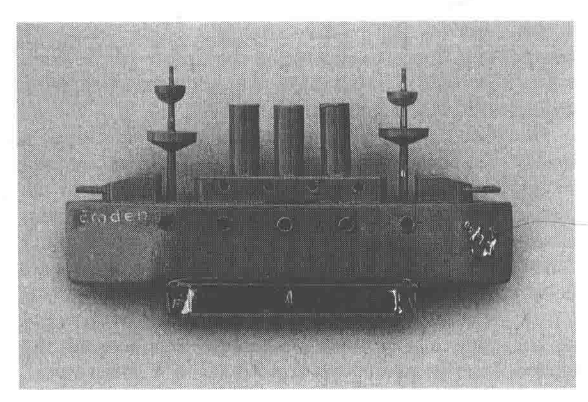
(a)

20-double hole, 40-reed "Tremolo' or 'Wiener' model in C

(b)



By moving the instrument to and fro, the varying notes available are brought into play.



There are two main types of harmonica – the diatonic and the chromatic. Basically, the diatonic harmonica is designed to produce the notes of the tonic chord of the key in which it is tuned by exhalation and the other notes of the diatonic scale by inhalation. On this type of instrument only the middle octave of the three-octave range is complete, the lower and upper octaves having a 'gapped' scale (fig.1*a*). This applies to both the 'Richter' or 'Vamper' type and the so-called 'Tremolo' or Wiener type which has two reeds for each note, one reed being slightly off-tuned to create a 'voix céleste' or vibrato effect. The chromatic harmonica consists basically of two harmonicas in keys a semitone apart, and originally was based on the 'Vamper' system, two reed plates being fitted, one tuned in C, the other in C♯ (or D♭), with a slide mechanism operated by a small hand-lever enabling the player to change from one set to the other. This early type of chromatic instrument (10 holes, 40 reeds) was soon superseded by the 12-hole instrument with 48 reeds (fig.2) in which the tuning of the middle octave of the previously mentioned types was adopted throughout the three-octave range (fig.1*b*). This type of instrument is now virtually standard, although a larger model (16 holes, 64 reeds) with a range of four octaves is also available. Many other types of harmonica exist, designed for special purposes, and include bass and chord accompaniment instruments for use in group and band performance.

The introduction of the Chinese *sheng* into Europe in 1777 led to many experiments in the use of the free reed. In the 1820s a succession of free-reed instruments were invented (*see* ACCORDION; CONCERTINA; and REED ORGAN), including Anton Haeckl's Physharmonika (1821) and Christian Friedrich Ludwig Buschmann's Handäoline (1822). In the wake of these developments the harmonica came into being in Vienna in the mid-1820s. Although it is not known for certain who invented it, a possible candidate is Georg Anton Reinlein who took out an early patent in February 1824 'for the fabrication of a harmonica in the "Chinese manner"'. Early harmonicas were hand-made, the wooden body-work carved and the reeds beaten from brass wire and fitted individually into the brass or bell metal reed-plates. Soon a second reed-plate, which produced notes by sucking the air in, was added below the original one, greatly expanding the harmonica's potential.

Originally perceived as a novelty instrument, the harmonica was first sold as a children's toy at markets and by door-to-door peddlers. It later became popular with adults as an instrument for private use, played for entertainment on walks or at indoor parties. It spread

2. *Modern chromatic harmonica with 12 holes by M. Hohner, Trossingen*

3. Harmonica in the shape of a World War I battleship, c1915 (Harmonikamuseum, Trossingen)

rapidly all over Europe and beyond. By the early 1830s the harmonica was already known from England to Australia. Four more production centres arose at that time, in the small towns of Trossingen (where the firm of HOHNER was founded in 1857) and Knittlingen in south-west Germany, Klingenthal in Saxony and Graslitz (now Kraslice), Bohemia. The instrument sold well and became widely popular because it was inexpensive, small and easily portable, and relatively easy to play. Because it had fixed notes it demanded little prior musical knowledge, and no tuning was necessary. As a result of mechanization in the 1880s it became an instrument of mass production and was soon played in almost every country in the world. It reached its peak in the late 1920s when the German harmonica industry, which by then had gained a world-wide monopoly, was producing more than 50 million instruments a year. 22·8 million were exported to the USA, 5·4 million to Great Britain, 3·1 million to India and 1·3 million to Italy. German harmonicas were also sold in Argentina, Canada, Romania, the Netherlands, Mexico, South Africa, Brazil and Turkey.

Harmonica manufacturers increased their sales by adopting new advertising methods. Catalogues and leaflets flooded the shops and retailers, while posters, whirling display stands and complete shop window decorations were also on offer. Instructors travelled thousands of miles visiting schools, youth groups and scout camps to introduce young people to the instrument and to form harmonica bands. Mail order companies made the instrument available in even the most isolated areas. Famous movie stars such as Buster Keaton were hired for big screen advertisements, harmonica players gave recitals and talent contests were organized for children. In America, in 1925, the Christmas tree in the White House was decorated with 50 harmonicas which prompted huge media interest. In New York a weekly radio programme, the 'Hohner Harmony Hour', taught people how to play. The designs of the instruments and their boxes also boosted sales. They were an ideal medium for reaching specific social groups and manufacturers reacted quickly to changes in politics (fig.3), technology, fashion and culture (fig.4). A harmonica was produced in the shape of a boomerang for the Australian market which proved a big success (fig.5). In Britain an instrument in the shape of a bombshell named the 'Cartridge Harp' was sold during the Boer War. Images of politicians, kings and queens on the boxes, as well as national symbols and important events, were also used as a marketing ploy.

The USA became the heartland of the harmonica. Nearly all styles of popular music embraced the instrument. It was played in hillbilly and gospel music, but the blues became its real domain, the bent notes and whimpering sounds produced by the harmonica adding emotion to the guitar players' vocals. Musicians such as Sonny Terry, the two Sonny Boy Williamsons and Little Walter developed distinctive styles of playing, sometimes imitating the sound of trains and fox hunts. In the 1920s and 30s harmonica bands, pioneered by the Borrah Minevitch Harmonica Rascals, became popular on the vaudeville circuit. This kind of band reached a peak in the years of the recording ban from 1942 to 1944, when harmonica players substituted for all the other instrumentalists who were on strike. At that time players were not granted membership of the musicians' union because the harmonica was not recognized as 'a real musical instrument'.

In the 1920s the chromatic harmonica was developed; it was brought into prominence by Larry Adler in the late 1930s, followed later by Tommy Reilly. But despite the fact that serious works were writen for it by composers such as Darius Milhaud, Ralph Vaughan Williams, Malcolm Arnold and Arthur Benjamin, the harmonica was never fully accepted in the classical field. In jazz the harmonica gained respect through Jean 'Toots' Thielemans, who collaborated with Benny Goodman, Ella Fitzgerald and Oscar Peterson. At the end of the 20th century Howard Levy was exploiting its potential even further. The harmonica also regularly featured in pop

4. Packaging of Hohner's Beatles harmonica, mid-1960s (Harmonikamuseum, Trossingen)

5. 'Boomerang De Luxe' harmonica and box (Harmonikamuseum, Trossingen)

music from the 1960s onwards. It was used by bands such as the Beatles, the Rolling Stones and the Yardbirds, as well as by singers such as Bob Dylan, Neil Young and Bruce Springsteen.

Harmonica (ii). *See* MUSICAL GLASSES.

Harmonic degree. A not wholly adequate English rendering of the Schenkerian term STUFE.

Harmonichord. *See* SOSTENENTE PIANO, §3.

Harmonic rhythm. Literally, the rhythm or rhythmic pattern of harmonic progression in a musical passage; that is, the rhythm articulated by the chords that make up the progression. Usually, however, the term refers simply to the rate of change of chords, which could equally well be called 'harmonic tempo'.

See HARMONY and RHYTHM.

Harmonics. Sets of musical notes whose frequencies are related by simple whole number ratios. A harmonic series is a set of frequencies which are successive integer multiples of the fundamental (or first harmonic). For example, the set of frequencies 100, 200, 300, 400, 500 Hz ... is a harmonic series whose fundamental is 100 Hz and whose fifth harmonic is 500 Hz. In general, the *n*th harmonic of a series has a frequency which is *n* times the fundamental frequency.

1. General. 2. Wind instruments. 3. Strings

1. GENERAL. The importance of harmonics in various branches of music theory and practice derives ultimately from the way in which sound is perceived by the human ear and brain. The pressure fluctuations at the eardrum of a listener, which give rise to the sensation of sound (musical or otherwise), normally have a complex pattern or waveform. In 1822 the French mathematician Fourier showed that any waveform, however complex, could be decomposed into a set of simple sine wave components. If the waveform is periodic, corresponding to a regularly repeating pattern of pressure variation, then its sine wave components are members of a harmonic series. In this case it is difficult to perceive the components separately; they are fused into a single sound with a definite musical pitch. In contrast, a sound which has a set of components which are not harmonics (or close approximations to harmonics) will not normally be perceived as having a clear pitch, and the components can be heard separately. The pitch associated with a harmonic series is that of the fundamental or first harmonic; the frequency spectrum, which describes the relative strengths of the frequency components, helps to determine the timbre of the note, with an increase in the strength of upper harmonics giving an increased brightness to the sound.

The 19th-century acoustician Helmholtz developed a theory which related the dissonance of a musical interval to the degree of beating between the harmonics of the different notes forming the interval. Notes whose fundamental frequencies are related by small whole number ratios have reduced beating because of coincidences between the frequencies of the harmonics concerned (*see* INTERVAL); this may at least partially explain why several of the intervals between successive members of the harmonic series are of great importance in Western music. The intervals between the first 25 harmonics, to the nearest cent, are shown in Table 1, which also gives the pitches of the harmonics for a series whose fundamental pitch is C.

2. WIND INSTRUMENTS. A wind instrument, conventionally blown, generates a continuous pitched note corresponding to a periodic waveform and a harmonic set of frequency components. Usually several different pitches can be obtained for a fixed pattern of fingering or valve depression; these pitches are described as the natural notes of the instrument. The fundamental frequency of a natural note is determined by a complex interaction between the tone generator (air jet, reed or lips) and the air column of the instrument (*see* ACOUSTICS, §IV).

In most wind instruments, the air column has a series of resonances whose frequencies are close to being members of a harmonic series. It is important to realize, however, that in real wind instruments the air column resonances are never perfectly harmonic. The fundamental frequency of the sounded note is usually close to one of the air column resonances; to move from one resonance to another the player modifies the tone generator (for example, by changing the lip pressure on a reed), sometimes also opening a register key to modify the air column. When a new air column resonance has been selected, a new note is established, for which the fundamental frequency is close to the new air column resonance. Associated with the new note will be an exactly harmonic set of frequency components, since the new vibration pattern is periodic; but whether the interval between the new note and the old corresponds to an exactly harmonic interval will depend on the skill with which the instrument maker tuned the air column resonances, and the extent to which the player 'pulls' the note by adjusting the method of blowing.

Despite the fact that the natural notes obtained in the way described above are not necessarily exact harmonics, the term 'harmonic' is customarily used as a synonym for 'natural note', and this usage will be followed in the remainder of the article. On the flute, the second air column resonance is approximately an octave above the first, so that an octave harmonic can be obtained; subtle adjustment of blowing pressure and angle can correct the intonation as required. On the clarinet the second air column resonance frequency is approximately three times that of the first, so the second register is a 12th above the first, corresponding to the third harmonic. In the harmonic flute organ pipe, a small hole is bored approximately half way along the tube, at a point which is a pressure antinode for the first resonance of the air column. This effectively

TABLE 1

Harmonic	Interval from fundamental	Note	Interval between harmonics
1		C	1200 cents (octave)
2	1 octave	*c*	701·96 cents (perfect 5th)
3	1 octave + 701·96 cents	*g*	498·04 cents (perfect 4th)
4	2 octaves	*c′*	386·31 cents (major 3rd)
5	2 octaves + 386·31 cents	*e′*	315·64 cents (minor 3rd)
6	2 octaves + 701·96 cents	*g′*	266·87 cents
7	2 octaves + 968·83 cents		231·17 cents
8	3 octaves	*c″*	203·91 cents (major tone)
9	3 octaves + 203·91 cents	*d″*	182·40 cents (minor tone)
10	3 octaves + 386·31 cents	*e″*	165·00 cents
11	3 octaves + 551·32 cents		150·64 cents
12	3 octaves + 701·96 cents	*g″*	138·57 cents
13	3 octaves + 840·53 cents		128·30 cents
14	3 octaves + 968·83 cents		119·44 cents
15	3 octaves + 1088·27 cents	*b″*	111·73 cents (diatonic semitone)
16	4 octaves	*c‴*	104·96 cents (used by J. Wallis)
17	4 octaves + 104·96 cents		98·95 cents (used by J. Wallis)
18	4 octaves + 203·91 cents	*d‴*	93·60 cents (used by J. Wallis)
19	4 octaves + 297·51 cents		88·80 cents (used by J. Wallis)
20	4 octaves + 386·31 cents	*e‴*	84·47 cents
21	4 octaves + 470·78 cents		80·64 cents
22	4 octaves + 551·32 cents		76·96 cents
23	4 octaves + 628·27 cents		73·68 cents
24	4 octaves + 701·96 cents	*g‴*	70·67 cents (chromatic semitone)
25	4 octaves + 772·63 cents	*g♯‴*	

kills the first resonance, encouraging the pipe to sound at the second harmonic, an octave above the first.

On brass instruments, with their longer and narrower tubes, a greater number of harmonics is obtained by tightening the lips; these harmonics provide the only basic notes on the natural (i.e. slideless, keyless and valveless) trumpet and horn. Bach regularly wrote for the trumpet notes between the 3rd and 18th harmonics and once, in Cantata no.31, wrote for the 20th harmonic. Mozart wrote for the horn from the 2nd harmonic to the 24th (12 Duos for two horns K487/496*a*).

It can be seen from Table 1 that harmonics which are multiples of prime numbers above 5 (e.g. nos.7, 11, 13 and 14) do not correspond to recognized notes in the equal-tempered scale. However, on a C trumpet nos.7 and 14 can fairly easily be lipped up to *b♭*, and skilled trumpeters can lip no.11 down to *f″* or up to *f♯″* and no.13 up to *a″*; composers regularly wrote these notes. Some trumpeters were more skilled at this than others, as can be seen in the writings of 18th-century music historians. The problem was solved by means of hand-stopping on the horn and the use of a slide on the trumpet, before the invention of valves made it unnecessary to use these particular harmonics. Harmonics nos.17 and 19 are good approximations of *c♯‴* and *d♯‴*, but composers do not seem to have used them.

The timbral effects of harmonics have long been used in organ building. Although organ pipes possess a wide harmonic range, the effect can be heightened without forcing by adding further pipes whose fundamentals are the harmonics of the foundation or 'diapason' ranks. Since the 15th century these extra ranks have been made to draw separately, and the organist can synthesize a variety of tone qualities by combining stops corresponding to the 1st to 6th harmonics and compound stops of pre-set combinations of harmonics such as nos.6, 8, 12 and 16 (Mixture), 3, 4 and 5 (Cornet), 3 and 5 (Sesquialtera) or even occasionally nos. 5, 6, 7 and 8 ('harmonics'). Harmonics nos.1, 3 and 5 on flute-toned stops, for example, synthesize quite a good imitation of a clarinet. Some keyboard ELECTRONIC INSTRUMENTS also use this principle to synthesize various tone-colours, a technique known as additive synthesis. For further discussion of the acoustical basis of harmonics *see* SOUND, §6(ii).

3. STRINGS. It was noted in the previous section that the resonance frequencies of the air column in a real wind instrument are never exact harmonics; the same is true of the resonance frequencies of a real musical instrument string. An ideal, completely flexible string with absolutely rigid supports would have an exactly harmonic set of resonances; in practice these conditions are never met, and the resonance frequencies are usually slightly further apart than a true harmonic series (*see* INHARMONICITY). This results in an interesting distinction between plucked and bowed notes. Bowing a string in the normal manner gives a periodic vibration of the string, and the sound therefore has a frequency spectrum containing exact harmonics (neglecting some minor transient effects). When a string is plucked or struck, in contrast, each resonance of the string radiates sound at its own frequency, giving a slightly inharmonic frequency spectrum. The inharmonicity is usually negligible for violin and guitar strings, but is of considerable significance in pianos.

A bowed string normally vibrates at a frequency very close to that of the first string resonance. The mode of vibration corresponding to this resonance has a displacement antinode (point of maximum amplitude of vibration) at the centre of the string. Touching the string lightly at this point kills the vibration of the first mode, but leaves the second mode unscathed, since it has a node at the centre; the string then establishes a new vibration pattern, with a vibration frequency corresponding to the second string resonance. Neglecting the very small inharmonicity

of the string resonances, this new note is described as the second harmonic of the string.

Upper harmonics are often used for special effects on string instruments and on the harp. In the violin family, the use of harmonics of open strings, 'natural' harmonics ('flageolet tones'), was introduced by Mondonville in *Les sons harmoniques: sonates à violon seul avec la basse continue* op.4 (*c*1738). In his preface he explained how to obtain harmonics nos.2, 3, 4, 5, 6, 8 and above by lightly fingering at a node on any string. The sonatas make considerable use of harmonics nos.2, 3, 4 and 5. For the 2nd harmonic, the note is fingered in its normal position but only lightly. For the 3rd, 4th and 5th harmonics, the player fingers lightly as if to play a perfect 5th, 4th or major 3rd above the open string (or at other nodal points: at any multiple of an *n*th of the distance along the string for an *n*th harmonic); harmonics sounding a 12th, two octaves and a 17th above the open string are obtained. In ex.1*a* the special sign above each notehead

indicates that the player fingers in the positions of the lower notes on the *g* string and the upper notes (only) are sounded. The passage in ex.1*b* sounds as in ex.1*c*, assuming that both written notes are played as harmonics, the upper line on the *d′* string and the lower on the *g*. Mondonville also used 2nd (octave) harmonics on the *G* and *d* strings of the cello in the same sonatas. In modern notation there is either a small circle over the actual note or a diamond-headed note in the position of the nodal point to be touched (e.g. Ravel: *Ma mère l'oye*).

The most commonly used 'artificial' harmonics are 4th harmonics of the written fingered notes, which sound two octaves above those notes; they are obtained by fingering the written note and lightly touching the string a perfect 4th above, and are notated by writing diamond-headed notes a perfect 4th above the main note.

With a long string strongly bowed as many harmonics may be obtained as on the trumpet. This was the principle of the one-string TRUMPET MARINE, which could play trumpet music with a characteristic out-of-tune effect on the 4th and 6th of the scale.

On the harp 2nd harmonics, sounding one octave above, are obtained by plucking the upper half of the string with the side of the thumb and lightly touching the mid-point of the string with the ball of the thumb. Harp harmonics are designated by a small circle above the written normal note of the string.

Harmonic seventh. A term used by Euler and others for the interval between the fourth and seventh harmonic partials of a note. *See* SEPTIMAL SYSTEM.

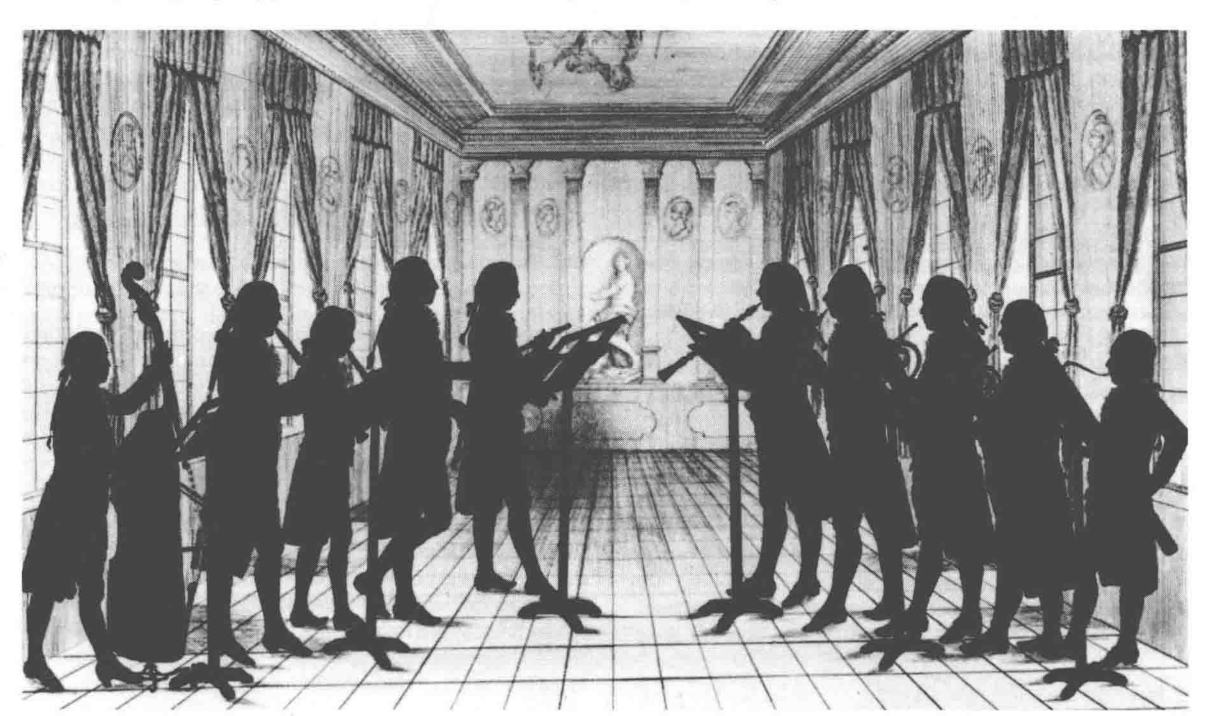
Harmonie (i) (Fr., Ger.). *See* HARMONY.

Harmonie (ii) (Fr., Ger.). A term used extensively in Germany and elsewhere to mean wind instruments or a small wind band (oboes, horns, bassoons etc.) employed by the aristocracy (and others) from the mid-18th century or a small military band (*see* BAND (i), §I, 2); the repertory for such a band is known as HARMONIEMUSIK (Fr. *musique d'harmonie*). In France, *harmonie* is distinct from *fanfare*, a band of brass and percussion players.

Harmonie Gesellschaft (Ger.). *See* HARMONY SOCIETY.

Harmonielehre (Ger.). The study, teaching or theory of HARMONY.

Harmoniemusik. In its widest sense, music for wind instruments. Within its ambit have come a variety of musical styles: for instance, the French commonly use the term 'harmonie militaire' to refer to military bands, even the massed wind bands of the Napoleonic era: Elgar wrote *Harmony Music* for his domestic wind quintet; the Germans refer to the wind quintet as the 'Harmonie-Quintett'. The title of Haydn's *Harmoniemesse* (1802) is explained by the prominence of wind instruments in that work. Mendelssohn's *Harmoniemusik* op.24 (1824) is for 23 wind instruments and percussion. In its more limited sense the term was fully current only from the mid-18th century until the 1830s when it was primarily applied to the wind bands (Harmonien) of the European aristocracy and the music written for them, and secondarily to their popular imitations in street bands (Mozart told in a letter to his father, 3 November 1781, of being serenaded by a street band containing two clarinets, two bassoons and two horns with his Serenade K375) and small military bands without heavy brass instruments or percussion. To translate 'Harmonie' simply as 'wind band' is vague, and as 'military band' generally wrong.



The nucleus of the Harmonie was a pair of horns, beneath which were bassoons (in early Harmoniemusik where there was only a single part two players would commonly play in unison) and above a pair of treble instruments, usually oboes or clarinets; by the 1780s it was standard practice to employ both oboes and clarinets in an octet Harmonie. Flutes, english horns and basset-horns were also occasionally used as alternatives, or in addition. The trombone, serpent, double bass and double bassoon were variously employed to give a 16′ quality: the instrument used depended upon availability, and such parts were often optional. The principal function of Harmonien, the only sources of musical entertainment for some patrons, was to provide background music at dinners and for social events, but they also performed in public and private concerts, where they occasionally accompanied a soloist.

Wind bands of clarinets, horns and bassoons were employed in France by the 1760s, and of clarinets and horns even before that. The Duke of Orléans, the Prince of Condé and the Prince of Monaco retained the three best known, and these were probably the first to give public performances, appearing frequently at the Concert Spirituel during the 1760s and 1770s. French military bands of the period were modelled on the court Harmonien, and in general remained no larger than a sextet even as late as the Revolution. English Harmoniemusik existed at a popular level in public performances given, for instance, in the open air at St James's by one of the small

military bands (of clarinets, horns and bassoons) and at Ranelagh Gardens in the 1790s; pairs of horns were often played in the pleasure gardens. At the court, only the Prince of Wales retained a *Tafelmusik*, during the 1780s. The repertory of French and English Harmoniemusik also differed: the French used *pièces d'harmonie*, which were a group of six or so short pieces normally selected and arranged from opera originals, whereas the English developed a peculiarly individual repertory of 'military divertimentos', long sequences of short movements which were a mixture of original, dance and military movements, sometimes with pieces taken from the works of other composers. Somewhat rarer was the sonata type, best exemplified by J.C. Bach's six sinfonias and four quintets or 'Military Pieces'.

In central Europe, the traditions of employing a wind band go back at least to the beginning of the 18th century: a band of oboes and horns was employed at the Prussian court in 1705 and bands of oboes, tenor oboes and bassoons were known even earlier. Harmoniemusik became more widespread in the second half of the century. Prince Paul Anton Esterházy retained a sextet *Feldmusik* from 1761, and the divertimentos for pairs of oboes, horns and bassoons recently written by the new Kapellmeister Haydn probably formed part of its repertory. When Emperor Franz I visited Prince Philipp Carl of Wallerstein in 1764 he heard French horns and clarinets play at table. Dinner music was written by Mozart for the Archbishop of Salzburg in the mid-1770s, and a wind band played such music in Albert's tavern in Munich in 1777.

The octet, or 'full Harmonie' was introduced in central Europe by Prince Schwarzenberg, who in about 1776 gathered together a group of oboe, english horn, horn and bassoon players. But it only came of age when in 1782 Emperor Joseph appointed a Harmonie consisting of the finest available performers on oboe, clarinet, horn and bassoon. This ensemble founded a Viennese tradition, its characteristics later mirrored by the ensembles of several other aristocrats, including Prince Esterházy and Prince Liechtenstein. The performers were first-class professional musicians, not liveried servants such as had often been employed for this kind of domestic music previously. The emperor's Harmonie, for example, originally consisted of Georg Triebensee and Went (oboes), the Stadler brothers (clarinets), Rupp and Eisen (horns) and Kauzner and Drobney (bassoons), all members of the Burgtheater orchestra. Their repertory was technically and musically more advanced than anything written earlier; there can be little doubt, for instance, that Mozart's two serenades, K375 and 388/384*a*, and Krommer's 13 Harmonien were composed for one of the Viennese Harmonien. The greater part of it, and that which they used principally as dinner music, was something completely new, although it undoubtedly had strong connections with the French *pièces d'harmonie* of the 1760s and 1770s. This consisted of full-length transcriptions of opera and ballet scores. It was normal for these to contain 12 or more near-complete movements, and sometimes even the recitative was included. It was rare for a composer to make such arrangements himself (although Mozart undertook such a task with *Die Entführung aus dem Serail*; letter to his father, 20 July 1782); usually it was the work of the director of the Harmonie that played it. Thus Went made many transcriptions for the emperor's Harmonie, and Joseph Triebensee and his successor, Sedlak (who was responsible for the authorized transcription of Beethoven's *Fidelio*), still more for Prince Liechtenstein's Harmonie. The emperor's library acquired many of their transcriptions. The influence of this Viennese practice was widespread throughout Europe; Maximilian Franz, in taking his Viennese Harmonie to Bonn when he

Wind band of the Prince of Oettingen-Wallerstein, c1783: silhouette on gold ground, 1791 (Neues Schloss, Wallerstein)

became Elector of Cologne in 1784, pioneered the new vogue in Germany and the Lobkowitz Harmonie was probably the leading exponent of the Viennese tradition in Prague. Many Harmonie transcriptions were published throughout Europe during the next half-century, and many more existed in manuscript in various court and monastery libraries. Probably the best-known of all transcriptions is Mozart's of 'Non più andrai' from his *Le nozze di Figaro* (along with music by Sarti and Soler) as dinner music in *Don Giovanni*; he also used a Harmonie ensemble for a serenade in the garden scene of *Così fan tutte*.

The privations caused by the Napoleonic wars forced most of the Viennese aristocracy to discontinue patronage of their Harmonien, though those of the emperor and Prince Liechtenstein apparently survived with little interruption even into the 1830s. In Germany the Duke of Sondershausen retained his until 1835 when it was replaced by a full orchestra. References to Harmoniemusik beyond this date are rare.

European Harmoniemusik was imported by emigrant Moravians into the USA, where it remained in vogue well into the 19th century. It became a custom to play Harmoniemusik in the evenings from the roof of the Single Brethren's House at Bethlehem, Pennsylvania, and 14 Parthien for clarinets, horns and bassoons were written by the Moravian composer David Moritz Michael for this purpose. He was also responsible for the Harmoniemusik which accompanied a peculiar local event at Bethlehem every Whit Monday (*c*1809–13), a boat trip down the Lehigh River to a whirlpool and back. The music was planned to reflect the moods of each phase of the journey.

Harmonika. *See under* ORGAN STOP (*Harmonia, Physharmonika*).

Harmonium. The name given by ALEXANDRE-FRANÇOIS DEBAIN to a small REED ORGAN patented in 1842. This original instrument had a three-octave keyboard, one set of reeds and a single blowing pedal. The name was later extensively used in England and on the Continent to refer to all reed organs, of whatever size or construction. Larger instruments in Germany were sometimes called 'Kunstharmonium'.

Such instruments were widely disseminated, especially by the colonial powers, in Africa and India, where they came to play an important role in local traditions. The harmonium was introduced into India by French missionaries, probably around the middle of the 19th century (Indian terms for it are hārmo ṇiam, hārmoṇiā, ārmoṇiā). Though upright models are found, the most common is a small portable instrument set in a box. Models are made in various sizes with a range of stops and couplers. The instrument is usually played while sitting on the floor, the player fingering the keyboard with one hand and pumping a bellows at the back with the other. Its use is widespread in the provision of heterophonic contrapuntal texture for vocal music (where it is often played by the singer himself) in a wide range of classical and urban popular styles. It is less frequently found in village music contexts. It has for a long time been manufactured in India and Pakistan; Palitana, in Gujarat, is regarded as a centre of manufacture of the reeds.

As it is a fixed-pitch instrument, its use in Indian music has been criticized (and was banned on Indian radio for some years) on the grounds that it does not conform to the traditional flexible intonation.

Harmony (from Gk. *harmonia*). The combining of notes simultaneously, to produce chords, and successively, to produce chord progressions. The term is used descriptively to denote notes and chords so combined, and also prescriptively to denote a system of structural principles governing their combination. In the latter sense, harmony has its own body of theoretical literature.

1. Historical definitions. 2. Basic concepts: (i) The chord (ii) Chordal inversion (iii) Dissonance (iv) Constructional technique and note relationships. 3. Historical development: (i) To the end of the Baroque (ii) The Classical era (iii) The Romantic era (iv) Early 20th century (v) Late 20th century. 4. Theoretical study. 5. Theory since 1950. 6. Practice.

1. HISTORICAL DEFINITIONS. In Greek music, from which derive both the concept and the appellation, 'harmony' signified the combining or juxtaposing of

disparate or contrasted elements – a higher and a lower note. The combining of notes simultaneously was not a part of musical practice in classical antiquity: *harmonia* was merely a means of codifying the relationship between those notes that constituted the framework of the tonal system. In the course of history it was indeed not the meaning of the term 'harmony' that changed but the material to which it applied and the explanations given for its manifestation in music.

According to the conception of classical writers, taken over by medieval theorists, harmony was a combining of intervals in an octave scale – a scale understood not as a series but as a structure. Consonances based on simple, 'harmonic' numerical proportions – the octave (2:1), the 5th (3:2) and the 4th (4:3 – form the framework of a scale (*e′–b–a–e*), and in addition to the octave structure resulting from the interlocking of consonances, the consonance itself also qualifies as harmony, as a combining agent (*see* CONSONANCE, §1).

In the Middle Ages the concept of harmony referred to two notes, and in the Renaissance to three notes, sounded simultaneously. An anonymous writer of the 13th century (*CoussemakerS*, i, 297) defined the *concordantia* (the simultaneity employed in polyphonic music, and not merely used to test out the relationship between notes) as 'the harmony [*harmonia*] of two or more sounds produced simultaneously [*in eodem tempore prolatorum*]'. Gaffurius and Zarlino spoke of three-note harmonies, though Gaffurius (A1496, bk 3, chap.10) considered only combinations of octaves, 5ths and 4ths. Zarlino (A1558, bk 3, chap.31) was the first also to include in his concept of harmony triads consisting of 5ths and 3rds; this he was able to do because, besides perfect consonances, he defined imperfect ones – the 3rds – by means of simple, 'harmonic' numerical proportions (5:4 and 6:5) rather than by the complicated Pythagorean proportions.

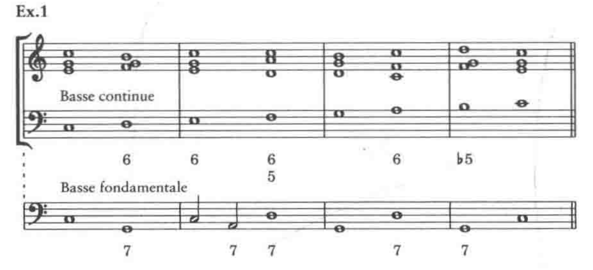
In addition to the simultaneous sounding of two or three notes in isolation, the concept of harmony takes in the relationships between such sounds. In 1412 Prosdocimus de Beldemandis designated the regulated alternation of perfect and imperfect consonances as 'harmony' (*CoussemakerS*, iii, 197); in the 17th century, among other prerequisites for the composition of *contrappunto moderno*, Christoph Bernhard (ed. Müller-Blattau, A1926, p.40) described 'harmonic counterpoint' as an articulated sequence of 'well-juxtaposed consonances and dissonances' and d'Alembert, Rameau's commentator and popularizer, defined *harmonie*, in contradistinction to *accord* (three or four notes sounded simultaneously, forming a unit), as a progression of simultaneously sounded notes intelligible to the ear: 'l'harmonie est proprement une suite d'accords qui en se succédant flattent l'organe' (1766, pp.1–2).

The word 'harmony' has thus been used to describe the juxtaposition of the disparate – of higher and lower notes – both in the vertical (in the structure of chords or intervals) and in the horizontal (in the relationship of intervals or chords to one another). There is a widespread tendency, probably too deep-rooted to be corrected, to take harmony as meaning no more than the vertical aspect of music, disregarding the fact that chordal progression is one of the central categories dealt with in the teaching of harmony. This tendency entails a bias that not only misrepresents the terminology but can also influence the listener's way of hearing, which is not wholly independent of a verbal understanding of what is involved in music.

Moreover, the concept of harmony refers less to actual musical structures than to the structural principles underlying intervals and their combinations or chords and their relationships. (In Riemann's theory of harmonic function, a harmony is the essence of all chords having a like function and thus exists at a much more abstract level than chords with their inversions and notes 'foreign to the harmony'.) However, harmony considered as a structural principle is just as much an intrinsic part of ancient and medieval music as it is of the tonal system of modern times. The two-note consonance constituted the foundation of the old tonal system, the three-note consonance that of the new. From the 18th century onwards, the scale of any key has been explained as being the result of a reduction of the three principal chords, the tonic, dominant and subdominant: C–E–G + G–B–D + F–A–C = C–D–E–F–G–A–B–C.

2. Basic concepts.

(i) The chord. The harmonic theory of recent times, which evolved gradually between the 16th and the 18th centuries, is based on the idea that a chord – three or four notes sounded simultaneously – is to be taken as primary, as an indivisible unit. While in earlier counterpoint two-part writing was regarded as fundamental (with four-part writing as a combination of two-part counterpoints), in the later study of harmony a chord was regarded as a primary element rather than as an end-product and was indeed considered as such regardless of the difference between homophonic and polyphonic style. (J.S. Bach's counterpoint, despite the complexity of its polyphony, was undoubtedly based on harmony and not merely regulated by it: the harmonic aspect arises as a foundation, not as a resultant.)

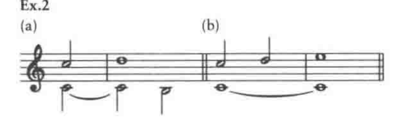


In the idea of the chord as a given entity, it is necessary to distinguish between two aspects: that of psychology and that of musical logic. Stumpf defined or characterized the psychological entity as a 'fusion' of the notes in a consonant triad (and to a lesser extent in the chord of a 7th too). The logical factor, however, is to a large extent independent of the psychological, although the conception of a chord as a logical entity could not have arisen in the first place without the psychological phenomenon of fusion. Whether, in terms of logic, a chord presents an entity, and not merely a combination of intervals, depends on the function it fulfils in the musical context. A chord each of whose notes is resolved in contrapuntal fashion will nevertheless be conceived as a primary element in the mind of the composer if – for example as a supertonic preceding the dominant and the tonic – it is intrinsic to the harmonic continuity.

(ii) Chordal inversion. The doctrine of chordal inversion, namely the proposition that the root-position chord C–E–G, and 6-3 chord E–G–C and the 6-4 chord G–C–E are different manifestations of an identical harmony and that the bass note of the 5-3 form (C–E–G) must count as the fundamental note, the basis and centre of reference (*centre harmonique*) of the other notes, was for a long time thought to be the remarkable and epoch-making discovery of Rameau; on the basis of this theorem he was held to have been the founder of harmonic theory. The concept of the inversion had in fact been anticipated by a number of theorists of the 17th and early 18th centuries

– by Lippius (A1612) and his follower Baryphonus (A1615), by Campion (A*c*1613), by Werckmeister (A1702) and also by the ingenious dilettante Roger North (*c*1710). It was not anticipated, as Riemann claimed, by Zarlino. What was decisively new in Rameau was not the theorem as such but its incorporation into a comprehensive theory of musical coherence, in which the conception of the chord as a unit, primary and indivisible, the concept of the root note, the doctrine of the fundamental bass (*basse fondamentale*) and the establishment of a hierarchy between the fundamental degrees were interdependent elements, complementing and modifying each other.

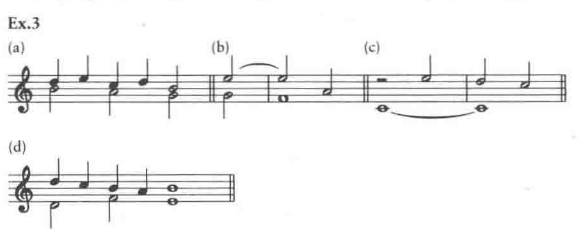
The roots of chords (which are no longer their bass notes when the chords are inverted) link together to give the *basse fondamentale*. The latter is a purely imaginary line, in contrast to the basso continuo, which is the sequence of actual bass notes. It is a construction designed to explain why a progression can become a compelling, intelligible coherence rather than a mere patchwork of separate chords. According to Rameau (whose theories were further developed in the 19th century by Simon Sechter) the cohesive principle is the fundamental progression, from root to root; in fact, the 5th is reckoned a primary, stronger fundamental progression, the 3rd a secondary, weaker one. A fundamental progression or apparent progression of a 2nd (according to Rameau the 2nd, which as a simultaneity is a dissonance, is also not self-sufficient as a bass progression) is reduced to progressions of a 5th: in the chord sequence G–C–D minor, C is indeed a tonic degree (I), related to G as the dominant (V), but it is also a fragment of the 7th on the submediant (VI⁷), related to the supertonic (II) – the root A being introduced for the sake of the 5th progression A–D: see ex.1 (Rameau, B1722, p.204). For similar reasons, the



Ex.1

chord F–A–C–D in C major is considered as a triad of F major with added 6th (*sixte ajoutée*) provided that it is followed by the C major triad (fundamental 4th progression); on the other hand it is considered an inversion of the 7th on D if it moves on to G major (fundamental 5th progression): F–A–C–D is a chord with two applications (*double emploi*).

(iii) Dissonance. The idea that a chord presented not a mere combination of intervals but a unit, primary and indivisible, was associated with a far-reaching change in the concepts regarding the nature and the functions of dissonances. In counterpoint before 1600, a dissonance in strict writing was a relation between two voices; and the dissonant note was regarded as being the one that had to advance to the resolution of the dissonance, hence in ex.2*a* the lower note, in ex.2*b* the upper. (The second, or



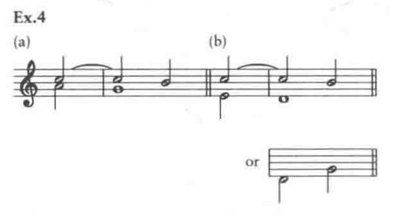
Ex.2

'reference', voice could either remain on the same note or move to a new one at the resolution.) A suspension on the strong beat is produced by a step in the 'reference' voice (ex.2*a*), and a dissonant passing note on a weak beat by a step in the voice making the dissonance (ex.2*b*).

From the 17th century the formation of dissonances in strict counterpoint was complemented by new approaches that extended the system of contrapuntal writing without violating any of its fundamental characteristics. But at the same time it was confronted with phenomena grounded in basic principles of a different kind, relating to other categories of musical listening. Among the new approaches to dissonance that merely extended the system were some that characterized the modern counterpoint of the 17th century, the *seconda pratica*: for example, changing note quitted by downward leap (ex.3*a*), the

Ex.3

suspension resolved by downward leap (ex.3*b*), and the accented passing note (ex.3*c*), which in Palestrina's style was permitted only in a rudimentary form as a weakly accented passing note of the duration of a *semiminima* (ex.3*d*).



These dissonances, which are to be found in contrapuntal practice, in no way invalidate the strict rules of counterpoint. They require, if their intended effect is to be understood, an awareness of the norms with which they conflict. It is precisely as exceptions to the conventional rule, which they infringe and in so doing confirm as valid, that they gain their expressive or symbolic meaning: the downward-leaping suspension (ex.3*b*) owes its character of pathos to its very deviation from the normal resolution by step.

The modern counterpoint of the *seconda pratica* may seem in consequence an accumulation of licences, of artificial infringements of earlier rules. On the other hand, the distinction between dissonant chords and notes foreign to the chord (or to the harmony) involved a fundamentally new conception of dissonances. It was this differentiation that gradually came to permeate compositional practice from the 17th century onwards and theory from the 18th. Not only was the stock of approaches to dissonance changed, but at the same time so was the basic idea of what a dissonance actually was.

In harmonically based writing a dissonance is accounted a dissonant chord – that is, a chord of which the dissonance is an essential component – if two conditions apply: if, in the first place, the dissonant chord can be meaningfully explained as a piling up of 3rds ('meaningfully' because at a stretch it is possible to reduce absolutely any chord to piled-up 3rds); and if, in the second place, the resolution of the dissonance is associated with a change of harmony (a change of root, which moreover will be in some part the result of the dissonance's pull towards resolution). Thus, according to the modern conception (Kurth, C1920), the dissonance factor is not so much a note (F as an adjunct to the harmony G–B–D) or an interval (the dissonance G–F as distinct from the

consonances G–B and G–D) as rather the chord, which as a whole is permeated by the character of dissonance, originally a property of individual intervals.

Notes foreign to the chord (or to the harmony) are distinguished from fundamentally dissonant chords in that, in the first place, they appear as dissonant adjuncts to the chords (Kirnberger spoke of 'incidental' dissonances) and, in the second place, their resolution is not dependent on a change of harmony (ex.4). In 16th-

century counterpoint there was no essential difference between a suspended 4th (ex.4*a*) and a suspended 7th (ex.4*b*). In the 18th and 19th centuries, however, the suspended 4th was regarded as a note foreign to the chord: it is neither intelligible as a result of piling up 3rds (unless one accepts the sort of far-fetched explanation propounded by Sechter in 1853), nor does the resolution of the dissonance correlate with a change of harmony. However, the note C in ex.4*b* is not free from ambivalence: if, either in the imagination or in musical reality, the root notes D and G are inserted underneath, a fundamental discord (II^7) results; but if the C is merely conceived as a suspension to a 6-3 chord on D the dissonance is a note foreign to the chord.

(iv) Constructional technique and note relationships. In a composition whose structure is determined by rules governing the progress of the *basse fondamentale* and the treatment of dissonances, two factors can be distinguished, just as in counterpoint at an earlier date. These factors are in themselves abstract, but their combined effect forms the basis from which actual composition proceeds. One of these is constructional technique, the other the regulation of relationships between the notes.

In earlier, more precise musical terminology, it was the regulated note relationships, as distinct from constructional technique or counterpoint, that were covered by the term 'harmony' (in keeping with the ancient and medieval meaning of the term). From the 18th century onwards both aspects of composition became subsumed in the concept of harmony – that is, in addition to the note relationships, the chord progressions built on a *basse fondamentale*, for which the expression 'harmony' was used in an attempt to distinguish it from 'counterpoint'. This constitutes a linguistic confusion and produces a blurring of the distinction between constructional technique and harmony, in the narrower sense of the word, that has marred many methods of teaching harmony.

The rules of early counterpoint refer not to precise, diastematically defined intervals such as major or minor 3rds but to classes of intervals – 3rds in general. And a distinction must be made between the rules of counterpoint, which are exclusively concerned with abstract musical construction, without regard to the difference between minor, major and augmented 6ths, or between perfect 4ths and tritones, and the directions for a harmonic (in the stricter sense of the word) arrangement of the composition – directions formulated as rules governing the use of *mi* and *fa*: a diminished 5th appearing in the place of a perfect 5th did not count as a dissonance, for whose legitimate application there were constructional rules, but as a 'non-harmonic note relationship' (*relatio non harmonica*) which was supposed to be avoided (though could not always be avoided in fact; many of the controversial problems of accidentals are insoluble). Tinctoris spoke of a *falsa concordantia* in contradistinction to a *dissonantia* (*CoussemakerS*, iv, 124*b*) in order to indicate the discrepancy between the contrapuntal (*concordantia*) and the harmonic (*falsa*) import of the interval. The essence of the 'true concords' (*verae concordantiae*), the *relationes harmonicae*, is represented by the hexachord that excludes both the chromatic intervals and the tritone.

Constructional technique and note relationships, which normally work together in perfect agreement, can sometimes get out of proportion with one another: in technical terms, the mannerism of Gesualdo depends on the device of clothing what is in abstract thoroughly regular, even conventional, counterpoint in an excess of chromaticism. A similar divergence between simplicity of constructional technique and complexity of note relationships can occasionally be observed in late Baroque tonal structure, in sequences of 5ths in the bass: for instance, the C major chord progression I–IV–VII–III–VI–II–V–I can be realized chromatically as C major–F major–B major–E minor–A major–D major–G♯ major–C♯ minor; and it is to the simplicity of the *basse fondamentale*, made up of steps of a 5th, that the tonally extremely complicated chord progression (a headlong modulation from C major via E minor and D major to C♯ minor) owes its compelling, intelligible effect.

Since the 17th century, keys have been constituted by note relationships as well as by constructional means. Taken in itself, a major or minor scale is not sufficient to define a key; the fact that a chord progression remains within the bounds of a major scale in no way precludes the possibility of its remaining tonally indeterminate. Conversely, as has already been demonstrated, a sequence of 5th steps (which in its tonally self-contained form is often spoken of in German parlance as a 'Sechter cadence') can lead into remote and alien areas of tonality rather than circumscribe a particular key. It is only by correlating a given scale with a fundamental bass relying primarily on steps of a 5th that a key can be unmistakably defined.

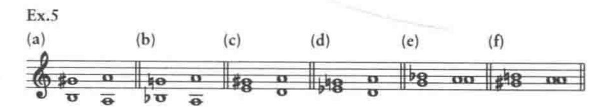
The cadence I–IV–V–I, or tonic–subdominant–dominant–tonic, relies first on the wholeness of the scale, second on the clear effect of the 5th progressions in the fundamental bass and third on the effect of 'characteristic dissonances' (Riemann) in establishing continuity: these would include the 7th on V and also the 6th on IV (related to I, the 6-5 chord is a subdominant with *sixte ajoutée*, and with respect to V it is an inversion of II^7, in which the 6th emerges as the root and the 5th as a dissonance requiring resolution). Individual features, since they alone do not define the cadence, may be altered or even omitted without the sense of the whole being lost; the scale may be chromatically altered, the subdominant replaced by a double dominant or a Neapolitan 6th, and the characteristic dissonances may be dropped.

Rival theories maintain either that the key is founded on the scale or that the scale is founded on the key. What is known as the theory of *Stufen*, or degrees, ascribes intrinsic importance to the scale. It asserts that seven

chord degrees coalesce into a key by virtue of the fact that they form a unique scale. It sees the sequence of 5ths (I–IV–VII–III–VI–II–V–I), which passes through all the degrees of the scale, as a paradigm of the comprehensive realization of a key. (The emphasis on the gamut as the foundation of a key would have impeded the explanation of chromatic alterations as tonal phenomena if the theory of *Stufen* had not been linked by Sechter with a theory of fundamental steps; the alteration of the supertonic degree to a chord of the Neapolitan 6th, which does not fall within the scale, is accordingly justified by the fact that the altered degree, like the unaltered one, is usually associated with a step of a 5th leading to the dominant, thereby integrating the degree into the tonality.)

In contrast to the theory of *Stufen*, Riemann's theory of function starts from the tonic–subdominant–dominant–tonic cadence in order to establish the key, and deduces the scale by analysing the three principal chords (C–E–G, F–A–C, G–B–D = C–D–E–F–G–A–B–C). The chords and their relationships to each other are taken as given; the scale results from them. Furthermore, as the derived phenomenon, the secondary product, the scale is susceptible to virtually unlimited alteration without the key becoming unrecognizable; by interpolations and chromatic inflections in the chords, hence by modifications whose consequence is an extension of the scale, the cadence is in no way restricted in its function of defining the key, but rather it is aided.

(v) Tonality and key. The term 'tonality' has now become widespread in addition to the older term 'key'. It was first used by Choron in 1810 to describe the arrangement of the dominant and subdominant above and below the tonic. In 1844 it was defined by Fétis as the essence of the 'rapports nécessaires, successifs ou simultanés, des sons de la gamme'. Its currency during the long and complex history of the concept is due to a variety of causes. In the first place the expression 'tonality' designates the intrinsic governing principle of key (Fétis: 'le principe régulateur des rapports') as distinct from its outward aspect, the individual key. In the second place, the concept of key is usually associated with the idea of a given diatonic scale; but tonality also covers chords with notes foreign to the scale (and even with roots foreign to the scale) provided that they are integrated into the tonal context and do not bring about any impression of a change of key. And in the third place, tonality can be taken to mean a complex of several related keys, a broad key-area.



Thus on the one hand the term refers to the principle that governs a key from within, instead of to the key's audible exterior. On the other hand it refers to broader relationships, the consequence of carrying the intrinsic principle a stage further and transcending the bounds of the key as it is defined in material terms. Thus Réti (1958), in order to emphasize the specific relation of the notes to a centre, a basic note or chord, in place of the general 'rapports des sons', distinguished between the concept of tonality and that of 'tonicality' (*see* TONALITY).

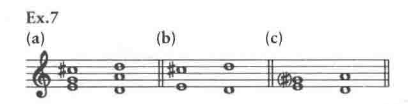
3. HISTORICAL DEVELOPMENT.

(i) To the end of the Baroque. That modern tonal harmony began about 1600 has been a commonplace since Fétis, who extolled certain spectacular dissonances in Monteverdi's madrigal *Cruda Amarilli* as the beginning of the modern era in music. The standard account of this as the replacement of a contrapuntal 'horizontal' style by a harmonic 'vertical' way of writing, however, is unsatisfactory.

It was not that counterpoint was supplanted by harmony (Bach's tonal counterpoint is surely no less polyphonic than Palestrina's modal writing) but that an older type both of counterpoint and of vertical technique was succeeded by a newer type. And harmony comprises not only the ('vertical') structure of chords but also their ('horizontal') movement. Like music as a whole, harmony is a process. (For discussion of the principles of consonance underlying medieval counterpoint *see* DISCANT; *see also* ORGANUM and COUNTERPOINT.)

To be understood from a historical point of view, tonal harmony must be seen in the context of compositional technique in the 15th and 16th centuries, a technique founded first on the opposition between imperfect and perfect consonances, second on the principle of the semitone as a means of connecting consonance with consonance (the leading note), and third on the treatment of dissonances as relationships between two voices. The progression from an imperfect to a perfect consonance – from a 6th to an octave, or from a 3rd to a 5th or unison – was experienced as a tendency comparable to that 'instinctual life of sounds' of which Schoenberg spoke in tonal harmony. And intervallic progressions that contain movement by a semitone in one of the voices were reckoned specially intelligible or compelling (ex.5).

As a means of effecting semitone steps, chromatic alteration, or MUSICA FICTA, often (though not always) led to progressions that in retrospect look like anticipations or prefigurations of tonal harmony. The consonance with the leading note (ex.5*a*) can be heard as a dominant. But the Phrygian cadence (ex.5*b*) was understood as a self-contained progression and not as a fragment (subdominant–dominant) of a D minor cadence; and the fact that in spontaneous chromatic alteration the Dorian (and also the Aeolian) form of the progression 6th-to-octave (ex.5*a*) could be exchanged for the Phrygian (ex.5*b*) is just as alien to tonal feeling (which tends towards harmonic unambivalence) as the alteration of the 3rd before the 5th (ex.5*c–d*). (*See also* MODE, §III, 5.)



That dissonances were treated as relationships between two voices means that they were neither integrated into chords nor contrasted with chords as notes foreign to the harmony. The 7th, C, in ex.6 is neither a component of a

chord (II^7) which is in itself dissonant nor a dissonant suspension preceding a 6–3 chord on the seventh degree of the scale; it is a dissonance in relation to D and a consonance in relation to F.

Tonal composition using chords, as it gradually evolved during the 17th and 18th centuries, can be distinguished from modal composition using intervals, first (as already mentioned) by its conception of the chord as a primary, indivisible unit, second by its referral of every chord to a single tonal centre and third by its segregation of intervallic

dissonances into the categories of dissonant chords and notes foreign to the harmony. In modal composition using intervals the penultimate chord of the Dorian cadence (ex.7*a*) was conceived as a secondary combination of two

intervallic progressions (ex.7*b–c*); and the progression could be specified as cadential by altering the 3rd, G, to G♯. In tonal harmony the chord of the 6th (ex.7*a*) presents itself as an indivisible unit and as a fragment of a dominant 7th chord on A, whose root has to be supplied by the imagination if the tonal coherence (dominant–tonic) is to become discernible. The 3rd, G, thus becomes a dissonant 7th which is resolved downwards on to the 3rd of the tonic chord.

The change in quality between the penultimate chord and the final chord, perceived tonally, no longer lies in the antithesis of imperfect and perfect consonances but in the contrast between the chord of the 7th and the triad. This change is experienced not merely as a juxtaposition but as a logical sequence in which the second chord forms the goal of the first.

The integration of all the chords, and not merely some of them, in a tonal context related to a single centre was a new principle in the 17th century. While in the modal use of intervals in the 15th and 16th centuries the cadence points (properly clausulas) represented one of the means of defining a modal centre, the intervallic progressions that occurred elsewhere in the context than at cadence points remained on the whole modally neutral.

The relationship of the practice of figured bass to the development of tonal harmony was an ambivalent one. On the one hand, figured bass encouraged the conception of the chord as the primary unit by designating vertical structures; the simultaneity was thought of as a tactile gesture rather than as the result of interwoven melodic parts. On the other hand, the experiencing of chords as based on roots, and the perceiving of the relationships between roots that build harmonic cohesion, were obstructed by the practice of figured bass: the emphasis on the actual basso continuo discouraged the awareness of the imaginary fundamental bass that was essential to the harmonic logic. Those theorists who in the 17th century formulated the principle of chordal inversion and root (Lippius in 1612 and Baryphonus in 1615) did not indeed concern themselves with figured bass but rather with the technique of Lassus; and Rameau's decisive establishment of the concept of inversion is more a symptom of the end of the figured-bass era than a manifestation that is typical.

The relationship of *contrappunto moderno* ('licentious' counterpoint) to tonal harmony was similarly complex in the 17th century. The dissonant structures that deviate from the norms of classical counterpoint can certainly often be interpreted from the point of view of tonal

harmony, though by no means always. The 7th on the subdominant (ex.8*a*) soon became established as a dissonant chord that did not have to be prepared in order to be understood. (In Monteverdi, IV^7 is an even more frequent 7th than V^7.) But the irregularity at the downward-leaping suspension (ex.8*b*) does not give it independent status as a harmonic phenomenon; it is rather a case of a dissonant figure which is understood in terms of intervallic writing and whose pathos derives from the fact that it forms a striking exception to the conventional resolution.

The old and the new ways of conceiving music were inextricably interlinked in the minds of many contemporaries. Bernhard, who sought to codify 'licentious' counterpoint about 1660 (ed. in Müller-Blattau, A1926, pp.84–5), described in his explanation of the passage in ex.9*a* the dissonant 4th (*c–f″*) as the result of an 'ellipsis'

– an omission of the preparatory consonance *d–f″* on the first beat. Thus, in keeping with the 16th-century way of listening, *f″* is a dissonant suspension leading to a resolution on the consonance *c–e″*. However, Bernhard made his own reduction (ex.9*b*), intended to demonstrate the real sense behind the unreal outward manifestation. This shows how the traditional interpretation has become coloured, or even overshadowed, by an interpretation based on tonal harmony. Since the underlying progression II–V–I, consisting of two steps of a 5th, is stronger and more intelligible than II–I–V–I, the bass note *c* should be heard as a passing note (and is thus omitted in the reduction). Thus *f″*, as the 3rd on the supertonic, is a consonance and *e″* a dissonant passing note; and the fact that it forms a consonance with the equally dissonant transitional *c* in the bass is secondary.

By about 1600 chromaticism had reached a culmination that it is difficult to distinguish from excess. During the 17th century this became both simplified and tonally integrated, the simplification being a necessary part of the integration. Gesualdo's technique, which in historical terms represents an end and not a beginning, was virtually without consequence for the development of tonal harmony. It relied on the use of extreme chromaticism to render a contrapuntal sequence 'strange' while completely obeying the rules of traditional intervallic writing by, for instance, displacing a 'reference note' chromatically by a semitone in the course of resolving a dissonance over it.

Chromaticism can qualify as being tonally integrated when the directional pulls of the leading notes, which arise through chromatic alteration, are in agreement with the fundamental progression. The sense of the plagal cadence in a major key (IV–I) is underlined by chromatic alteration of the subdominant chord to a minor triad, just as the sense of the perfect cadence in a minor key (V–I) is underlined by converting the dominant chord to a major triad. And the indeterminate direction of the 5th on the chord of the dominant can be resolved by raising or lowering (G–B–D♯–F or G–B–D♭–F) or by both at once

(what Kurth termed *Disalteration*: G–B–D♭–D♯–F; ex.11 below). Chromatic alteration gives the note a directional tendency.

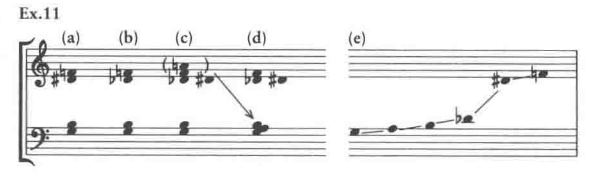
(ii) The Classical era. Among the most striking features that distinguish harmony after about 1730 from that of the Baroque era are the slowing down of harmonic rhythm, the change in function of the bass and the presence of a formally constructive harmonic technique leaning on the principle of correspondences. The fact that the rate of harmonic rhythm (measured as the average distance between changes of harmony) became slower was associated with the stylistic ideal of *noble simplicité* as opposed to Baroque ostentation; at the same time, it was necessary if the tonal outline of larger-scale form was to be accessible to a public comprising more ordinary music lovers than connoisseurs. In instrumental music above all, where the music's unity had to be conveyed without the assistance of a text, it was necessary to provide a view of the tonal layout of any movement that was intended to be a closed form, so that it should not appear to be a mere jumble of ideas.

The music of the Baroque era was undoubtedly tonal, but it evolved a type of tonal harmony different from the Classical or Romantic. In contrast to Rameau's doctrine, the real basso continuo could by no means always reasonably be reduced to a *basse fondamentale*; many of the harmonic procedures were determined by genuine melodic movement in the bass rather than by an imaginary fundamental progression. (In the 17th-century bass formulae the melodic formula itself appears as the primary factor, and the harmonic elaboration, which is variable, as the secondary factor.) On the other hand, after the decline of figured bass, which represented not only an aspect of performing practice but also a form of musical thought in its own right, it was the tonal functions that established harmonic continuity serving in the background of the music as an abstract regulative force. It was only in the pre-Classical and Classical eras that harmony was moulded into the system that Riemann described. The bass, expressed with emphasis, took the guise of an audible signal of the intended tonal functions, and not, or only occasionally, that of a part on whose individual progress the harmonic sequence depends.

The harmony of the Viennese Classical composers, if it is to be properly understood rather than merely identified by chord names, must be analysed in relation to metre, syntax (i.e. the laws by which musical phrases combine to make larger units) and form. The metrical relationship between anacrusis and termination, or between weak and strong beats, and also the syntactical relations between statement and answer, or between antecedent and consequent, are all relationships of tonal harmony: syntax is founded on, or partly determined by, harmony, and conversely harmony derives its meaning from the syntactical functions it fulfils. Tonal functions do not exist in their own right. They arise as a result of chords of differing tonal strengths – some prominent, some fleeting. And the strength with which a chord fulfils the function of, for example, the dominant depends on its position within the surrounding metrical and syntactic schemes. These factors determine whether it is simply a passing chord or a half-close marking the end of an antecedent phase. The fact that musical forms spanning hundreds of bars are sustained in their effect as a unity primarily through a comprehensible layout of keys was well known to 19th-century theorists such as A.B. Marx. But harmonic theory has still not really accepted the idea that Classical harmony, whose theory it purports to be, cannot be adequately understood other than in relation to musical form.

The meaning of any sequence of chords must depend on where, formally, it occurs. The widespread theory that in Classical music all harmonic relationships can be seen as expansions or modifications of the cadence is thoroughly mistaken. It is necessary to distinguish between closing sections, whose harmony constitutes a cadence, and opening and middle sections. The astonishing harmony at the beginning of Beethoven's Waldstein Sonata op.53, for example, would be out of place at the end of a movement: its effect as a beginning is compelling and forward-driving. And harmonic sequences characteristic of development sections cannot convincingly be traced to the cadence; nor could they be used as beginnings or endings.

Moreover, the force of a harmonic model is not independent of the formal level on which it appears. The cadence I–IV–V–I, taken as a sequence of chords, cannot be reversed to form I–V–IV–I without some loss of effect; yet as an arrangement of keys, a harmonic outline for an entire movement, the reversed form is commoner than the original. The fact that the dominant key must be arrived at and established in spite of the conflicting pull of the dominant chord back towards the tonic – a goal generally achieved via the dominant of the dominant – imbues the harmonic process with a tension that it would not have if it were merely a reiteration of the same cadential model on different levels of formal organization.



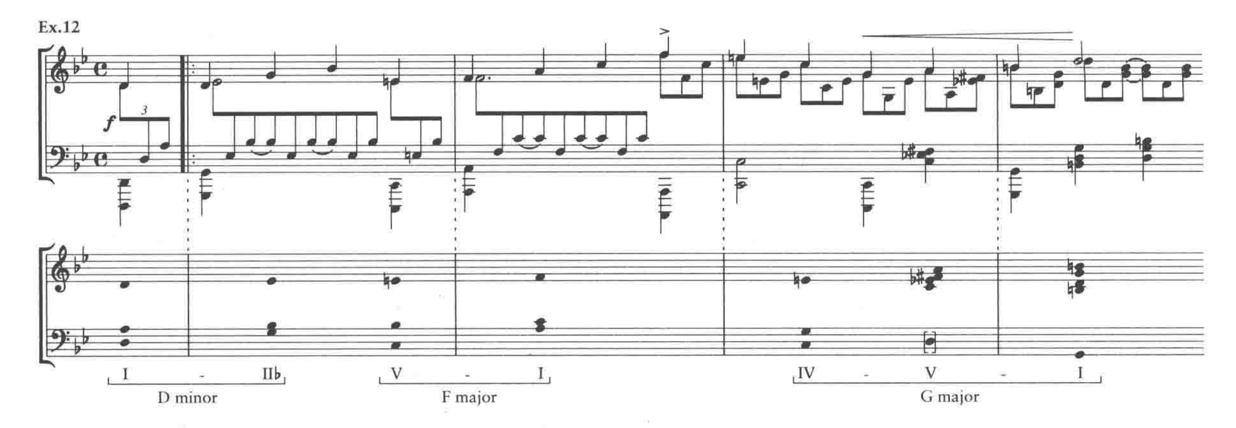
(iii) The Romantic era. The development of harmony in the 19th century reflected in its ideas the thinking of the age as a whole: the idea of continuous progress, the postulate of originality and the conception of an organism as a self-contained network of functions. In the 17th and 18th centuries the proportion of chromaticism and unusual dissonant figures that seemed admissible or adequate for any one composition depended largely, together with the emotional content of a text, on the genre to which the work belonged. The notion that harmony at any one point was in a single 'general state of evolution' is a 19th-century idea that has been applied retrospectively to earlier times. Theatrical style was in reality sustained by criteria different from those applicable to ecclesiastical or chamber style, and the harmony of a recitative or of a fantasia was hardly comparable with that of an aria or a sonata movement. In contrast to this, it is possible (as shown by Kurth, C1920) to describe the history of harmony in the 19th century as a totally interconnected development, propelled by the conviction that every striking dissonance and every unusual chromatic nuance was another step forward in musical progress, towards freedom, provided that the discovery could somehow be successfully integrated into a musical structure. What was of decisive importance about the 'Tristan chord' was not the simultaneity as such, which as II^7 in D♯ minor would have been a mere trifle, but Wagner's clever discovery that it could be interpreted as an inversion of a chord of the 7th on the dominant of the dominant (B), with a lowered 5th (F♮) and a suspended 6th (G♯) leading to the 7th (ex.10*a*).

The idea of originality, which imposed itself as the dominant aesthetic principle in the late 18th century,

combined the demand that in 'authentic' music the composer should express the emotions of his inner self with the postulate of novelty. Alongside melodic ideas, what the 19th century valued most as 'inspirations' were chords that were surprising and yet at the same time intelligible. Such chords were felt to be expressive – the word 'expression' being used in a strong sense to refer to the representation of out-of-the-ordinary inner experience by the use of unusual means – and were expected to take their place in the historical evolution of music, an evolution that was seen as a chain of inventions and discoveries. Thus, for instance, the chord of the dominant 7th with raised 5th (see ex.11*a*), otherwise viewed as the transferring of the augmented triad to the chord of the 7th, provoked as its antithesis the construction of a chord of the dominant 7th with lowered 5th (ex.11*b*); later the two chords were combined to form a 7th with doubly altered (*disalteriert*) 5th that could be complemented with a 9th (ex.11*c*); and finally, by a transposition (forbidden in harmonic doctrine) of the 9th to a lower octave (ex.11*d*), the tonal phenomenon of the chromaticized dominant chord was transformed into a metatonal phenomenon, the whole-tone scale (ex.11*e*).

Ex.11

The interpretation of a musical structure as an organism was one of the arguments used to justify the principle of aesthetic autonomy, that is the claim of music to be listened to for its own sake. The orientation to the organism model means that the harmonic as well as the motivic structure of a work represents a self-contained network of functions in which, ideally, there is not a single superfluous note. One particular problem arose for the composer: if he accepted the principle of autonomy, he committed himself to finding new ways of refining the chords on the various degrees of the scale, the types of chromaticism and the uses of dissonance, such as was demanded by the idea of originality and progress, and at the same time to making all these elements appear integrated increasingly closely into the tonal context. The multiplicity of chords on the degrees of the scale that Schoenberg praised in Brahms was intended to consolidate rather than to loosen the tonal articulation. The more comprehensive a supply of chords a key has, the more emphatically must its gravitation round a tonal centre be experienced. Thus the opening of Brahms's G minor Rhapsody op.79 no.2 for piano contains in its first four bars (ex.12) the harmonies D minor–E♭–C–F–C–D^9–G. The underlying key of G minor is implied but never explicitly stated; and yet it is the common denominator among the fragmentary key centres of D minor (I–II♭ Neapolitan), F major (V–I) and G major (IV–V–I), in that the listener, because of the thematic character and the formal position of the opening bars, feels impelled to look for tonal unity among so many harmonic steps.



Similarly, Wagner's chromaticism was not designed to achieve merely momentary effects of harmonic colour. It also served to link chords more closely together. For example, the progression in the opening bars of *Götterdämmerung* may at first seem wayward, but even though it cannot be heard as a basic tonal progression the ear can (if it is not prejudiced) recognize it as a strong harmonic movement (ex.10*b*).

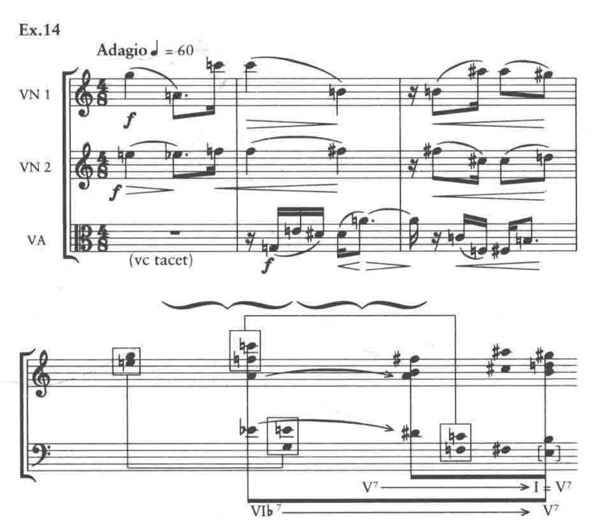
(iv) Early 20th century. Since the 19th century there has been an alternative to chromatic harmony as a means of extending tonality, namely modal harmony. It arose as part of a general interest in the past, in folk music and in oriental music and served to introduce 'foreign' elements into tonal harmony by drawing from other historical and cultural areas. It was not so much a system of harmony in itself as a way of deviating from the normal functions of tonal harmony to achieve particular effects. It was unlike the modality of the 16th century in that it was the relationships between chords, rather than melodic considerations, that determined the key centre. In the 19th century the modes came to be thought of as variants of major and minor, and this is implied by phrases such as 'Mixolydian 7th' and 'Dorian 6th'. The Mixolydian 7th, with the chords of D minor and F major, for example, in the key of G major, is not 'modal in character' in the medieval and Renaissance modal system (where the 3rd and 4th were just as much determinants of the modal centre as was the 7th); only against the background of major and minor did it become significant. Modal harmony, for all its apparent dependence on the past, was thus a 19th-century innovation.

The most significant aspects of 20th-century harmony (if indeed harmony is still the appropriate term) include, first, its decline in importance as a factor in composition; second, the 'emancipation' of the dissonance, leading directly to atonality; and third, the construction of individual systems.

Whereas in the 19th century harmony appeared to be the central factor by whose evolution the progress of music as a whole was measured, in the new music of the 20th century rhythm, counterpoint and timbre came to the fore, since the structural function of harmony was either too indistinct or too difficult to perceive for it to be capable of establishing musical continuity for long stretches. Harmony, which in a good deal of 20th-century music is regulated solely by negative rules (instructions about what to avoid), became both more intractable and less significant.

Ex.12

Ex.13



The emancipation of the dissonance was something that Schoenberg resolved upon in the years 1906–7 – not in any spirit of iconoclasm, in fact rather reluctantly but with a sense of inner inevitability. What is meant by it is that a dissonance no longer needed to be resolved since it could be understood in its own right; it no longer needed to rely on a consonance as its goal and its justification. The obverse of this was that the dissonance became isolated; its pull towards resolution and forward movement may indeed have been a restraining force, but it had also been a force for coherence, for the relationship of parts. Schoenberg felt the inconsequentiality of the emancipated, self-sufficient dissonance as a deficiency. To counter this isolation he adopted in particular two procedures: the principle of complementary harmony, and the conception of a chord as a motif. By complementary harmony is meant the procedure of relating chords to one another through the number of notes by which they differ. Thus in ex.13 (no.5 of *Das Buch der hängenden Gärten* op.15) the two four-note chords in bar 1 of the accompaniment have only one note in common, and those in bar 2 no note at all (with the exception of the second bass note, sounded a beat later). The conception of a chord as a motif means that it can present in vertical form a configuration of notes or a structure that can also be presented in horizontal form without losing its identity. The fact that that configuration exists as a common denominator between the different presentations establishes a musical coherence that brings the chord – the emancipated dissonance – out of its isolation. Inherent in the techniques that provide a solution to the problem of emancipation is the change to dodecaphony: complementarity tends towards the 12-note principle; equivalence of horizontal and vertical is a basic feature of serial technique.

In free atonality and 12-note writing the borderline between consonance and dissonance was considerably higher than in tonal music. The emancipation of the dissonance by no means implies, however, that the degrees of dissonance between different intervals had lost their significance. On the contrary, the combining of sounds continued to be governed by what Hindemith called the 'harmonic fluctuation' (i.e. the graph of harmonic intensity from chord to chord in a progression).

12-note harmony moves between two extremes: at one extreme, the principle of 'combinatoriality' (Babbitt), the bringing together of fragments from the different forms of a row that make up the material of the 12-note system, so that any undue predominance of individual notes (which might suggest tonality) is avoided; at the other, overt or latent association with tonal chord structures and progressions, such as is found in Berg's Violin Concerto and the beginning of the Adagio of Schoenberg's Third String Quartet op.30 (ex.14). The idea of stating all or part of a row in vertical form presents problems: in simultaneous presentation the notes of a row are interchangeable, because the vertical order of the row (upwards or downwards) has to follow not only the succession of pitch classes of that row, which are fixed, but also their octave register, which is not.

Harmonic tonality, which broke down about 1910, had dominated the scene for three centuries. It had been a universal system of reference, marking out the boundaries within which a composition had to move in order to correspond with the European concept of what music was. In contrast, none of the systems projected in the

Ex.14

early 20th century, apart from the 12-note technique as such, extended beyond specific validity for any individual composer. Skryabin based his later works on a central sound that determined both vertical and horizontal structures – the 'mystic chord', which has been interpreted first as a piling-up of 4ths (C–F♯–B♭–E–A–D), second as a chord of the 9th with lowered 5th (C–E–G♭–B♭–D) with unresolved suspension of the 6th (A), and third as a section of the natural harmonic series (upper partials 8–11 and 13–14 imprecisely pitched). The first interpretation is prompted by Skryabin's way of using the chord in his late works, the second has regard for the chord's historical provenance, and the third adopts the premise on which scientific rationalizations of harmonic phenomena were based during the 18th and 19th centuries.

Stravinsky frequently used the technique of overlaying triads, for example the chords of C major and E♭ major in the third movement of the *Symphony of Psalms* (ex.15*a*). By this means (a manifestation of his wider use of the OCTATONIC collection) he created bitonal effects and an ambiguity between major and minor (C major and C minor) and gained the possibility of further transformations by interchanging major and minor 3rds, so that, for example, C♯–E–G♯ may appear in place of C–E–G. ex.15*b*, from the same movement, shows D major and F major alternately superimposed on C♯ major/minor.

Bartók, continuing certain ideas explored by Liszt, developed a harmonic system based primarily on the principle of symmetrical octave division (*C–f♯–C′*, *C–e–g♯–C′*, *C–e♭–f♯–a–C′*): a region of harmony that had lain at the edge of traditional tonality or beyond it was established as the centre by Bartók and subjected to systematic organization. The tonal organization that Hindemith developed from the natural harmonic series (using methods that were sometimes idiosyncratic) was intended as a comprehensive system equally valid for Machaut and Bach as for Schoenberg. Seen in perspective

it was a projection of Hindemith's own stylistic peculiarities into a natural scheme that did not have the universality that Hindemith claimed for it. Nonetheless, it was in principle one that sought to measure dissonance level in complex chords and make possible the controlled gradation of dissonance in chord progressions. It used a type of abstracted fundamental bass comparable, though not identical, with that of Rameau.

(v) Late 20th century. By the mid-20th century many composers and commentators no longer regarded harmony as a discrete musical category in its own right, independent of more general questions of pitch organization. Certainly it seemed difficult, above all in 12-note and serial music, to conceive of harmony in diachronic terms, as regulating the succession of simultaneities over time. But still there was a recognition among a number of postwar serial composers that Schoenbergian 12-note technique, in which pitch classes had been ordered at least predominantly in the horizontal dimension, had left the vertical dimension underdetermined. Two possible ways of compensating for this perceived arbitrariness were widely explored: on the one hand, techniques that sought to assert more direct control over the construction of chords or pitch-class simultaneities; and, on the other, attempts to create greater harmonic definition through the distribution of pitches in register.

Stravinsky's sensitivity to questions of harmony and intervallic polarity by no means lessened with his turn to serialism in the 1950s. In a number of later works, including the *Variations (Aldous Huxley in memoriam)* for orchestra, he employed the technique of hexachordal rotation pioneered by Krenek in his *Lamentatio Jeremiae prophetae*, which involves splitting the 12-note row into two hexachords each of which is then successively rotated, the rotations being transposed each time back onto the same initial pitch (*see* TWELVE-NOTE COMPOSITION, §7). By forming successions of chords from the homophonic superimposition of these rotated forms, Stravinsky created a highly personal form of serially generated harmony, often incorporating the split octaves and simultaneous major and minor 3rds which had been prominent features of his middle period. These rotation techniques have been adapted by a number of younger composers, including Wuorinen and Knussen.

Boulez, likewise convinced of the inadequacy and arbitrariness of complementary harmony, developed from 1951 onwards the technique of multiplication. This involves partitioning the series into unequal segments (*blocs sonores*), each of which is then taken and in turn transposed onto each of the component pitch classes of another segment, the product of the 'multiplication' consisting of all the pitches of each of these transpositions combined (*see* BOULEZ, PIERRE, §3). In practice the distinctiveness of the harmonic results obtained from multiplication depends on the intervallic constitution, and above all the density, of the harmonic objects in question. Where the sonorities being multiplied share a concentration of the same interval class, that concentration will be reinforced in the sonority that results. Elsewhere, however, multiplication results in dense aggregates approaching full chromatic saturation, in which such individual intervallic characteristics are neutralized.

The products of multiplication are groups of pitch classes whose articulation in both time and in register remains unspecified. Hence Boulez, along with other

composers of his generation such as Stockhausen and Berio, also explored the potential of pitch register for creating a sense of harmonic definition within a chromatically saturated texture. The device, observable in Webern's late works, of fixing each pitch class in a single registral position over a substantial number of bars, features in a number of serial works of the 1950s and beyond (such as Stockhausen's *Kontra-Punkte*), while the third cycle of Boulez's *Le marteau sans maître* (see L. Koblyakov, *Pierre Boulez: a World of Harmony*, Chur, 1990) systematically exploits the transposition of a 'vertical row', in which the 12 notes are ordered in register rather than time. Within these fixed-register 'harmonic fields' the hard and fast distinction between horizontal and vertical textures is transcended. Such a field can be articulated as pure simultaneity (12-note chord), pure succession (12-note row) or as part-simultaneity and part-succession. While a row or similar ordering might regulate the horizontal dimension (the temporal succession of pitches), the vertical dimension (the registral distribution of pitches) can be structured according to quite different criteria: such pitch fields, for instance, might display the kind of inversional symmetry around a central pitch or interval found earlier in the century in works of Bartók (*Music for Strings, Percussion and Celesta*, Piano Concerto no.2) and Webern (Symphony op.21, Cantata no.2, op.31), where its function had often resided in the harmonic control of canon or other forms of imitative polyphony.

Often associated with this kind of symmetrical harmony is the attempt to give 12-note chords or pitch fields a distinctive harmonic identity by restricting the number of interval types occurring between registrally adjacent pitches. Such limited interval (or interval class) construction had been adumbrated by Schoenberg (B1911, p.454), who had not only observed that the chord of 4ths employed to notable effect in the *Kammersymphonie* no.1 could be extended to produce a 12-note chord, but had created further 12-note chords whose adjacent intervals consisted solely of major and minor 3rds (ibid., 456–7). Textures dominated by such 'characteristic intervals' interested both Pousseur and Stockhausen in the mid-1950s, while independently Lutosławski developed his own rich vocabulary of 12-note chords based on limited interval-class construction. Many of these chords restrict themselves to just two adjacent interval types (such as perfect 4ths and minor 3rds, or tritones and semitones). Other composers meanwhile have gravitated to all-interval chords, in which the 11 pitch intervals within the octave each occur only once between pairs of registrally adjacent pitches. In the music of Elliott Carter, these prove ideally suited to controlling the vertical superimposition of separately evolving musical layers, enabling each to be defined by its own tessitura and limited repertory of intervals.

The global effect created by such fixed-register distributions is that of a static articulation of space rather than a dynamic movement through time. This view of harmony as an essentially synchronic phenomenon was not restricted to composers of a serialist persuasion. A similar sense of stasis is provided by harmonic fields based on the omnipresence not of the total chromatic but of a more limited pitch-class collection. What Slonimsky termed 'pandiatonicism', the free, non-functional employment of diatonic modes as neutral pitch 'collections' rather than as scales with a hierarchy of degrees, had been a prominent feature of mid-century neo-classicism, but it equally came to characterize the minimalist works of Reich, Glass and later Adams. The harmonic consequence of Reich's phasing processes, in which unison statements of diatonic (but generally non-triadic) melodic fragments move gradually out of synchronization, is often this kind of static modal field. Likewise the later works of Pärt, while often homophonic in texture, are characterized by unpredictable harmonic encounters generally within a closed modal or diatonic collection.

The reintegration of consonance was, from around 1970, perhaps the most noticeable harmonic development in the work of composers of almost any stylistic persuasion. The harmonic taboos characteristic of serial music (such as the avoidance of octaves and triadic formations) started to be abandoned in the 1960s even by such composers as Berio and Pousseur who still saw their work as belonging broadly within the serial tradition. Many composers reintroduced the materials of functional tonality in the context of non-functional syntaxes: the use of triads linked by conjunct motion between voices (a combination of common tones and stepwise progession by tone or semitone) characterizes works as diverse in sound and aesthetic as John Adams's *Phrygian Gates* and Scelsi's *Anahit*. In the work of neo-Romantic composers such as Rihm or Holloway, the rehabilitation of consonance involved explicit reference to Romantic harmony, even at times outright quotation, but often in a way that fostered a sense of historical distance from the model, resulting in a sense of rupture and dislocation rather than an overarching harmonic unity. In his symphonic works of the 1970s onwards Peter Maxwell Davies has attempted to reinvent a directional harmonic syntax capable of sustaining large-scale tonal structures: such attempts, however, encounter the problem of adequately affirming points of harmonic arrival in the absence of communally recognized criteria of tonal stability.

Electronic transformation has proved an especially fruitful way of exploring the continuum between acoustic consonance and dissonance. In each of the 13 cycles of Stockhausen's *Mantra* the sounds of the two pianos are ring-modulated by sine tones whose frequency corresponds to the 'fundamental' of that cycle. The degree of dissonance of the modulated complex consequently depends on the dissonance of each piano note in relation to the fundamental note. The simulation of techniques of ring-modulation in the instrumental domain became just one of the techniques associated with SPECTRAL MUSIC, especially in the 1980s. This movement evolved under the influence of the work of Messiaen and Stockhausen, as well as the new possibilities opened up by the computer analysis of timbre. Murail, a leading spectralist, compared the many dense harmonic complexes found in Messiaen's later work to inharmonic resonances of bell sounds, whose spectra can be replicated by means of frequency modulation. Spectral music takes such complex inharmonic spectra as a unifying model for both harmonic and temporal structuring. At the end of a century in which harmonic theory had been sparing in its appeals to science or 'nature', spectral music seemed to revive, in principle at least, the acoustic rationalizations that had been central to harmonic thinking from its very beginnings.

4. THEORETICAL STUDY. The difference between the theoretical and the practical study of harmony consists

not so much in a divergence between the reasons for rules and their application but rather in dissimilarities that arise out of the differing historical origins of the two disciplines. The theoretical study of harmony owes its inception to a remodelling of *musica theoretica* – that is, of mathematical speculations on the foundations and structures of the tonal system. The practical study of harmony proceeded from the doctrine of figured bass, which was expanded at the beginning of the 18th century and elevated into a theory of free composition, as opposed to counterpoint, the theory of strict composition (see §6 below). Part of the legacy of *musica theoretica* is the claim of harmonic theory to be scientific, a claim that has constantly shifted its ground but has never been abandoned. Harmonic theory affects to be a 'theory' in the strongest sense of the word instead of being merely a collection of rules for musical craftsmanship.

On the philosophical assumption that numbers and numerical proportions, conceived of in the Platonic sense as ideal numbers, represent founding principles and not mere measurements, the numerical demonstration of intervals and intervallic complexes was taken to be the mathematical basis of musical phenomena up to the 17th century (and in peripheral traditions up to the present day). Zarlino (A1558, bk 3, chap.31), who took 'harmonic proportion' (15:12:10) as the basis of the major triad and 'arithmetical proportion' (6:5:4) as that of the minor triad (from measurements of string lengths), propounded the musical priority of the major triad by virtue of the mathematical and philosophical prestige of the concept of 'harmonic'. The same result, the exalting of the major triad, was arrived at two centuries later by Rameau but in a different way. First, his measurements were made by reckoning vibrations instead of string lengths, so the proportion 4:5:6 shifted from the minor triad to the major and the proportion 10:12:15 shifted from the major to the minor. Second, following contemporary natural science rather than humanism, he gave precedence to the simple (hence the proportion 4:5:6) rather than the ancient (the term 'harmonic', which was saturated in ideas). Third, he sought to discover the scientific foundations of musical actualities not in Platonically interpreted mathematics but in physics, the most advanced discipline of his times: the Platonic idea of number had lost its force and had sunk from a scientific status to a poetic or sectarian one. The basis of musical phenomena was henceforth discovered in the physically determinable nature of the note, that is, in the natural harmonic series. There was one fundamental fact which from the 18th century on was invoked by authors of textbooks on harmony in order to claim scientific legitimacy: this was that the major triad is contained within, or prognosticated by, the natural harmonic series (in the upper partials 1–6, *C–c–g–c–e′–g′*, notably as partials 4–6).

As opposed to a physical foundation for musical theory, Hauptmann (B1853) presented a foundation that was dialectical and idealistic. He construed such phenomena as the triad or the cadence as instances of the Hegelian model of thesis, antithesis and synthesis. According to Hauptmann, in the cadence I–IV–I–V–I the tonic is first 'set up as a direct entity' (as if it were being stated unquestioningly rather than being argued); it is then 'divided in itself' (as the dominant of IV and sub-dominant of V), finally to be 'reinstalled as a result' and thus confirmed (retrospectively, IV and V appear no longer as tonics to which I relates but as subdominant and dominant of I: I's 'existence as dominant' turns to 'possession of dominant'). This dialectic, which he evolved in detail, Hauptmann thought of as an active dialectical process, an intellectual process in the subject matter itself, not a mere mode of description. He saw dialectical construction as a valid theoretical representation of a principle that was active in music and that established it as 'logic in sound' and to that extent as a science.

Riemann made various attempts to forge a link between the physical explanation and the dialectical. He gradually came to minimize the importance of the former and finally almost to deny it altogether. In accordance with the philosophical tendencies of his times, he transformed Hauptmann's Hegelianism into a kind of Kantianism in his later writings, above all in the 'Ideen zu einer "Lehre von den Tonvorstellungen"' of 1914–15. But the prevailing means by which the theory of harmony was given a scientific basis in much of the 20th century was the explanation of harmonic phenomena in historical terms. It was no longer Nature (physically definable) but History that constituted the final court of appeal. After mathematics, physics, Hegelian dialectics and psychology (Kurth, B1913, C1920), it was the role of history to guarantee the scientific character of music theory. The next step, in recent years, has been a psychological approach dealing with musical cognition and perception (see §5 below). The mathematical, physical and idealistic dialectical theorems have indeed not been forgotten; but, in spite of important efforts to restore them (Handschin's 'Pythagoreanism', 1948), they have become peripheral.

Since Rameau there has been a constant endeavour to explain the historical phenomenon of tonal harmony during the 17th, 18th and 19th centuries by reference to the physical properties of the single note, and thus to establish harmonic theory as a strict science. This has involved music theory in problems that would have been less difficult to solve were it not for this fixation on the natural harmonic series. Above all, the minor triad presented this approach through physics with a challenge that it expanded to meet only with difficulty and with some questionable theorizing.

None of the endeavours to discover an acoustical explanation for the minor triad analogous to the rationalization of the major triad (by means of the natural harmonic series) met with success. Significantly, the one physicist among music theorists, Hermann von Helmholtz, forwent any reduction to physical terms. The repeated attempts that were made, persistently and futilely, from Rameau's postulation (B1737) of a sympathetically vibrating *f* and *A♭* beneath *c″* through to Riemann's idea of a series of lower partials (as a symmetrical inversion of the series of upper partials) all started with certain assumptions. They took for granted on the one hand that the major triad derived from the physical properties of the single note, and on the other that the minor triad enjoyed a status equal to that of the major; from these it followed logically that there must be a physical explanation for the minor triad. The notion that the minor was a shading of the major, an artificial variant of the natural triad (Helmholtz), was not really taken as a satisfactory explanation. It was regarded as no more than a description, and an admission of defeat in the face of the impossibility of explanation.

A third hypothesis, or group of hypotheses, proceeded from the idea that the 5th and the major 3rd were the only 'directly intelligible' intervals, that is, intervals essential for note relationships. The major triad C–E–G would thus be a combination of C–G and C–E with C as the common point of reference (*centre harmonique*) of the intervals, and the minor triad C–E♭–G would be a combination of C–G and E♭–G with G as the common point of reference (Hauptmann, B1853) or with C and E♭ as a double root. The assertion that the minor triad must be read from the top downwards contradicts the musical fact that it attempts to rationalize. The division of the root, if it is to be empirically valid, must be perceived as an ambivalence and not as a simultaneous appearance of two roots: in other words, as the possibility of allowing either C or E♭ to become alternately the *centre harmonique* (Helmholtz, E1863). A variant of Hauptmann's theory of the minor triad appears in Oettingen's thesis (C1866) that the unity of the chords resides in the fact that the notes of a major triad (*c′–e′–g′*) have a 'tonic' root (C) and those of a minor triad (*c–e♭–g*) have a 'phonic' overtone (*g″*) in common. As a rationalization of the unity of sound the principle of 'tonicity' is complemented by the principle of 'phonicity'.

According to Kurth (B1913), who substituted psychological for physical explanations, the major and minor triads are to be regarded not as stable, self-contained structures but as states of tension: the 3rd, E, in the (dominant) major triad on C pushes towards F (as the root of the major triad on F), while the 3rd, E♭, of the (subdominant) minor triad on C pulls towards D (as the 5th of the G major triad). Rationalization is sought no longer in the nature of things, definable in physical terms, but in the nature of people, interpretable in psychological terms.

The understanding of a theory does not merely mean the grasping of the principles from which it derives. It also particularly means the apprehension of the questions that prompted it in the first place. The difficulty of explaining the minor chord through physical premises – the conviction that acoustics must form the foundations of music theory – represents one of the challenges that harmonic 'dualism', most clearly exemplified in Riemann's theory of harmonic functions, set out to meet. A second objective that was in Riemann's mind was to formulate a theory of the secondary degrees II, III and VI which would establish their differences from the primary degrees I, IV and V more precisely than had the theory of degrees. The term 'mediant' is not an explanation but merely a descriptive label without any theoretical content; and the idea that primary degrees are connected to the tonic by direct relationships of a 5th whereas secondary degrees are indirectly so connected may do justice to some applications of the secondary degrees (for example, their role in the sequence of 5ths, I–IV–VII–III–VI–II–V–I, the prime harmonic model in the early 18th century) but cannot do justice to all their functions.

Riemann proceeded from the observation that the secondary degrees can sometimes appear as 'representatives' of primary degrees. Thus, in major keys II can fulfil the function of IV, III that of V or I, and VI that of I or IV. (VII, except in sequential passages where the bass moves by 5ths, is an incomplete form of the dominant 7th.) Riemann failed to take into account, or else his system led him to suppress, the affinity or intrinsic proximity of II to the dominant of the dominant. Impressed by the musical experience of functional similarities between the degrees, Riemann attempted to rationalize them through his theory of 'apparent consonances' or 'understood dissonances'. Here, IV can be represented by II (so that II appears as a relative minor to the subdominant – *Subdominantparallele*, abbreviated as 'Sp') since II has its basis in IV, having arisen from it by a substitution of the 5th on the subdominant (in C major, C) by the 6th (D). The note D, regarded by the theory of fundamental progressions as the root of the chord on the supertonic, is according to Riemann only apparently a consonance. For its true importance for the harmonic context to be recognized it must be perceived as a dissonant adjunct to the subdominant. Thus in Riemann's system the terms 'consonance' and 'dissonance' refer less to phenomena of actual perception than to categories in musical logic. Indeed it might be asked whether the speculative theory of 'apparent consonances', which flatly contradicts the usual empirical perception of the supertonic degree, is necessary at all in order to explain the functional similarity between degrees II and IV: that two structures fulfil the same or an analogous function in no way presupposes that the one must be materially derivable from the other.

The theories of function and of fundamental progressions, which are generally presented as alternatives, can in large part be understood as contrary but complementary. In the first place the distinction made by the theory of fundamental progressions between primary and secondary steps is certainly not stated as such by proponents of functional theory, but neither is it ignored or actively denied. And modern proponents of the fundamental progression, like Kurth, have not found the explanations attempted by functional theory superfluous; rather they find them too speculative on the one hand and too narrow on the other to do justice to all the functional differentiations between the degrees of the scale. In the second place it is obvious that the theory of fundamental progressions is primarily orientated to early 18th-century harmony (namely to the harmonic model of the sequence of 5ths), while the theory of functions, in common with Riemann's doctrine of metre and rhythm, is developed from the music of Beethoven. It is thus to some degree not a case of competitive theories dealing with the same matter in hand, but of theses concerning different stages of a historical development. Third, the fundamental progressions described or reconstructed by that theory and the direct and indirect relationship of chords to the tonic conceptualized in the theory of functions are factors in composition that are perfectly capable of existing side by side. The description of the degree of relatedness between individual chords and the tonal centre, and the delineation of the path followed by the *basse fondamentale* within the chord sequence, are not mutually exclusive but complementary. Similarly, the different stages of historical development mentioned above represent not a total change of principles but merely a shift of emphasis between progression from chord to chord, and the relationship of chord to tonal centre.

5. Theory since 1950. Since the mid-20th century theoretical approaches to harmony have developed in several new directions, particularly in the anglophone world. Of primary importance is the inflence of Heinrich Schenker, whose theory of harmony is ultimately

absorbed into a thorough-going account of tonal structure (*see* ANALYSIS and TONALITY). Schenker assigns to a vertical formation the status of a harmony only if it is heard to represent a *Stufe* (scale-step, from Sechter) that is prolonged through a (finite) span of time. Formations that fail this criterion are interpreted as an amalgam of conjunct melodic lines, whose interaction is constrained by principles of counterpoint rather than harmony. Furthermore, a vertical formation that achieves the status of a harmony when considered within the context of its own time-span of prolongation dissolves into linear motion when considered beyond those boundaries. With a single exception, every formation thus ultimately fails the *Stufe* criterion and reverts to prior linear and contrapuntal processes. The exception is the *Ursatz*-generating tonic triad, whose time-span of prolongation is co-extensive with the entire piece. It alone is generated by harmonic rather than contrapuntal principles. Thus although harmony, represented by the tonic triad, is the foundation of the Schenkerian view of tonality, the status of individual harmonic structures is nonetheless attenuated. Those aspects of music that traditionally count as harmonic – chord and chord progression – are subsumed by, and inseparable from, the broader concept of tonality. In this sense, 'harmony' reclaims the earlier sense of the Greek *harmonia* (see §1 above).

A similar absorption of harmony is evident in recent analytic approaches to atonal repertories, but for entirely different reasons. Once the diatonic gamut gives way to the set of 12 equal-tempered pitch classes, the distinction between the diatonic step and leap that underwrites the dichotomy of tonal melody and harmony is altered. Harmonic formations are composed of the same materials and relationships as pitch categories (scales, melodies, motifs, contrapuntal conjunctions) from which they are traditionally held distinct. Each of these categories is considered, rather, as a specific mode of projecting (or formatting) a more abstract category, the pitch-class set, the properties, potentials and interrelations of which exist independently of its realization in time and in register. Consequently, although atonal theory, in the tradition of Forte, Perle and Morris, furnishes a descriptor for all harmonic formations, the study of harmony now warrants different treatment. It is for this reason that there is no distinction in subject matter between books entitled *Harmonic Materials of Modern Music* (Hanson, D1960), *The Book of Modes* (Vieru) or *The Structure of Atonal Music* (Forte, D1973), although each of these works pursues its subject in a different way.

Where 'harmony' (as a category designating the description and interpretation of simultaneously attacked or perceptually fused pitches) most retains its categorical integrity is in the analysis of the chromatic repertories of the later 19th century, specifically those connecting consonant triads and dominant-7th and half-diminished-7th chords via semitonal part-writing. While some such chromatic events elaborate or replace diatonic ones and are readily interpreted in terms of linear generation along Schenkerian lines, others resist a determinate diatonic interpretation, and are a hybrid of tonality and atonality. They maintain the leap/step and hence harmony/melody distinction of diatonic tonality, but reinterpret it in reference to the tempered 12-note gamut that also underlies atonal music: semitones are melodic, all other intervals harmonic. In this larger, symmetric gamut, tonics are mercurial and *Stufen* lack identity, so the distinction between prolonged and prolonging events is occluded. Vertical formations are thus safeguarded against absorption into a linear-generated framework at higher structural levels. At the same time, the leap/step and harmony/melody demarcation protects harmony from subsumption under the context-free pitch-class-set umbrella of atonal theory: because harmony and melody are made up of different intervals, each retains its categorical autonomy.

In 12-note triadic and 7th-chord chromaticism, then, harmony retains the primary cognitive status that it bears in the approaches of Rameau and Riemann to classical tonality. Yet the ontology and behaviour of harmonic objects in a symmetric, tempered chromatic universe are different from those in a (conceptually) just or Pythagorean diatonic universe, and these differences warrant distinct interpretative strategies. The tonal indeterminacy of chromatic harmony leads to two classes of interpretation: individual harmonies are orientated either towards multiple tonics simultaneously or towards no tonics at all. The first approach (multiple tonics) traces its origin to early 19th-century notions of *Mehrdeutigkeit* (Vogler, Weber), leads through Schoenberg's notion of hovering tonality, and is represented by theories of double tonality (Bailey, C1977–8) and functional extravagance (Smith, C1986). The second approach (no tonics) traces its origin to Fétis's observation (B1844) that diatonic sequences suspend a listener's sense of tonality; leads through writings of Capellen (C1902) and Kurth (C1920); is represented by more recent work (e.g. Proctor, C1978) on transposition and symmetric division, and has achieved a particularly systematic synthesis in the neo-Riemannian transformational theory arising from the writings of David Lewin.

The fundamental insight of neo-Riemannian theory is that the relationships of the harmonic structures of 12-note chromaticism are direct, unmediated by the tonal centres inherent to both functional and *Stufen* theories. The connection to Riemann is not through his influential theory of harmonic functions but rather to his development, in *Skizze einer neue Methode der Harmonielehre* (1880), of the system of *Schritte* (triadic transpositions) and *Wechsel* (exchanges of major for minor triads) first introduced by von Oettingen in 1866. Initially conceived in the context of just intonation, the *Schritte* and *Wechsel* are translated by neo-Riemannian theory into equal temperament, with particular attention to the characteristic 19th-century transformations that maximize common tones and semitonal motion. The Table of Tonal Relations developed by Leonhard Euler (E1739) and appropriated by Oettingen and Riemann furnishes an elegant geometric model for triadic progressions consisting of such transformations. When conceived in equal temperament, the geometry of the table is circularized in multiple dimensions, yielding a torus. Analogous transformations and geometrical representations are available for progressions involving various species of 7th chords.

The torus, as a model of harmonic relations, also turns up in empirical studies of musical cognition and perception, a branch of scholarship with a methodological and conceptual legacy quite independent from that of music theory. Recent work in these areas merges the traditional concerns of *Tonpsychologie* (Helmholtz, Stumpf) with the epistemology of contemporary cognitive science, which emphasizes learning and memory and hence affords

a role for style and culture as well as for phenomena characteristically associated with 'nature'. Cognitive and perceptual work includes psychoacoustic studies of harmonic similarity; strategies for modelling assignments of tonal centres to harmonic progressions and for assessing their closural strengths; and probes of the psychological reality of concepts of historical significance to music theorists. Harmony figures heavily as a primary category in such studies, which are generally more concerned than analytically orientated approaches with well-defined atomic musical relationships, and less with their absorption into an integrated vision of the artistic masterwork. (*See* PSYCHOLOGY OF MUSIC, §II, 1.)

6. PRACTICE. Writings on harmony are practical rather than speculative if they satisfy purposes other than the theorist's passion for explanation. The distinction is porous, if not flimsy: there is a clear pragmatic value when 'laws' of harmony are pressed into service as aesthetic filters in support of political or nationalist agendas (as in post-Revolutionary France or Stalinist Russia), for example. In standard usage, however, 'harmonic practice' refers more narrowly to writings that place harmonic knowledge at the service of the education of performers and composers. It has an unbroken history whose origin roughly coincides with that of harmonic tonality, reinforced, during the 19th and 20th centuries, by a robust institutional framework of conservatories, universities and preparatory academies that continue to place harmony at the core of the elementary training of performers, composers and musical amateurs.

All works of practical musicianship project, perhaps only implicitly, a theory of *harmonia* (in its original sense – see §1 above). If the focus is limited to the subset of writings that take 'chord' and 'chord progression' as primary lexical and syntactic categories, the boundary that divides theory from practice is still difficult to locate. Explicitly speculative tomes such as Lippius's *Synopsis* (A1612) offer compositional instruction in part-writing, while classroom primers develop concepts that eventually migrate into the mainstream of speculative writings (e.g. the seminal treatments, in the *Lehrbücher* of E.F. Richter (B1853) and Mayrberger (B1878), of passing chords, which were to become conceptually crucial to Schenker's theories of *Schichten* and *Ursatz*).

Practical harmony has served largely as preparatory training for three activities – improvisation, composition and analysis – that are distinct in principle but frequently overlap. Most practical works on harmony in the 17th century were aimed primarily at training continuo players in the improvisational art of thoroughbass realization, while the greatest thoroughbass treatise of the 18th century, by Heinichen, was entitled *Der General-Bass in der Composition*. On the other hand, the most influential of all practical writings in the years between Rameau and Riemann, Gottfried Weber's *Versuch einer geordneten Theorie der Tonsetzkunst* (B1817–21), has a primarily analytical purpose, despite its title ('Attempt at a systematic theory of composition'): to give the reader a means 'to conceive and communicate a rational idea of the good or ill effect of this or that combination of tones and of the beauty or deformity of this or that musical passage or piece'.

The origins of practical training in harmony may be traced to Italian and German counterpoint treatises of the early 16th century that enumerate the combinations usable in four-voice composition. A century later, the concept of triadic invertibility stimulated an emerging awareness of such combinations as primary categories. Although this awareness is adumbrated in German composition manuals (e.g. Baryphonus, A1615) that focus on principles of four-part writing, it is in contemporary improvisation primers that chords are first fully hypostasized. The new chordal autonomy is more evident in guitar treatises from the Iberian peninsula (notably Amat, A1639) than in the better-known thoroughbass manuals of central and southern Europe, which only began to integrate principles of traidic invertibility around the mid-17th century.

In 18th-century Germany, thoroughbass realization was increasingly cultivated not only by continuo players but also as part of composition training. C.P.E. Bach reported that his father's composition pupils 'had to begin their studies by learning pure four-part thorough bass. From this he went to chorales; first he added the basses to them himself, and they had to invent the alto and tenor. Then he taught them to devise the basses themselves'. The more advanced of these tasks required understanding not only of part-writing but also of harmonic syntax, a topic that had first been addressed in thoroughbass manuals of the late 17th century dealing with the realization of unfigured basses (e.g. Penna, A1672). As the role of the basso continuo waned in the later 18th century, improvisation ceased to be a primary goal of harmonic training. Although isolated passages on 'preluding' (e.g. Friedrich Wieck, B1853) attest that a thorough understanding of harmony was prerequisite to the improviser's art in the 19th century, there is no continuing tradition of improvisation primers again until the 1950s, when jazz musicians began to codify their methods.

Rameau's theory of fundamental bass, which has constituted a nearly universal foundation of harmonic training since 1800, was initially disseminated in his own writings for composers and accompanists. It was only after Rameau's death in 1764 that his ideas became the basis of a standard pedagogical practice. During the second half of the 18th century several other core concepts of harmonic teaching began to appear in a form resembling current usage. In the 1750s, Marpurg developed a taxonomy of non-harmonic tones. In his *Two Essays*, published in 1766, John Trydell indicated fundamentals as scale degrees in relation to a tonic, representing them by Arabic numerals; this system subsequently reappeared, with Roman numerals, in Vogler's writings. Perhaps most importantly, the composition treatises of Kirnberger (B1771–9) and H.C. Koch (B1782–93) began to consider the role of harmony as a formal articulator on the scale of phrases and movements. Each of these concerns (non-harmonic tones, scale-degree root representation, and form) was put to analytical as well as compositional purposes in the following century. (*See also* ANALYSIS.)

Harmonic analysis, in the form of fundamental basses laid under existing compositions, is already present, albeit sparsely, in the writings of Rameau and Kirnberger. Vandermonde (1778) advocated fundamental bass analysis as part of preparatory training in composition, and by the turn of the 19th century analysis had become a central concern of writings on music. In the empirical compendia of Momigny, Weber and Reicha, fragments from 18th-century works provide exemplars of all manner of musical phenomena, and stimulate nuanced formula-

tions of harmonic principles in place of the coarse normative pronouncements that often dominated composition pedagogy of the era. Harmonic analysis is recommended to students as a fruitful activity for its own sake. Reicha suggests the following procedure:

First, all the inessential notes of the piece are eliminated, and the essential notes alone are entered; then the fundamentals of the chord are entered on a separate staff; the piece in its original form is compared with that giving just the essential notes; then the succession of fundamentals is examined so as to see how the chord successions form progressions.

Reicha's procedure has endured since, although the fundamentals entered on a staff were soon replaced by Roman numerals, which were disseminated in Weber's influential treatise and put to more scholasticist ends in the didactic harmony writings of Jelensperger (E1830) in France, Sechter (B1853–4) in Austria and Richter (B1853) in Germany, Richter's *Lehrbuch der Harmonie* staying in print for a full century, through 36 editions, and being translated into ten European languages. These three textbooks are among the earliest or most influential representatives of a stream, eventually a raging torrent, of prescriptive, ahistorical harmony textbooks created to fill the demand created by the institutionalization of advanced musical training during the first half of the century in northern and western Europe and the British Isles, and by 1860 in North America and Russia. Such primers typically offered lessons in figured-bass realization and Roman-numeral analysis of synthetic examples, without reference to any particular repertory.

Roman-numeral analysis was challenged at the end of the 19th century by Riemann, who proposed the theory of dual principles, together with the theory of tonal functions, in a series of pedagogical writings. In 1917 Riemann wrote that 'the Roman numeral method is being more and more marginalized as outmoded', and that dualism and functional theory 'ever more certainly takes its place'. His vision of universal monopoly, however, failed to materialize. After Riemann's death, functional theory was divorced from dualism, which has found few advocates among modern writers (an exception is Levarie, E1954). The theory of harmonic functions has dominated harmonic pedagogy in Germany, Scandinavia and eastern Europe, but even there it has not totally supplanted the Roman numeral method. Riemann's influence in southern Europe and in the anglophone world has been minimal.

The *Harmonielehren* of Schenker (B1906) and of Louis and Thuille (C1907) marked the revival of a thoroughly empirical attitude toward practical harmony for the first time since Weber. These are not exclusively, or even primarily, works of practical harmony, despite their titles: each presents an original conceptual synthesis, bolstered by presentation and discussion of abundant examples from the German tradition since 1700. The repertorial orientation represented by these writings soon took hold in didactic works, particularly in the United States. Of central importance are the harmony textbooks of Mitchell (E1939) and Piston (B1941), both of which are explicitly empirical and analytical rather than normative and pre-compositional. Almost every page of Piston's *Harmony* includes at least one illustrative score fragment from the musical canon, while Mitchell's *Elementary Harmony*, the first harmony text influenced by Schenker's theory of tonality, leads the reader through a set of rudimentary linear-graphic analyses of movements from Beethoven's sonatas.

Since the mid-20th century, Schenker's influence on tonal theory in North America has had an increasing impact on practical harmony. Sessions (E1951) analyses a progression from Brahms's Violin Concerto, which uses a variety of diatonic harmonies, as an 'elaboration of a tonic triad', and suggests that the prolongational attitude behind this claim is broadly applicable. Forte's *Tonal Harmony* (E1962) advances a view of harmonic progression as dynamic motion towards a cadential goal, and generates local harmonic formations via linear motion or temporal displacement. The first page of the ambitious and widely used textbook of Aldwell and Schachter (E1978) reproduces the opening of a Mozart piano sonata; its second page introduces a two-voice reduction that serves as a platform from which to explore and express some rudimentary observations. And in Gauldin (E1997), linear reduction of examples from the literature sits alongside Roman numeral analysis as an activity that develops the student's sense for the inner workings of tonality.

In retrospect, the most significant articulation point in the history of practical harmony was its separation from contemporary compositional practice in the early 19th century, a development that roughly coincided with the rise of harmonic analysis and institutional musical training, the waning of improvisational primers and the consolidation of the western musical canon. The first stage of this isolation was marked by a synthetic, scholastic and arepertorial approach to elementary compositional training; the second stage, a century later, sought to overcome the limitations of the first by reorientating harmonic knowledge towards the development of an analytical practice directed at classical repertories, and whose explanatory power wanes as chromatic writing is liberated from diatonic tonality. Several developments in the late 20th-century academy – notably a suspicion of historicizing teleologies and the re-evaluation of the distinction between classical and vernacular – stimulated a recognition of diatonic tonality as a living tradition. Perhaps the most important trend in practical harmony at the beginning of the 21st century is the reintroduction of contemporary music, in the form of folk music, jazz, show-tunes, rock and so on into manuals of practical harmony, in both Europe and North America, in the service of compositional and improvisational as well as analytical training.

Harmony Society [Harmonie Gesellschaft]. American Separatist group founded by George Rapp (*b* Iptingen, Württemberg, 1 Nov 1757; *d* Economy [now Ambridge], PA, 7 Aug 1847). Rapp and several hundred followers emigrated from Germany to the USA in 1804, and formed a communal society near Pittsburgh; they chose their name to reflect the intense religious spirit that bound them together. They built three towns (Harmony and Economy, Pennsylvania, and Harmony, Indiana) and grew wealthy through agricultural and industrial enterprises, but the practice of celibacy gradually reduced their membership and the society disbanded in 1906.

Harmonist musical activities were extensive, and were encouraged by Rapp, who was perhaps a flautist. Between 1825 and 1831 the society's physician, Johann Christoph Mueller (1777–1845), led an orchestra with a repertory of over 300 marches, dances, overtures and symphonies by Vanhal, Sterkel, Pleyel, Jommelli, Rossini, Mozart, Joseph Haydn and others. The orchestra and Harmonist choirs performed works by Haydn, Cherubini and J.G. Schade. Much of the music was arranged by Mueller and by the music publisher William C. Peters, a non-member engaged in 1827–8 to teach the society's musicians; Peters also wrote a Symphony in D (1831) for the orchestra. Charles von Bonnhorst, a Pittsburgh attorney and amateur violinist who was a close friend of Rapp, wrote more than 30 quadrilles and waltzes for the orchestra during the 1820s. Mueller and Jacob Henrici (1804–92), both Harmonist composers, wrote short keyboard pieces, odes for voices and instruments and hymns; five compilations of hymn texts and tune names were printed, some on the society's own press.

A schism in 1832 greatly depleted the musical ensembles, but after 1835 singing classes and brass bands thrived, notably under Jacob Rohr (1827–1906), an Alsatian-born bandmaster who was employed by the Harmonists from 1878. Musical activities of the society culminated with John S. Duss (1860–1951); an admirer of Patrick Gilmore, he used Harmonist funds to organize professional bands and to hire the New York Metropolitan Opera orchestra, its leader Nahan Franko and two of its singers, Lilian Nordica and Edouard de Reszke, with whom he toured the USA and Canada between 1903 and 1907. Duss composed marches (*America up to Date*, *March G.A.R. in Dixie*), foxtrots and two-steps, sacred solos and choruses and a *Mass in Honor of St Veronica*. Most of his works were published by the W.C. Ott Co., which he financed, and by Volkwein Bros. in Pittsburgh.

Harms. American firm of music publishers. It was founded in New York in 1875 by the brothers Alexander T. Harms (*b* New York, 20 Feb 1856; *d* New York, 23 Oct 1901) and Thomas B. Harms (*b* New York, 5 Jan 1860; *d* New York, 28 March 1906). T.B. Harms & Co. issued contemporary popular music, and the success of such early publications as *When the robins nest again* (1883) and *The letter that never came* (1886) led other Tin Pan Alley publishers to emulate the firm's promotional activities. In 1901 Max Dreyfus (*b* Kuppenheim, 1 April 1874; *d* Brewster, NY, 12 May 1964), who had been working for Harms as an arranger, bought a 25% interest in the firm, and though over the next few years he achieved complete managerial and financial control, he retained the Harms name for the firm, making it the leading publisher of musical stage songs. In 1903 he employed Jerome Kern as a composer; Kern subsequently became a partner. The firm also issued the works of George Gershwin, who was engaged in 1918 as a songwriter, and in the 1920s it began to publish the music of Richard Rodgers. Dreyfus sold his interest in the company to Warner Bros. in 1929 when it became part of the Music Publishers Holding Corporation; he stayed on as a consultant until he set up in 1935 the American branch of Chappell, a company affiliated with Chappell of London, owned by his brother Louis Dreyfus (1877–1967). In 1969 that part of Harms connected with the estates of Louis Dreyfus (who had been a director of Harms) and Kern was bought by Lawrence Welk and became part of the Welk Music Group.

FRANCES BARULICH

Harms, Johann Oswald (*b* Hamburg, bap. 30 April 1643; *d* ?Brunswick, 1708). German stage designer and painter. He was a pupil of the Hamburg painter Ellerbrock and from the mid-1660s studied panel and mural painting in Rome in the circle of Salvator Rosa and Pietro da Cortona. A stay in Venice from about 1669 made him familiar with the artistically and technically most advanced forms of opera production and stage design. On his return to Germany Harms worked first as a painter of panels and murals, but from the time of his appointment as the chief theatrical designer to the Dresden court (1677), most of his work was done in the theatre, in the operatic centres of north and central Germany (about 50 works): Dresden (1677–81), Eisenberg (1681–6), Weissenfels (1681–6), Hanover (1684 and later), Wolfenbüttel (1686–90 and later), Brunswick (1691–8) and Hamburg (1695–1705).

Harms was the most important designer for the German Baroque operatic stage, designing sets for numerous first performances of operas by Kusser, Steffani, Krieger, Keiser, the young Handel and others. His designs for the stage benefited, in particular, from his experience as a muralist; he united the middle-class realism typical of art

Stage design by Johann Oswald Harms for Keiser's Singspiel 'Störtebecker und Jödge Michaels', Theater am Gänsemarkt, Hamburg, 1701: pen and ink with wash (Herzog Anton-Ulrich Museum, Brunswick)

in Hamburg with the bold, expansive compositional techniques of Italian mural painting. His artistic achievement advanced beyond his Venetian and Viennese models: the realism of his urban and rural settings, especially those for Kusser's *Cleopatra* (1690, Brunswick) and Keiser's *Störtebecker und Jödge Michaels* (1701, Hamburg; see illustration), anticipate the principle of the imitation of nature that was a cornerstone of later theories of design for middle-class theatre in Germany.

Harney, Ben(jamin) R(obertson) (*b* Middletown [now in Louisville], KY, 6 March 1871; *d* Philadelphia, 11 March 1938). American ragtime songwriter, pianist and singer. Despite statements to the contrary by Eubie Blake, Harney came from an established white Kentucky family. He apparently received formal training on the piano for, in later years, he played classical compositions as written and then repeated them in ragtime. At the age of 14 he entered a military academy in Kentucky, where he remained for four years. During this period he probably visited saloons where black pianists played because, one year before leaving school, he composed what is now considered the earliest ragtime song, *You've been a good old wagon but you've done broke down*. From 1889 he was active in Louisville, playing in a saloon at the corner of Eighth and Green Streets. In 1895 a Louisville businessman financed the publication of *You've been a good old wagon* and it became an immediate hit. On the strength of this success Harney moved to New York where, in 1896, he achieved popularity playing and singing in the new musical style. From this time until 1923, when he suffered a heart attack, Harney pursued a successful career in show business, touring throughout the USA, England, Europe and East Asia. Thereafter he seldom performed, and with the eclipse of ragtime by jazz he was soon forgotten. By 1930 he was living in poverty in Philadelphia.

Harney produced a large number of ragtime songs, but three stand out from the others: *You've been a good old wagon* (1895), *Mr Johnson turn me loose* (1896), perhaps his most popular song, and *The Cakewalk in the Sky* (1899). The syncopated rhythm in these songs, and Harney's own renditions of them, were described by contemporaries as being black in character. Harney's *Ragtime Instructor* (1897) was the first method book to teach the new syncopated piano style.

WORKS
(*selective list*)

Songs (lyrics by Harney unless otherwise stated): You've been a good old wagon but you've done broke down (1895); Mr Johnson turn me loose (1896); I love my honey (1897); There's a knocker layin' around (1897); Draw that color line (1898); If you got any sense you'll go (1898); You may go but this will bring you back (1898); The Black Man's Kissing Bug (1899); The Cakewalk in the Sky (1899); The hat he never ate (H.S. Taylor) (1899); Tell it to me (1899); The only way to keep her is in a cage (1901); T.T.T. (1903)

Harnick, Sheldon. *See under* American composer and lyricist BOCK, JERRY.

Harnisch, Otto Siegfried (*b* Reckershausen, nr Göttingen, *c*1568; *d* Göttingen, bur. 18 Aug 1623). German composer. From 1585 to 1593 he studied at the University of Helmstedt, though in 1588–9 he was Kantor at Brunswick Cathedral. In 1593–4 he was Kantor at Helmstedt and from 10 March 1594 until 1600 at the Gymnasium and also at the Marienkirche, Wolfenbüttel. In the latter capacity he was required from 1597 onwards to teach the choirboys of the ducal chapel, whose director was Thomas Mancinus, and to conduct them from time to time in the court church. Probably in 1600 he became Kapellmeister to the Duke of Wolfenbüttel's brother, Duke Philipp Sigismund of Brunswick-Lüneburg, at Iburg, near Osnabrück. In 1603 he moved to Göttingen as Kantor at the Academy and the Johanniskirche, and he held both appointments until his death. That he dedicated several of his late works – as he had some of his earlier ones – to members of the Brunswick nobility testifies to the goodwill that he continued to enjoy in influential Brunswick circles. He was one of the first German composers to adopt the style of the three-part Italian villanella; his numerous pieces in this genre constitute the core of his creative work. Three other facets of his work are also important: the settings of humanist odes dating from his years at Helmstedt, his theoretical and practical works for school use, and especially his sacred music. His responsorial *Passio dominica* (or Passion according to St John), probably inspired by Mancinus's setting, constitutes an important advance in the history of the Passion, since it is the earliest in which the turbae are scored for five voices.

WALTER BLANKENBURG/CLYTUS GOTTWALD

Harnoncourt, Nikolaus (*b* Berlin, 6 Dec 1929). Austrian conductor, cellist and viol player. Brought up in Graz, he was a cello pupil of Paul Grümmer, and of Emanuel Brabec at the Vienna Music Academy. During his years as cellist with the Vienna SO (1952–69) he became interested in early music, and his studies, alongside experiments in period instruments, led to the formation in 1953 of the Concentus Musicus of Vienna. The ensemble, of which his wife Alice (*b* Vienna, 26 Sept 1930) was for many years leader, was one of the first to specialize in performing early music with instruments appropriate to the period. After four years of preparation they began giving concerts, and in 1962 made their first recording, of Purcell's Fantasias for viol consorts. This was followed by highly acclaimed recordings of Bach's Brandenburg Concertos (1964) and orchestral suites (1966) which Harnoncourt directed from the cello desk, the *St John Passion* (1965), the B minor Mass (1968), the *St Matthew Passion* (1970) and the *Christmas Oratorio* (1972). A major pioneering project, shared with Gustav Leonhardt, to record all of Bach's sacred cantatas was launched in 1971 and completed in 1990. This enterprise established a landmark in Bach recording, both for its overturning of hitherto accepted interpretative conventions and for the almost invariable use of boys' voices to sing the soprano solos. His other notable Baroque recordings with the Concentus Musicus include Monteverdi's three surviving operas (which he conducted at Zürich (1975–9) and later at the Edinburgh Festival and elsewhere), Rameau's *Castor et Pollux*, Telemann's oratorio *Der Tag des Gerichts* and his *Musique de table*, and music by Biber, Schmelzer and Fux, with whose styles Harnoncourt shows a particular affinity.

Nikolaus Harnoncourt

More recently Harnoncourt has extended his activities to Classical and Romantic repertory, both with the Concentus Musicus (with whom he has recorded sharply etched, highly individual readings of symphonies and choral works by Haydn and Mozart) and with modern instrumental groups, above all the Chamber Orchestra of Europe, with whom he has toured extensively, and the Concertgebouw Orchestra. His recordings with the Chamber Orchestra of Europe, which include the symphonies of Beethoven and Schubert, have won many international prizes. He has also made a number of operatic recordings, notably a compelling, if characteristically provocative, series of Mozart operas. Harnoncourt has taught and lectured extensively, and was appointed a professor at Salzburg University and the Salzburg Mozarteum in 1972. His research into period instruments and performance has played an important part in the revival of early music and its wider public dissemination. His views on performance are outlined in his books and in numerous articles.

NICHOLAS ANDERSON

Harp (Fr. *harpe*; Ger. *Harfe*; It., Sp. *arpa*). Generic name for chordophones in which, as defined in the classification system by Hornbostel and Sachs, the plane of the strings is perpendicular to the soundboard. *See also* ORGAN STOP.

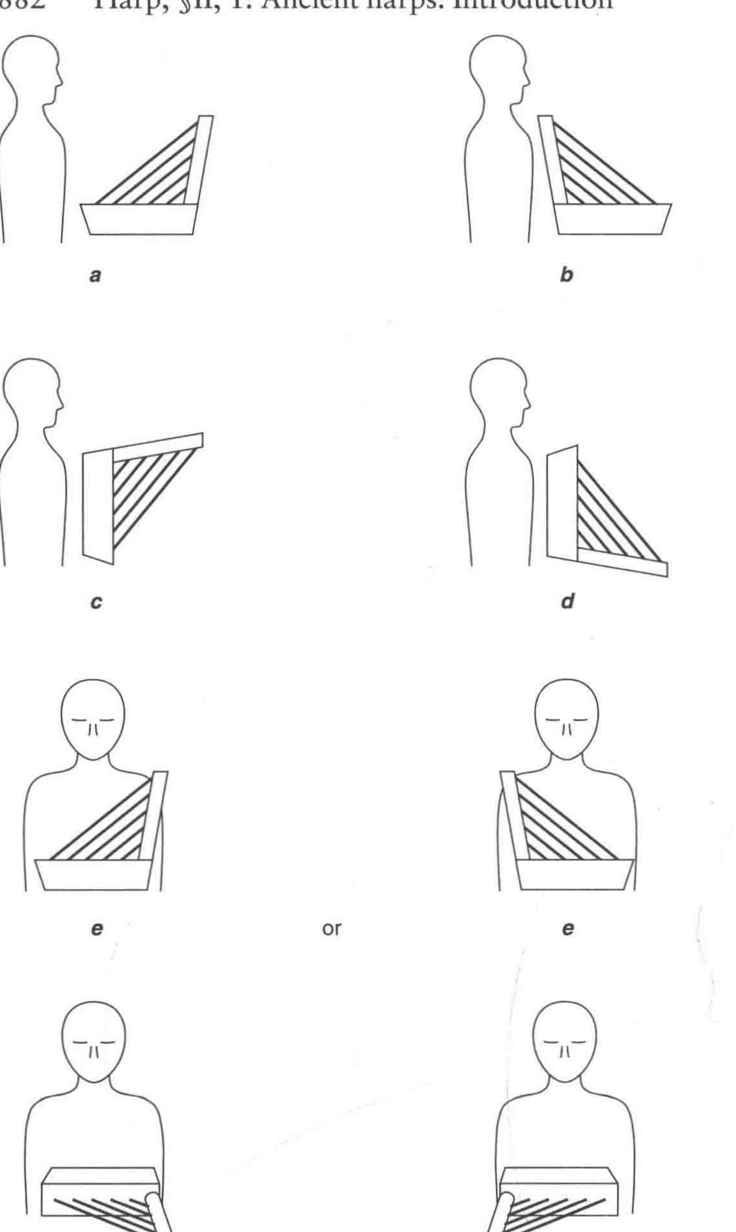
I. Introduction. II. Ancient harps. III. Africa. IV. Asia. V. Europe and the Americas.

I. Introduction

Normally triangular in outline, all harps have three basic structural components: resonator, neck and strings. Hornbostel and Sachs divided them into two categories: 'frame harps' and 'open harps'. Frame harps have a forepillar or column which connects the lower end of the resonator to the neck, adding structural support and helping to bear the strain of string tension. Harps without forepillars are 'open harps'. Only European harps and their descendants are consistently frame harps: most others are open. Hornbostel and Sachs further subdivided open harps into two sub-categories: 'arched' and 'angular' harps. According to Hornbostel and Sachs, the neck of an arched harp curves away from the resonator while the neck of an angular harp makes a sharp angle with it. The termBOW HARP is often applied to arched harps; some organologists have applied the term to a type of MUSICAL BOW with attached resonator. The GROUND HARP (or ground bow) has characteristics of both harps and musical bows.

Resonators of harps may be spoon-shaped, trowel-shaped, boat-shaped, box-shaped (square, trapezoidal or rectangular, often with rounded edges), hemispherical or, rarely, waisted. Resonators are topped with a wood or skin soundtable and a string holder to which one end of a string is usually attached. In some West African BRIDGE HARPS (harp-lutes) the strings pass over a bridge and are then attached in some manner to the lower end of the harp. The other end of a string is attached to the neck either directly with special knots or indirectly to fixed plugs, movable tuning-pegs, or to tuning-rings or nooses which are themselves attached to the neck. Mechanisms which themselves buzz or which modify the string's overtones and vibratory patterns, or both, may be attached near one end of the string, either on the neck or the soundtable, and activated by the plucked string. Mechanisms of these types were used on European harps from the Middle Ages to the early Baroque (i.e. brays; see §V, 1, below) and are used on many African harps. The number of strings on a harp can range from only one to over 90. Mechanisms for chromatic alteration of the strings range from manually operated hooks or levers to complex pedal-activated systems.

The earliest known use of the word 'harpa' was by Venantius Fortunatus, Bishop of Poitiers, in about 600; he wrote, for example: 'Romanusque lyra, plaudat tibi barbarus harpa'. The old Norse word 'harpa' is believed to have been a generic term for string instruments. Around the year 1000, Aelfric glossed *hearpe* as 'lyre'. By this broad definition, even the Sutton Hoo instrument, reconstructed for the second time in 1969 in the form of a long lyre, might have been called a harp. Similarly, the word 'hearpan' in *Beowulf* and other Anglo-Saxon literature is taken to mean playing a string instrument. Early medieval Latin terminology is also ambiguous. 'Cithara' was used for both lyres and harps, while in the 10th and 11th centuries the terms 'lira' and 'lyra' were used for a certain type of bowed instrument. A rare example of a specific use of 'cithara' is in an illustration, said to be from a 12th-century manuscript, which was reproduced in the 18th century by Martin Gerbert in his *De cantu et musica sacra*. It shows a 12-string harp, captioned 'Cythara anglica'. Confusions as to terminology still existed as late as 1511, when Virdung wrote: 'What one man names a harp, another calls a lyre'. Further confusion persists in the application of such terms as 'table harp' to a type of zither, 'mouth harp' to the harmonica, 'jew's harp' to a plucked idiophone (the *guimbarde*) and 'glass harp' to a form of musical glasses. The instruments described by Hornbostel and Sachs as 'harp-lutes' have now been redefined as bridge harps; see §III below. Hybrid instruments with harp-like features include the HARP-PIANO (or keyed harp) and an English guitar-like instrument of the early 19th century (*see* HARP-LUTE (ii)).



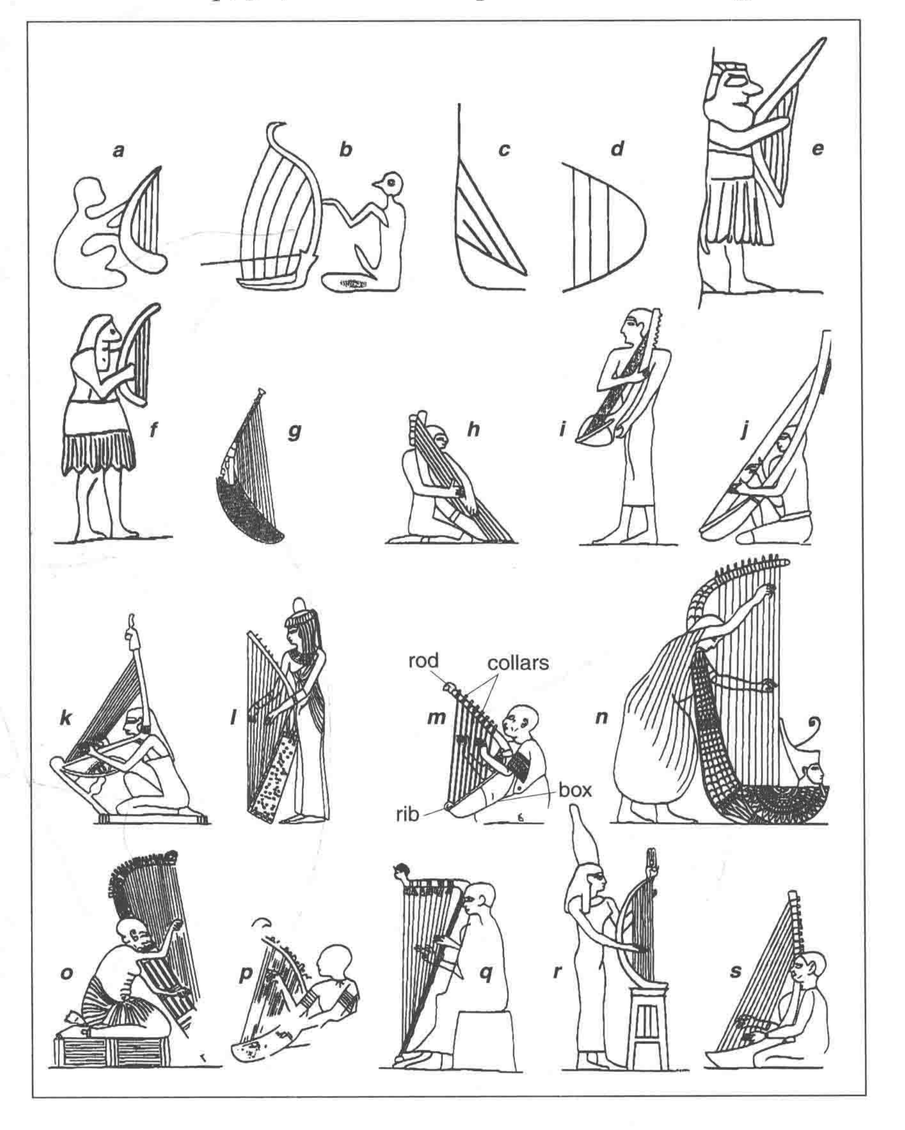
The harp is played in six basic performing positions (fig.1), of which five were used in ancient civilizations and are still in use today; the sixth (position F) appears only in Africa. Analysis of performing positions along with structure is vital to understanding the dispersal and evolution of the harp across time and the globe. Harp tunings are pentatonic, tetratonic, heptatonic (including diatonic) and chromatic. Strings are usually plucked with the fingers, but they may also be struck with a stick or strummed with a plectrum while strings which are not wanted to sound are damped; occasionally the bass wire strings may be stroked with the palm of the hand. Resonators may be used as percussion instruments and struck with the fingers, hands or with hooked rattles. Harpists may use any number of digits from the thumb of one hand with the thumb and forefinger of the other to the thumb and first three fingers of both hands; rarely only a single index finger is used. The fifth finger is seldom used because of its lack of strength and its shortness, which generally causes a clawlike and nearly unusable performing position when all five digits are placed on the strings.

The harp's use ranges from religious ritual to pure entertainment. Harpists are depicted in royal chambers, salons, banquet scenes and processions as soloists or in ensembles. Harpists have accompanied themselves singing ballads, reciting oral history and epic poetry or accompanying rituals of various types. In the ancient world, solo harpists and harpists in large ensembles were usually men while harpists who played in small chamber ensembles were often women. In the Western world until the late 19th century, professional harpists were usually men, while women played the harp as a domestic instrument probably from the 17th century. Today, men and women play harps throughout the world; but throughout Africa, in India, Georgia and Siberia women are rarely professional harpists and, in a few cases, are not even allowed to touch the instrument.

II. Ancient harps

1. Introduction. 2. Numbers of strings. 3. Regional inventories: (i) Iraq (Mesopotamia) (ii) Iran (Persia) (iii) Egypt (iv) Greece.

1. INTRODUCTION. In ancient times harps were, with some isolated exceptions, all of the 'open' type, arched or angular. Many kinds and sizes were developed, with various performing positions and playing techniques (see figs.2, 3, 4 and 7 below). The way that the harp is held determines the angle of the strings to the body of the performer. The evidence shows that the majority of



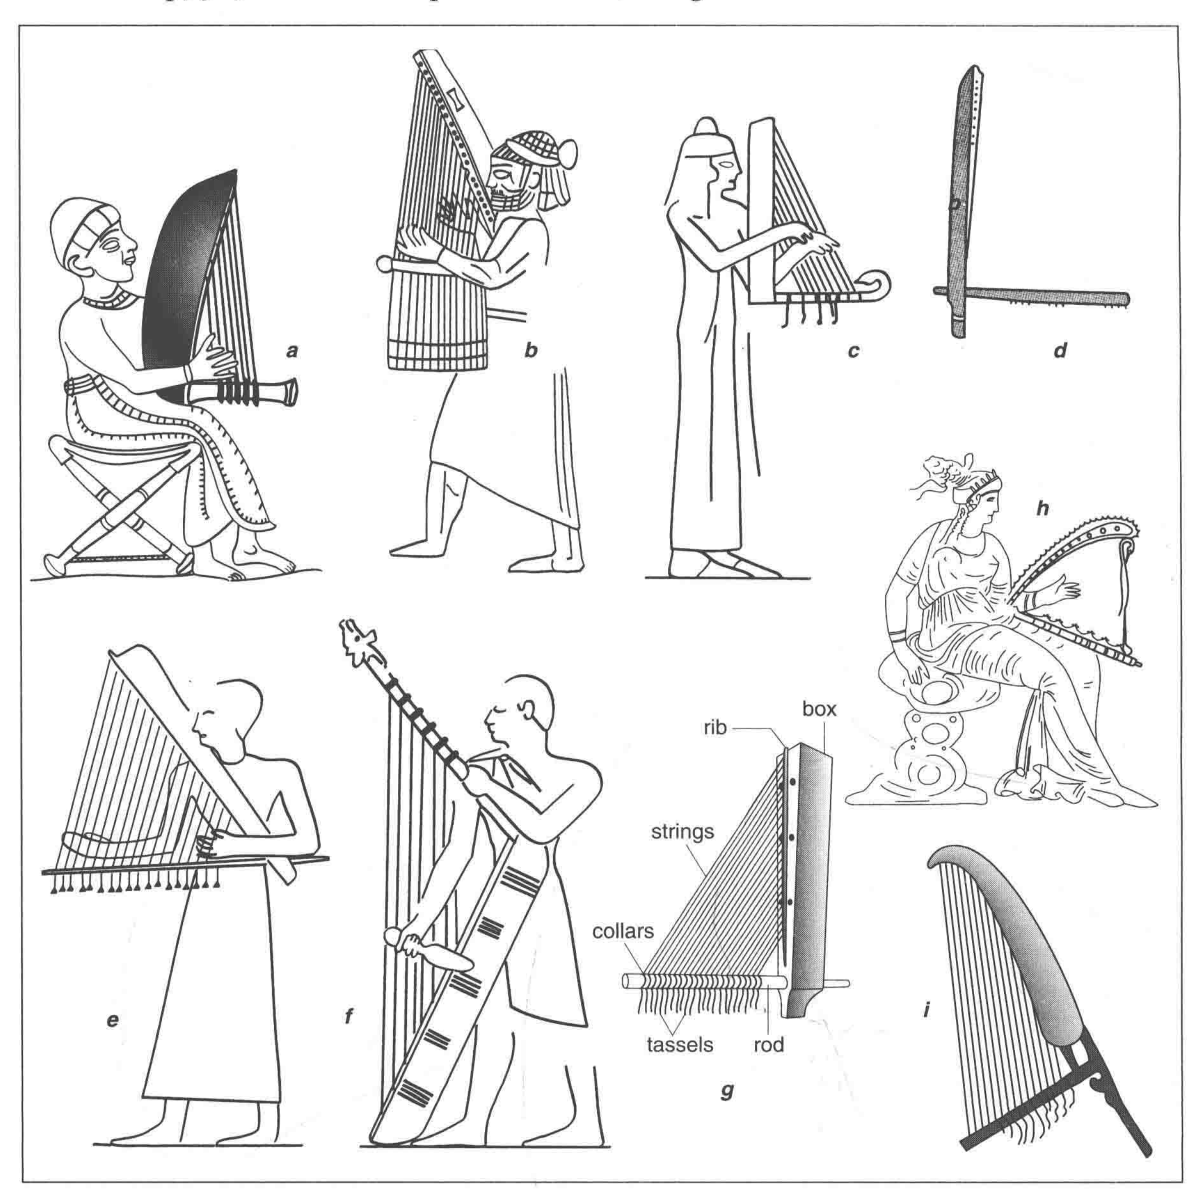
1. Worldwide distribution of performing positions on harps, regardless of historical period (there are minor variations in the angle of the harp in relation to the human body; the depicted harp is intended to be generic and does not represent any particular type; information on some performing positions is derived from iconographic sources):

a – Uganda, Democratic Republic of the Congo (East), Gambia, Senegal, Guinea, Guinea-Bissau, Sierra Leone, Liberia, Mali, Ivory Coast, Ghana, Burkina Faso, Siberia; formerly Mesopotamia
b – Mauritania; formerly Egypt, Minoan, Mesopotamia
c – Gabon, Cameroon, Chad, Congo, Central African Republic; all Western harps, and Western-influenced harps in the Philippines, Mexico, Peru, Paraguay, Ecuador, Venezuela, Colombia, Argentina, Chile; formerly Egypt
d – Chad (south-west); Chile and Peru (only in processions; the harp is turned upside-down and the neck of the harp rested on the shoulder of the harpist, who can then play while walking); formerly Mesopotamia, Middle East and East Asia, Central Asia, west Asiatic areas; Italo-Greek areas
e – Central African Republic, Democratic Republic of the Congo (only Zande and Zande-influenced peoples), Gambia (Jole), Guinea (Wasulu), Georgia (Caucasus), Afghanistan, India, Myanmar; formerly Middle East and East Asia, Central Asia, Indonesia
f – Chad (south-west), Cameroon (north) [the harp rests entirely on the ground and the performer squats with the resonator close to the body]

ancient harps were held with the strings either vertically (figs.2 and 3) or horizontally (fig.4). (A few were held with the strings at an oblique angle, but classifying harps according to whether they are horizontal or vertical, and arched or angular, is still useful when considering general trends in the development of ancient harps.) The strings were either plucked by the fingers (figs.2*f*, *g*, *k–s*; fig.3*a–c*, *e*; fig.7*b* and fig.8 below) or struck with a long plectrum held in the right hand (figs.3*f* and fig.4*c–e*). Both methods are seen on ancient representations by the 2nd millennium BCE, but vertical harps were often plucked with the fingers and horizontal ones with a plectrum. In representations with plectra, the left hand is often obscured by the strings, but it may have been used to dampen the strings that should not sound when the plectrum was strummed across all strings. On most of the earliest harps tuning was effected by rotating collars ('tuning nooses') encircling the neck, although some had tuning pegs (see fig.8 below).

Arched harps were first introduced during the 3rd millennium BCE in the Middle East (fig.2*a*, *c–g*) and Egypt (fig.2*i–j*) and angular harps appeared in about 1900 BCE in Mesopotamia, from where they quickly spread. The latter were used throughout the Hellenistic period, entered the Buddhist and Islamic worlds, but died out after the end of the 17th century CE.

There were two major types of vertical angular harp, 'heavy' and 'light'. Up until 600 CE a sturdy design predominated, with a thick neck passing through the robust resonator. This gave way to a much more delicate design where a thin neck was attached to an extension or 'tail' below the resonator and rested against a short pin extruding from the resonator (fig.7*d*). In effect, the neck



2. Vertical arched harps found in (a) Iran, (b) the Aegean, (c–h) Mesopotamia and (i–t) Egypt: (a) Chogha Mish, 3300–3100 BCE, seal impression on clay; (b) Keros, Greece, 2600 BCE, marble statuette (hypothetical strings); (c) Mesopotamia, 3100–2900 BCE, cylinder seal impression; (d, e) Uruk, 3000 BCE, inscribed clay tablet; (f) Khafajeh, 2600 BCE, relief on limestone; (g) Ur, c2500 BCE, composite of extant silver covers of two surviving instruments (see also MESOPOTAMIA, fig.4); (h) shovel-shaped harp, Giza; 2300–2206 BCE, wall relief; (i) shovel-shaped harp, Hagarsa, 2632–2510 BCE, wall painting; (j) shovel-shaped harp, Giza, 2400 BCE, wall relief; (k) ladle-shaped harp, Thebes, 1504–1419 BCE, wall painting; (l) boat-shaped harp, Thebes, 1419–1410 BCE, wall painting; (m) ladle-shaped harp, Saqqara, 1350–1323 BCE, wall relief; (n) 7-shaped harp, Thebes, 1166 BCE, wall painting; (o) 7-shaped harp, Thebes, 1198–1160 BCE, wall painting; (p) round ladle-shaped harp, el-Amarna, 1382–1365 BCE, wall painting; (q) 7-shaped harp, Thebes, 710–656 BCE, stele; (r) crescent-shaped harp, Dendara, 300–200 BCE, wall relief; (s) shovel-shaped harp, Memphis, 600–400 BCE, relief

formed a lever and the pin a fulcrum. The contraption was stable because the torque of the strings around the fulcrum was counteracted by the torque of the tail. Light vertical angular harps appeared on Iranian and East Asian monuments within a few decades of 600 CE, but because of the closeness of dates it is difficult to be certain which region first adopted them or whether they were invented in some intermediate region. The latter possibility is suggested by the rounded ends of their resonators (fig.7*a*, *c* and *d*), a feature already present on a horizontal angular harp dating from 400 BCE found near Pazïrïk in the Altai mountains. Mouth organs typical of China were depicted alongside light vertical angular harps in the rock reliefs at Taq-e Bostan, Iran (7th century CE, *see* IRAN, §I, fig.8); as the former were certainly imported from the East, this kind of harp may also have had its origin there.

Frame harps appeared briefly in Greece (*c*450–350 BCE, fig.3*h*) and Italy, when some angular harps had a forepillar inserted between the top of the resonator and the far end of the neck. They were subsequently forgotten, and did not return until the modern harp emerged in Europe in about 800 CE. Just as the classical Greek frame harp was an isolated case, so was the Cycladic harp (fig.2*b*) two millennia earlier. The latter has sometimes been identified as a frame harp, but is more likely to have been an arched harp: the 'forepillar' being nothing more than a long and curved extension to the neck.

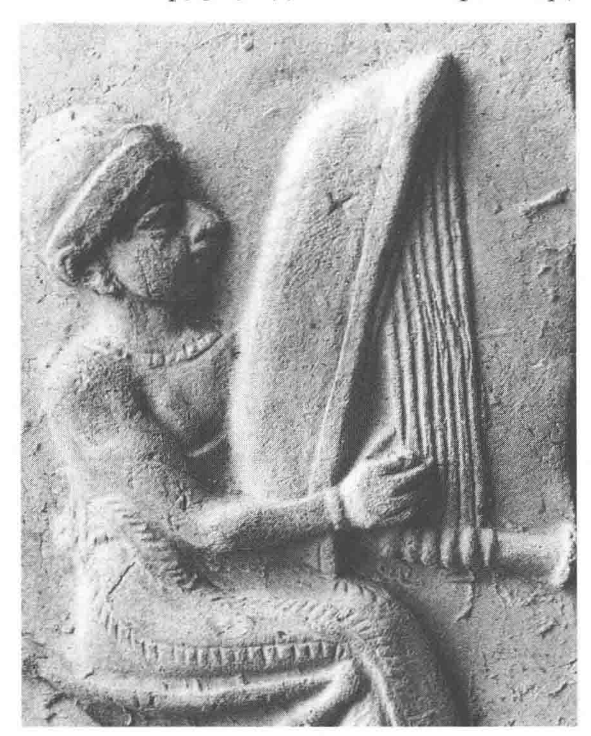
2. NUMBERS OF STRINGS. Iconographical evidence is helpful in showing the ways in which ancient harps were constructed, but to determine the number of strings employed on the various types one must turn to the fragments of instruments that have survived, since pictures and carvings are often sketchy or schematic. The dry sands of Egypt have preserved a large number of harp fragments dating from the middle of the 3rd millennium to the end of the 1st millennium BCE, and several have been excavated elsewhere, e.g. several horizontal arched harps at Ur (*c*2500 BCE, now housed in the British Museum; see §II, 3(i), below) and the angular harp at Pazïrïk (400 BCE; now in the Hermitage, St Petersburg). Fragments of two light vertical angular harps that were brought to Japan from China in the 8th century BCE have been held ever since in the Imperial Treasury of the Shōsōin, Nara.

3. *Vertical angular harps: (a) Tell Asmar, Mesopotamia, 1950–1530* BCE, *terracotta relief; (b) Nineveh, Mesopotamia, 660–650* BCE, *wall relief; (c) Thebes, Egypt, 1454–1419* BCE, *wall painting; (d) Egypt, 1500–1100* BCE, *extant harp (Metropolitan Museum of Art, New York); (e) Medamud, Egypt, 304–30* BCE; *(f) Kawa, Egypt, 710–656* BCE; *(g) Egypt, 700–500* BCE, *extant harp; (h) Athens, Greece, 5th century* BCE, *Red-figure vase painting; (i) Herat, Iran, 1426* CE

Although these survivals demonstrate a considerable variety in the number of strings used, the overall trend is that the early arched harps had few strings (usually less than ten, in one case only three) but angular harps, from their first appearance onwards, always had many (between 15 and 29, but averaging at 21). The re-invented frame harp of medieval Europe could support many more strings, partly because the structure was stronger and partly because, with the 'harmonic' curve of the neck, the string lengths increased exponentially, resulting in an even distribution of tension across a wide compass.

Because the number of strings used on ancient harps discloses the number of pitches available to the harpist (considering that unison strings are unlikely), the increase in compass made possible by the switch from arched to angular harps presumably reflects contemporary changes in the musical material.

3. Regional inventories.



(i) Iraq (Mesopotamia). The image of a vertical arched harp was used in a Sumerian pictogram of 3000 BCE (fig.2*d–e*; *see also* Mesopotamia, fig.1). The same shape is found on stone plaques (2600 BCE; fig.2*f*) and seals (3000 BCE; fig.2*c*). A horizontal arched harp is shown on a vase from Bismaya (fig.4*c*) dating from the later half of the 3rd millennium BCE. No complete harp has been found, but a reconstruction has been made of a composite of two fragments of an arched harp with 13 strings from the Royal Cemetery at Ur (*c*2500 BCE; the original neck is in the British Museum, and the resonator is in the

4. Horizontal arched (a, d, e, g, h, j, k) harps and angular harps (c, f, i), and frame harp (b): (a) Iran, 2300–2100 BCE, seal impression (see also IRAN, *fig.3c); (b) Cyclades, Greece, 2600 BCE, marble statuette; (c) Shar-i Sokhta, Iran, ?2400 BCE, terracotta plaque; (d) Bismaya, Mesopotamia, 2100 BCE, relief on stone vase; (e) Tell Asmar, Mesopotamia, 1950–1530 BCE, terracotta plaque; (f) Tell Asmar, Mesopotamia, 1950–1530 BCE, terracotta plaque; (g) shoulder harp, Thebes, Egypt, 1504–1452 BCE, extant shoulder harp; (h) Thebes, Egypt, 1380–1320 BCE, extant harp; (i) Iran, 400–800 CE, silver plate; (j) Pendzhikent, Tajikistan, 700–20 CE, wall painting; (k) Nāgārjunakonda (India), 100–300 CE, stone sculpture*

University of Pennsylvania Museum, Philadelphia; *see* MESOPOTAMIA, fig.4). Although all the wooden parts had decayed, their shapes were discernable by the silver and gold foil that partly covered the instruments and from the bitumen that had been used as a filler. Stauder (A1957) arrived at a similar reconstruction based on iconography.

Angular harps were introduced in about 1900 BCE to the complete exclusion of arched ones, and the conversion brought about a sudden increase in the number of strings available to harpists (see §II, 2, above). It is not surprising that this change occurred in Mesopotamia since, as shown by the Ur harp, Sumerian harp makers were already

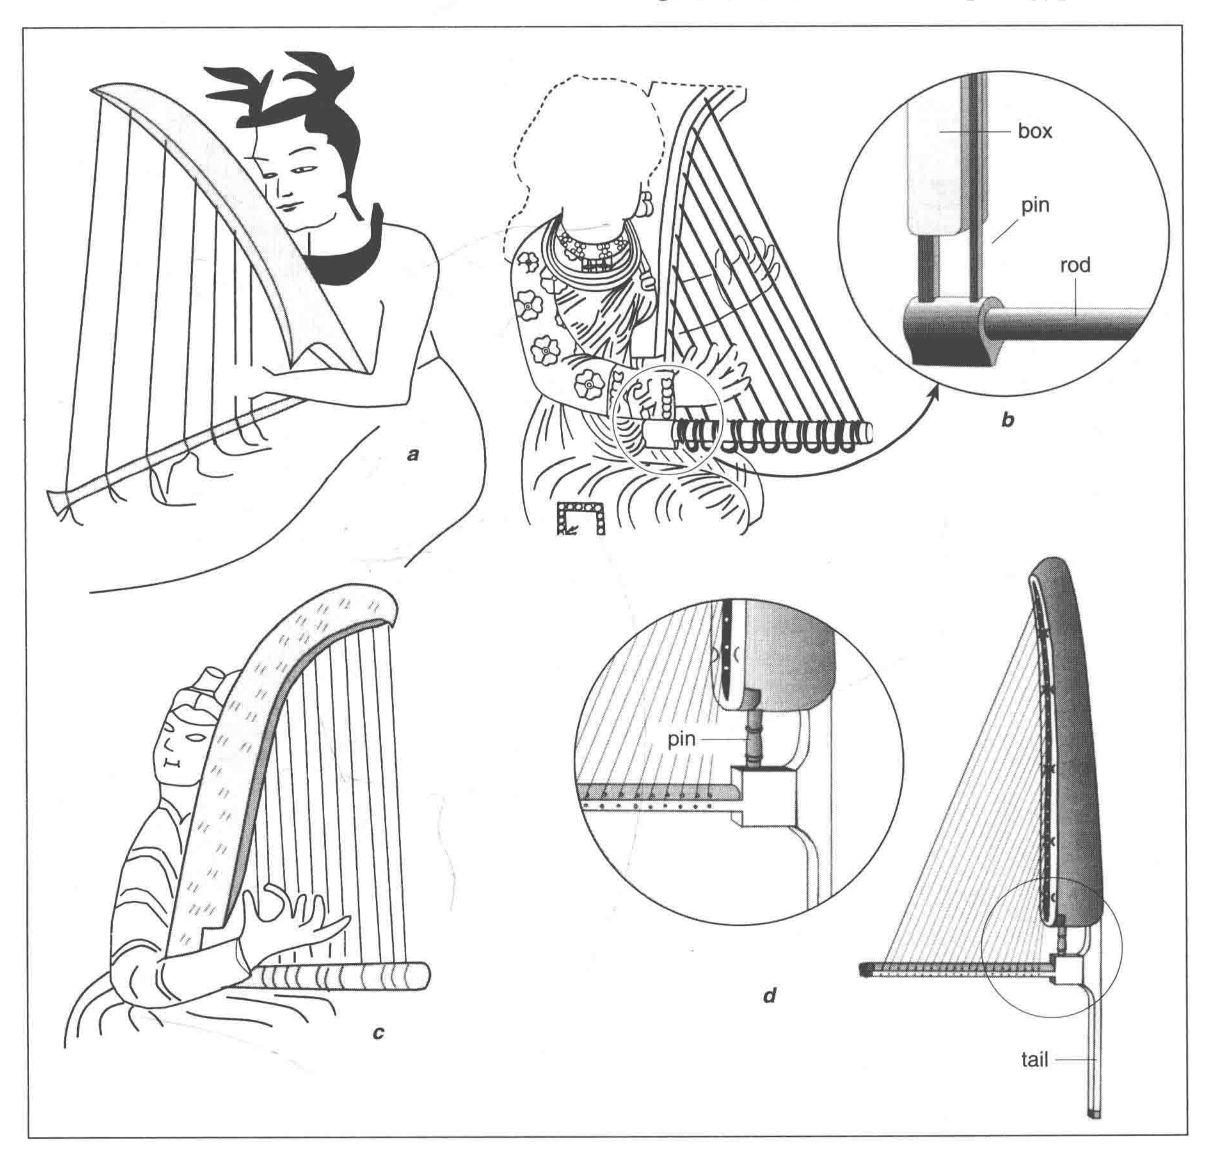
5. Vertical angular harp: clay plaque from Tell Asmar, 1900–1500 BCE (Musée du Louvre, Paris)

making arched harps with as many as 13 strings by about 2600 BCE. By contrast, contemporaneous harps in Egypt typically held only four or five strings. The switch may be linked to the development in Mesopotamia of codified tuning systems in the middle of the 2nd millennium BCE (*see* MESOPOTAMIA, §8). The known tuning texts, which include tuning instructions, concern a nine-string *sammû*, but the theory could in principle apply to any number of strings. (There are two interpretations of the Old Babylonian term *sammû*: Gurney and Lawergren (A1987) argue that it was a harp; see fig.4*d–e*. According to Kilmer it meant 'lyre'; *see* MESOPOTAMIA, §5.)

Side-views of Old Babylonian vertical angular harps (fig.3*a*) show an incised cross near the top of the resonator, and similar figures can be found on neo-Assyrian harps (800–650 BCE; fig.3*b*). It was known as the 'ear of the *sammû*', i.e. its soundhole. Angular harps were prevalent throughout the neo-Assyrian period. The pinnacle of their popularity was reached in the palace of King Ashurbanipal (reigned 668–627 BCE), where wall reliefs show large numbers of harps: for example, one depicts a victory celebration accompanied by five angular harps.

(ii) Iran (Persia). Harps were depicted in Iran from at least 3100 BCE to 1600 CE, a longer period than elsewhere. Arched harps were shown on seals, being played vertically at Chogha Mish (fig.2*a*; *see also* IRAN, fig.2*a*; 3300–3100 BCE) and Susa (2750–2600 BCE), but horizontally at Shar-i Sokhta (fig.4*b*; 3000–2300 BCE) and in south-eastern Iran (*see* IRAN, fig.2*c*). In the 2nd millennium BCE the focus shifted to the Elamite region in western Iran. As in Mesopotamia, Elamite harps were angular, but the latter were smaller. During the 1st millennium BCE Elamite harps acquired full size, as shown on a metal bowl dating from about 650 BCE, found at Arjan, Elam (*see* IRAN, fig.7). Judging from the presence of large harp ensembles (larger than those of Mesopotamia), Elam had a major harp culture. Nine harps are shown at Madaktu and groups of six, three and two harps at Kul-e Fara (9th–7th century BCE; *see* IRAN, §I, 4(i) and IRAN, fig.7).

In Iran light vertical angular harps appeared first at Taq-e Bostan (600 BCE; fig.7*b*). They co-existed with heavy vertical harps, but grew to dominance from 1400 to 1600 (see fig.3*i*). Islamic book illustrations during this period form the largest corpus of harp iconography before the standardization of modern instruments. Angular harps continued to be used in the Islamic world up to the end of the 17th century. In his census of instrument makers living in Istanbul (*c*1650) Ewliya Çelebi reported ten *chang* (angular harp) makers (Farmer, 1936). The question remains as to why they then disappeared after such an illustrious history spanning 3500 years. Perhaps the delicate design of light angular harps was unable to keep stable tuning, or that compared to lutes and zithers, which steadily increased in popularity, harps may have come to be seen as unwieldy anachronisms, incapable of adapting to new musical demands.



In Europe Islamic travellers brought angular harps as far West as Spain.

(iii) Egypt. Harps were the most prominent type of Egyptian instrument and they existed through most of the pharaonic period. Some were covered with 'silver, gold, lapis lazuli, malachite, and every splendid costly stone, for the praise of the beauty of his majesty' and others with 'ebony, gold and silver'. The generic Egyptian name for harp was *benet*.

During the Old and Middle Kingdoms (2600–1500 BCE) there was only one type – the shovel-shaped harp – but it existed in several sizes (figs.2*h–j* and fig.8). Since the harp arose later in Egypt than in the Middle East, Sachs (*SachsH*) assumed that the harp came to Egypt from the Middle East. However, the Egyptian shape differed from the contemporary Sumerian one (fig.2*g*): Egyptian harps had a thick neck and relatively small resonator while Mesopotamian ones had the reverse proportions.

6. Horizontal arched harp (sammû): terracotta relief from Tell Asmar, 1900–1500 BCE (Musée du Louvre, Paris)

7. Light vertical angular harps: (a) Dunhuang, China, 535–56 CE, cave painting; (b) Taq-i Bostan, Iran, 600 CE, rock relief; (c) Henan province, China, 551 CE, stone stele; (d) Nara, Japan, 8th century CE, parts of extant harp.

During the New Kingdom (1500–1200 BCE) new types with Mesopotamian proportions were introduced with ladle shapes (fig.2*k* and *m*). Another shape has also been identified: the seven-shaped harp (fig.2*o*, *q* and *n*, the latter with an added ladle-like base and a finial head). Strongly curved harps are called 'round ladle-shaped harps' (fig.2*p*). Shoulder harps (fig.4*f*) also flourished during this period. During the Ptolemaic period (332–30 BCE) crescent-shaped harps were introduced (fig.2*r*). Angular harps were subject to much experimentation with the angle of the neck to the resonator and with playing position (fig.3*e–g*). Similar experiments were being carried out contemporarily in Greece. Ladle-shaped harps are the most prevalent types still being played in Africa today (see §III below).

The relative popularity in Egypt of the various types of harp is summarized in fig.9. The most notable trend is the slow but steady increase in proportion of angular harps, which grew from a modest start in the New Kingdom to dominance in Hellenistic period. At the time of Athenaeus (160–230 CE) a *trigōnon* (angular harp) player from Alexandria had become so popular that Roman citizens were whistling his tunes in the streets (*Deipnosophistae*, iv.183e).

Angular harps conquered Egypt nearly two millennia after they had replaced arched harps in Mesopotamia, i.e. the latter region craved instruments with many strings, whereas Egypt did not. Egyptian musicians may have resisted angular harps because they feared the consequences of easy access to many pitches. That was the attitude of Plato when he condemned harps in *Republic* (iii.399c):

> "Then", said I, "we shall not need in our songs and airs instruments of many strings or whose compass includes all the modes." "Not in my opinion", said he. "Then we shall not maintain makers of harps [*trigōnon*, *pēktis*] and all other many-stringed and polymodal instruments."

8. The singer Iti and the harpist Hekenu, who plays an arched harp with a shovel-shaped resonator: detail of a relief from a tomb at Saqqara, 5th Dynasty, 2563–2423 BCE *(Egyptian Museum, Cairo)*

In fact, Greece too had been very slow in accepting the angular harp. It preferred lyras and kitharas with approximately seven strings. Egypt's long preference for harps of narrow pitch range amounted to inveterate musical conservatism, a condition praised by Plato (*Laws*, 656d):

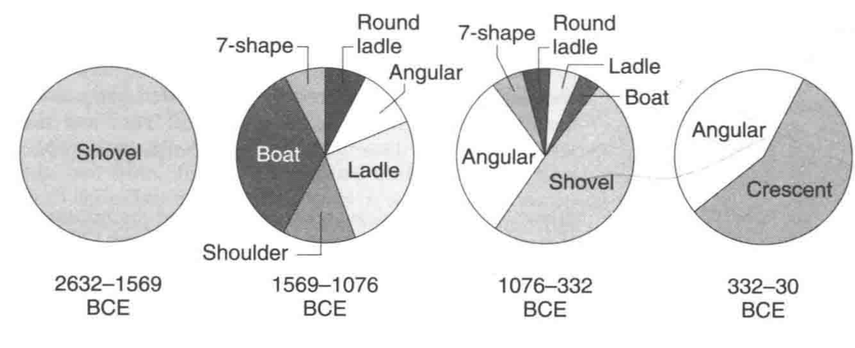
CLINIAS: How, then, does the law stand in Egypt?
AN ATHENIAN STRANGER: . . . It appears that long ago they determined on the rule . . . that the youth of a State should practice in their rehearsals postures and tunes that are good: these they prescribed in detail and posted up in the temples, and outside this official list it was, and still is, forbidden . . . to introduce any innovation or invention . . . in any branch of music.

There were, however, attempts to increase the numbers of strings on Egyptian arched harps, especially during the reign of the heretic pharaoh Akhenaten (1353–1335 BCE), when foreign harps seem to have gained temporary acceptance.

(iv) Greece. Marble statuettes from the Cycladic islands show some arched harps in the Aegean by the middle of the 3rd millennium BCE (fig.2*b*), but angular harps did not arrive until about 400 BCE when they are shown on Red-figured Attic and Apulian (south Italian) vases. Some were actually frame harps, being made with a forepillar, often given a fancy shape, such as the bird shown in fig.3*b*. Frame harps disappeared with the demise of the classical Greek civilization. (*See also* TRIGŌNON.)

Harps with a cigar-shaped resonator are called spindle harps. Their odd shape may be an attempt to acquire the beneficial acoustical properties now associated with exponential string-length distribution (i.e. the curve given by the increase in the length of strings which, with the same tension and thickness, give a musical scale; it is given on modern frame harps by the 'harmonic curve' of the neck). As drawn on the example from an Attic Red-figure vase in fig.10, the exponential curve lies quite close to the spindle shape of the resonator.

According the ancient texts, the *sambyke* ('siege-engine'; *see* SAMBUCA) was a musical instrument that looked like a warship used to attack harbour forts. Most likely, it was a horizontal angular harp. During the Hellenistic period angular harps remained popular, but their design had reverted to the earlier Near Eastern model that lacked a forepillar.



To understand the relatively late introduction of harps in the Aegean, Plato's *Republic* again serves us well. But his opinion was formulated at the beginning of the 4th century BCE and does not explain why Aegean inhabitants did not adopt the harp in the 2nd millennium when neighbouring regions (Anatolia, Mesopotamia and Egypt) all enjoyed harps with wide compasses. Instead they took to the relatively narrow compass of the lyre (*see* LYRE, §2). The reason for the choice is an enigma, but it resulted in a segregation between lyre and harp cultures in the eastern Mediterranean.

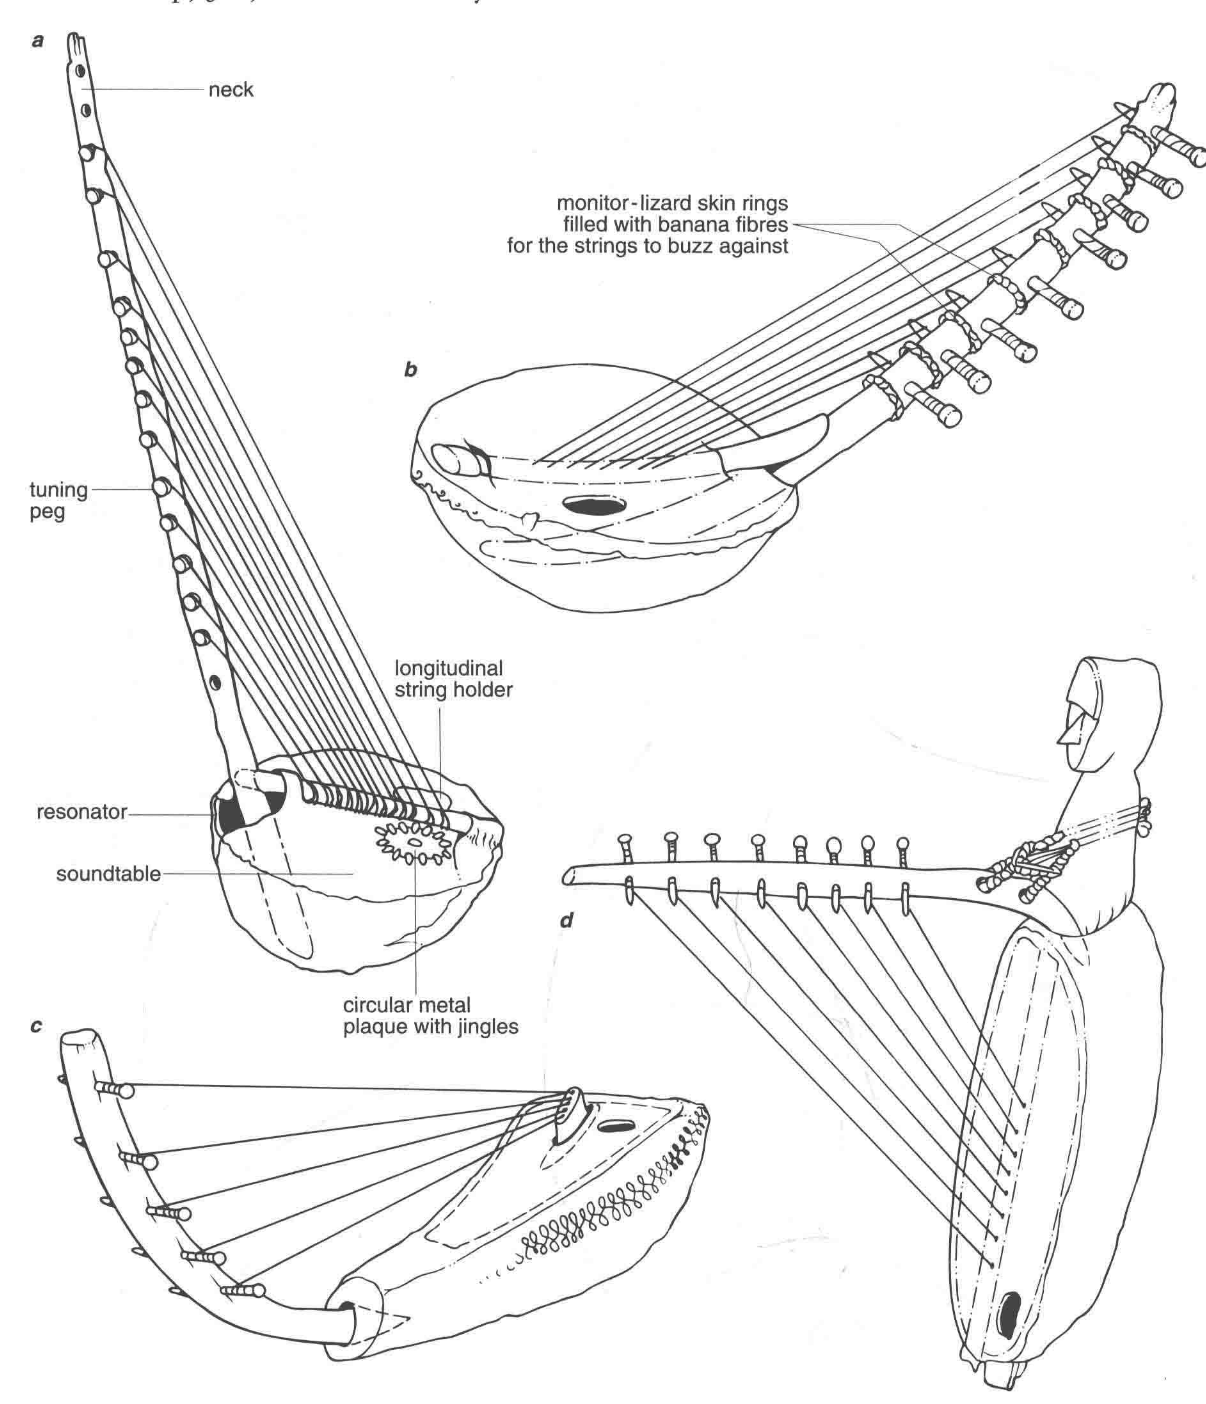
III. Africa

Nowhere is there a larger variety of harps than in Africa. The harp has a place in the traditions of nearly 150 African peoples. The variations in the construction and decoration of African harps serve as excellent examples of the ingeniousness of African instrument makers in creatively utilizing locally available materials. African harp makers – often harpists themselves – incorporate formal and design elements that make each instrument a unique expression of a particular culture and performing practice. Harps and harp playing often have rich symbolic meanings; harpists are frequently historians and genealogists as well as the central figures in religious rituals.

For further details of West and central African harps, *see* BRIDGE HARP and KORA.

1. History and distribution. 2. Organology and construction: (i) Harps with longitudinal string-holders (ii) Harps with vertical string-holders or bridges (iii) Construction, materials and stringing. 3. Performing techniques. 4. Performing practices.

9. Diagram showing how the relative population of different types of harp developed in Egypt over time; all shaded areas refer to variant shapes of arched harp



10. Spindle harp painted on an Attic Red-figure vase (5th century BCE); the white line is added to show the exponential curve

1. History and distribution. In construction, the harps of Africa belong to a continuous tradition that is at least 5000 years old. Several types of African harps, especially those of Mauritania, Gabon, Central and East Africa, are so strikingly similar to ancient harps, that one suspects harps began to be played in Africa south of the Sahara in ancient times. The ancient construction methods were quite probably preserved through oral tradition because of the extraordinary importance of the cultural functions and meanings assigned to African harps. While one would assume from the construction of African harps that they are most closely related to those of ancient Egypt, it is surprising to discover that some of the basic performing positions used on African harps resemble those of ancient Mesopotamia and were not found in Egyptian iconography. Whether harps originated in the Middle East and spread to Africa or vice versa is still a matter for debate. While there is specific iconographic evidence to prove the existence of black harpists in ancient Egypt, there is nothing for the remainder of Africa in ancient times; however, the presence of at one basic type of African harp in Praetorius's *Theatrum instrumentorum* (1620; the *ngombi* type: see fig.11*d*) suggests that it has remained virtually unchanged at least since the early 17th century.

African harps share some basic structural components with the Pluriarc and the Lyre. On the harp-like pluriarc, each string has its own neck rather than sharing a common one. The similarity of the wooden bowl-resonator and soundtable lacing of the Ganda harp, *ennanga* (fig.11*b*), to those of the Soga lyre indicates a relationship between them.

Harps, lyres and pluriarcs each predominate in their own geographical area to the exclusion of the others. Harps are distributed in a belt across Africa from Mauritania to Uganda and occur mostly north of the equator. Lyres occur east and north-east of harp territory, while pluriarcs appear south of the equator. In the few locations where more than one of these categories of instrument co-exist, the older instrument seems to die out as the newcomer to the area takes over (in parts of Uganda, for example, the lyre is slowly replacing the harp). Closer relationships between these categories could probably be established on the basis of a comparative study of bridges and string-holders, musical and social customs, geographic distribution and, most importantly, performing techniques. However, only those instruments considered as harps in the classification system of Hornbostel and Sachs (where the defining characteristic

11. Three structural types of African harps with longitudinal string-holders: (a) ardin (Mauritania), structural type 1, 'spoon in a cup'; (b) ennanga (Uganda), type 1, 'spoon in a cup'; (c) kinde (Lake Chad area), type 2, 'cork in a bottle'; (d) ngombi (Gabon), type 3, tied to a 'shelf'

is that the plane of the strings is perpendicular to the soundtable) are discussed here.

2. Organology and construction. All members of the African harp family share basic structural components (see fig.11*a* and 12*b* below): (1) a neck, usually made from the branch of a tree, and fitted with tuning pegs or tuning nooses to which one end of the strings are tied; (2) a resonator, the hollow body of the harp which amplifies the sound of the strings; (3) a soundtable, usually of skin stretched over the open top of the resonator, which vibrates when the strings are plucked, thereby enhancing the duration of the sound of the strings as well as helping to transmit their vibrations into the resonator to be amplified; and (4) either a string-holder, to which the other end of the strings are tied, or a bridge, which the

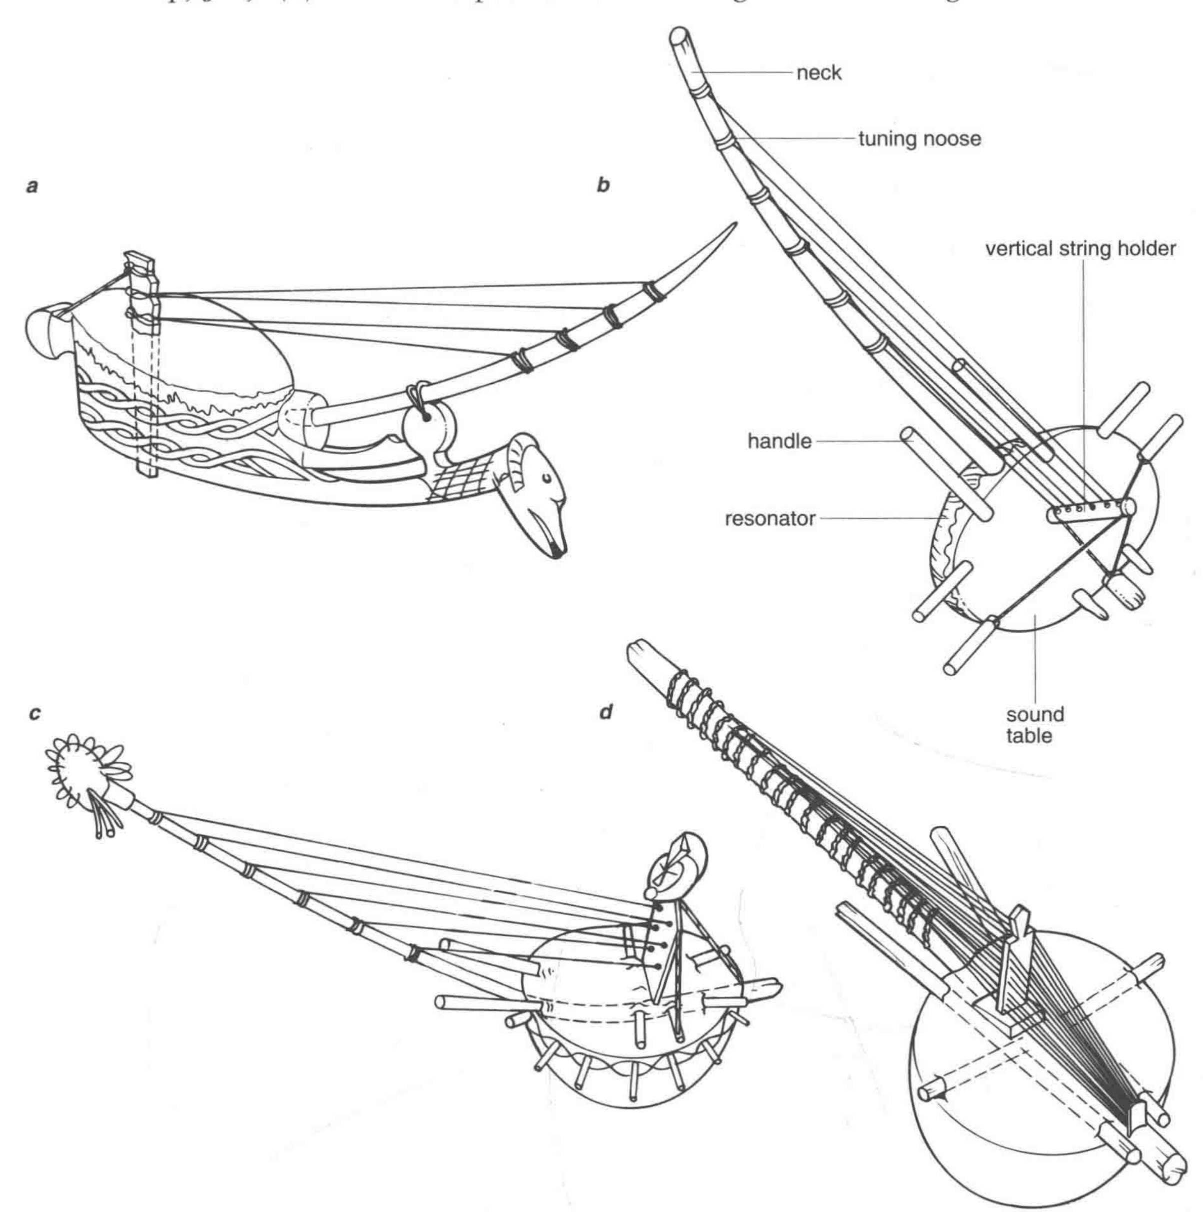
strings pass over before being tied in some way to the far end of the harp. All African harps are thus classed as 'open' harps because they lack the additional structural support of a forepillar of most Western or 'frame' harps.

DeVale (New York, B1989) has classified instruments in the African harp family as belonging to two basic groups based on whether the string-holder or bridge is placed lengthways on the soundtable in line with the neck, or whether it stands perpendicular to the soundtable (or leaning somewhat toward the neck).

(i) Harps with longitudinal string-holders. African harps with longitudinal string-holders are the direct relatives of ancient harps and are related by their basic construction to all the harps of the world outside of Africa. In these harps, the string-holder lies on (fig.11*a*) or under (fig.11*b* and *d*) the soundtable, or is inserted pin-like into it (fig.11*c*), and lies parallel to the centreline of the soundtable in line with the neck. In addition to the placement of their string-holders, the tuning mechanisms for all harps of this group are tuning pegs inserted into the neck of the harp. Harps with longitudinal string-holders are found throughout Central and East Africa but not in West Africa, with the exception of the Mauritanian *ardin*.

Harps with longitudinal string-holders have been classified into three types by Klaus Wachsmann (B1964) based on the manner in which the neck is attached to the resonator. In the first type (fig.11*a* and *b*), found in Mauritania and Uganda (the extreme ends of African harp territory), the neck simply rests in the resonator like a 'spoon in the cup', and if the strings were removed, the whole structure would collapse. Harps of this type are arched, except for the *ardin* (fig.11*a*) which is angular. The second type (fig.11*c*) is the most common, being found throughout Central and parts of West Africa and related to one type of Asian harp. Its neck is tanged and fitted into a hole at one end of the resonator or sometimes forced in like a cork into a bottle. Harps of this type are all arched. The third type (fig.11*d*) is known as a 'shelf' harp. When this type of harp is carved, a projection ('shelf') is left remaining at the back half of the top of the resonator and sometimes carved into an anthropomorphic form (see §III, 4, below). The neck is either laced to the shelf with fibre or thong (fig.11*d*) or tanged and fitted into it (in either case this type is classified as an angular harp). Shelf harps are found primarily in Gabon and the Central African Republic and are related in basic structure and performance position to Western European harps and their descendants.

(ii) Harps with vertical string-holders or bridges. Although harps with vertical string-holders or bridges (fig.12) are classified in the system of Hornbostel and Sachs as 'harp-lutes' (*see* CHORDOPHONE), they have little in common with lutes except that some have straight necks and some have bridges. Unlike lutes their string-holders and bridges are vertical not horizontal, and the plane of their strings is perpendicular to the soundtable (like all harps), not parallel. Additionally, the performing position, in which the neck is pointed away from the performer (fig.1, Type A), and the techniques used are unquestionably those of a harp, and are nearly identical to those of most harps of Uganda and the eastern part of the Democratic Republic of the Congo. It is this basic position, not found in ancient Egypt, that relates all of these harps to the horizontally-held harps of ancient Assyria.



Harps with vertical string-holders or bridges are the unique creation of West African harpists and harp makers. Bridges are usually placed perpendicular and string-holders sometimes at an angle to the soundtable. The necks are not fitted with tuning pegs; instead, either each string is tied to its own ring made of braided hide which is 'strung' onto the neck, or 'nooses' in the form of rope or leather extensions are tied to each string on one end and then wrapped around the neck in some fashion.

Following Wachsmann's lead in classifying harps with longitudinal string-holders by the manner in which the neck is connected to the resonator, DeVale has identified two types of harp with a vertical string-holder or bridge: tanged and spiked. In the first type (fig.12*a*), the neck is tanged and fitted into a hole in the end of the resonator or, like its counterparts with longitudinal string-holders, forced in like a cork into a bottle. The tension of the strings on the string-holder is counterbalanced by cordage which anchors the tip of the sound holder directly to a stubby protrusion on the far end of the resonator. Its resonator is carved from wood, and the morphology of the harp as a whole resembles a ship, often complete with masthead, a sculptural form peculiar to this type of harp. Because 'shiplike' harps are found primarily in museums in Western countries and there is little evidence that they were played in Africa, speculation has it that they are either obsolete or may have been made only for tourists.

The neck of a 'spike harp' passes entirely through the resonator like a spike, protruding a bit at the lower end (fig.12*b–d*). There are two categories of spike harp, those with string-holders and those with true bridges. In the first category the vertical string-holder is anchored with cordage to the short protruding end of the neck (fig.12*b* and *c*). Instruments in the second category (fig.12*d*), named 'bridge harps' by Knight (B1972), have a bridge in place of a string-holder, which the strings pass over before being tied, usually to a metal ring or a small metal arch (like a croquet hoop) nailed into the protruding end of the spiked neck.

The resonator of a spike harp is usually made from a calabash (a prevalent material in West Africa), and ranges from hemispherical to nearly spherical in shape. Occasionally it is made of wood, as in the now rare *seperewa* of the Asante of Ghana whose resonator is a rectangular box. Most spike harps have two handles threaded through the skin soundtable, which the harpist holds with the last three fingers of each hand while plucking the strings with the thumbs and forefingers, the neck pointing away from the performer. The handles allow the resonator to be braced securely against the harpist's body or the ground, and thus the harpist has great control over the pressure exerted to pluck the strings, whether strolling or sitting while playing. In the Jola *furakaf* and the Wasulu *donso ngoni* traditions, however, the harp is held with the neck pointed guitar-like to the side: the harpist wraps one arm around the harp to hold the handle, plucking with the thumb and index finger, while the other hand holds the neck about two-thirds of the way up its length and only the thumb plucks.

Spike harps can have one or two parallel ranks (rows) of strings. In those with one rank of strings (fig.12*a* and *b*), the string-holder is usually a rod drilled with a single row of holes. In those with two ranks of strings (fig.12*c*),

12. Two structural types of African harps with vertical string-holders or bridges: (1) tanged harp: (a) 'shiplike harp' (?Sierra Leone); (2) spike harps: (b) simbingo (Gambia), with one rank of strings, (c) kori (Côte d'Ivoire), with two ranks of strings, and (d) kora (Gambia), with two ranks of strings and bridge replacing string-holder

the string-holder is usually rectangular with holes drilled along each of the long sides resulting in a rank of strings tied to each side, the rank on the right played by the thumb and forefinger of the right hand, and the rank on the left played by those of the left hand. Bridge harps always have two ranks of strings fitted into notches on each side of the rectangular bridge (fig.12*d*).

The bridge-harp category, prevalent in Senegal, Gambia, Guinea and Guinea-Bissau, includes the largest members of the African harp family. The 21-string Mandinka *kora* is the best known. Smaller bridge harps, usually with four to eight strings, have been played in the Ivory Coast, Mali and Ghana. Bridge harps are believed to be the newest members of the African harp family, developing from spike harps with string-holders probably sometime during the 17th or 18th centuries.

(iii) Construction, materials and stringing. African harp makers demonstrate imaginative use of local materials in making their instruments. The resonators of African harps come in a wide variety of forms including boat-shaped, waisted, triangular, trapezoidal, ovoid, hemispherical and, most rarely, rectangular. They are usually carved from a solid piece of wood, but, in West Africa, often a hollow gourd (calabash) is used, resulting in a hemispherical resonator, while the Acholi, Lango and Labwor peoples of Uganda generally use a tortoise carapace. The soundtables are usually mammalian skin or, more rarely, of lizard or snakeskin. Soundholes in the soundtables amplify the sound, and for most harps with longitudinal string-holders also provide access for the replacement of strings. The skin of the soundtable is fastened to the harp

in various ways, usually requiring twisted hide or vine thongs. Sometimes the skin is tied to itself, its ends being stretched over the back or sides of the resonator, or laced through holes in a ledge which encircles and projects from the body of the resonator. Or, as on the *ennanga*, a separate smaller piece of skin placed over the bottom of the resonator is decoratively laced to the soundtable skin. Often in West Africa the soundtable is nailed to the sides of the resonator and then the nails are covered with upholstery tacks; nailing is rare in Central and East Africa. Strings were formerly made of animal tendons, twisted hide, metal, vine or raffia, but nylon fishing line, which comes in a variety of gauges perfect for strings, is rapidly replacing traditional materials. Nearly all African harps have bowed or curved necks; but the Mauritanian *ardin* and the Mandinka *kora*, both from West Africa, have straight necks. String-holders and bridges, necks and tunings pegs are traditionally made of wood. Any part of a harp (except, of course, the strings) may be decorated; many carved or even sculpted. The elaborate ivory-necked harps of the Mangbetu (Democratic Republic of the Congo) found in many museums were probably carved for collectors.

The aesthetic of 'buzzing' sounds is integral to the timbre of many African harps, as to many other African instruments. The objects added to create these effects – an intensification of sonority or an increase of the noise to pitch ratio – are usually activated, directly or indirectly, by plucking the strings, but their material and position on the harp vary widely. On the *ennanga* rings of banana fibres wrapped with the skin of a monitor lizard are placed below each tuning-peg at a point where the strings can vibrate against the rings (fig.11*b*). Circular metal plaques attached to the *ardin* soundtable skin are bordered with tiny loose metal jingles (fig.11*a*). West African *kora* players may attach a similarly constructed metal plaque, but rectangular in shape, to the tips of the bridge. One soundhole of the *ougdyé* of the Kirdi is covered with membranes from spider's-egg cocoons.

On harps with longitudinal string-holders, i.e. those in Central and East Africa, there are usually five to ten strings (although nine-string harps are exceedingly rare), notable exceptions being the *ardin* (ten to 16 strings) and the single-string *zamataba* of Gabon. These two are also the only African harps played exclusively by females: the former by professional musicians of the *griot* caste, the latter by Fang adolescents. Harps with five or more strings are generally tuned to a pentatonic scale, but not necessarily diatonically (see the tuning key in ex.1). The Gwere of eastern Uganda, however, tune their six-string

tongoli to a tetratonic scale with nearly equal intervals (sounding like a chain of 3rds to Western ears) and the *ardin* player frequently changes her tuning to fit the particular mode of the classical poetry she sings. Harps with vertical string-holders, i.e. those of West Africa, range from one (rare) to 21 strings, with several having three or four to eight strings. Those with large numbers of strings (seven to 21) are usually tuned heptatonically; those with fewer strings, pentatonically. Like the *ardin* players, *kora* players are also professional musicians of the *griot* caste and have multiple scales to which they tune their harps, both traditions reflecting their synthesis of African and Islamic musical traditions.

3. Performing techniques. In the history of the harp throughout the world, harpists have used only six basic performing positions (see fig.1); only in Africa are all still used, where they depend on local tradition. The position directly affects what can be played on the harp, and harps of the same structural type are often played in different positions. For example: among harps with longitudinal string-holders, harps of the first structural type ('spoon in a cup') are used in positions A (the *ennanga*) and B (the *ardin*); harps of type 2 ('cork in a bottle') are used in positions A (the *kinanga* of the Konjo in western Uganda and eastern Democratic Republic of the Congo), C (the *dilli* of the Masa), D (the harp of the Mara of Chad), E (the *kundi* of the Zande of northern Democratic Republic of the Congo) and F (the *kinde* of the Barma and others south-east of Lake Chad); harps of type 3 ('shelf harps'), like harps of European origin, are apparently played only in position C (e.g. the *ngombi* of the Fang and other neighbouring peoples). Among harps with vertical string-holders and bridges, most are played in position A (e.g. the Mandinka *kora* and *simbi*) although two (the Jola *furakaf* and the Wasulu *donso ngoni*) are played in position E.

In Africa, the harp is performed most often as a solo instrument in dialogue with the harpist's own voice, and a repertory of songs or sung poetry is performed either for an audience or for the harpist's own pleasure. African harp songs generally have the same basic form. While the harp is usually played throughout a song, predominantly instrumental and vocal sections alternate. It is sometimes impossible to make a rigid distinction between vocal and instrumental sounds: although the preludes and postludes are almost entirely harp solos, during the interludes the harpist may hum or utter syllables which duplicate the pitches of the harp pattern and imitate the sound of the plucking, or use glottal stops in imitation of a percussion instrument. In the large-harp traditions of West Africa, the interludes are frequently elaborate improvisations.

African harpists generally play repeated patterns which vary in length from one song to another but remain constant within a song. Patterns range from simple ostinatos to those which closely imitate the vocal melody. Particularly in West Africa, the patterns may be ornamented during repetitions. Sometimes a people use more than one style, even within the same song. Strings are seldom plucked simultaneously, but when they are the intervals produced are mostly octaves (ex.1) or 4ths, a notable exception being the 5ths of the Teso of Uganda. The vocal melody of a harp song is usually hidden within, although its range is not necessarily limited by, the harp pattern (see ex.1), and during the course of a song both

the harp pattern and the vocal line may be varied, or, more rarely, changed for another.

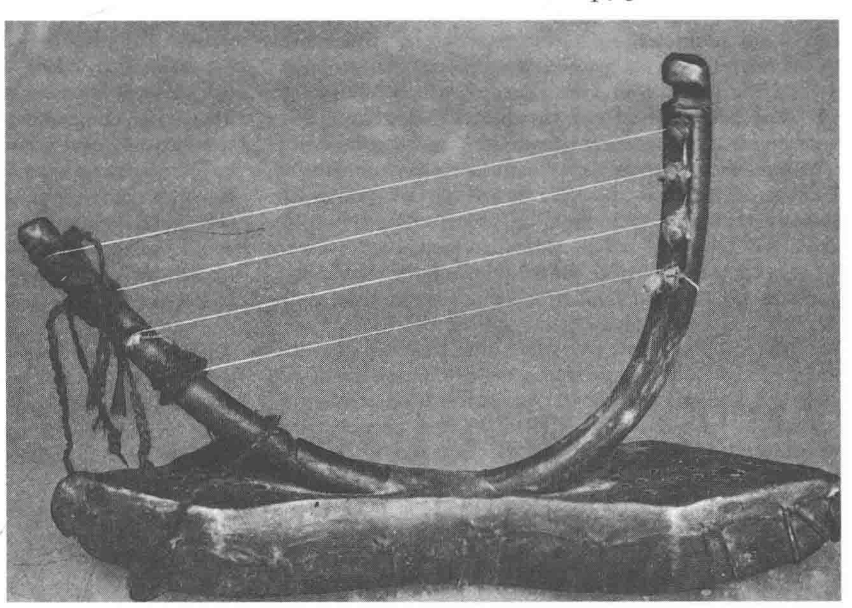
Harp patterns are divided between both hands, but the division is most often melodically and rhythmically unequal; however, *ennanga* patterns have equal parts which dovetail: the *ennanga* player uses the thumb and first finger of each hand, the patterns consisting of the isochronal notes of a single melody presented successively by the alternation of hands (see ex.1). This form of dovetail interlocking has also been noted as peculiar to Kiganda xylophone playing.

4. Performing practices. The subject matter of harp song texts is extremely varied. Topical songs, apparently the commonest, are often oblique in meaning and laden with personal allusions. Harp songs frequently record historical events and the deeds of legendary heroes, and are performed in ritual or social contexts. Genealogy, praise, and eulogy are sometimes included, as is the performer's name and people. Songs about war and love, those used to incite warriors to battle or to protect and encourage hunters, are also common. Often the harpist improvises repetitions of important musical and textual phrases or entire verses; the frequency and method of repetition depends on the performer's emotional involvement at the moment, sense of timing and responsiveness to the audience.

The harp is sometimes used in ensembles with other harps. Harp duos are frequent among the Nzakara *ba-yabia* (poet-musicians) of the Central African Republic who play the harp patterns together but alternate in singing the text. Trios are played on the *dilla* of the Masa. In Kotoko exorcism rituals three harps (*galdyama*, *direndana* and *kolo*) form a family with overlapping ranges. In both these trios one harpist is considered the leader and does all the singing. Among the Barma a women's song and dance encouraging warriors to battle is accompanied by men playing a quartet of *kinde* harps and a calabash rattle. Acholi harpists form a quintet and play the same pattern simultaneously while the leading harpist sings; the others softly sing the refrain with him. The harp is also played in mixed ensembles. The *ardin* player is usually accompanied by one or more of the following: another *ardin*, a *tbol* (drum), a *tidinit* (four-string lute) or another singer. During a performance she sings in dialogue with another singer, or stops plucking the strings and beats the rhythm on the resonator, or another member of her group taps on the resonator while she continues to play. In Busoga (Uganda) a harpist playing a *kinzasa* is sometimes accompanied by three other performers, one playing a single-headed drum (of *engabe* type), another, a small pair of kettledrums, and the third alternately striking the edge of the harp's resonator with a drumstick in his left hand, and the soundtable of the harp with a rattle on a hooked beater held in his right hand; at the same time they all sing together. When two Jola harpists perform together, only one of them normally plays the harp while the other, with two sticks, beats a simple rhythmic pattern on the calabash of the harp being played. In a Padhola dance a solo harpist is sometimes accompanied by a percussion trough, single-headed drum, cone flute, side-blown trumpet, the pellet bells on the dancers' ankles and a chorus.

Symbolism is an important aspect of African harps and can lie in the intangible, such as the names given to strings, or in the tangible, in the form of geometric, anthropomorphic or zoomorphic designs. For example, the *ngombi* is the most important instrument used in Bwiti rituals of the Fang, and represents Nyingwan Mebege, the sister of their god and a benevolent life-giver to whom the Bwete appeal in their songs. The strings of the *ngombi* are considered to be her sinews and tendons; the tuning pegs, her spine; the resonator, her womb; her features are represented in the carved anthropomorphic figure ('shelf') on the top of the resonator; the sound of the harp is her voice.

IV. Asia



Both the arched and angular harps of the ancient world (see §2 above) were carried eastwards: the arched to South and South-east Asia, where it has been played continuously to this day, and the angular to East Asia where it was revived in the 20th century.

The earliest depictions of arched harps in India are ideograms in the Indus script from before 1800 BCE. After the demise of the Indus civilization, harps were not shown again in Indian iconography until the 2nd century BCE with a narrow, boat-shaped resonator and a strongly bent neck (fig.4*j* above, and fig.13). Their dispersal coincided with the spread of Buddhism. According to the *Nāṭyaśāstra* (300 CE), this harp – the Vīṇā – had seven or nine strings, but soon after 600 CE the term *vīṇā* came to refer to a stick zither. Arched harps spread eastwards through India to Myanmar (Burma), Thailand, Cambodia and Indonesia. Harps betraying distant Indian influences appear in Javanese stone carvings at the Buddhist monument of Borobudur in Central Java dating from the 9th century and at the Cambodian site of Angkor Wat (12th century), but it is debatable whether they were ever popular in Java, perhaps played only among the upper classes. Chinese documents reported that a large Burmese ensemble including an arched harp with 14 strings visited China in 801–02.

While the arched harp appears to have died out in most of South and South-east Asia after the end of the 17th century, three living harp traditions remain: the Saùng-gauk, the classical harp of Myanmar which goes back at least to the 7th century, the *bīṇ-bājā* that survives among the Pardhan of Madhya Pradesh, and the *vaj* or *waji* of

13. Arched harp: Indian terracotta, Gupta period, c320–500 CE *(British Museum, London)*

14. *Vaj of Nuristan*

Nuristan (Afghanistan; fig.14). The *saùng-gauk*, played by both sexes, is plucked with the right hand. No plectrum is used; instead the left hand rests on the neck of the harp so that the left thumbnail, the tip v-notched for accuracy and clarity, can be used to stop a string to raise its pitch. The *bīṇ bājā* and the *vaj* are played only by men, but with the same technique as that depicted in the 2nd millennium BCE in Mesopotamia (see fig.4*e*) and in ancient India at least until the Gupta period (4th and 5th centuries CE; *see* VĪṆĀ, §1): they are strummed with a plectrum in the right hand while the left damps the strings.

Although strikingly different in appearance, both the *bīṇ bājā* and the *vaj* probably derive, ultimately, from the Mesopotamian and Iranian traditions of the 4th–3rd millennia BCE. Whether they can be linked morphologically with the Indian *vīṇā* tradition is uncertain, but they are etymologically related in that *bājā* and *vaj* are both derivatives of the Sanskrit word meaning 'instrument'. In addition to sharing performing positions and techniques, both have a neck/string-holder that is one continuous piece of wood. The strings are attached to the neck end with tether cords creating tuning collars, and are fed through holes in the string-holder end and then knotted there. Like ancient Egyptian harps (fig.4*g*), the *vaj* has 'guide pegs' (not tuning pegs) in its neck over which the strings are draped to prevent them from sliding down the neck; the *bīṇ bājā* is pegless. In neither case do the strings penetrate their skin soundtables. The strings of the *bīṇ bājā* are made of cow or deer veins; those of the *vaj* of calf or cow tendons. Both have waisted resonators, that of the *vaj* wide with a rectangular cross-section, while the resonator of the *bīṇ bājā* is long, smooth and slim. The method of fastening their continuous neck/string-holders to their resonators, however, is very different. That of the *vaj*, a pronounced C-shape resting on its side, is pinned through the soundtable so that only a small amount of it is in contact with it. The neck/string-holder of the *bīṇ bājā* is pinned into the skin soundtable at both ends of the notched string-holder section which is thus entirely in contact with the soundtable. The *bīṇ bājā* has five long strings (although there are eight sawtooth notches on its stringholder) with a low tuning, and the *vaj* has four (there are some reports of five) strings and a higher tuning, approximately within a tetrachord. The *vaj* is played as a melodic instrument and is apparently not accompanied by singing, while the *bīṇ bājā* produces a kind of rhythmic ostinato or drone to accompany the narrative singing of excerpts from the *Mahabharata* or from Gond epic poetry.

The vertically held angular harp spread eastwards through Central Asia, probably along the Silk Road. Cave paintings along this route show harps being played in Buddhist ensembles: the arched harp seen in Pendzhikent, Tajikistan (700–20 CE; fig.4*i*), suggests Indian influence, but most sites display the light angular type (e.g. fig.7*a*) of Persia. According to written histories, the angular harp entered China during the Han Dynasty (206 BCE to 220 CE) and was later taken from there, apparently along with Buddhism, to Korea and Japan. The dominant type remained the light angular type which in China (called *konghou*) reached the zenith of its popularity during the Sui and Tang dynasties (581–907). The only two surviving Chinese harps (collected in the 9th century, but possibly manufactured some centuries earlier) are now in the Shōsōin Repository at Nara, Japan. By about 1100 when purges had decimated Buddhism in China, the harp ceased to be illustrated, although Tang dynasty paintings were continuously copied (including the harps), a fact that is apt to cause confusion among scholars.

Vertically held angular harps probably continued to be played for several more centuries in the Middle East, possibly reaching India during the Muslim period (13th century or later); they were depicted in Persian and Mughal miniature paintings until the 17th century. Occasionally these later harps were depicted with what appears to be a thin forepillar. Most frequently the strings were attached to the neck via tuning nooses as they were in most previous Asian iconography; a few depictions showed tuning pegs but only in the later centuries.

In Japan the angular harp was once used in gagaku, the court orchestral tradition. In the 1970s, the Japanese Gagaku Society commissioned a replica of the larger of the two Shōsōin harps, thus reviving the tradition. However, the replica omitted the small pin between the neck and the resonator (fig.7*d*), the original of which was

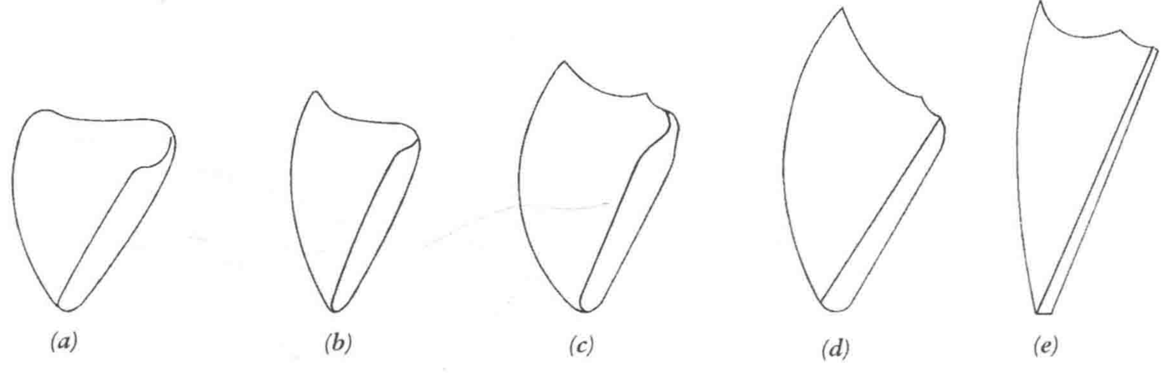
not found until later, but a more exact replica was made in the early 1980s. It then became apparent that the light angular harp had a crucial weakness: when one string was tuned, others were strongly affected. Most likely, this shortcoming affected most harps of the light angular type.

Harps spread to regions far north of the ancient Middle Eastern heartland. In Georgia (see GEORGIA, §II, fig.3) there is an angular harp, the *changi* (derived from *chang*, the Persian term for harp). An arched harp, the *tor-sapl-yukh* is an arched harp of the Khantys, one of the Finno-Ugric people of western Siberia. Both harps survived well into the 20th century and may still be played in some regions. Although these two harps have been classified as angular and arched respectively, the distinction is not as clear-cut as on ancient harps. Georgian and Khanty harps sometimes have a thin forepillar inserted between the distal ends of the resonator and the neck and, in view of the formalistic nature of classification schemes, one might call them 'frame harps'. But the very light dimension of the sticks, and their absence on some specimens, suggest that they may be disregarded for the purposes of classification, and the harps can still be regarded as arched and angular. The Khanty harp is laminated so that the neck end rises smoothly from the resonator like the neck of a swan. On the Georgian harp the neck is also laminated to the body, but it forms a 90° angle with the body.

V. Europe and the Americas

1. The Middle Ages and the early Renaissance. 2. Ireland and Scotland: diatonic harps from the 14th century to the 18th. 3. Other single-rank harps. 4. Spain, mid-16th century to the early 18th. 5. Multi-rank harps in Europe outside Spain: (i) The instruments (ii) Harpists and repertory (iii) Wales and England. 6. Latin America: (i) History and distribution (ii) Structure and performance. 7. Mechanized harps and later *harpes chromatiques*: (i) Hook harps and single-action pedal harps (ii) The Pleyel harp and other later experimental harps (iii) The double-action pedal harp (iv) Technique and repertory (v) Lever harps. 8. Electronic harps. 9. Local traditions: (i) Norway (ii) Austria, Hungary and Germany (iii) Italy. 10. Revivals: (i) The Celtic revival (ii) Early music.

1. THE MIDDLE AGES AND THE EARLY RENAISSANCE. The distinguishing characteristic of the medieval harp is its resonator carved out of a single piece of wood. Harps made in this way were played in Europe from the 8th to the 18th centuries. Some resonators may have been carved from the front and covered with leather, tightly stitched up behind, so that the skin served as the soundboard. Strings were probably made from materials close to hand, including those derived from animals (gut, sinew, leather, horsehair), metal (brass, bronze), precious metal (electrum, silver) and exotic materials (silk). Medieval harps generally had a range no wider, and often much narrower, than the human voice.



Though the oldest extant European harps date from the 14th century CE, the earliest European depictions of harps are those on Greek and Italo-Greek vases of the 5th and 4th centuries BCE. These, however, show Asiatic-type harps, mostly derived from Mesopotamian and Persian harps of the previous millennium (see §II above). At present, no iconographical evidence is known that suggests the existence of harps in western Europe in the millennium between the Italo-Greek depictions and those of the 8th century CE. The origins and early development of European harps remain a matter for speculation and debate. Terminology provides little assistance. The Anglo-Saxon *hearpe*, from which the word harp is derived, originally denoted a Teutonic lyre. In some early Western depictions, harps are labelled 'cithara', 'lyra' or even 'barbitos': Greek terms for various kinds of lyre.

The primary source of information about medieval European harps is in Christian iconography. Open harps continued to be depicted occasionally up to the 12th century; after that time, frame harps are virtually the only kind shown. Most appear in illustrations of the psalms, in the hands of David himself or one of his attendants.

The Dagulf Psalter, a product of the Court School of Aachen, was presented to Pope Hadrian I by Charlemagne some time before 795. Its carved ivory cover carries two David scenes, one with harp. In the lower scene, soldiers look on as an enthroned David plays the harp accompanied by two musicians: one with clapper cymbals, the other with a plucked three-string lute (fig.15). This harp is reminiscent of a Greek type, but it has only a vestigial resonator and is held in medieval and not west Asiatic position (see fig.1, positions C and D respectively). There is no trace of such a harp in European use, but similar depictions continue to occur later; for example, in a Greek psalter written and illustrated by Theodorus of Caesarea in 1066. As many as 12 frame harps are found on Picto-Scottish cross slabs and free-standing crosses, dating from the 8th to the 10th centuries, all shown within the context of David iconography. If the dating of the stone at Nigg (Scottish Highlands) to the second half of the 8th century is accurate, its depiction of a triangular frame harp would be the earliest known (post-Classical) appearance of the instrument in northern Europe, although it soon spread south to the Continent and west to Ireland. Pictish stones from Lethendy, near Perth, and Ardchattan, near Oban, both 10th century, present harp players alongside other instrumentalists, including triple-pipers and a horn player, evoking Davidic choirs, such as that seen in the Dagulf Psalter.

16. Schematic profiles of European harps from the 11th century to the 16th

Harps in the Byzantine-influenced Utrecht Psalter (816–35) continue to have straight necks as found on all angular harps, with five to eight strings and forepillars either imperfectly delineated or absent. In some cases there is a suggestion of a trefoil or clawed foot at the base of the resonator. Harps are more clearly drawn in the 11th-century Harley Psalter and the Canterbury Psalter (before 1170), both of which derive from the Utrecht Psalter. These harps demonstrate features common to most European harps for several following centuries: the neck is slightly curved inwards towards a trapezoidal box resonator; the neck is joined to the narrower end of the resonator by a narrow shank; and the forepillar is curved outwards, away from the longest string.

Variations on this basic shape (fig.16*a*), perhaps regional, can be seen. The harp played by the seated figure on the 11th-century Irish Shrine of St Mogue (in the National Museum of Ireland, Dublin) already has the characteristic Irish T-formation strengthening the forepillar (see §V, 2 below). The late 12th-century Hunterian and Westminster Psalters depict harps with about 13 strings, zoomorphic, slightly overhanging neck finials, carved or turned forepillars, and resonators whose quatrefoil and oblong markings are probably nonperspective representations of soundholes.

In psalm illuminations dating from the 12th to the 14th centuries, David is often tuning his harp, symbolically imposing order on the world. In the Hunterian initial, David is plucking a 5th with his right hand (assuming the forefinger and not the middle finger is used and the harp is tuned diatonically) while turning the peg of the upper string with a tuning key in his left (fig.17). This hand position is also often shown in depictions where he is not tuning; it appears to be a thumb and two-finger technique that continued to be the primary playing method used in Spain until the mid-18th century.

Another small harp-type instrument was quadrangular. Its string holder was at the top and it had a slim forepillar. Such an instrument is depicted on the cover of a book probably made between 1131 and 1144 for Melissenda, Countess of Anjou, played by one of David's musicians, while another plays a small triangular harp (*see* DULCIMER, fig.10). Other examples are in a Greek psalter and canticles of Eusebius Pamphili, 11th-century Bishop of Caesarea, and on the North and South Crosses at Castledermot in Ireland, probably from the same century.

In the 12th century harps were often shown in the hands of some of the 24 Elders. Large examples with zoomorphic finial and plain forepillar are found on the Pórtico de la Gloria of the cathedral in Santiago de Compostela and the Portail Royal of Chartres Cathedral. A book of Old Testament illustrations of about 1250, with text in an Italian hand and pictures probably by various French artists, shows small, highly decorated 12- or 13-string harps of this type with trefoil foot. Plainer forms were still depicted in the 14th century; one example of 1376 (the Irish Shrine of St Patrick's Tooth, National Museum of Ireland, Dublin) has 22 strings, and was made after French models for Thomas de Bramighem, Baron of

17. King David tuning a frame harp: miniature from the Hunterian (or York) Psalter, English, c1170 (GB-Gu Hunter 229, f.21v)

Athenry. Another with 22 strings, played by one of six attendant angels, was portrayed by the Catalan painter Pere Serra (1375–1404) in his *Virgen de Tortosa* (Museu Nacional d'Art de Catalunya, Barcelona).

A significant change can be seen in some instruments depicted in the 13th century. While the gentle curve of the neck is retained, the neck extends upwards somewhat at the front, thus giving slightly more length to the lowest strings, and the forepillar is now only gently curved (fig.16*b*). The stained glass in Chartres Cathedral contains a figure of David with this kind of harp, as does the Beatus initial in the English Peterborough Psalter (*c*1300).

By the 14th century, another harp form had developed: its forepillar was still strongly curved, but its neck swept up at the front into a pointed finial balanced by another pointed finial at the neck-to-shank joining point (fig.16*c*). A harp of this type, with nine strings, is depicted being tuned by David in the Tree of Jesse on an orphrey of *opus anglicanum* made between 1310 and 1340 (fig.18). Stringing can be deduced from the remains of a late 14th- or early 15th-century ivory harp (now in the Louvre); it has 24 original pegholes and one which seems to be a later addition, bringing the total to the number given by Machaut in his poem *Dit de la harpe* (*Oeuvres de Guillaume de Machaut*, ed. Hoepffner, 1908–21). If modally tuned throughout, it would have a range of a little more than three octaves. With a more probable partly chromatic tuning in at least one octave, it would have slightly less than three octaves overall. The forepillar is 47 cm high on the external curve and is mortised into the neck. Presumably this was the kind of harp used in French 14th-century polyphonic music. The performing

18. King David tuning a harp: detail from an embroidered orphrey of opus anglicanum, 1310–40 (Victoria and Albert Museum, London)

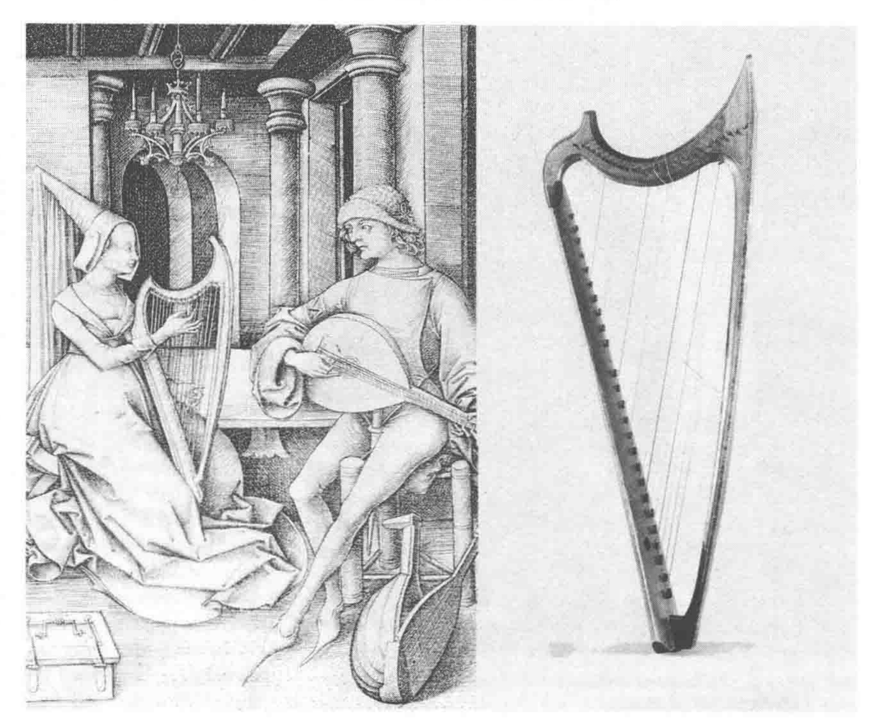
instructions of Jacob de Senleches's *La harpe de melodie* (a copy in *US-CHAhs* 54.1 is uniquely notated in the shape of a harp) indicate that its somewhat slow-moving tenor was to be played on the harp and the injunction 'harpe toudis sans espasse blechier' seems to imply that its long notes should be sustained by reiteration.

While most medieval and Renaissance harps were probably gut-strung, it is likely that a proportion were metal-strung. Irish harps, in which many medieval features were retained, had brass strings which were alternately plucked with long fingernails and damped or stopped with the fingerpads. The fingernail technique is mentioned in the 13th-century *Geste of Kyng Horn*, where the direction 'Teche him to harpe with nayles scharpe' occurs. Extant tuning-pegs from the 12th, 14th and 15th centuries are either perforated or slotted; most are made of bone, which has a higher chance of survival than wood or metal, though the latter materials were also used.

During the early 15th century considerable experimentation in harp design took place, resulting in several forms, with some common and some individual features. These changes were contemporary with the downwards extension of bass registers in general and with the development of keyboard instruments. In the late 14th and 15th centuries the harp and organ were frequently depicted with clerics (as well as in the earlier context with angels), and both instruments must have fulfilled functions which were parallel in some ways.

The methods of achieving a downwards extension of harp compass involved changes in the angles between the rigid parts of the instrument. In one type of harp the neck and curved forepillar were swept upwards to form a high point (i.e. 'high-headed'), accommodating bass strings considerably longer than was possible on earlier harps (fig.16*d*). The other type showed more fundamental changes. Longer string length was achieved by lowering the bass end of the resonator in relation to the neck. The angle of the forepillar-to-resonator joint thus became more acute at the lower end, while that of the neck-to-resonator joint became wider. The forepillar, at first gently curved, was later straight or nearly so, and of T-formation in section. The neck was no longer set directly into the treble end of the resonator but was set on a slim shank. To some extent this improved the line-up of the shortest strings, which had been somewhat splayed and out of plane on earlier harps. Points or scrolls decorated the forepillar finial and the neck-to-shank point (fig.16*e*).

There was little change in the size of the resonator in either type of harp. It remained slim and fairly shallow, though there was some variation in shape, later examples being generally oval or hexagonal in section and made from two hollowed-out parts put together length-ways. There was one completely new feature common to both types. Each string was fixed into the resonator with a right-angled wooden pin, which later became known as a bray (Fr. *harpion*; Ger. *Schnarrhaken*; It. *arpione*; Welsh *gwrach*). When a string was plucked, it vibrated against the bray, producing an aesthetically desired buzzing quality. This was comparable with the sound obtainable on other contemporary instruments, such as the krummhorn and the hurdy-gurdy; an annotation in a copy of Mersenne's *Harmonie universelle* (1636–7) likened the effect to 'le doux tremblement d'une orgue'. There are a few instances of brays on much later types of harp, including two-rank chromatic harp s (see §V, 5 and fig.25



below) and high-headed single-strung harps with ribbed-back resonators (see §V, 3 below). The new Renaissance harps were gut-strung; some continued to be played with the older nail technique in the stopped style and others may have been played with the fingertips. This Renaissance harp must have been well suited to the music of the time as it remained in use, across the British Isles and into central Europe, until well after the next significant redesigning of harps at the end of the 16th century.

Besides a great number of depictions of Renaissance harps, several instruments have survived. The earliest, now in Eisenach, was made in the Tyrol, possibly in the 15th century. It has 26 strings, stands 104 cm high and has delicate inlaid geometrical decoration of a kind found on other 15th-century instruments. Two undecorated 16th-century examples, now in the collections of Leipzig University and the Germanisches Nationalmuseum, Nuremberg (fig.19*b*), are 92 cm and 102 cm high, with 25 and 26 strings respectively.

A method of sharpening individual notes by stopping or pinching the string near the neck or close to the soundboard was used to some extent, but sustained change of mode required retuning of some strings. Simple tunings of a kind already in use were given in several 16th-century printed treatises: Martin Agricola (*Musica instrumentalis deudsch*, 1529) mentioned a harp with one row of 26 strings (*F* to *c‴*) in which the B strings could be tuned either flat or natural; Venegas de Henestrosa (*Libro de cifra nueva*, 1557) indicated that the fourth string (B) and the seventh (E) could be tuned either natural or flat. Mersenne also illustrated the simple single-strung harp with brays (which had been superseded in France by his time), giving the range of the 24-string harp as G to *g″* with natural B in the lowest octave and both flat and natural Bs in the other two. He said the performers of his day tuned by 'putting flats in all sorts of keys', though the tuning of certain strings (known as *modales*) was constant. These tuning methods continued to be used on later single-rank harps.

In Wales the classic Renaissance harp had brays, horsehair strings, bone tuning pins and mare's skin stretched over the soundbox. Descriptions of such instruments appear in many Welsh poems of the 15th and 16th centuries, soliciting the gift of a harp. A small silver model of a Renaissance harp, made by a Chester silversmith, was one of the awards at the Eisteddfod at Caerwys in Flintshire in 1567. Renaissance harps were still used in Wales long after they had been abandoned elsewhere. James Talbot, Regius Professor of Hebrew at Cambridge (1689–1704), made extensive notes on many instruments in use towards the end of the 17th century (Talbot MS; *GB-Och* Music 1187). 'The proper Welch harp' and 'Welch or Bray Harp' referred to by some of his informants were in fact large Renaissance harps, with either 31 (*A′* to *c‴*) or 34 (*G′* to *e‴*) strings. Welsh harp players employed five standard and guaranteed tunings, as enumerated in 16th-century treatises and repertory lists: *is gywair*, *cras gywair*, *lleddf gywair y gwyddil*, *go gywair* and *bragod gywair*; *tro tant* was not a standard tuning, but was commonly used. Such tunings are required by the music of the ROBERT AP HUW manuscript (*GB-Lbl* Add.14905). This manuscript, written in a unique tablature, contains examples of harp music composed by 14th- and 15th-century bardic harpers in Wales and gives precise playing instructions, indicating specific fingerings for both striking and stopping the strings.

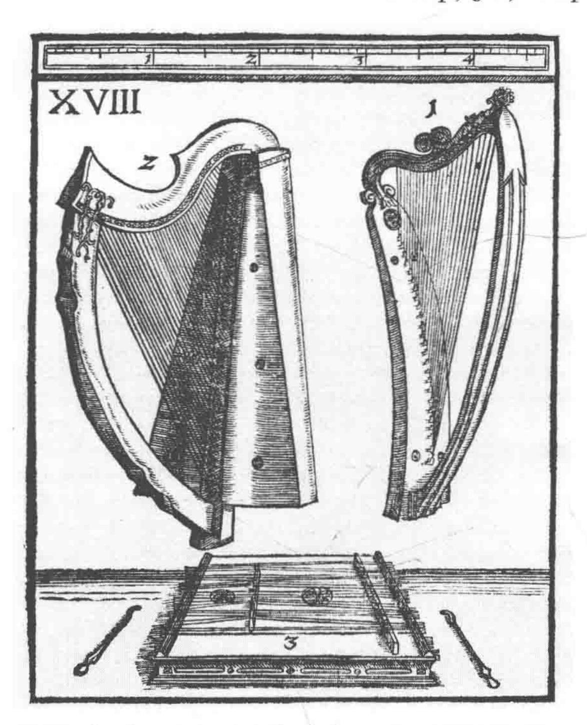
2. IRELAND AND SCOTLAND: DIATONIC HARPS FROM THE 14TH CENTURY TO THE 18TH. The Irish and Gaelic name for the harp, CLÁIRSEACH (Scottish: CLÀRSACH), is documented from the 15th century onwards; the terms 'ceirnin' and 'cruit' are also found. Harps depicted in medieval shrines (see §5(i) above) show structural features of the type of instrument used in Ireland until the late 18th century (*see* IRISH HARP (i)).

19. (a) Renaissance harp with brays, and lute: engraving by Israhel van Meckenem (ii), second half of the 15th century; (b) Renaissance harp with brays, German, maker unknown, 16th century (Germanisches Nationalmuseum, Nuremberg)

The oldest extant Irish harp, now at Trinity College, Dublin, had legendary associations with Brian Boroimhe (or Boru, 926–1014), but dates in fact from no earlier than the 14th century (fig.20). This harp is low-headed: the upper end of its forepillar meets the neck at a point only slightly higher than the joint between the treble end of the neck and the resonator. Two other harps, known as the Queen Mary and Lamont harps (now in the Royal Museum of Scotland, Edinburgh), are also of this type and have been dated to the 15th century. Later, perhaps by the beginning of the 16th century, a larger but still low-headed form emerged.

These three instruments share features which characterize the Irish harp as it was used in Ireland, Scotland and Europe until its disappearance: brass wire as stringing material; large, flat soundboxes hewn from a single piece of wood with metal 'shoes' to protect the string-holes and a thin panel rebated into the back; strong, deeply curved necks further reinforced by metal cheek-bands which sandwich the timber and are pierced by bronze or brass tuning pins of large diameter; and curved pillars with T-formation. The neck, pillar and resonator are held together by the tension of the strings alone, without glued joints.

By the 18th century, however, the typical instrument, as played by itinerant Irish harpers, was much larger. Whereas the panels which closed the backs of the medieval instruments had no holes, causing stringing to be done through open sound-holes in the bellies of the harps, from the 17th century onwards most instruments had sound-holes filled with tracery, so stringing was done through large holes in the back panel. Unlike previous harps with solid backs, these had a drier, simpler tone. The big, one-piece resonator was retained but the forepillar, now only slightly curved, was very tall (the low-headed Lamont harp has a forepillar height of 59·7 cm; that of the high-headed, 18th century Sirr harp – in the National Museum of Ireland, Dublin – measures 111·8 cm) and the neck swept upwards to meet it. The bass strings were therefore much longer in relation to the treble strings than on a low-headed harp. Irish harps were strung to the left side of the neck, but tuning was done from the right; the left hand played the treble, the right hand the bass. Irish harpers struck the brass strings of their harps with specially trimmed long fingernails. It seems unlikely that this technique was used by gentleman amateurs in England who took up the Irish harp in the later 17th century.



20. Oldest extant Irish harp, known as the 'Brian Boru' harp, 14th century (Trinity College, Dublin)

The sonority of the individual notes varies greatly, depending on whether the wires are struck by the fleshy fingertips or the fingernails; the use of the latter implies a quite different playing technique and type of attack. It also means that the melodic ornamentation typical of Irish performance on an Irish harp properly 'strung with brass strings and beaten with crooked nails' cannot be reproduced by a player using the fingertips. Even in Ireland the old technique gradually died out in the 17th and 18th centuries, and of the ten harpers present at the famous harpers meeting in Belfast in 1792 only one, Denis Hempson, then 97 years old, used the traditional fingernail technique. It was very soon to die out altogether – during a period, ironically, of revived interest in Irish music and the Irish harp (see §10(i), below).

3. OTHER SINGLE-RANK HARPS. Diatonically or partly chromatically tuned harps with one rank of strings continued in use long after the invention of double- and triple-strung fully chromatic harps (see §V, 4–5 below) and, later, of pedal harps. In most cases, they were adaptations of earlier types, often structurally influenced in some respects by newer forms. Two chief kinds are traceable. One seems to derive from that regarded by Praetorius in Germany as the 'ordinary' ('gemeine einfache') harp (fig.21). The resonator was generally fairly shallow, four-sided and rectangular in section, though some instruments had a convexly curved soundboard; strings were pegged into a string holder, a wooden strip that ran lengthwise down the middle of the soundboard. Soundholes were sometimes circular, more often clusters of small perforations. Some instruments were plainly made; others had very elaborately carved necks with anthropomorphic or zoomorphic finials (heads of David, Cupids, warriors, lion heads etc). Forepillars were slightly curved in earlier harps, later generally straight. Though low-headed harps of this kind were made even in the 18th century, high-headed forms had already appeared in the 17th century and these were still played by some professional virtuosos at the end of the 18th century. Presumably their repertory (like that in some regions of Latin America) was not more chromatic than could be accommodated by the old system of partly chromatic tuning or different tuning in different octaves. In hooked form, some harps of this type lasted even longer in certain regions (see §V, 8, below).

The other main type had a resonator with a ribbed back, a flat soundboard, and a straight forepillar in either low- or high-headed form. Most of the later single-strung Welsh harps are of this type. Although a low-headed form became the predominant type in Latin America (see §V, 6, below) few European examples have been preserved and its early history is difficult to ascertain. It seems to have been derived from Mediterranean (not northern)

21. Woodcut from Praetorius's 'Syntagma musicum' (2/1619): (1) common harp; (2) Irish harp with brass strings; (3) dulcimer

sources and may have been a byproduct of early triple harps.

A very small harp (forepillar height of 84 cm), bearing the mark 'Stradivarius, Cremona 1681' (in the Naples Conservatory), has a flat pine soundboard (now slightly lifted with string tension) with violin-like double purfling, set on a resonator shaped as if in five ribs, though it is actually made in one piece. The 27 strings are pegged directly into the soundboard, except for the lowest three, which are toggled through large holes; there are four tiny heart-shaped soundholes. In another small Italian instrument (owned by one family since 1860 but possibly of earlier manufacture), the resonator is five-ribbed, 31 strings are pegged into a central strip on the soundboard and there are four soundhole clusters.

A small harp now in the Royal College of Music, London, must have been made for a Welsh player, who traditionally balanced the harp on his left shoulder, since it is strung to the (player's) right of the neck. Its resonator is five-ribbed; the strings are pegged into the soundboard and above each string-hole is the metal strip found on most 18th-century triple harps. The Richard Hayward harp (so-called after its last private owner, who gave it to the National Museum of Ireland, Dublin, in 1947) is similarly strung. It is 150 cm high, with a nine-ribbed resonator 109 cm long and 31 strings. Except that it is single-strung, it is structurally like 18th-century Welsh-made triple harps. The inscription in Irish ('May you never want a string while there are guts in an Englishman') and the unlikely date 1657, which are incised on the forepillar, must have been added during its use in Ireland where it is said to have been played in the streets and parks of Belfast about 1780 by the itinerant harper Paddy Murphy.

4. Spain, mid-16th century to the early 18th.

Various techniques used to obtain chromatic notes on diatonic (single-rank) harps are described or depicted in Spanish sources, mainly of the mid-16th century to the early 18th. Alonso Mudarra (*Tres libros de musica en cifras para vihuela*, 1546), Juan Bermudo (*Declaración de instrumentos musicales*, 1555; describing the technique of the harpist Ludovico) and Diego Fernández de Huete (*Compendio numeroso de zifras ... para arpa de una orden y arpa de dos órdenes, y de órgano*, 1702–4) all described sharpening the required string by stopping it close to the neck of the instrument with the thumb, and Mudarra and Huete also described re-tuning certain strings to obtain the required accidentals. Although it is never mentioned in the writings, another technique which may have been used was that of stopping the string with the tuning key, held in the fourth and fifth fingers of the right hand – which are not used for plucking the strings – in a manner similar to the current practice in some Latin American regions. This technique is depicted in a painting from the second half of the 17th century (*Herod's Banquet and Salome's Dance* by Domingo Nieto, S Juan Bautista de Taragabuena, Toro, Zamora), the only known reference in Spain to this practice.

In his *Declaración*, Bermudo described diatonically tuned, single-rank harps (of 24 to 27 strings), but he considered them imperfect compared with the fully chromatic keyboard instruments; he stated that the harp was little played on account of its difficulty and suggested adding eight or ten coloured strings to make it possible to play cadences correctly, or even five coloured strings to each octave for a complete chromatic range. A manuscript note added to the copy of Bermudo's book in the Library of Congress, Washington, DC, indicates that at the time when Bermudo was writing his treatise, Francisco Martínez, harpist to the infantas, used harps with chromatic strings added and had written tablature for harp (Stevenson, 1960). Martínez had commissioned harps for the royal household from the luthier Juan de Carrión (*d c*1606), who was probably one of those who developed the harp with two ranks of strings; it is possible that this book of tablature (now lost) was written for a chromatic harp. All this indicates that the chromatic harp, probably with crossed strings, was in use in Spain by the middle of the 16th century. The florid and fairly chromatic pieces in Hernando de Cabezón's *Obras de música para tecla, arpa y vihuela* (1578) could have been played only on a harp with considerable chromatic possibilities.

Ever since it first appeared in musical sources in the middle of the 16th century, the harp has been linked with keyboard instruments in terms of musical function and repertory, and in the chromaticism required of these instruments. The first known piece of music specifically written for harp is *Tiento IX, Cifras para harpa y órgano* by Alonso Mudarra (in *Tres libros de música en cifras*, 1546), written in tablature (Sp. *cifra*) for a diatonic harp of 28 or 29 strings. Mudarra stated that this was an example from an entire book of tablature for harp and organ which he had written but not published. Mudarra's Fantasía no.10 (for vihuela) was written in imitation of the playing of Ludovico, who contrived chromatic notes with good effect on a single-rank harp – perhaps by means of string stopping but more probably by pre-tuning selected strings. Another tablature, invented for harp, vihuela and keyboard by Venegas de Henestrosa (1557),

was used by several composers from the late 16th to the early 18th centuries, including Antonio de Cabezón (1578), Ruiz de Ribayaz (1677) and Diego Fernández de Huete (1702) (*see also* TABLATURE, §2(iv), fig.3). In this tablature the letters *y*, *l* and *p* are used for the fingers – index (*índice*), middle (*largo*) and thumb (*pulgar*), respectively – and *q*, *o*, and *s* for the left-hand chords (*quinta*, *octava*, *sexta*). Some harp music has survived in normal notation.

In Spain, single- and double-rank harps coexisted from the mid-16th century (slightly later elsewhere) until the 18th. In 1702–4 Huete still devoted part of his treatise to the single-rank harp, although he pointed out that double-rank ones were more commonly used. Iconographic sources, texts, and the only surviving example of a single-rank harp (made *c*1700 by Joseph Fernández de Valladolid, and now in the Museo de la Encarnación, Ávila, this harp has the resonator of a diatonic harp but a neck of a chromatic harp), all indicate that, except for in the number of strings, diatonic and chromatic harps were similar in their morphology, proportions and style of construction. One early 16th-century painting (Juan Correa de Vivar, *King David*, *c*1535; fig.22) shows a single-rank harp that displays all the main characteristics of the Renaissance and Baroque Spanish harp: several ribs in the soundbox, the head slightly raised, the forepillar narrow though still lightly curved, two soundholes with parchment, and 20 strings (though only 14 pegs; see also fig.23).

22. *King David with a single-rank harp: altarpiece panel by a follower of Juan Correa de Vivar, c1535 (Museo de Santa Cruz, Toledo)*

Spanish documentation from the 17th century to the early 18th indicates that diatonic and chromatic harps were all built according to the same set pattern, differing only in the number of strings. This pattern was possibly already established in the second half of the 16th century. The guild of luthiers, regulated since the second half of the 15th century in the Kingdom of Aragon and since the beginning of the 16th century in Castilla, was ruled by a strict set of guidelines. In Madrid there are ordinances going back to at least 1578 (which indicates a pre-exisiting tradition) requiring the use of specific woods and patterns in the construction of string instruments, among them the harp. This explains the continuity of a particular harp-making style over more than a century.

In the 1680s, there were at least six players of a Spanish kind of harp in London. The low-headed, 33-string instrument measured and described in the James Talbot Manuscript (*c*1690–1700, *GB-Och* MS 1187) was was a little over 147 cm tall, with a seven-ribbed resonator 137 cm long, widening from 12·7 cm at the top to 45·8 cm at the bottom. Like several of the cross-strung Spanish chromatic harps that have survived, its soundboard was of pine and the rest of the instrument of walnut. (Talbot mentioned the existence of a double-strung Spanish harp with five chromatic strings per octave, but he gave no measurements and appears not to have encountered one personally.)

Single- and double-strung Spanish harps from the late 17th century and early 18th, though approximately as tall as that described by Talbot, had much larger resonators, closer to those prescribed by Nassarre in 1724 (for double-strung harps). In Latin America, very large resonators are found on some instruments which are otherwise still of 17th- or early 18th-century type (see §5, 1(iv), below).

Nine complete two-rank harps and one fragment survive, all from the late 17th and early 18th centuries; several of them are signed by luthiers of the royal household. In all of them the diatonic and chromatic ranks cross approximately one third of the way up the length of the strings (i.e. they are 'cross-strung'), and in four instances numbers representing the notes as they were given in tablature are written on the neck or on the soundboard. In each example, the soundbox is made up of seven ribs, usually of walnut; the head is slightly raised and the forepillar is narrow and straight, and carved with decorative rings. The base of the forepillar is usually open, with two strips of wood crossed over it that serve as feet. There are seven polygonal soundholes in the soundboard; in two examples, both from 1704, they are rhomboidal. Inside the box there is very little reinforcement; there are wooden bars only under the soundboard; the ribs are joined together by glued strips of cloth. Two of these harps have 27 diatonic and 15 chromatic strings, and the rest have 29 diatonic and 18 chromatic. Their characteristics approximate those stated by theorists, especially Nassarre.

5. MULTI-RANK HARPS IN EUROPE OUTSIDE SPAIN.

(i) The instruments. Several types of harps were developed with more than one rank of strings to make chromatic notes available as they are on the keyboard. One type, used in Spain and Portugal, had two ranks crossing approximately one third of the way up the length of the strings, yielding the term 'cross-strung' (see §V, 4, above). In other parts of Europe, harps with two or three

23. Single-rank harp with ribbed resonator: detail from the 'Adoration of the Shepherds' by Francisco de Zurbarán, 1638–9 (Musée de Grenoble)

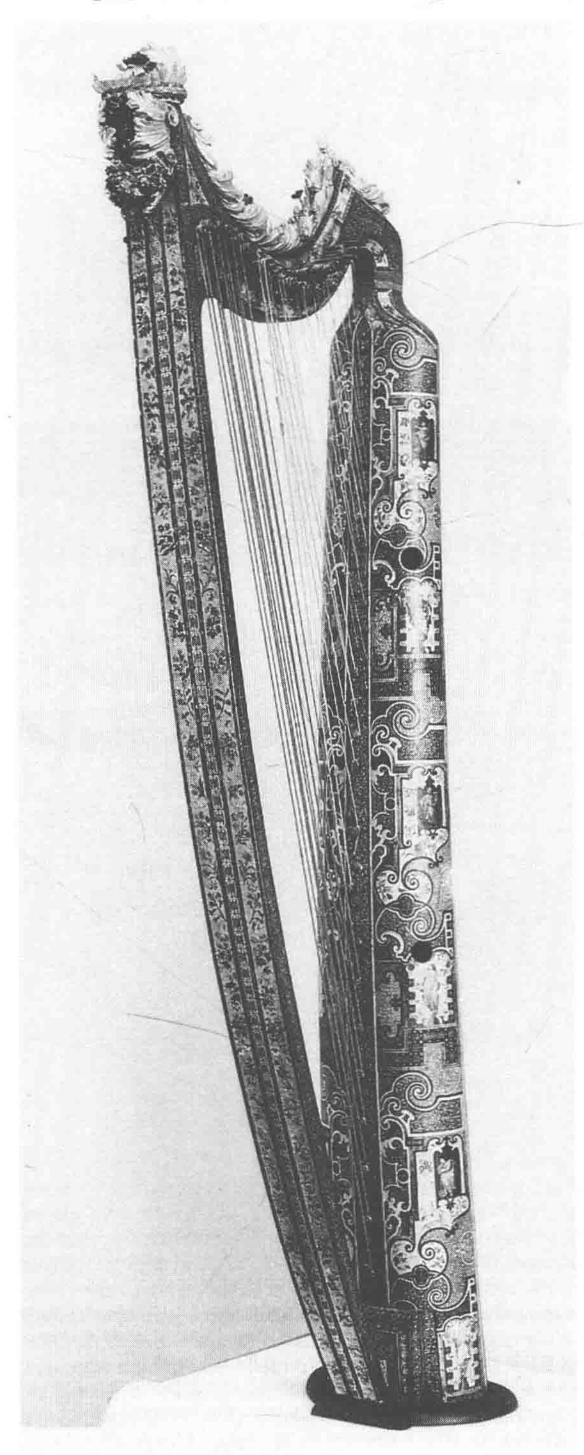
parallel ranks in various configurations were used, known in general by the term *arpa doppia* ('double harp': in this sense the term refers to a harp with 'additional strings', not specifically in two ranks, nor does 'double' that the instrument is 'doubled' in size – as in 'double bass' – as some scholars have speculated).

Iconographical evidence shows that experiments with more than one rank of strings began at least as early as the 14th century. A triptych of 1390 (Real Academia de la Historia, Madrid) from the monastery at Piedra shows a small medieval harp with two parallel ranks.

Literary references to harps with more than one rank of strings date from the early 16th century. In his *Tetrachordum musices* (Nuremberg, 1511) Johannes Cochlaeus reported that the English play a harp with three ranks. A second annotation scribbled in the Library of Congress's copy of Bermudo's *Declaración* (see §V, 4, above) complains that Bermudo was unaware 'que en flandres abia harpas de tres ordenes' ('that in Flanders there are harps with three ranks of strings'; see Stevenson, 1960).

The term *arpa doppia* has caused confusion since the 17th century. In *Harmonie universelle* (Paris, 1635–6), Mersenne used the term *double Harpe* when referring to a large harp with three ranks of strings, comparing it to the smaller *Harpe ordinaire à trois rangs*. In the 1770s Charles Burney referred to a three-rank harp as 'our double Welsh harp' (*Burney GN*). On another occasion, when viewing the painting *Allegory of Music* (*c*1625–34; now in the Palazzo Barberini, Rome) by Giovanni Lanfranco, which features a large three-rank harp, Burney noted that 'St Cecilia is playing a large double harp' (*BurneyFI*). A similar harp appears in the painting of King David by Domenico Zampieri ('Domenichino', 1581–1641), an artist of the school of Bologna (fig.24). Domenichino portrayed triple harps in several other paintings (*Martyrdom of St Agnes*, *c*1619–22, Pinacoteca Nazionale, Bologna; *Virgin and Child with SS John the Evangelist and Petronius*, *c*1626–9, Pinacoteca di Brera, Milan; *Dance of David*, Silvestro al Quirinale, Rome). A large *arpa doppia* (it is not quite clear if it has two or three ranks) is included in the *Portrait of the Artist's Family* (*c*1646; Pinacoteca di Brera, Milan) by Carlo Francesco Nuvolone.

Three treatises survive that contain detailed information on the structure and tuning of harps with more than one rank of strings: *Dialogo della musica antica e della moderna* (Florence, 1581) by Vincenzo Galilei, Mersenne's *Harmonie universelle*, and the *Tratado de la música* (Ms, 1634, *E-Mn* 8931) by Bartolomé Jovernardi (Bartolomeo Giovenardi, a Roman harpist working at the Spanish court). Galilei's is the only known detailed description of a harp with two parallel ranks. His schematic diagram shows 58 strings comprising a compass of four octaves and one tone (*C*–*d'''*). The two ranks were divided around *c'* into an upper half used by the right hand, where the second or chromatic rank lay to the (player's) left of the main diatonic rank, and a lower half, used by the left hand, where the chromatic rank lay to the right of the main rank; i.e. the chromatic rank changed



24. King David playing a triple harp; detail from a painting by Domenichino, early 17th century (Château de Versailles)

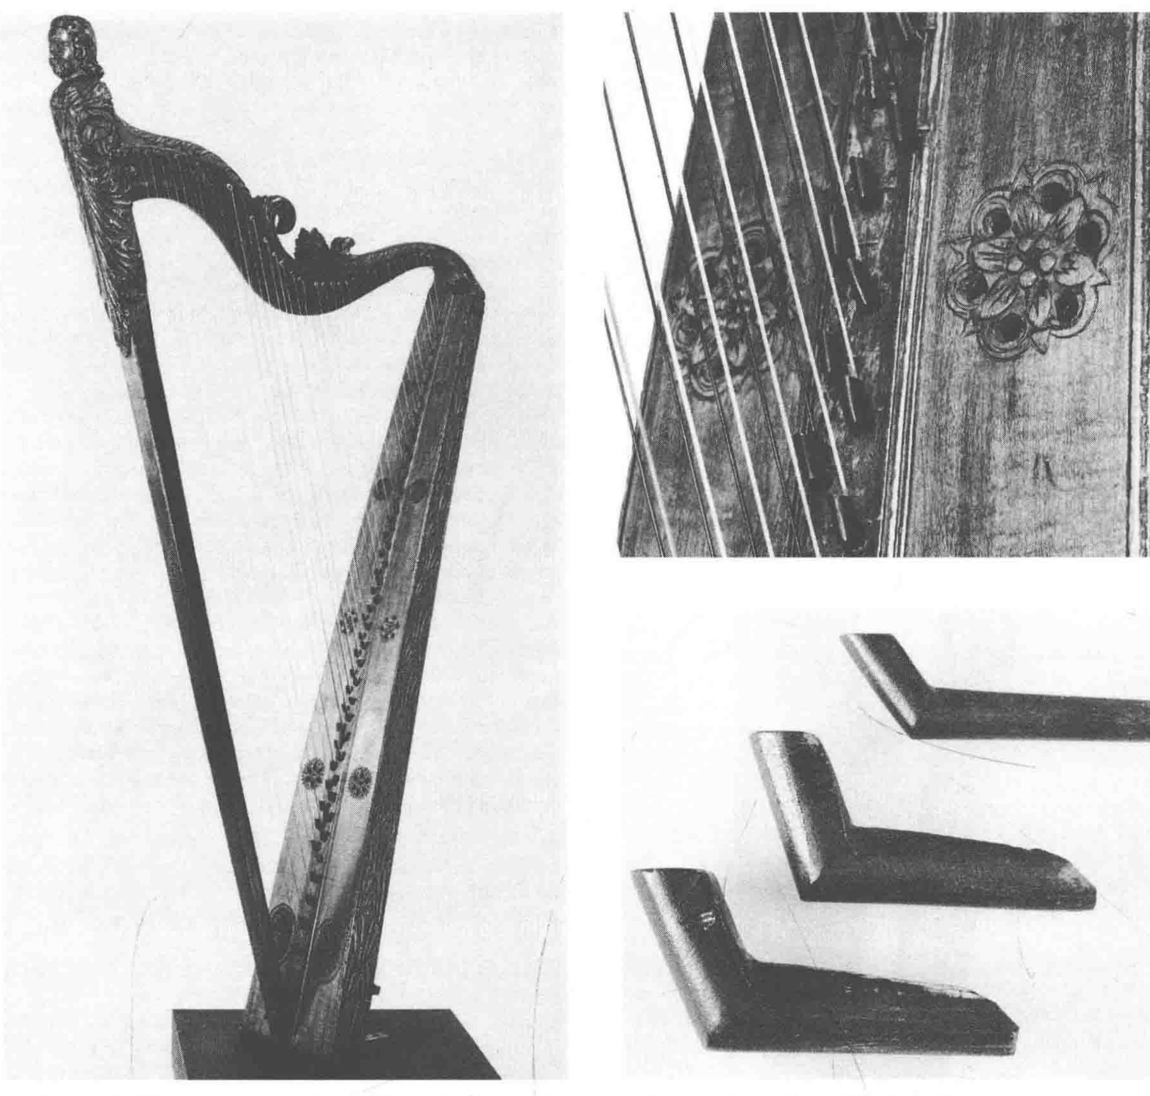
sides half way up so that with each hand the player had to reach through the outer diatonic rank to pluck the chromatic strings. The problem with this type of stringing was outlined both by Galilei and Jovernardi: when playing with the right hand below the cross-over point (*c'*) or with the left hand above, in each case the fingers must reach through the chromatic rank to play the diatonic notes, unless strings on the chromatic rank could be tuned in unison with the diatonic rank. This complication is eliminated on three-rank (triple) harps with two parallel outer ranks tuned in unison and the inner rank of chromatic notes set between them.

Jovernardi and Mersenne gave detailed descriptions of three-rank harps. In 1634, while in residence at the court in Madrid, Jovernardi observed that Spanish harps did not have three ranks of strings as did the harps in Italy. Features found on extant instruments corroborate the details Mersenne gave concerning the structure of the three-rank harp. Strings were secured to the soundboard using pegs or pins, a system that persisted in Welsh triple harps well into the 19th century. The back of the resonator was ribbed (rather like that of the lute), rather than being a three-sided box or carved out of one piece of wood. The metal tuning-pins were squared at one end to accommodate the tuning key, and pierced with a hole at the other for strings to be threaded through. Brass wires were attached to the soundboard above each peg to stop the wood, with the grain running vertically, from splitting. Mersenne said that harps could be made to whatever size one wished, but he suggested a height of 4 or 5 feet (1·2–1·5 metres). Large Italian triple harps were over 6 feet (1·8 metres) tall.

Some basic characteristics of two- and three-rank harps of the late 16th and early 17th centuries emerge from these sources. Compasses varied from over three octaves to four octaves and a 5th. The latter (*G'–d'''*) is the largest range required in works where *arpa doppia* is specified, including the *Toccata* by Trabaci and the solo in Monteverdi's *L'Orfeo* (see §V, 5(ii), below). Two- and three-rank harps could be tuned with either B♮ or B♭ in the diatonic ranks. The chromatic ranks contained all the accidentals needed corresponding to the diatonic ranks and could include D♮ and A♮, in unison with the diatonic ranks, or D♯ and A♭. Mersenne said that the exact size of the semitones on the harp was not easily determined, but that they could be variable, and tuned equal or unequal. No particular temperament was specified. Two- and three-rank harps were usually strung with gut. Jovernardi referred to 'reinforced strings', but what these were made of has not been determined (possibilities include gut strings with a higher twist or some kind of overwinding with metal). Silk or metal strings may also have been used. These harps were played resting on the right shoulder, and strings were plucked with the pads of the fingers, sometimes close to the nails. Damping the strings was sometimes necessary to avoid dissonances created when notes rang over. Great dynamic range was possible with the proper touch.

The lavishly decorated harp known as the 'L'arpa de Laura' is the most beautiful surviving example of a two-rank harp (Galleria Estense, Modena; fig.25). It was ordered for the singer and harpist Laura Peverara (*c*1550–1601) by the Duke of Ferrara, Alfonso II d'Este, and built in Rome in 1581. Two 17th-century two-rank harps are in the Musée des Instruments de Musique, Brussels. The first, which displays some structural similarities to the harps depicted by Domenichino and Nuvolone, is called the 'Kaiser' harp due to a possibly anachronistic label reading 'Martinus Kaiser 1675'. This harp has a five-staved, cypress resonator, a walnut neck and forepillar, four soundholes in the soundboard, and metal staples to prevent the strings from ripping the soundboard. The two parallel ranks have extremely narrow spacing and the strings are fastened to the soundboard with bray pins. The second of the Brussels harps – of German origin – is an elegant instrument, its forepillar terminating in an anthropomorphic finial (fig.26). It has 33 strings in the left rank and 26 in the right; the five lowest and four highest have no chromatic strings beside them. This harp is also equipped with bray pins. Another important two-rank harp (late 16th century) is in the Museo Civico, Bologna. This harp has a carved resonator, eight soundhole rosettes in the soundboard, brass staples and three ranks of strings: a continuous middle rank from treble to bass and two incomplete chromatic ranks on either side.

25. *'L'arpa di Laura': two-rank harp, 1581 (Galleria e Museo Estense, Modena)*



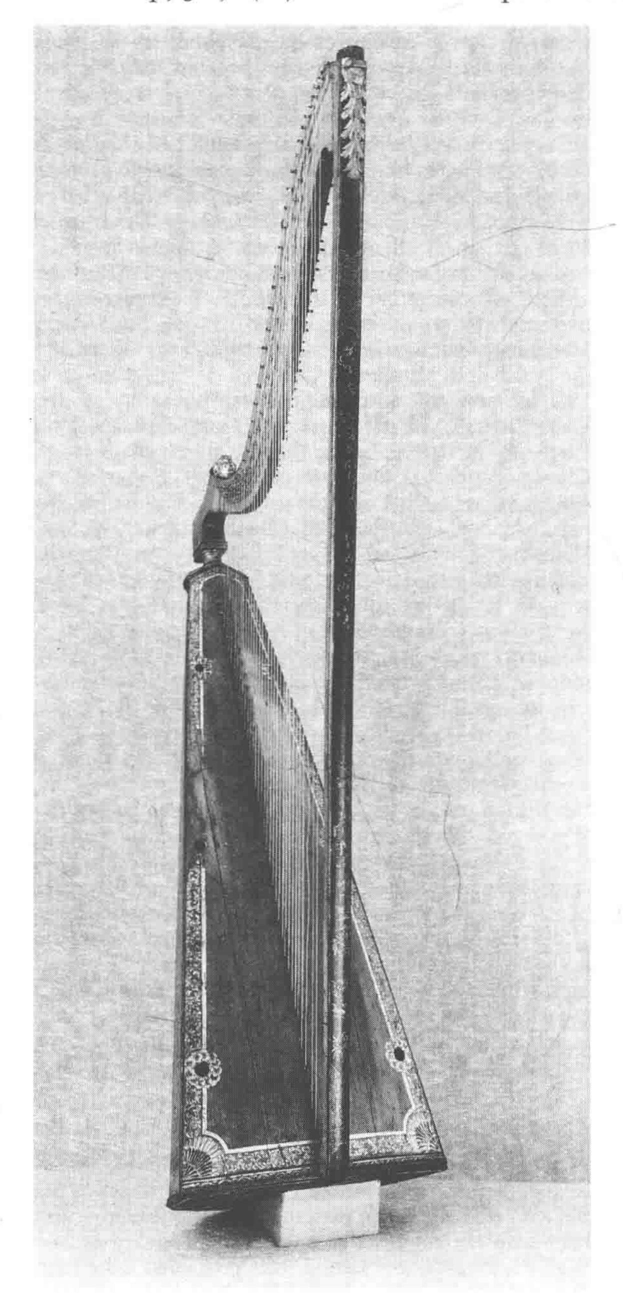
The very large, highly decorated, three-rank 'Barberini harp' (*c*1625) formerly in the Palazzo Barberini and now in the Museo degli strumenti musicale, Rome is almost certainly the harp in the painting by Lanfranco mentioned above. This harp has an extravagantly carved forepillar, a resonator made of nine staves, and a long-grain softwood soundboard with four soundholes. The number of tuning pins in the neck does not correspond with the number of pins in the soundboard, so the original configuration of this harp cannot be precisely determined. A large, three-rank harp in the Museo Civico, Bologna is probably composed from two instruments. The nine-staved, maple resonator (? early 17th century) with its two-piece, long-grain spruce soundboard with four soundholes and brass staples has a light construction. The neck and forepillar are carved and heavy, and probably come from a later, larger harp.

Pierre Trichet, in his manuscript *Traité des instruments de musique* written in Bordeaux between about 1630 and 1640, observed that while single-, double- and triple-rank harps were being used at this time, the single-rank harp was by far the most common. By the beginning of the 18th century there are no records left of players of multi-rank harps working in Naples or Rome. Filippo Bonanni (*Gabinetto Armonico*, Rome, 1722), however, indicated that the three-rank harp, though scarcely found in Italy, was being used in Germany. J.P. Eisel (*Musicus autodidactus*, Leipzig 1738) gave a diagram of a two-rank harp (which he called a 'Davids-Harfe') and described how it was played, with the left hand from *G′* to *c′* and the right hand form *c′* upwards. This diagram is similar to the two-rank harps made by the German builder Johann Volckmann Rabe of Nordhausen. One of 1740, preserved in the Musikhistorisk Museum, Copenhagen, is fully chromatic, with 52 strings in two parallel rows fastened to the soundboard with bray pins. Three other harps by Rabe are in collections in Los Angeles, Nuremberg and Brussels.

(ii) Harpists and repertory. Beginning in Naples in the 16th century, and later in Rome, Italy was home to the most important centres for builders and players of the *arpa doppia*. Galilei stated that the double harp was introduced into Italy sometime prior to 1580. The Neapolitan harp tradition was centred around Gian Leonardo Mollico (*c*1530–1602), known as Giovanni Leonardo dell'Arpa, and his students, including Flaminio Caracciola (*fl* 1579–90), Scipione Bolino (*fl* 1600) and Francesco de Auxiliis (*c*1630). By 1552, Dell'Arpa was recognized as the leading harp virtuoso in Naples and one poetic reference even claims that he invented the *arpa doppia*. Nearly fifty years later, Scipione Cerreto (*Della prattica musica vocale et strumentale*, Naples, 1601) identified Dall'Arpa, Ascanio Mayone (*c*1565–1627) and Domenico Gallo (*fl* 1600) as excellent players of the 'arpa a due ordini'. Mayone's son Giulio dell'Arpa was also an active and well known harpist.

Two publications printed in Naples include pieces designated for the harp. Ascanio Mayone included a *Recercare sopra il canto fermo di Constantio Festa per sonare all'arpa* (based on the *La Spagna* melody) in his *Secondo libro di diversi capricci* (1609). Giovanni Maria Trabaci's *Il secondo libro de ricercare* (1615) contains his *Toccata seconda, & ligature per l'arpa*, four *Partite artificiose sopra il tenor di Zefiro* and *Ancidetemi pur, per l'arpa*. Trabaci, Mayone and Luigi Rossi (?1597/8–1653; also a composer-harpist) were associated with Giovanni de Macque (*c*1548–1614), *maestro* of the Chapel of the Spanish Viceroy in Naples from 1599.

Rossi, in a manuscript collection (*GB-Lbl* Add.30491), preserved the majority of Macque's solo instrumental works along with other contemporary pieces including the four *Partite sopra Zefiro* by one Rinaldo. These are



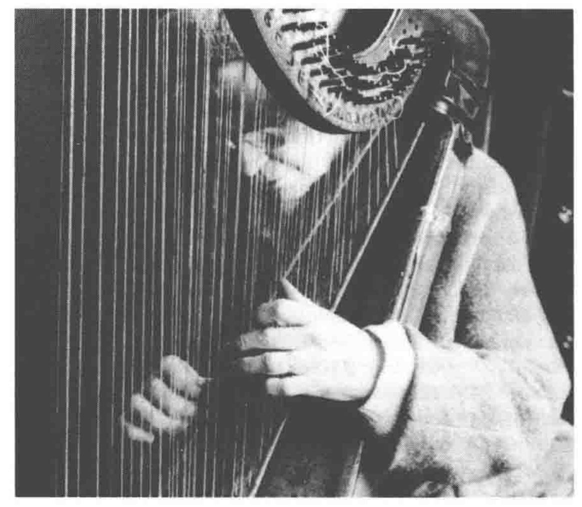
26. German double-strung chromatic harp, with details of brays and position of brays in the soundboard (Musée des Instruments de Musique, Brussels)

remarkably similar, in places virtually identical, to the Trabaci's *partite* on the *Zefiro* tenor. Although the precise identification of Rinaldo is somewhat uncertain, the most likely candidate is Rinaldo Trematerra [Rinaldo dall'Arpa] (*d* 1603), a singer and harpist who was based in Naples who visited the court of Ferrara, home to Laura Peverara, during the 1590s in the retinue of Carlo Gesualdo.

By the beginning of the 17th century the harp was also flourishing in Rome. Jovernardi claimed that the perfect triple harp (*arpa perfecta a tre ordini*), was invented in Rome in 1612. Vincenzo Giustiniani, however, wrote in his *Discorso sopra la musica* (1628) that the *arpa doppia* was invented around 1600 in Naples by Sire Luc Anthoine Eustache and then introduced to Rome by Giovanni Battista Jacomelli (del Violino) (*c*1550–1608). One of the most lauded of the Roman harpists was Orazio Michi (*b* 1594/5; *d* 1641), whose talent was praised by many Italian and French writers (including Mersenne and André Maugars), as well as by other harpists such as Caterina Baroni (daughter of the singer and harpist Adriana Basile Barone) and Costanza de Ponte, who married Luigi Rossi in 1627. Costanza's brother Paolo de Ponte was also a professional harpist active in Vienna. Rossi's younger brother Giovan Carlo (*c*1617–1692) was a noted player of the *arpa a tre registri* based in Rome, whose career also included a period in France. While there Rossi performed in the first performance of Cavalli's opera *Ercole Amante* in Paris (1662). Two other harpists held in high esteem in Rome were Marco Marazzoli (*b c*1602–5; *d* Rome, 26 Jan 1662) and Lucrezia Urbani (*fl* 1609), who was a member of an ensemble that included Girolamo Frescobaldi and the lutenist Alessandro Piccinini.

One of the most famous solos for harp in opera literature is the Ritornello for *arpa doppia* in *L'Orfeo* (1607) by Claudio Monteverdi. The *arpa doppia* was also used as a continuo instrument in operas by Marco and Domenicho Marazzoli and Stefano Landi and in other works by Sigismondo d'India, Girolamo Montesardo, Francesco Lambardi, Filippo Albini and Lelio Colista. Agostino Agazzari (*Del sonare sopra 'l basso con tutti li stromenti*, Sienna, 1607) classified the harp for use in

27. Welsh triple harp by David Evans, London, 1736 (Victoria and Albert Museum, London)



continuo realization as an instrument both of foundation and of ornamentation.

The harp began to decline in southern Italy during the second half of the 17th century. Gregorio Strozzi included two solo pieces, a *Sonata di basso solo per cimbalo et arpa, o leuto* and two variations for harp in his *Romanesca con partite*, in his Neapolitan publications of 1683 and 1687.

(iii) Wales and England. The triple harp appeared in the British Isles early in the 17th century. On 11 October 1629, the French harpist Jean le Flelle [Flesle] took the oath at the court of Charles I as 'musician for the harp', having arrived in London in 1625 in the retinue of Charles's bride, Henrietta Maria. Le Flelle, whose playing was praised by Mersenne, played the Italian triple harp with gut strings. William Lawes composed the 11 'harpe consorts' for bass viol, violin, harp and theorbo, probably for Le Flelle's own consort.

It was the triple harp, however, that seems to have been so quickly adopted by the Welsh harpers living in London during the 17th century – so much so, that by the beginning of the 18th century the triple harp was already generally known as the Welsh harp. The first known Welsh triple harpist is Charles Evans who was appointed harper to the court in 1660, and was later referred to as 'His Majesty's harper for the Italian harp'. Two outstanding Welsh makers were David Evans, who in 1736 made the splendid triple harp now in the Victoria and Albert Museum (fig.27), and his pupil John Richards of Llanrwst, who worked mostly in Wales at the estate of Sackville Gwynne at Glanbrân.

The typical Welsh triple harp is very high-headed with a steep harmonic curve. The range is generally about five octaves containing an average of 95 strings. The strings are held in place in the soundboard by round-headed wooden pegs and pass through slotted tuning-pins arranged in three stepped rows on the right side of the neck. The neck is not jointed directly to the resonator, but is set on a flat-topped shank which forms the upper part of a fluted block fixed in the upper end of the resonator. Often the neck is reinforced with an iron insert. The joint between the neck and the long, slim forepillar is held together by the tension of the strings. The resonator is coopered and strengthened on the inside with a number of wooden braces. Some Welsh triple harps have soundholes in the soundboard, others simply have an open resonator bottom. Welsh triples are designed to be played on the left shoulder, the left hand playing the treble register, the right hand the bass register and both hands accessing the inner row (fig.28). Welsh triple harps built in the 18th century were very lightly constructed, having thin, long-grained soundboards bent to form a convex belly. During the 19th century makers began to imitate pedal harp construction, using cross-grained soundboards. Late in the century Bassett Jones of Cardiff, chief harp maker to Queen Victoria and the most famous of

28. Welsh triple harp by Bassett Jones, c1850, played by Nansi Richards-Jones, 1970

the 19th-century makers, introduced a brass bar, or gallery, along the neck, improving the distribution of tension and justifying the plane of the strings. Compared to that of Italian triple harps, the tone is less defined but richer in the bass, and sweeter and less bright in the treble, both characteristics well suited to the 18th- and 19th-century repertory, particularly that of Welsh airs.

A good description of the Welsh triple harp is given by the harpist and composer JOHN PARRY (ii) (1776–1851) in the preface to the second volume of his collection of Welsh airs, *The Welsh Harper* (London 1839):

> The compass of the Triple Harp, in general, is about five octaves, or thirty-seven strings in the principal row, which is on the side played by the right hand, called the bass row. The middle row, which produces the flats and sharps, consists of thirty-four strings; and the treble, or left hand row, numbers twenty-seven strings. The outside rows are tuned in unison, and always in the diatonic scale, that is, in the regular and natural scale of tones and semitones, as a peal of eight bells is tuned. When it is necessary to change the key, for instance, from C to G, all the Fs in the outside rows are made sharp by raising them half a tone. Again, to change from C to F, every B in the outside rows is made flat, by lowering it a semitone. When an accidental sharp or flat is required, the performer inserts a finger between two of the outer strings, and finds it in the middle row. Many experiments have been made, with a view of obviating the necessity of tuning the instrument every time a change in the key occurred. Brass rings were fixed near the comb, but those rattled and jarred; in short, every attempt failed until the invention of the Pedals. ... Yet my old country Triple Harp, though it has its imperfections, possesses one advantage, and that is the unisons. Who has ever heard some of the old Welsh airs with variations, and not been quite delighted with the effect of the unisons?

The effect of 'unisons' mentioned in the last two sentences refers to a characteristic effect of Welsh technique, obtained by playing a pair of unison strings on both the outside rows using the right and left hands in rapid succession. Examples of this technique can be found in many of the publications of Welsh airs. One of the most famous of the 18th-century Welsh triple harp players was JOHN PARRY (i) ('of Rhuabon'; *c*1710–82). From 1734 until his death he was harper to the family of Sir Watkin Williams Wynns of Wynnstay, Ruabon. Parry and his amenuensis Evan Williams (Parry being blind from birth) published the first collection of Welsh melodies for the triple harp, *Antient British Music* (London, 1742). His 1761 *Collection of Welsh, English & Scotch Airs with New Variations* also contained four 'New Lessons' of his own composition. Parry's playing was much admired by Handel, and gave three performances of Handel's Harp Concerto in B♭ (published as op.4 no.6, 1738) in 1741–2. According to Sir John Hawkins, however, Handel had composed this work (which had originally been intended for the first performance of *Alexander's Feast*, 1736) for another Welsh harp virtuoso, William Powell (*d* 1750). Powell was almost certainly the harpist for Handel's first composition with an obbligato harp part, the air 'Praise the Lord with Cheerful Noise' in *Esther*, composed about 1718 when both Handel and Powell were in the employ of the Duke of Chandos. Handel also included harp parts in *Giulio Cesare* (1724), *Saul* (1739; including a solo 'symphony') and *Alexander Balus* (1748). EDWARD JONES, *Bardd y Brenin* ('the King's Bard'), was appointed harper to the Prince of Wales in 1788. He published *Musical and Poetical Relicks of the Welsh Bards* (1784; enlarged editions in 1794 and 1808), *The Bardic Museum* (1802) and *Hên Ganiadau Cymru* (1820), each consisting of Welsh airs. These constitute the largest source of Welsh airs, and some of the plates were reprinted in the publications of John Parry (ii). Jones also published many of his own sonatas, marches and dances for solo harp or keyboard, written in the idiom of the day.

During the 19th century Augusta Hall (Lady Llanover) (1802–96) invited harpists and harp makers to live on her estate in Llanover, Gwent, and many fine triple harps were built there during her lifetime. Many Welsh triple harps from the 18th and 19th centuries remain in public and private ownership throughout Europe and in the USA although few are still playable. Several important examples are in the collection at the Victoria and Albert Museum, London, and the largest collection is housed in the Welsh Folk Museum in Cardiff.

A line of Welsh harp tradition can be traced back to Robert Parry of Llanllyfni, a relative and teacher of John Parry of Rhuabon (whether the line goes back as far as Charles Evans has not been confirmed). Robert Parry supposedly had a link with the ancient traditions of Welsh harp playing. John Parry of Rhuabon taught William Williams (Wil Penmorfa) (1759–1828), who taught Richard Roberts of Caernarfon (1769–1855), who in turn was the teacher of John Wood Jones (*d* 1844). Wood Jones was a great grandson of Abram Wood (*d* 1799), a Romany gypsy who came to Wales in about 1750. Many more of Abram Wood's direct descendents were famous harpists, including Jeremiah Wood (*c*1778–1867), Edward Wood (1838–1902), and John Roberts (1816–94) who was himself the father of a family of harpists. The continued practice of the Welsh triple harp throughout the 19th century is largely thanks to the members of the Wood and Roberts gypsy families.

After the early 20th century triple harps were almost completely abandoned in Wales in favour of the pedal harp. Were it not for one player, Nansi Richards-Jones (1888–1979), who learnt to play from itinerant harpists in the Bala area at the turn of the century and who played both triple and pedal harp on the left shoulder (fig.28), the traditional techniques would have been lost completely. Current performers of the Welsh triple harp include Eleanor Bennett, Robin Huw Bowen, Cheryl Ann Fulton, Ann Griffiths and Llio Rhydderch.

6. LATIN AMERICA.

(i) History and distribution. The *arpa* (harp), single-strung, diatonic and without pedals, was brought to the New World from Spain with the first conquistadors, and later with lay colonists and various missionary orders. With the *vihuela*, it is said to have prospered more than any other European instrument in New Spain. Just as early 16th-century luthiers of Seville were required by ordinance to be able to make harps, so were instrument makers of Mexico City by an ordinance of 1568. A link remains between 20th century Latin American diatonic harp traditions – for example those of Paraguay and the Colombian–Venezuelan plains – and Jesuit settlements of the 17th and 18th centuries. The harp and violin played significant roles in Jesuit evangelistic activities in Paraguay and in the Peruvian–Ecuadorian Oriente; in the mid-18th-century, the harp is said to have been the most common instrument among Indians in the Quito area of Ecuador.

In the early colonial period, the harp was also used in cathedrals, for example in the orchestra of that of Mexico City in the late 16th century and throughout the 17th. It was the required instrument for the accompaniment of religious music in 18th-century Montevideo, Uruguay;

and the cathedral of Concepción, Chile, boasted an organ and an ensemble of clavichord, two violins, drum, fife and harp in the 18th century. Around 1630 in the Lima Cathedral *capilla de música*, the harp assumed the bass role of the sackbut and continued until 1832 when the position of harpist was abolished.

There is evidence of such a bass role in numerous Mexican and South American archives, which allude to the harp's use as a continuo instrument up to the end of the 18th century. Stevenson's aggregation of colonial manuscripts from different archival sources gives an idea of the instrument's use as a continuo instrument in Hispanic-American Baroque music (as in Iberian music; *Stevenson RB*).

In the 19th century, following the 1767 expulsion of the Jesuits and the widespread replacement of the harp by the organ as a church continuo instrument, descriptions of the harp focus more on folk and salon usage. In the Mexican *son jarocho*, a musical–choreographic genre now centred in the southern coastal plain of Veracruz, the use of the harp dates back at least to 1803. Female harp virtuosos are described in various accounts of 16th-century Spain, and in Chile the tradition of women harpists is documented back to the 18th century; they also performed in 19th-century salons and in outdoor booths set up in towns. The tradition of harp playing in 17th- and 18th-century Córdoba, Argentina, continued in northern Argentina in the following century; in Santiago del Estero, dances at country posts included performances by blind harpists. There are numerous historical references to blind harpists, and still today this occupation is often selected by blind men of rural Latin America who are unable to earn a living by working the fields.

There is iconographical evidence for the use of harps outside the church in 19th-century Peru; Pancho Fierro (1803–79), the watercolourist, portrayed musicians carrying the instrument on their shoulders, often in procession, as they still do. It should be noted that the harp was used in processions for Corpus Christi in the 17th and 18th centuries in the Spanish Marañón (as they may have been in 16th-century Spain under Charles V). Illustrations of Peruvian harp usage, including holding the instrument on the shoulder, appear on 19th-century vessel fragments; one portrays the Ayacucho region scissors dance, which is still performed.

The harp was used in 19th-century Venezuela in salons and in shops. By the end of the century it was found throughout the Venezuelan plains, played by men; in Caracas, women performed on European made harps. Along the Atlantic coast, in Cartagena, Colombia, the harp was a favourite instrument in the early 19th century, played by either sex. In Bogotá, in the 1820s, it was used in the home and in the theatre. In Guayaquil, Ecuador, in the early 19th century, the harp, guitar or violin was often used to accompany dance.

An important early description of Quechua harp playing in highland Ecuador (by F. Hassaurek for San Juan festivities in 1863) details how the harp was carried in a procession of dancers, the instrument being played as it rested on a boy's back, while a second musician beat it rhythmically. Late 19th-century Ecuadorian Indians also used the harp in a radically different context: for a child's wake. In the style of the late 19th-century Quito School, Joaquín Pinto's painting *Velorio de indios* depicts a highland Ecuadorian Indian home, where a harpist plays as one couple dances in the patio and the corpse of a winged figure – probably a child – is visible on a platform within. In the 1980s and 90s Quechua communities outside Cotacachi (near Otavalo) still employed a harpist-cum-beater (*golpeador*) for the ritual celebration of a child's wake (a *golpeador* is shown beating the harp in fig.30*b* below).

In the 20th century, according to the Paraguayan harpist Alfredo Rolando Ortíz, the harp is particularly used in six countries: Argentina, Chile, Mexico, Paraguay, Peru, and Venezuela. Although its importance in these cultures is beyond dispute, it should be emphasized that the instruments show unique physical features and possess distinct musical repertories, often representing different cultures, in each country.

Yaqui Indians of Sonora, Mexico, and Arizona, USA, perform the Pascola dance around Holy Week to the music of a harp and a violin (*see* MEXICO, fig.7); this combination is also used by the Mayo of Sonora for their Pascola dances. In Chiapas, southern Mexico, a favoured trio combination among Tzotzil, Chamula and Tzeltal musicians is harp–violin–guitar (fig.29); it has been suggested that the nature of these instruments, their performing techniques and the structure of their music derive from 16th- and 17th-century Spanish sources (see fig.23 above). The Veracruz *jarocha* harp shows four principal melodic tendencies: homophonic, with slow rhythmic movement; tremolo arpeggios; arpeggios with 'melodic intent'; and undulating conjunct motion. In Jalisco, some *mariachi* groups include harp, several violins and *jarana*, possibly with *vihuela*, *guitarrón*, other guitars and several trumpets, though the harp is now rare in this context. The harp tradition in Apatzingán, Michoacán, is sufficiently strong to support an annual contest; in that region, rhythmic *sones* and lyric-declamatory *balonas* are sung to harp and vihuela accompaniment.

Paraguay now has one of the most influential harp traditions in Latin America. The harp is the country's official national instrument and is featured in hundreds of *conjuntos* (*see* PARAGUAY, fig.3). Paraguayan folk groups exist in most South American countries and the Paraguayan-style harp (see V, 6(ii), below) is also used in Chile, Ecuador and Venezuela. The Paraguayan harp repertory includes the *galopa* and *guarania*, both in sesquialtera rhythm, the latter having frequent arpeggios and great melodic freedom.

According to Isabel Aretz, the harp in Tucumán, northern Argentina, has a tradition that lasted 350 years; it was widely used solo or in dance *conjuntos* both in the countryside and in the city until just after 1900, when the tradition weakened.

In Chile (as in Michoacán-Guerrero, Mexico, Argentina, Peru and highland Ecuador) the practice of *cajoneo* (rhythmic beating of the resonator) is common. The national dance is the *cueca*, in which the harp accompaniment, when present, is played by women; *tonadas* and *romances* may also be accompanied by the harp.

Throughout Venezuela the harp is closely tied to the performance of the rhythmically complex national dance, *joropo*, but there are two distinct traditions: in the Plains (extending into eastern Colombia) the 'llanera' tradition has a fixed playing style and compositional form, while the 'aragüeña' tradition of Aragua-Miranda has melodic, rhythmic and textual variants. The Aragua harp normally performs with maracas accompaniment (*see* VENEZUELA,

29. Single-rank harp with ribbed resonator, guitar and violin, Zinacantán, Chiapas, Mexico, 1966

fig.4), the Plains harp with that of maracas and four-string *cuatro*.

Peruvian harps may be divided into two types: a longer instrument, generally found in 20 of the 23 states (covering much of the central and southern coast and the central and southern Sierra), and the *domingacha*, a small harp found principally in the state of Cuzco. Gourd harps, a type observed in 19th century Colombia (there are examples in the Pedro Traversari Collection of Musical Instruments, Quito, Ecuador), are still played in Piura, north-west Peru. Peruvian harpists perform *waynos* (HUAYNO), song-dances in rhythmic duple metre, often with the violin and sometimes other instruments, and lyrical, elegiac *yaravís*, which are frequently performed solo. Each region of Peru may be identified by particular left-hand, or bass patterns, notably for the *wayno*. The Peruvian performance practice of carrying and playing the harp upside down in a sling resting on the harpists shoulder while in procession, is traditional and distinctive for Latin America (*see* PERU, fig.3). In Quechua-speaking areas of Bolivia, harpists attend *farras* (or *fiestas*), where they perform *cuecas*, *bailecitos* and *kaluyos* with the *kena* (flute) and occasionally other instruments.

In the Ecuadorian highlands the two major harp traditions are that of primarily mestizo culture, in Tungurahua province, and that of Quechua culture, in Imbabura province. In central highland Tungurahua, harpists of average ability perform national folk musical genres such as *pasillo* and *albazo*, but there are also players with a broader, sometimes international repertory. Distinctive in the repertory of northern highland Imbabura Quechua harpists, is the *vacación*, a cyclical, ametrical non-dance music closely allied to ceremonies for a child's wake. The dance music of the same child's wake ritual comprises the *sanjuán*, a vigorous music with isorhythmic phrase structure, and the slightly faster *pareja*, a music associated with newly-weds, dancing and the dawn. (For further discussion *see* ECUADOR, esp. §II, 1(ii) and fig.1.)

(ii) Structure and performance. A variety of sources, both written and iconographical, give details of 16th-and 17th-century Spanish harps. Some characteristics are: varnishing; bone or brass pegs; relief work; single-rank (diatonic) or double-rank (chromatic); three parallel sets of soundholes on the soundboard, astride the forepillar, or violin-type f-holes; resonator with seven ribs; a compass of at least two octaves, and up to 46 strings; a C-shape (inverted arch) neck; a long, thin and straight forepillar, turned; a roundish soundboard, large in proportion to the low, slender superstructure of forepillar and neck; a low, walnut head; and gut strings (see fig.23). Many Latin American harps exhibit these features, notably the turned forepillar, inverted arched neck and gut strings. The most important features of Mexican harps are: their straight and turned forepillars; the shape of soundholes in Sonora and Chiapas Indian harps; the neck relief-carving of Chiapas harps (see fig.29); and the gut strings on some Guadalajara harps.

20th-century Paraguayan harps are long and slender (with a resonator of 140 x 40 cm at its widest point). The sound escapes through a large round hole on one side of the resonator (there are no holes in the soundboard). The resonator is traditionally of cedar, surfaced in pine. The

strings are secured to the soundboard by a thin external belt of wood (cedar) down its middle, into which bone incrustations are fitted. The tuning-pegs are traditionally of wood, though now aluminium is also used, as are guitar-type, mechanical tuning-pegs. Rural Paraguay harps of about 1940 had a curved neck with a circular finial on top of the forepillar, a feature retained in most recent harps though in an exaggerated form, in effect consisting of two curved segments connected at nearly a right angle. The neck, sometimes painted with an abstract design, consists of two facing halves of laminated cedar, the strings emerge from holes in the bottom. The result of this design, apparently peculiar to Latin America, is a truly vertical harp with centralized pressures permitting a very light construction not achieved on other harps. The straight, round forepillar has little or no turning. Up to the mid-20th century the instrument had 32 strings; later examples have 36 or even 40 nylon strings, some of them coloured (e.g. red to mark octaves), with a range of five octaves, often tuned in G. It is played seated for solo music and standing in ensembles.

The mestizos people of Tucumán, Argentina, use harps with extensively turned forepillars whose finial is often a small ball or other turned extension; there are seldom holes in the soundboard (when present there is only one or a parallel pair). Other structural features include short, flat-planed legs; a narrow but deep ribbed resonator; and a neck that is uncarved but occasionally painted. The instrument is played seated.

The neck of 20th-century northern highland Ecuadorian harps is uncarved and lightly curved. The forepillar is straight, with rounded edges; it is turned with two concentric incisions, commonly in three places; and occasionally has black painted rings at either end of each incision group. The forepillar is short, creating a low head, and there is usually no forepillar finial. The resonator is slightly arched, wide and deep. Harps in the northern highland Imbabura province have 17 to 27 strings, yielding a range of three octaves and a 5th or four octaves. The general pattern is hexatonic tuning in the treble, which has steel strings over a range of about a 12th, diatonic but lacking the minor supertonic. Harpists can thus play all pentatonic pieces (the bulk of the repertory) as well as the few, but widely played, hexatonic pieces.

The harp in the central highland Tungurahua province is made of a combination of several types of wood, usually cedar, walnut and cinnamon. Played seated or standing, it has three soundholes, which are circular or oblong, sometimes flanged and occasionally wood-inlaid; these are present on all Ecuadorian and Venezuelan harps. The neck is elaborately carved, often in a floral pattern; its curvature is substantial, resulting in a near-S shape (similar to the neck of the NADERMAN single-action harp of 1780). The forepillar is tall, straight, squared and unturned, with a carved finial, often in the form of a human or animal head. Master harpists tune the large 34-string harp, with four octaves and a 6th, to play *sanjuanito*, in the 'natural' minor and its relative major; the range in C♯ minor/E major would be G♯′–e‴. For the slow, expressive *yaraví*, in C minor/E♭ major, the following variant tuning is used: the lowest octave, natural minor; the second, harmonic minor; the third, natural minor; the fourth, Dorian. For the *pasillo*, the alterations from the strict natural minor are, in the second and third octaves, that the subtonic is raised to the leading-note and the submediant is raised a semitone, and in the fourth the subdominant is also raised a semitone (these alterations accommodate frequent recourse to the dominant).

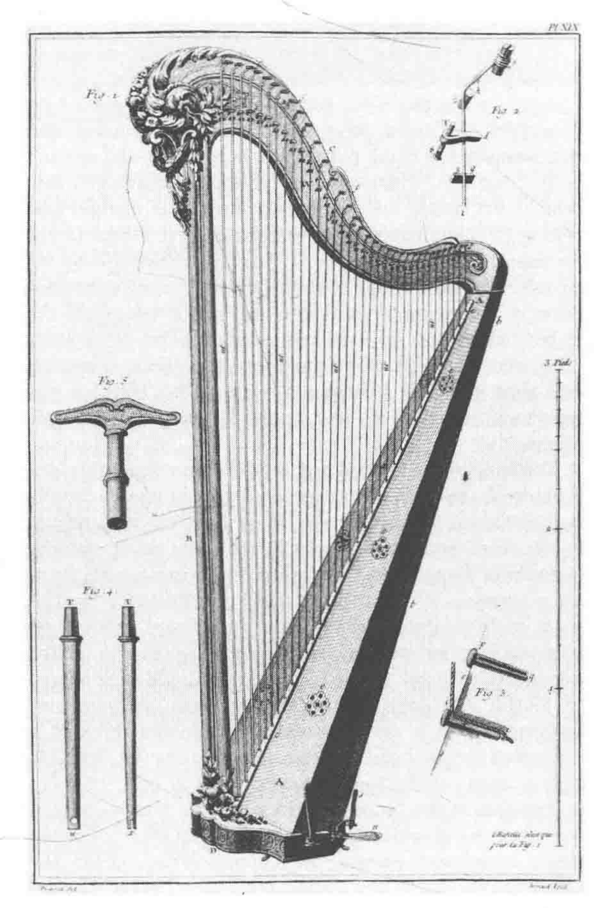
Many central Ecuadorian highland harpists are coming to prefer Paraguayan harps, with their distinctive sharply angled, uncarved necks and their absence of circular soundholes. Some such harps have 'figure S' soundhole patterns on either side of the forepillar, closely resembling those painted by Francisco de Zurbarán for the 17th-century Spanish harp (see fig.23). The tradition of harp-playing remains vital in Latin America. The *IV Encuentro Latinoamericano de Arpa* (The 4th Latin American Harp Meeting) held in Mexico City in May 2000, continued the study of the diffusion and development of pedal and non-pedal harps in Latin American music of all types and styles.

7. MECHANIZED HARPS AND LATER 'HARPES CHROMATIQUES'.

(i) Hook harps and single-action pedal harps. Chromatically strung two- and three-rank harps were complicated to make and cumbersome to play if more than a small number of chromatic notes were needed. Sometime during the late 17th century or early 18th a method of obtaining some chromatic notes on a diatonically tuned single-rank harp was developed. Strong metal J-shaped hooks were inserted in the neck below the tuning-pins to provide the pitch changes required in the musical styles of the time. At first these were the first, second, fourth and fifth degrees of the scale in which the instrument was tuned. When a hook was turned by the left hand to stop the adjacent string the pitch of that string was raised by a semitone. The hook method of chromaticization was applied to instruments considerably varied in structure, ranging from early 17th-century types to imitations of pedal harps. Some had rectangular resonators, some ribbed, some curved. Some had necks and forepillars of austere simplicity (fig.30), while others were elaborately decorated, occasionally with zoomorphic or anthropomorphic designs such as a lion's head or a representation of David or a satirical regional figure.

Only one string could be sharpened at a time, and the process of turning a hook temporarily prevented the left hand from playing. It was in order to remedy the inconveniences of manually operated hooks that a pedal-operated mechanism for sharpening the strings was developed. Although eventually the harp was provided with seven pedals, one for each note of the scale, initially it had five (C, D, F, G and A). These pedals, in the bottom of the resonator, were connected to wire rods that passed up through the resonator to connect with a link mechanism in a hollowed-out recess along the length of the right-hand side of the neck. The link mechanism was connected to the hooks on the outside left of the neck, and when a pedal was depressed the hooks turned and sharpened every string of the same note name in all its octaves. Single-action pedal harps are still a popular folk music instrument in the Austrian Tyrol and in Bavaria.

Jakob Hochbrucker of Donauwörth, Bavaria, is often credited with the invention of the single-action pedal harp, though it is sometimes attributed to other makers, such as J.P. Vetter of Nuremberg and Johann Hausen of Weimar. 1720 is usually given as the approximate date of the invention, but Hochbrucker's son Simon (*b* 1699), in his introduction to an undated collection of *Ariettes*,



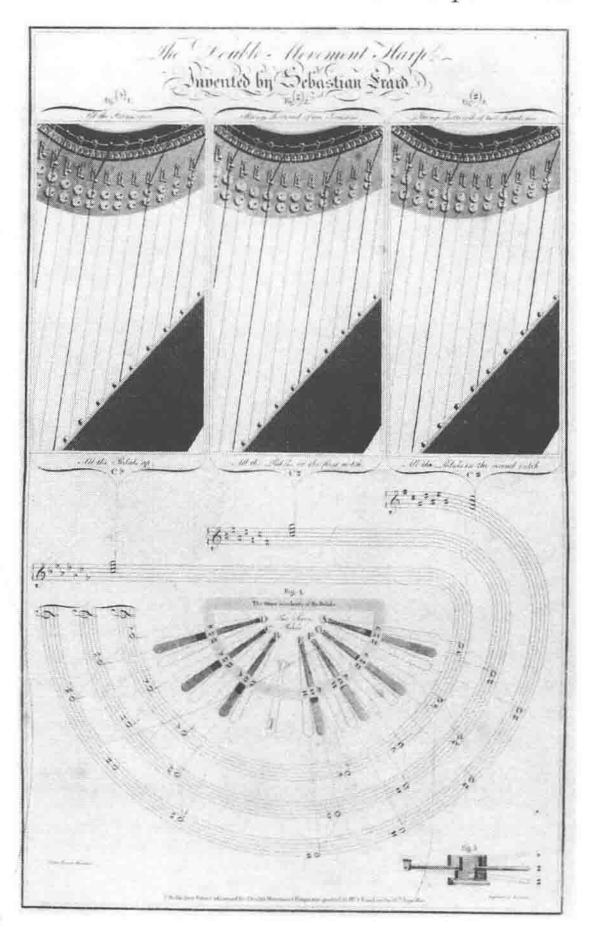
30. Hook harp by Martin Eggert, Wertingen, first half of the 19th century (Metropolitan Museum of Art, New York)

stated that the pedal harp had been invented by his father in 1697. It is not known who had the idea of enlarging the pillar and hollowing it out so that the pedal rods could be accommodated inside (rather than in the resonator), but by the time the single-action harp came to be played regularly in French aristocratic circles this placement of the pedal rods was standard.

Simon Hochbrucker introduced his father's harp to Vienna in 1729 and to Brussels ten years later. It was not until 1749 that a similar harp was played in Paris by the German harpist Goepfert (Gaiffre), who claimed to have invented it. Paris soon took a leading role, however, and with the arrival in 1770 of France's new dauphine, Marie-Antoinette – herself a harpist – Paris became pre-eminent in the harp industry. Harpists and harpist-composers converged there, and it is reported that in 1784 there were 58 harp teachers in the city. Harp makers too were numerous, and it was in Parisian workshops that all the important developments in harp construction in the second half of the 18th century took place.

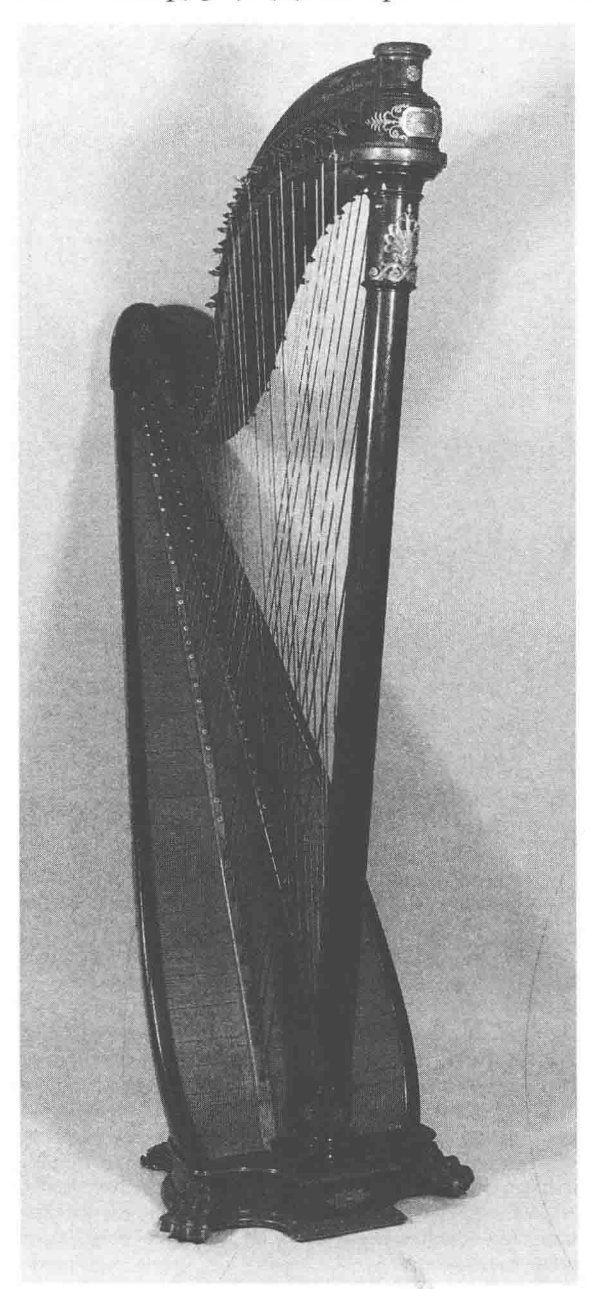
Diderot and D'Alembert's *Encyclopédie* shows a typical harp of the period (fig.31). The resonator was composed of a ribbed back, lidded by a thin flexible soundboard of lateral grain. The curve of the neck varied slightly according to the number (generally 36 to 43) and pitch of the strings. A box to house the seven pedals was added at the base of the harp, and the pedal rods connected to the linkage ran up through the hollow forepillar, now of necessity absolutely straight. In response perhaps to the taste of aristocratic patrons, the simply carved forepillars were made highly ornate, sculptured and gilded. Soundboards were painted in the Vernis Martin style, and the harp itself became an important decorative element, indeed a requisite of the most elegant Parisian salons.

Improvements were made in its mechanism. The *crochets* – a French version of the hook mechanism – were right-angled rather than U-shaped. When the pedal



31. Single-action pedal harp with structural and mechanical details: engraving by Benard after Prevost from Diderot and D'Alembert's 'Encyclopédie', v (Paris, 1767), pl.xix

was depressed the *crochet* moved horizontally inwards towards the neck where it squeezed the string against a fixed nut, thus shortening it by approximately an 18th of its length. The disadvantage of this system – used by all the leading harp makers including Louvet, Salomon, Holtzmann, Renault and Chatelain, Naderman, and the Cousineau family – was that strings so sharpened were pushed out of vertical alignment. Their sonority was then rather dull in comparison with the open strings, and they also tended to buzz against the neck of the harp. To remedy these failings Georges Cousineau and his son Jacques-Georges contrived an improved system (*à béquilles*), in which each string is provided with two small crutch-ended levers placed to either side of it, one above the other. The downwards movement of the pedal causes one lever to turn clockwise and the other anticlockwise, tightening the string in a firmer, more controlled manner than the *crochets* (for illustration *see* COUSINEAU).



The pedals for D, C and B strings were normally placed to the left of the resonator, and those for E, F, G and A to its right. The harp was lightly strung with gut strings except for the bottom six, which were wire-covered, and C and F strings were coloured respectively red and blue, for ease of identification. The open strings were tuned in E♭ to give the widest scope for modulation, eight major and five minor keys being obtainable by different pedal combinations. For example, in E♭ all the pedals were in their open position, but in C, the B, E and A pedals were depressed and fixed into the lower notch so that B♭ became B♮, E♭ became E♮, and A♭ became A♮.

In 1794 Sébastien Erard, who by this time had established his firm in London, took out the first British patent ever granted for a harp. This instrument, the fruit of much experiment, represented a radical change in the construction of the single-action harp. The ribbed resonator was abandoned in favour of a body made in two separate parts: a soundboard of Swiss pine and a rounded back reinforced by internal ribs. For strength and stability, the neck was of laminated construction. The mechanism, mounted on two brass plates, was fixed to the neck instead of being housed inside it, and was therefore independent of the frame. Erard also made mechanical improvements to the pedals, but the really revolutionary feature of his harp was its brilliantly simple 'fork' system, which replaced the unsatisfactory *crochets* and *béquilles*. The 'fork' consists of two brass prongs mounted on a small round brass disc. The disc is screwed centrally on to an axis which passes through the brass plates. The string, resting against a bridge-pin which aligns it with the centre of the disc at a distance of approximately 5 mm, passes between the forks. When the pedal is depressed, the axis turns to bring the prongs into firm contact with the string, thus sharpening it by a semitone (figs.32 and 34 below). The string is held firmly in position by the fork, so that the problem of jarring strings, common to the *crochets* and *béquilles* systems, is eliminated. The movement of the fork also keeps the affected string perfectly parallel with the others.

32. Positions of forks and pedals, and corresponding keys obtainable on the new Erard double-action harp: engraving by W. Lowry after Pierre Erard from his 'The Harp in its Present Improved State' (London, 1821)

(ii) The Pleyel harp and other later experimental harps. The increasing use of chromatic harmony by composers such as Wagner, Fauré and Richard Strauss at the end of the 19th century posed problems in executing harp parts on the pedal harp. There were also structural imperfections in the pedal harp such as its dependence on an often imprecise mechanism in order to obtain the semitones. In August 1894, two famous French harpists, Alphonse Hasselmans and Félix Godefroid, presented the problem to Gustave Lyon, director of the firm of Pleyel, Wolff et Cie. Lyon immediately began building an 'harpe chromatique sans pédales' based on a patent of 1845 by J.H. Pape, who had essentially 're-invented' the two-rank, cross-strung harp so popular in Spain during the Renaissance (fig.33). Retaining the single neck and forepillar of other harps, the neck carrying the tuning pegs was made of aluminium instead of wood and an aluminium plate was fixed below the sounding board. The forepillar was also made of steel or aluminium so that the whole formed a non-deformable metal triangle. As a result, the harp could be tuned with great precision, it retained its tuning very well, and far fewer strings were broken. The tuning pegs were replaced by the 'cheville Albert', a micrometric screw. One rank of 46 or 48 white strings contained all the diatonic notes, with C coloured red and F blue. Each diatonic string was attached to a *cheville Albert* on the right side of the neck and threaded though an eyelet in the left side of the soundboard, below which it was knotted. The second rank consisted of black strings divided into twos (C♯ and D♯) and threes (F♯, G♯ and B♭) like the black notes on the piano. This rank ran from the left side of the neck to the right side of the soundboard. The harpist played at the point where the strings cross.

33. Cross-strung chromatic harp by Pleyel, Paris, early 20th century (Musée des Instruments de Musique, Brussels)

The Pleyel harp became particularly successful in France and Belgium and was taught at the Paris and Brussels Conservatoires for many years. There is still a class in 'harpe chromatique' at the Brussels Conservatory, although the heyday of the instrument was in the first half of the 20th century. Lyon wrote a method in 1898, followed among others by Johannes Snoer (Leipzig, 1908) and Jean Risler (Paris, 1908), a teacher in Brussels. In 1985 a didactic work for the instrument was written by Odile Tackoen. 930 instruments were built over a period of about 30 years (up to 1930). Most of the harps have been lost, but a number of the remaining instruments can be seen in museums (in Brussels, Paris, London and elsewhere) and some are still played by a small circle of harpists. The Pleyel harp is experiencing a period of renewed interest as a result of its use in jazz, and attempts are being made at present to make new designs of the instrument, particularly in Wales, Canada and the USA. A limited number of compositions have been written for the Pleyel harp, the best known of which is Debussy's *Danse sacrée et danse profane* (1904). This harp, with its many chromatic possibilities, is also outstandingly well suited to the whole piano repertory.

A number of other chromatic instruments were invented during the 19th century. The *harpe-luth* was a smaller derivative of the Pleyel harp but had only metal strings. The intention was to play harpsichord music on it. It was used as the instrument to accompany Beckmesser's serenades in Wagner's *Die Meistersinger*. To achieve the required 'cracked lute' effect, the opera orchestra harpists threaded cloth or paper strips through the strings. Another European cross-strung harp, in a private collection, has a thick neck and a unique 'inverted Y shaped' forepillar arrangement: a short distance from the head it divides into two delicate 'branches' which are attached far apart to the base of the harp (see Rensch, D(vi)1989, fig.92). H. Greenway from New York built a chromatic harp (now in the Metropolitan Museum of Art, New York) at the end of the 19th century with two necks and two complete forepillars which cross each other slightly below their midpoints. There is a similar harp, probably from about 1800, in London (Victoria and Albert Museum), which is a totally unplayable instrument, and was assembled by crossing two harps over each other.

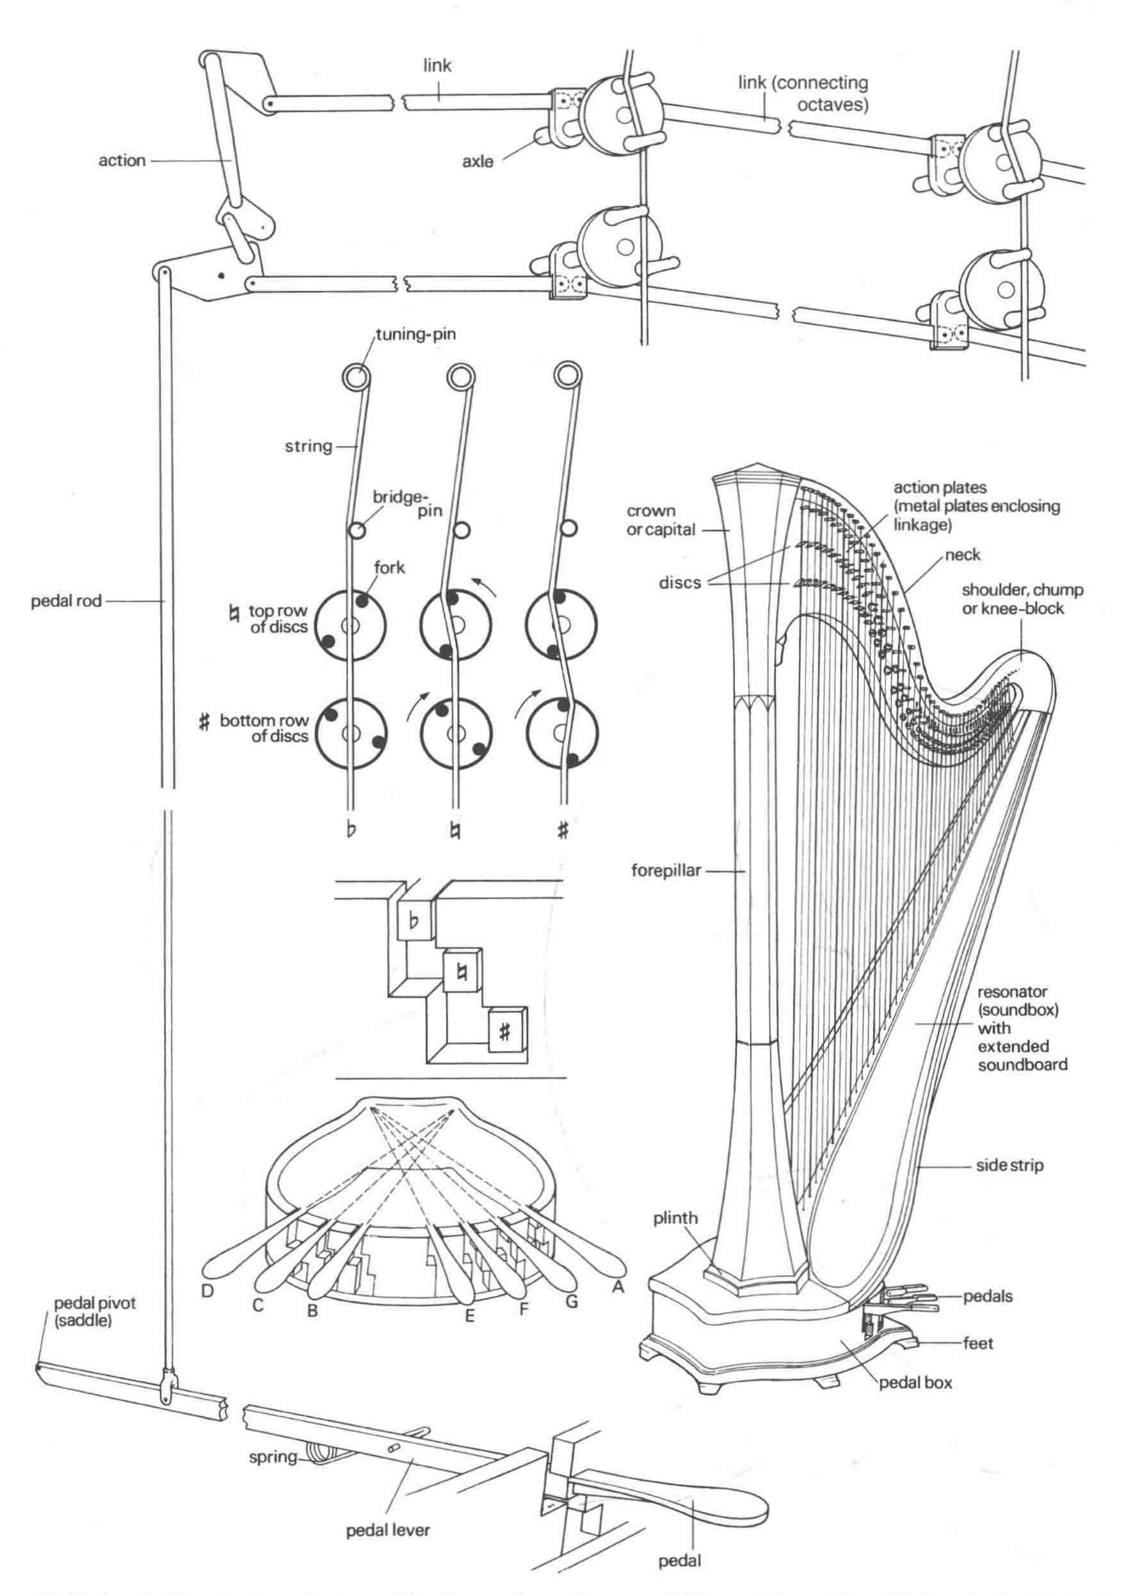
(iii) The double-action pedal harp. In spite of mechanical and constructional improvements, musicians and harp makers alike were dissatisfied with the tonal and modulatory limitations implicit in the fact that the single-action harp could play in only eight major and five minor keys and that accidentals were extremely limited. In 1782 the Cousineau family built a harp which could play in all keys by means of a complicated apparatus with two sets of pedals placed one above the other, making 14 pedals in all. (The open strings were tuned in C♭.) Around the turn of the century Erard set out to produce a better solution, and, after continuous experiment, in 1810 he patented his double-action harp. Operating on the same fork principle as his earlier single-action harp, Erard's double-action instrument uses C♭ as its open key and has 43 strings (*E′* to *e″″*) and seven pedals, each of which can be depressed twice, housed in a box at the base of the harp. Each string passes between two fork-bearing discs, placed one above the other. When the pedal is depressed into its first notch, the upper disc turns so that the forks grip the string and sharpen it by a semitone, while the lower disc turns about 45° but does not touch the string. When the pedal is depressed a second time, and fixed into the bottom notch, the lower fork turns a further 35°, gripping the string and shortening it by another semitone (see fig.32). Each string, except the highest and the lowest one or two which have no forked discs, can therefore be sharpened two semitones, from flat to natural to sharp, and the harp can be played in any key by the simple expedient of fixing the pedals in the requisite notches. Moreover, on double-action harps, accidentals are only limited by the fact that when a pedal is activated, all strings of the same name change together. Thus, for example, one cannot play C♯ and C♮ at the same time in

different octaves unless enharmonics can be used for one or both of the two Cs, i.e. B♯ for the C or D♭ for the C♯. This ingenious mechanism has been used, with very few modifications, by most harp makers up to the present day. Between 1811 and 1835 Erard made about 4000 double-action harps, decorated in a 'Grecian' style, and many of them are still in use. They are strung with gut from *e''''* (known on the harp as 'First Octave E') to *F* (known as 'Fifth Octave F'), and from *E* to *E'* with wire-covered silk (now often replaced in restrung Erards with wire-covered nylon).

In 1835 Erard's nephew Pierre, building on the same principles, brought out a larger model (with 'Gothic' decoration) of 46 strings (*C'* to *f''''*), the wire-covered bass strings (*C'* to *F*) having steel cores. Such harps were familiar in most British and French orchestras until the early 1960s, when the age of their mechanism made most of them too unreliable for regular orchestral use and harpists began to import new instruments from Germany, Italy and the USA.

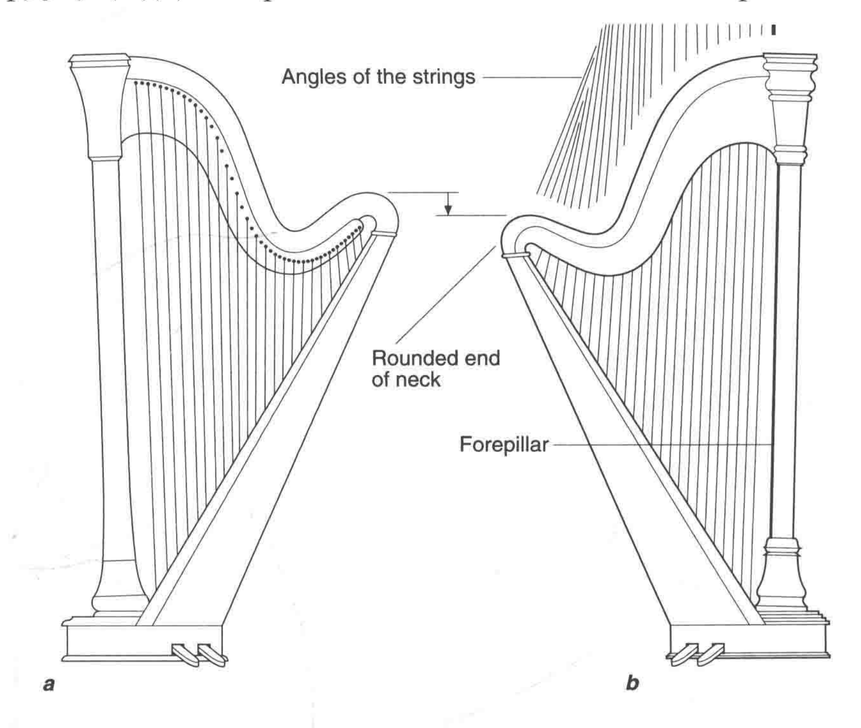
When European harps were first imported into the USA in large numbers in the second half of the 19th century, it became obvious that a more robustly constructed instrument was needed to withstand the rigours of the varying climatic conditions. Two rival Chicago-based firms – LYON & HEALY, who made their first harps in 1889, and the Rudolph Wurlitzer company (*see* WURLITZER, §2), who made harps from 1909 to 1936 – worked to this end. Mechanical precision was improved and the mechanism was entirely enclosed between the brass plates of the neck. The pedal rods within the forepillar were enclosed in individual brass tubes, which made their movement easier and less noisy.

While all of the non-mechanical structural parts of the harp were still made entirely of wood, soundboards were strengthened by covering the usual single cross grain with a veneer of vertical grain. On bigger harps the soundboard was extended to exceed the width of the body of the instrument at its lower, bass end, where the heavier strings needed greater amplification. The largest modern concert pedal harps have 46 or 47 strings (*D'* or *C''* to *f''''* or *g''''*), are about 183 cm tall and weigh about 35 kg (fig.34). The stringing is usually the same as that set by Erard, that is, gut with wire-wound strings in the bass. Some harps are strung with nylon rather than gut, while many harpists who generally prefer gut use nylon for the highest one to two and a half octaves because they are less susceptible to the temperature and humidity changes that cause frequent breakage of the strings. The total applied string tension exceeds 730 kg. There are currently many makers of this type of pedal harp around the world.



No further major innovations in the pedal harp were made for 90 years, until the French firm Camac Production, owned by Joël and Gérard Garnier and based at Mouzeil, near Nantes, introduced their 'New Generation' harps in 1996. Seven major changes – ergonomic, mechanical, acoustical and structural – were made to their harps (fig.35): (a) they reduced the weight of the harp by using an anodized aluminium alloy instead of the traditional brass for the plates along the neck, and by replacing the heavy wood of the forepillar with a hollow carbon-fibre/epoxy tube covered by a wood veneer. (b) While retaining the traditional string lengths of the harp and its overall height at the column end, they lowered the height of the harp at the rounded end of the neck near the highest strings. In so doing, Camac returned to the standard used by Erard, which enables the arms and hands to be held in a more comfortable lower position when playing the uppermost strings. (c) While the strings of most harps are essentially parallel to each other across their entire range, Camac returned to a Baroque concept of a progressive radiation for the angle of the strings to one another, most evident in the highest strings, so that the angle between the harpist's fingers and the strings stays the same from the middle to the highest range of the harp.

(d) The rods that connect the pedals to the mechanism in the neck of the harp have been replaced with more durable stainless steel flexible cables similar to aircraft control cables. A separate testing device with an electronic sensor – nicknamed 'le dohickey' – has also been designed which allows facile regulation of the length of the cables to help keep the harp equal-tempered. The device is inserted into the harp and if the cables are out of adjustment it begins beeping and does not stop until the cable is correctly adjusted by turning the cable adjustment screw. Such regulation can take less than ten minutes, and can be carried out by the harpist rather than needing the services of a technician. (e) While maintaining the basic Erard concept of double action, the mechanism inside the neck of the harp has been completely redesigned. While a forked disc on most pedal harps is a stand-alone disc screwed on the outside of the harp to an axle which turns inside a hole between the two plates on the neck (see fig.33), the Camac disc has been modified to have an extended base with a conical bore, thus making the disc an intrinsic part of the spindle system which turns inside the harp (fig.36). Thus, while the forked discs on a standard pedal harp can become easily de-regulated by the screws which hold them in place becoming loosened by the tension of the strings, the Camac conical disc-spindle system functions as a stable inert unit which resists de-regulation. In addition, the Camac natural and sharp discs rotate in opposite directions – the natural disks anticlockwise like most pedal harps, and the sharp disks clockwise – resulting in even contact pressure from both disk pins and less string deflection when engaging the sharps, which minimizes buzzing and helps maintain the tuning of the strings.

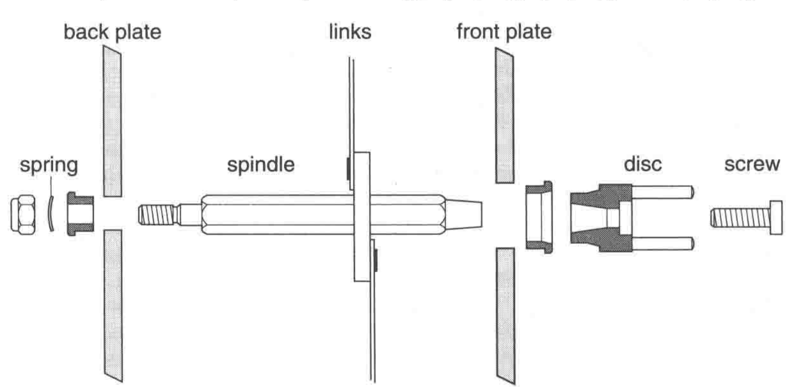


(f) Unlike the straight, tapered soundboards on most pedal harps, the Camac soundboard is stiff in the centre, where the stress from the strings is concentrated, and much lighter and more flexible along the outside edges. While still remaining pliant and extremely responsive, their soundboards result in instruments that quickly assume the full sound of 'maturity' without going through the 'green harp' phase that others require. (g) While the box-frame at the bottom of the harp that houses the pedals and connects the resonator to the column has been traditionally constructed solely of wood, Camac has added an internal assembly of aluminium alloy components, again borrowing the technology from critical aircraft structures. As a result of all the changes made to them, Camac harps have a very accurate action, stable tuning, are very light and strong, and are ergonomically much improved.

(iv) Technique and repertory.

(a) 1750–1820. The late 18th-century development and establishment of the single-action pedal harp was paralleled by developments in playing technique and repertory.

34. Modern double-action harp, showing pedal-rod/tuning disc mechanism, pedal box, and the positions of forks and pedals for the sharps, flats and naturals



35. Side views of (a) a typical pedal harp and (b) a Camac 'New Generation' harp, showing differences in height at the rounded end of their necks and in the angles of the strings relative to their forepillars

Stéphanie-Félicité, Countess of Genlis (1746–1830), had been given harpsichord pieces to play on the harp when she had her first lessons at the age of 13 from Georges-Adam Goepfert. It appears to have been her own idea later to adapt keyboard technique to the harp, and to play it using all five fingers of both hands. Her reasons for doing so are admirably expounded in her *Nouvelle méthode pour harpe* (1802), but the only players to adopt her method were her own pupils. The normal method then, as now, was to play with the first four fingers of both hands, the little finger never being used at all on account of its lack of strength and also its shortness.

The three-movement solo for harp in G written by C.P.E. Bach in Berlin in 1762 makes no concessions to either the limitations of the harp of his day or those of the harpist; neither does Mozart's Flute and Harp Concerto (K299/297*c*) of 1778. The Mozart concerto, however, is distinctly easier to play on the lightly-strung harps of the 18th century for which it was intended than on the larger, heavier-strung double-action pedal harps now in general use.

Harp writing of the period was normally confined to scale passages, arpeggio figurations and spread chords, embellished by occasional trills and turns. The only special effects of timbre in common use were single harmonics and *sons étouffés* (damped notes), both executed only by the left hand. Modulation was unadventurous and an enormous number of sonatas, airs with variations and so on were written in E♭, the open tuning (i.e. with all pedals in the natural position) of the single-action harp. Whether such fashionable harpist-composers as Louis Cardon, Simon Hochbrucker, P.-J. Meyer and P.J. Hinner mistrusted the uncertain mechanical functioning of their harps or whether they were merely content musically to rely on the available conventional effects is not certain. However, those unafraid of experiment, particularly with the use of the enharmonic 'synonyms' made available by the pedals and by an approximation of equal temperament, were able to compose short passages of a fairly chromatic nature that were well within the harmonic limitations of the instrument. The lovely Adagio opening of Krumpholtz's Sonata no.5 ('dans le style pathétique') is a case in point: the 11 bars of Largo introduction are in E♭ minor, with written G♭ played by its enharmonic equivalent F♯, C♭ by B♮, F♭ by E♮, and D♭ by C♯.

36. Section through the neck of a Camac 'New Generation' harp showing the mechanism of the forked disc that rotates to create sharps, flats and naturals

The three composers who made the greatest contribution to the literature of the single-action harp – J.-B. Krumpholtz, J.L. Dussek and Louis Spohr – were all married to professional harpists. Krumpholtz, himself a talented harpist, engaged Erard's interest in the technical problems of the instrument, and also made improvements of his own: a short-lived damping mechanism for the bottom strings, and a more successful 'harpe à renforcements' in which the central back panel of the ribbed body of the harp was replaced by shutters which, when opened by the operation of an eighth pedal (placed centrally between those operated by the left foot and those operated by the right), prolonged and enlarged the sound of the instrument. Krumpholtz wrote several concertos, some sonatas for flute or violin and harp, duos for two harps and many solos and studies.

Dussek wrote his op.2 harp sonatas (including the well-known one in C minor) in Paris between 1786 and 1789; the op.11 duo for harp and piano, which he dedicated to Mme Krumpholtz, was probably composed after he went to London in 1789, as was the E♭ concerto (op.15). Between 1792 (when he married the harpist and singer Sophia Corri) and his departure for Hamburg in 1799, he wrote more duos, solo sonatas and three concertos. The first of these concertos, the two-movement op.30 in C, demands firm, incisive playing and impeccable articulation of the fingers. Without doubt, Dussek's best works for the harp are his late *Trois duos concertants* for harp and piano (op.69 nos.1–3), written for performance by himself and F.J. Naderman in Paris in 1810. The problem presented by the inability of the single-action harp to modulate into the remote keys favoured by Dussek is here solved by combining the two instruments in such a way that the remoter modulations are accomplished in the piano's solo passages. Although the harp parts are technically extremely demanding, Dussek did not demand of the instrument itself excessive chromaticism or key changes beyond its capabilities.

Spohr's output contains several pieces for solo harp that do not tax to any great extent the modulatory possibilities of the instrument. In the duo sonatas for violin and harp, however, like Krumpholtz he made much use of harmonies rendered possible on the harp by the use of enharmonic equivalents. Dorette Spohr's instrument was a single-action harp made by the elder Naderman, and the unsatisfactory *béquilles* system of these harps (see §V, 7(i) above) caused the sharpened strings to be dull in sound, to be pulled out of alignment, and, most annoying to the harpist, to jar. However, when the harp's pedals were in their open position, none of these problems occurred. It was normal practice when playing in A♭ to tune all the D strings down to D♭. Spohr conceived the idea of tuning all the strings a semitone flat so that pieces in D or G might be played with the pedals in their open position. The manuscript copy of his Concertante for violin, harp and orchestra (*GB-Lcm*) is provided with two harp parts, one in A♭ and one in G. Dorette Spohr eventually gave up the harp around 1820 when, though dissatisfied by the limitations of her own instrument, she found she could not adapt herself to playing one of Erard's splendid new double-action harps tuned, in the open position, in C♭.

Some other works for the single-action harp deserve mention: in Germany the concertos of Eichner (1769) and Albrechtsberger (1773); in France the four concertos and various sonatas, variations and duos of Petrini (1744–1819); and the harp and fortepiano duos of Boieldieu as well as his elegant Concerto in C of 1801. All these works are technically demanding but use only the conventional stock-in-trade of harp writing – trills, arpeggio figuration and scale passages – without any search for musical profundity or attempts to overcome the harmonic limitations of the single-action instrument.

The harp entered the modern orchestra by way of the opera house, where it was at first little used except as an instrument evocative of mythology and romantic legend. Early uses in 18th-century opera include Gluck's *Orfeo ed Euridice* (1762). Haydn used it in his *L'anima del filosofo* (1791), and in 1804 Le Sueur called for 12 harps (six to each of two parts) in his *Ossian ou Les bardes*.

(b) Modern technique and repertory. Elias Parish Alvars (1808–49), a fine composer and outstanding harp virtuoso, was the first to recognize the numerous effects and harmonic possibilities made available by the double-action harp and had an immeasurable influence on later harp writing. One of his teachers was Théodore Labarre, whose excellent *Méthode complète* (1844) indicates the techniques expected of good performers on the double-action harp. Apart from the usual scales, arpeggios and trills, Labarre particularly stressed harmonics, glissés and the use of enharmonic 'synonyms'.

Harmonics are written with the sign '○' above or below the notes, and in the left hand can be single, doubled or tripled to allow chords in harmonics. Left-hand harmonics are obtained by using the side of the palm as an artificial bridge, placing it at a point halfway down the length of the string and playing only the top half to produce a note one octave higher in pitch. In the right hand only one harmonic at a time can be obtained, as the artificial bridge is formed by the first joint of the index finger, the harmonic being obtained by playing the top half of the string with the thumb. The best range for harmonics is *A* to *g″*.

Another important technique is the sliding movement which Labarre called *glissé*, produced in a downward direction by sliding the thumb from one string to the next, and in an upward direction either with the second (index) finger alone, or with the second and third fingers together in parallel 3rds. Yet another important technique was that of producing enharmonic 'synonyms' – the unisons made possible by the positioning of the pedals. On the double-action harp, every note except D♮, G♮ and A♮ has its synonym, that is, a note of the same pitch obtainable on an adjacent string. For instance, D♭ has C♯ as its synonym, F has E♯, A♭ has G♯. When played at speed, the quickly reiterated notes of the same pitch thus produced give an impression of great virtuosity (*see* BISBIGLIANDO). It was by combining the *glissé* and 'synonym' techniques that Parish Alvars was able to produce the chordal glissando, a device that became essential for any composer writing for the harp. If, for example, the pedals are positioned so that the strings sound B♮–C♭–D♮–E♯–F♮–G♯–A♭, a diminished-7th chord is formed. Many other such combinations are of course possible, and once the pedals are fixed to produce only the notes of the chord and their synonyms, a chordal glissando (without any dissonances) can be obtained by sweeping the fingers across all the strings. Parish Alvars, the first to use this remarkable effect, called it *sdrucciolando* ('slipping'). Berlioz, who heard Parish Alvars in Dresden in 1842, and, in his treatise on orchestration (1843) described him

as 'the most extraordinary player' ever heard on the harp, understood its technique though he did not use it in his own works. Parish Alvars was also the first to combine *sdrucciolandi* with harmonics. (The best-known example of their combined effect is in the cadenza of Ravel's *Introduction et allegro*.)

Much of the solo harp repertory of the 19th century, however, was scarcely more than salon music to be performed by talented amateurs. None of the later virtuosos approached Parish Alvars either as harpist or as composer, and with a few exceptions the solos and concertos they wrote for themselves, and the music they wrote for their pupils, have little intrinsic merit, relying for their effect on some of the easier techniques used by Parish Alvars.

The harp continued to be played in opera orchestras – particularly noteworthy are the harmonics in Boieldieu's *La dame blanche* (1825), the use of two harps in Meyerbeer's *Robert le diable* (1831) and the idiomatic harp solo in Donizetti's *Lucia di Lammermoor* (1835) – but it was Berlioz who pioneered its use in the symphony orchestra (*Symphonie fantastique*, 1830; *Harold en Italie*, 1834). Not until the 1840s, however, did the double-action harp become so widespread that it was available to all Western composers. Liszt's tone poems (particularly *Orpheus*) show the harp to great advantage. Both Schumann (*Drei Gesänge* for tenor and harp op.95) and Brahms (Four Songs op.17) wrote harp parts that are idiomatic and difficult, while those in Wagner's operas are extremely difficult and unidiomatic. Verdi's later ones, on the other hand, are well written and grateful to play. Bruch's *Schottische Fantasie* op.46 (1880) has an important and well-written harp part. Occasionally in 19th-century operas multiple harps are required. Wagner apparently was the first in this: *Das Rheingold* (completed 1854) has six harps on-stage and a seventh off-stage. For the remaining three parts of the *Ring*, Wagner wrote only two harp parts but called for six harps, three on each part. Berlioz scored for six separate harp parts in *Les Troyens* (composed 1856–8).

The closing years of the century produced Richard Strauss's *Tod und Verklärung* and *Don Juan* (both 1888–9), Sibelius's *Swan of Tuonela* (1893) and Symphony no.1 in E minor (1898–9), Franck's Symphony in D minor (1886–8) and Debussy's *Prélude à l'après-midi d'un faune* (1892–4), all with parts for harp. The Debussy *Prélude* is scored for two harps, using chords, arpeggios, broken chords, glissandos and harmonics to excellent effect. Also notable are harp cadenzas by Rimsky-Korsakov (*Spanish Capriccio*, 1887) and Tchaikovsky (*Swan Lake*, 1875–6; *Sleeping Beauty*, 1888–9; and *The Nutcracker*, 1891–2).

Until the second half of the 19th century, professional harpists were usually men; women played it primarily as a 'parlour instrument' or were harp teachers. One of the first women harpists of renown was Henriette Renié (1875–1956), who was awarded the *premier prix* at the Paris Conservatoire in 1877 and later became professor of harp there.

Almost all the available harp effects of the late 19th and early 20th centuries, some of them bearing fanciful names (e.g. 'Aeolian flux' for 'glissando'), were detailed by Carlos Salzedo in his *Modern Study of the Harp* (1921). He described, for instance, a 'pedal glissando' (best used on the bass notes of the harp) that is achieved by moving the pedal to flat or sharp and back again within the duration of a note, the 'glissando' effect being produced by the sound of the movement of the fork against the still-vibrating string. The pedal glissando is used to great effect in André Caplet's *Divertissement à l'espagnole* (1924). Salzedo also mentioned the device of weaving a narrow strip of paper between the strings, an effect used by Puccini in *Turandot*. Most of the new effects introduced by Salzedo himself are of a percussive nature: 'esoteric sounds' (in which the pedals are moved without any notes being played), chordal glissandos played with the backs of the nails, plucking the strings with the nails near the soundboard and harmonics at the 12th (produced by playing the top third of the string; Salzedo wrote harmonics at the pitch at which they sound, a departure from the normal practice, both before and since, of writing them at the octave at which they are played). Many of these effects have become a common part of the harpist's technique.

Early 20th-century works featuring the harp as a solo instrument include Gabriel Pierné's *Concertstück* (1903), Debussy's *Danse sacrée et danse profane* (1904) and Ravel's *Introduction et allegro* (1905). In the opera house, the harp parts of Puccini are idiomatically written, extensive, and consistently effective. Like all harp parts by Richard Strauss, the score for his opera *Salome* (1905) is technically difficult, particularly Salome's dance with its nearly continuous chromaticism requiring rapid multiple pedal changes; it has become a required test piece for harpists auditioning for orchestra positions. In the concert orchestra, where the inclusion of two harps had become standard, Debussy and Ravel composed parts that are models of harp writing, while those by Stravinsky, though more unconventional, are nevertheless effective.

The dominant school of playing was the French, a fact reflected in the repertory, which includes solo works by Fauré, Roussel and Caplet, a concerto by Saint-Saëns (*Morceau de concert* op.154, 1918) and chamber music such as Debussy's Sonata for flute, viola and harp (1915) and Caplet's *Conte fantastique* for harp and string quartet (1924). The impetus derived from such works, allied to the ever-increasing number of good harpists, led to a proliferation of chamber works including harp, particularly in France and later in Great Britain, Germany, the Netherlands, Switzerland and North America. Among those that have remained standards in the harp repertory are the compositions of Marcel Tournier (1879–1951) including *Féerie: prélude et danse* (1920) for harp and string quartet, and *Jazz-band* (1926) for solo harp, Hindemith's solo *Sonate* (1940), and Britten's *Ceremony of Carols* (1942) for chorus with solo harp accompaniment.

Of great importance to harp repertory from the late 19th century to the present are the compositions, transcriptions and arrangements by great harpists and teachers such as Charles Oberthür (1819–95), a German-born harpist, and the Welshman John Thomas (1826–1913), both of whom flourished during the third quarter of the 19th century in London. Others included Henriette Renié, Marcel Tournier, Ada Sassoli (1881–1946), Carlos Salzédo (1885–1961), Micheline Kahn (1890–1987), Marcel Grandjany (1891–1975), Pierre Jamet (1893–1991) and Lily Laskine (1893–1988), all students of Alphonse Hasselmans (1845–1912), professor of harp at the Paris Conservatoire from 1884 to 1912. (For further details of

harpists and their compositions from the 18th century to the early 20th, see Rensch 1989).

From the late 1950s onwards composers such as Berio, Boulez, Holliger, Rands and Miroglio extended the technical vocabulary even further in their works, at the same time developing new notation and giving instructions for the performance of the required effects. New effects have included the loud 'buzzing' sound resulting from threading the lower strings with aluminium foil, an eerie whistling sound created by sliding a steel tuning fork up the whole length of several contiguous wire bass strings simultaneously, muted single-string 'glissandos' produced by plucking and re-plucking a string continuously near the soundboard with the index finger of the left hand while lightly sliding the index finger of the right hand up or down the length of the string, and a bevy of percussive sounds caused by striking groups of strings with everything from chopsticks to rubber mallets. Unfortunately, many composers have used the same effects but with different notation, much to the chagrin of harpists. In 1984, Ingelfield and Neill came to the rescue of fellow harpists with their *Writing for the Pedal Harp*, which created a standardized notation of harp effects.

Since the 1950s a considerable number of harp concertos and works for solo harp have been written, most either inspired, commissioned or composed by harp virtuosos. A call by Sue Carole DeVale for scores from composers, posted on the internet in 1995, had yielded nearly 80 such works by early 2000 by composers from around the world. Most are harp solos or small chamber works for harp with other instruments or voice, most are by women composers, and every style of composition is represented.

Since at least the mid-20th century, many pedal harpists have played diverse forms of music – classical, jazz, popular and traditional – and many compositions and arrangements reflect this fact. Composers are increasingly writing for the harp played in combination with non-Western instruments, and for combinations of Western and non-Western tunings, resulting in new explorations of tonality and sound effects for the harpist. Examples include Robert Lombardo's *Independence Day* (1983), a dance-theatre suite for Javanese GAMELAN and harp, with the latter tuned to match the gamelan's seven-note *pelog* scale; and Elaine Barkin's *Gamelange* (1993) for harp and a mixed band of selected instruments from the Javanese and the Balinese gamelan, in which harp is tuned diatonically to interplay with the three notes common to Western tuning and those of the Javanese *slendro* (five-note tuning system) and the Balinese *pelog*. The three 'common' notes are not in exact unison and thus, when played together, create audible, vibrating beats.

(v) Lever harps. In 1962, Lyon and Healy Harps in Chicago introduced their 'Troubadour harp', of 'neo-Gothic' shape, on which every string could be raised a semitone (and lowered back again) by means of a brass lever that could be flipped up with the performer's left thumb either before or (with planning) during a piece; this was the first 'lever harp'. The lever was essentially L-shaped, the longer arm being the handle, and the shorter arm having a rounded slot in its edge which would catch the string and stop it when the lever was raised. While allowing the desired sharpening effect with great ease, these original levers were unsatisfying in other respects. Firstly, the sharpness of the notch wore down the strings, causing them to break more frequently than strings without levers. Secondly, the timbre of the stopped string was deadened slightly and its volume consequently decreased. Nevertheless, the Troubadour harp was a great success because it was seen immediately as a less expensive alternative to a pedal harp for beginners.

However, it very quickly became clear that lever harps were not just for beginners, but a new form of affordable and easily transportable harp, and a genuine alternative to an expensive and heavy pedal harp. Their popularity has grown exponentially. Soon other manufacturers, both small one-man shops and larger factories, arose around the world, either devoted solely to the production of lever harps or adding lever harps to their production line. Since then, a large variety of harp styles and levers have been developed. Most are still 'neo-Gothic' or 'neo-Celtic' in shape, but now lever harps with the classic rounded column design that makes them look like miniature pedal harps are being manufactured. Newer levers have improved both the sound quality and the longevity of the strings on which they are employed. Some of these can be purchased to be used on any harp, while others remain for the exclusive use of the harp brand for which they have been invented. Even the J-hooks have returned (see §V, 7(i), above), but with the cup of the J filled in, taking the form of sharpening 'blades'. Lever harps range in size from small lap harps with 21 strings to standing harps of 1·5 metres with 40 strings. Harps can be purchased with levers only on particular notes (usually Cs and Fs) or with a 'full set' on all the strings.

At first some of the less chromatic pieces of the classic pedal-harp repertory were adapted 'on-the-spot' for lever harp, but special lever-harp (or 'pedal-free harp') arrangements soon began to be made of traditional music of Ireland and other countries, and of pieces from the classical, popular, musical comedy and film repertories. Many new compositions have been written specifically for the lever harp. The lever harp has been used for folk, classical, jazz, popular and country music with equal success.

The major manufacturers of lever harps are Lyon & Healy, Dusty Strings and Triplett Harps (USA), Salvi (Italy), Aoyama (Japan) and Camac (France). There are now several manufacturers of excellent harp kits for assembling in the home: an even more affordable alternative to owning and playing a harp.

8. ELECTRONIC HARPS. As is true of all innovations in musical instruments, electric and electro-acoustic harps have been developed to respond to changing musical aesthetics and the needs of harpists. Beginning no later than the 1940s, jazz and pop music began to be explored as sources of solo repertory for the harp. One of the early pioneers was Robert Maxwell in the United States, a classically-trained graduate of the Juilliard School of Music, whose original compositions and arrangements were first published over a ten-year period beginning in about 1946. While microphones on stands connected to public address systems could be used to amplify the sound of a harp, during Maxwell's time, the only way for a harpist to produce sound effects common today, such as instant reiteration, was to re-record over one's previous recordings in a studio, an extremely difficult task. In his recordings of 'Limehouse Blues' and 'Chinatown, My Chinatown', Maxwell did exactly that, but an astonishing 15 times for each piece.

Concomitantly, the number and types of venues available to harpists to perform (such as restaurants, nightclubs and hotels) increased. It was inevitable that harpists, like other instrumentalists, would seek more sophisticated ways to amplify their instruments so they could be heard over conversation and other ambient noise, and to explore timbral variation. Whether performing classical, jazz or pop music in such venues, harpists began to use various types of contact microphones or pickups, first connecting them to public address systems or simple separate amplifiers, and later to electronic amplifiers with built-in sound modifying capabilities. The latter allowed experimental sound effects especially used for jazz and pop. Both practices are still widely in use and pickups are attached to tuning pins, bridge pins or soundboards of small diatonic harps, lever or pedal harps whether strung with gut, nylon, wire or some combination thereof.

The first electric harp – one, like an electric guitar, that could only be heard if connected to an amplification system – was produced by Salvi Harps (who no longer makes them) in the 1980s. During the same period, in response to the demands by harpists to have amplified sound equal in quality and clarity to their acoustic harps, Lyon & Healy (Chicago) began researching and developing two such harps which they call 'Electric and Electro-acoustic'. Both types of harps are fitted with transducers on each of the strings that transform the acoustic sound of the string into an electrical signal. Both types use the same pedal mechanism and strings as all Lyon & Healy harps, and are made in two of the same sizes: the 'concert grand' with 47 strings and the 'semi-grand' with 46 strings. The difference between them lies in their soundboards and their uses.

The soundboard of the Electric harp, introduced in 1991 and designed to be used only as an electric instrument, is made of solid hardwood poplar which is immovable and less resonant, thereby suppressing feedback at loud volumes. Poplar is also used for its ruggedness for the gigging harpist, constantly moving the harp from venue to venue, and for its resistance to the radical climatic changes of some performance environments. The Lyon & Healy Electroacoustic harp (1977), has the same Sitka spruce extended tapered soundboard as acoustic concert-grand pedal harps; thus it can be played as an amplified instrument or as an acoustic one with the same sound and feel as other acoustic harps. Unlike other electric harps, both of these models have high-performance 'Stereo Active' electronics that mix and preamplify the separate string signals to produce a stereo-like output. Because each string has a specific location on the stereo spectrum, 'moving stereo sound' can be produced when the harp is amplified or recorded in stereo; this also allows adjustment of the balance between the top and bottom strings when only monaural output is available. An electro-acoustic lever-harp is in development.

Camac Harps introduced its electrified harps in 1991. The line, consisting only of electro-acoustic harps, is known as the 'Blue', and all five harp styles in it, both lever and pedal harps, are lacquered in royal blue. Like Lyon & Healy electric and electro-acoustic harps, each string has its own electric transducer and the harps can be plugged into all manner of amplifiers and sound modifiers. Unlike Lyon & Healy harps, they do not have a preamplifer built in. The 'electroharps' are a pair of lever harps of neo-Celtic shape, the larger with 36 strings; the smaller with 30 strings is dubbed 'Baby Blue'. The other three are all pedal harps with the 'New Generation' double action and construction (see §V, 2(ii), above). The smallest pedal harp, with 44 strings, is called 'Little Big Blue'; the other two are both concert-grand size with 47 strings, and are differentiated by their soundboard shape, one being called 'Straight-soundboard Blue', the other, 'Extended-soundboard Blue'.

Amplification or modification of sound is not the only way harp makers use electrification. For example, Glen Hill of Mountain Glen harps has incorporated a unique laser light system into his custom-built, electro-acoustic, 34-string lever harp. Using microchips, his trigger circuitry allows a signal from piezoelectric pickups to act as a switch that activates red diode lasers, like those in laser pointers, set under faceted crystals in the pillar and the neck. Activated in real time by plucking any of nine strings (C, D or G in three successive octaves), the laser-lit crystals sparkle in response to the tones being played by the harpist with the same intensity and decay rates shared by light and sound. Mountain Glen will also custom-fit a harp with a wireless FM radio transmitter, so the harp can be amplified but with no cables to get in the performer's way, or with a pitch-to-MIDI converter so that any MIDI sound or digital signal can be controlled by one or more of the harp's strings. Using a custom computer program, any sampled visual image can also be controlled by this same circuitry. Images can be fed into a liquid crystal display projector via a computer, and then be controlled by the harpist. Because they have their own separate circuitry, both the laser-lit crystals and the MIDI system can be plugged in separately and activated whether the harp is played either as an acoustic instrument or an electric one.

9. Local traditions. Local and primarily indigenous harp traditions on the European continent began at least by the 17th century and were found performed by musicians from Norway, several countries within the Austro-Hungarian Empire, Germany and Italy. At the present time, unbroken traditions, both stemming from 18th-century itinerant Austrian harpists, are known still to flourish in the Tyrol and in Hungary.

(i) Norway. The earliest mention of a local Norwegian harp tradition appears in 'King David's Psalter' written in 1623 by Bishop Arrebo of Trondheim in defence of his strict conduct. He lists *krogharper* along with *hackebretter* (hammered dulcimers) and *langspil* (*langeleik*, a type of dulcimer) as instruments leading to bad character among young people. Only one description of performance practice has been found. In a novel by N.R. Østgaard written in 1852, but describing events at the end of the 18th century, a woman plays *pols* and *halling* (dance tunes) as well as psalm melodies on the *krogharpe* for a wedding party. In a footnote, Østgaard explains that the *krogharpe* is similar to the common harp, has metal strings, is played with the soundbox horizontal and sounds louder than a *langeleik*.

There are nine extant Norwegian *krogharper* ('crook harps') or *bondeharper* ('peasant harps') and one fragment, all dating from 1681 to 1776. They are located in the Norsk Folkemuseum, Oslo; the Glomdalsmuseet, Elverum; the Ringve Museum, Trondheim; the Historisk Museum, Bergen; the Musikmuseum, Stockholm; and in private collections. Two of these (in Stockholm and

Bergen), presumably from the south-west coast of Norway, resemble large medieval harps. They have wooden pegs for 14 and 18 strings respectively. The resonators are carved from a solid block of wood and backed with a single wooden slab.

The other instruments are very unique in construction. They are characterized by a hollow forepillar constructed like the resonator, i.e. carved from one piece of wood and backed with slab. The soundboard is carved so that the strings rise from a peak which runs down the centre of its length. The neck is a simple yoke between the soundbox and the forepillar and is often hollow as well. The harps are decorated with wood-burnt patterns and cross-shaped soundholes. Two of them have carved zoomorphic heads at the front of the pillarbox. These harps are all from Østerdalen, the eastern-most valley of Norway.

All Norwegian harps show evidence of 12 to 20 iron or brass strings with wooden tuning blades and very wide spacing (2·5–3 cm). The name *krogharpe* is perhaps a reflection of the hook-shaped bray pins with which many of the harps are equipped. The Østerdalen harps were found at large farms and are usually decorated with the date (the earliest 1696, the latest 1776) and three initials of the owner ending in 'D' (e.g. 'M H D' for 'Maren Halvorsdatter'), which suggests that the harps were played by the women of richer farms. The *krogharpe* died out completely at the beginning of the 19th century, but in the 20th century makers in Norway and England (such as Sverre Jensen, Paul Guppy and Kjell Stokke) began building them again. Performers such as Tone Hulbaekmo, Stein Villa and Åshild Watne have used the harp for Norwegian dance tunes from the *langeleik* repertory, song accompaniment and medieval music. The harp is regularly included in the *Landskappleiken*, the Norwegian national folk music competition.

(ii) Austria, Hungary and Germany. The 19th century witnessed a rich tradition of wandering harpers in the Austro-Hungarian empire and Germany, with the earliest reports of its existence coming from Vienna at the time of Maria Theresa (1717–80). The wandering harpers were both men and women. They went from house to house, courtyard to courtyard and performed at markets, fairs, inns and gardens. The harps were termed *Lamentiergattern* ('lamenting fences') in reference to the tragic songs sung by the harpers. They had simple four-sided resonators and a straight forepillar sometimes topped with a forward-turned scroll. There is no mention of a hook mechanism, so the harps were presumably tuned diatonically and had 25–35 strings. In many orphanages children were taught to play the harp or other instruments so that they would have a means of making a living after leaving the orphanage. In the 19th century the harpers became so prolific that the Viennese authorities issued licences and instated prohibitions in an attempt to control their numbers and the quality of their music and the content of their songs, which were often obscene. Wandering harpers also played in the theatres between acts. The last of the Viennese harpers, Gustav Bergmann (*b* 1824), Paul Oprawil and Magdalena Hagenauer (*b* 1807), had died by the early 20th century.

In the second half of the 18th century, after the demise of the mining industry in the Erzgebirge mountains of German-speaking northern Bohemia, the population turned to other means of earning a livelihood. Records as early as 1745 show that wandering harp players travelled to Karlsbad to entertain the guests there. In 1787 Mozart heard the wandering harper Josef Häussler playing variations on melodies from *Le Nozze de Figaro* in Prague at his favourite inn. Mozart reportedly composed a theme upon which Häussler played several variations, which were published by Anton Schimon in 1848. Although men did play the harp, it was most common for women, called *Harfenmädchen* (harp girls), to travel alone or in pairs with their harps upon their backs. Later entire families took to the roads as *Harfenkapellen* (harp bands) became popular. The usual constellation consisted of the father on violin, the mother on guitar and the daughters on harp. The centre of this activity became the town of Pressnitz (now Přisečnice) whose entire population seems to have been engaged in some aspect of travelling music, whether performing, teaching young musicians or caring for the children of those on the road.

Sometime before 1840 the tradition spread from the Erzgebirge to the Czech-speaking areas of north-eastern Bohemia, centring around the town of Nechanice (near Nepomuk). From here impresarios travelled with large groups of harp players often made up of young children 'bought' from their parents. Smaller family groups consisted of violin, harp and sometimes transverse flute. Bohemian musicians also carried the tradition of the *Harfenkapelle* to the German towns of Hundeshagen in the southern Harz Mountains of Thüringen (by 1788; fig.37) and Salzgitter near Hanover (*c*1850). These areas of high unemployment also became centres of wandering musicians.

37. 'Harfenkapelle' from Hundeshagen, near Duderstadt, 1912

As with Vienna, certain larger German cities, such as Hamburg, Munich, Berlin and even Hildesheim (near Hanover), boasted their own *Harfenjulen* (wandering harp women). Most famous of these was perhaps Louise Nordmann, the last Berliner *Harfenjule*, who died in 1911.

At fairs, markets and inns, the wandering harpers from Bohemia, Hundeshagen and Salzgitter played dance melodies (Lanner and Strauss) and accompanied the popular songs of the time termed *Schlager*, *Moritaten* (similar to British broadside ballads) or *Küchenlieder* (lit. 'kitchen songs': those popular among servants). The harp played accompanying chords to the melody of the violin or played the melody in the right hand with chordal accompaniment in the left hand.

Bohemian and German musicians travelled throughout Europe and Asia, including Russia and Siberia, Scandinavia, the British Isles, northern Africa, the Near East, Manchuria and Mongolia. It was not uncommon for the musicians from Salzgitter to travel to the Americas.

The harps they played were built by carpenters in Pressnitz (which also supplied Hundeshagen), Nechanice, possibly Schönbach in Egerland, Markneukirchen in Saxony, areas near Salzgitter and certainly in other areas as well. The names of several 19th-century carpenter-harp builders have come down to us: Poppenberger, Reis und Bach in Pressnitz and František Kdoul in Nechanice. They were light (4–6 kg) and portable hook harps, 135–145 cm high with 36–39 strings, usually gut (although the harps from Nechanice had metal strings in the treble) and they were tuned diatonically, usually in B♭ or F. The resonators were four-sided and arched upwards towards the neck. The harps from Pressnitz and Salzgitter were equipped with hooks for each string (fig.38), those from Nechanice usually had only one or two hooks per octave.

At the end of the 19th century, the *Harfenkapellen* became eclipsed by orchestras and brass bands from Pressnitz who toured all over the world. The tradition had died out by the beginning of World War I in most areas. In Hundeshagen, which lies just 5 kilometres to the east of the former East German border, women continued to travel and perform, sometimes stealing across to the West, until 1961 when the border became impassable.

In the Egerland, the area of north-western Bohemia closest to Bavaria, harps were included in the so-called *Dudelsackkapellen* (bagpipe bands) consisting of *Bock* (bagpipe), clarinet, short-neck fiddle, bass and harp. In these groups the harp was played exclusively by men. They played local folk music rather than popular music and often marched through the streets carrying their harps and playing at the same time. The harp was most commonly a hook harp as used by other Bohemian wandering harpers, but sometimes Tyrolean single-action pedal harps were used. The tradition continued until the end of World War II when German-speaking Bohemians were deported to Germany.

One region in which the present practice represents an unbroken but continually developing tradition is the Alpine region of Austria and Bavaria. Joseph Haydn (1731–1809), born in the village of Rohrau in lower Austria, wrote glowingly of the simple melodies his father played on the harp when Haydn was a small boy (quoted in E.F. Schmid: *Joseph Haydn*, Kassel, 1934, p.95). From the middle of the 19th century the Zillertal was the centre of harp activity. The musicians played mainly dance-music – ländler, waltzes and polkas – in groups consisting of harp, one or two violins and *Bassettl* (small double bass). Sometimes harps played with accordions or brass and wind ensembles. They also played solo and duet harp pieces, or accompanied solo instruments or song.

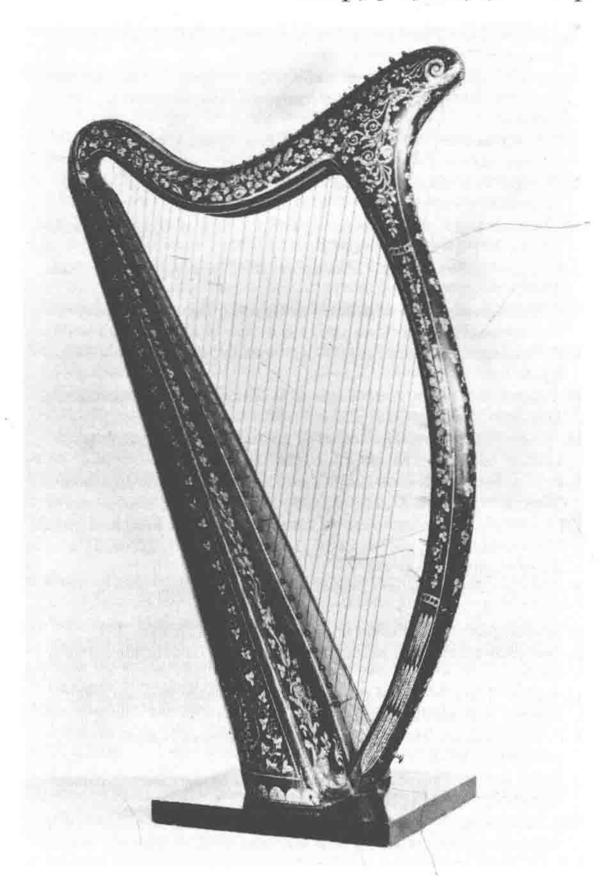
38. Viennese itinerant harper playing a hook harp from Pressnitz, Bohemia, c1900

Records of harp builders in the Austrian Tyrol exist from the middle of the 18th century onwards. Local tradition suggests that Bohemian wandering harpers introduced the hook mechanism to the Tyrol. Most surviving non-pedal harps are simple diatonic instruments with four-sided arched resonators and straight forepillars. Very few have hooks. The first single-action pedal harp builder in Tyrol was Sepp Sappl (1862–1925). His early 32-string harps retained the four-sided arched resonators of the hook harp with the addition of three to five pedals. He used a simple hook mechanism, the pedals attached to cables running through the resonator to the neck. Later he developed the five-sided, staved, arched back with seven pedals and 36 strings which has become the typical form of the 'Tiroler Volksharfe'. This form was perfected by Franz Bradl from Brixlegg (1882–1963). His harps were tuned in E♭ and the pedals originally arranged E B F C G D A from left to right. Later he changed to the present arrangement, identical to that of the double-action pedal harp. Bradl's harps became the model for all later Tyrolean harp builders such as Josef Sappl (1909–86), Karl (*b* 1912) and Peter (*b* 1943) Petutschnigg of Lienz, Benedikt (*b* 1928) and Peter (*b* 1958) Mürnseer of Kitzbühel, Jakob (*b* 1919) and Alexander (*b* 1964) Kröll of Kramsach, Fritz Hauser (*b* 1927) of Zell am Ziller, and Karl Fischer (*b* 1912) of Traunstein in Germany. The modern Tyrolean folk harp is still a single-action harp with the cables

running through the resonator but it now uses forked mechanics like those of the double-action pedal harp. Nylon strings have replaced the original gut. Until World War II it was exclusively a man's instrument. But since then its popularity and use have spread throughout Austria and Bavaria where it is played by both men and women. It is played as a solo virtuoso instrument or in groups called 'Saitenmusi' (string music) together with *Hackbrett* (hammered dulcimer), zither, guitar and violin. Most music schools and conservatories in Austria and Bavaria offer Tyrolean harp as well as classical harp; however, without the efforts of harp players such as Berta Höller and Peter Reitmeier, who collected harp music during and after World War II, the Tyrolean folk harp and its music would not enjoy the standing it does today.

The itinerary of the 19th-century German-speaking wandering harpers also included the areas of Hungary settled by German speakers in the 18th century, particularly Transnubia. Some families of harpers and knife grinders, primarily from Austria, settled near Lake Balaton in Transnubia and continued the tradition of the wandering harper within Hungary. They played hook harps and performed waltzes and polkas as well as popular German songs, visiting mainly the German-speaking villages. Later Hungarian popular songs (gypsy songs) and folk songs were added to the repertory. In the 20th century some harpers built their own harps, adding a simple four- or five-pedal mechanism of their own construction. In the 1960s there were still 12 members of the Gertner and Horváth families carrying on the tradition of the wandering harper and some were still active in the year 2000.

(iii) Italy. Two areas of Italy – Viggiano near Naples and the Abruzzi near Rome – were also known for their wandering harpers in the period from 1780 to at least 1850. Paintings and etchings from this period usually show groups of musicians with one or two harps together with a mandolin, a violin bowed in front of the chest and a triangle; sometimes bagpipe and shawm, clarinet, guitar or bass are also pictured (fig.39). These are simple diatonic harps with straight four-sided resonators and a straight forepillar, sometimes topped with a volute. There is no evidence that a hook mechanism was used. Viggiano in Calabria is perhaps the more famous of the two areas. The Museo Storico Musicale in Naples owns a harp from Viggiano with 34 strings, a straight, four-sided resonator and straight forepillar. The musicians played and sang Italian folk melodies, tunes from operas and Neapolitan songs. Although the Abruzzi are most famous for their bagpipe and shawm players, ensembles with harps called *carciofolari*, were also known. The harp players in both locations were exclusively men. They wandered throughout Europe and to the Americas. In Italy the practice of teaching children in orphanages to play the harp was also widespread in the 19th century. In 1992 there was only one elderly Viggianese harpist, a Signore Rossi, but he still knew the traditional repertory.



39. Ensemble of harp, violin, four-keyed clarinet and triangle: 'I Viggianesi', engraving by Francesco Pisante after Filippo Palizzi, mid-19th century

10. Revivals.

(i) The Celtic revival. In the early 19th century attempts were made to sustain and revitalize Irish harp playing traditions and repertory. The main source of information on the traditional style of harping in Ireland is the collection of Edward Bunting, originally published in three volumes as *A General Collection of Ancient Irish Music* in 1797, 1809 and 1840. A founder of the Belfast Harp Society (1808–13) and the Irish Harp Society (1819–39), Bunting acted as scribe at the meeting of harpers in Belfast in July 1792, notating the performances of Dennis Hempson and nine others who remained from the class of traditional players, of whom Hempson was the only one who still used the old fingernail technique. This characteristic playing technique for the metal strung harp, using specially trimmed long fingernails, is very different to that of the gut or nylon strung harp and probably contributed to the Irish harp's almost total disappearance. Harp teachers were mostly from a classical background which implied gut-string playing technique.

The Belfast Harp Society inaugurated the teaching of a number of children by Arthur O'Neill and Bridget O'Reilly, two of the players who had taken part in the 1792 festival. Harps were provided by local makers. Having collapsed in 1813, the society was re-established with similar aims in 1819 but closed in 1839. A Dublin Harp Society, of social rather than pedagogical character, lasted from 1809 to 1812. After 1819 John Egan, and later his nephew and successor Francis Hewson, produced a new design of 'Irish Harp' for amateurs. Although superficially resembling some 18th-century harps, Egan's instruments were much more lightly constructed and were smaller, simplified versions of the pedal harps of his day, with thin soundboards and separate, rounded backs (fig.40). Later, he produced his 'portable harp', the gut strings of which were fixed into the soundboard with pegs. A hand-operated blade not unlike that of the hook harp (see §V, 7(i), above) shortened individual strings by a semitone. In about 1819, Egan built a harp with seven 'ditals' placed in the forepillar, each of which when pressed down would affect a mechanism in the neck of the harp that shortened all strings of the same note name by a semitone. Like the single-action harp on which it was based, this harp was tuned in E♭; the technique of playing was also derived largely from that of the pedal-harp. Egan also made at least one double-action dital harp.

The upsurge of interest in Celtic culture at the end of the 19th century saw upper middle class scholars and academics encouraging interest in the harp by providing

40. Dital harp by John Egan, Dublin, c1819–31 (Victoria and Albert Museum, London)

money for prizes at competitions (e.g. the eisteddfod in Wales and the mod in Scotland) and by commissioning instrument makers to try their hands at harp making. In the early 20th century J. & R. Glen, an Edinburgh bagpipe maker, made a few reproduction harps, and Briggs, an English violin maker based in Glasgow, made some harps which are still being played today. Small harps were also being made in Dublin by Egan, in Belfast by McFall and in London by Clive Morley. By the mid-20th century, the main makers were Walton in Belfast, Imbush in Limerick, Pat and John Quinn in the Republic of Ireland and Brown and Bruce in Edinburgh who took over the business of Sanderson and Taylor. Mary O'Hara played a Brown and Bruce harp. (For a discussion of the Welsh triple harp, whose tradition never entirely died out, see §V, 5(iii), above.)

However historically incorrect the terminology, the modern harp known as 'Irish' or 'Celtic' is small and diatonic, although most small harps have blades or levers which can raise the pitch of each string by a semitone (see §V, 7(iv), above). Generally these harps have a compass of about four octaves and an average of 30 strings. Older models, such as those by Morley or Briggs, have narrower spacing between the strings, but the ones being made today are more likely to have concert-harp spacing. Some of the modern harps (e.g. by Mark Norris and John Yule, both based in Scotland) are very tightly strung, but there is a growing trend among makers to use lighter-gauge strings. Nylon strings are very popular, especially in the USA, as they are less sensitive to extremes of temperature. They are also used by the Japanese company Ayoyama which has exported many harps to Ireland since the 1970s. Camac of France are experimenting with carbon fibre strings, but there are still some makers who prefer gut (e.g. Pilgrim Harps in England, Norris and Yule). Few metal strung harps are being made even though the tradition in Ireland before the mid-18th century certainly involved metal stringing (*see* IRISH HARP (i)).

However, some revivalist gut harpers have also experimented with the metal strung harp, either in researching the old techniques and music associated with the harp (e.g. the Americans Anne Heyman and William Taylor, and Alison Kinnaird of Scotland), or playing on it the music of today, be it traditional or newly composed (e.g. Paul Dooley in Ireland, Eileen Monger in England, Alan Stivell and Paul and Herve Queffelant from Brittany, Rudiger Opperman from Germany, and Mary McMaster from Scotland). Many of these players are also teachers and makers. Other makers of metal strung harps include Jay Witcher and Chris Caswell (USA), Robert Evans (Wales), Jack Morgan (England) and Ardival Harps (Scotland).

In Ireland in the 1960s, the harp became increasingly used in a chordal style to accompany singing, a style of which Mary O'Hara is perhaps the most famous exponent. During the same period Seán Ó'Riada introduced the harp to Irish *céili* music in his Ceoltóirí Cualann group, thereby encouraging its use also as a melody instrument. Considering the large population of emigrant Irish in the USA, it is not surprising to find the harp also beginning to gain popularity in America at that time. A similar development has taken place in Scotland, with the harp being increasingly played not only as a solo instrument but as an integral part of groups of musicians (*see* CLÀRSACH). In the 1970s Alan Stivell of Brittany was playing the harp in a rock-based band to large crowds all over Europe and America, and he undoubtedly inspired many younger people who perhaps had never seen a harp before. Since that time there has been a huge increase in the numbers of people playing the small harp, and it now has a status equal to any of the other instruments being used in traditional music, and it is also finding its way into other genres of music. There are players composing music for the small harp in the traditional mode, in jazz style, and in other wholly original ways. It has also become possible to study the small harp on degree courses in Ireland, Scotland and Galicia (Spain). There are societies for the small harp in England, France, Germany, Northern Ireland, the Republic of Ireland, Scotland, the USA and Wales which promote concerts, fund teaching, host festivals and acquire harps to rent out to beginners. The small harp is being used in music therapy, especially in the USA and Ireland, and all over the world harpers find employment playing at weddings, formal dinners and in hotels.

(ii) Early music. Along with the general development of interest during the 20th century in historical performing practices using period instruments or replicas, a growing number of harpists and harp makers have been researching the playing techniques, repertory and building methods of earlier periods, and recreating them in performance on harps based on historical or iconographical models, with the help of contemporary descriptions. Harps were featured in many of the pioneering EARLY MUSIC groups

of the 1950s and later. A growing need to further the exchange of information among historical harp players, builders and researchers has led to the establishment of a Historical Harp Conference and Workshop held annually in the USA, the first of which was organized by Judit Kadar and Cheryl Ann Fulton in 1984. The Verein zur Förderung historischer Harfen (International Historical Harp Society) was founded in 1985, based in Europe. Its archive houses literature, facsimile prints of harp music, iconography, photos and descriptions of harps in museums and private collections as well as information on harp builders and players. The Historical Harp Society, founded in 1990 and based in North America, has initiated the 'Historical Harp Survey' to register all harps built before 1939 currently in North America. Symposia and workshops are held annually in various locations in the USA and Europe under the aegis of the two main societies, and a number of smaller organizations have arisen, such as the Asociación arpista Ludovico in Spain. The International Harp Centre in Basle and its journal *Harpa* were established in 1991.

Makers of historical harps include Yves d'Arcizas (France), Ardival Harps (Scotland), David Brown (USA), Catherine Campbell (USA), Simon Capp (England), Arsalaan Fay (USA), Winifried Goerge (Germany), Tim Hobrough (Scotland), Claus Hüttel (Germany), Eric Kleinmann (Germany), David Kortier (USA), Lynn Lewandowski (USA), Pedro Llopis Areny (Spain), Antonio de Renzis (Italy), Rainer Thurau (Germany), Jay Witcher (USA) and Beat Wolf (Switzerland).
